Red Seal records show up in true style during March. The salesmen give this line of records their personal attention, with the result that each month shows a large sale.

The sale of Victrolas are up to normal. The country dealers report a larger number of sales. The Wurlitzer Co. have booked an order for a fine Victrola in white and gold, style XX, to be delivered to the Standard Oil magnate, Alexander McDonald. This will be the highest priced outfit ever sold in this city.

The past month found an increase in the number of sales of the Edison Business Phonograph. The Wurlitzer house takes this to mean that trade conditions are improving sufficiently for business houses to take on new equipment, and that this useful instrument is becoming more popular each week.

The Wurlitzer Record Album was placed on the market last month. Orders for these are coming in from local and small dealers. These are very neat and hold a dozen records. Each record is slipped into an envelope. Each album can then be placed on any regular book shelf.

The Wurlitzer house says April will be a good all-around month for trade.

The Milner Musical Co. report a fairly good talking machine and record trade for March. The sheet music department made a good showing. In the small instrument department the month's showing was satisfactory. Manager Strief says April will be a good month for business.

On the 1st of April the Universal Talking Machine Mfg. Co., Camp and Mulberry streets, Newark, N. J., issued their first complete catalog containing 443 double-side 10-inch records and 46 double-side 12-inch records. The company say they are sending this catalog so the trade can see the way they have paired up the different selections. As is known, the Universal Co. have double-faced their entire list, and they have ceased to press single-faced records.

NEW AUXETOPHONE FEATURES.

Victor Co. Sends Out Circular to Trade Explaining Them in Detail.

On April 1 the Victor Talking Machine Co., Camden, N. J., sent the trade a circular concerning the re-exchange of Auxetophone sound boxes and blowers for the new type of machine, in which they say: "The Auxetophones which are now being delivered from our factory are equipped with a few new features, which we find materially increase the efficiency of this instrument. First—The sound box has been made lighter, which we have found to be an advantage in reproducing. Second—The blower is of the end-bearing type, with a new lubricating system. This blower runs quietly, and is kept properly lubricated by the new arrangement of oil cups, insuring longer life to the motor, and in addition it is less liable to get out of repair than the former type. It is very desirable that all instruments now outstanding should be brought up to date."

SOL BLOOM TO INVITE TRADE

To Inspect His Palatial Talking Machine Quarters at 466 Fifth Avenue.

When Sol Bloom has his new place, 466 Fifth avenue, New York City, finished the various rooms—Greek, Japanese, Egyptian, the nursery and the auditorium, seating about 150—in the basement, he intends giving a "trade matinee." That is to say, he proposes to invite the jobbers and dealers of Greater New York to be his guests and look him and his place over, with a luncheon, etc., to be served on the premises. Despite rumors to the contrary, Mr. Bloom does not intend to lease his building at 40 West 34th street, though he has received an offer of $75,000, which he refused, for the place.

NEW REGINAPHONE STYLE

Just Being Placed on the Market by the Regina Co.—A Most Attractive Creation.

The Regina Co., New York, are showing a new type of Reginaphone, namely, a hornless cabinet, combining the music box and talking machine. It is designed on beautiful lines, and the finish of the woodwork and mechanical parts is of the well-known high standard for which this company are famous. Two cabinets are displayed, one in golden oak with a special fine figure, and the other comes in solid mahogany. These machines materially strengthen the Regina line, and the management is confident they will prove strong sellers.

E. C. Beach, of the Cleveland (O.) Phonographic Record Co., when in New York recently, stated that they would open up in this city with a line of their own machines and indestructible cylinder records. Mr. Beach also said the company were making arrangements to establish their own jobbers and dealers.

You can make dollars out of the horn trade with such a product as this.

Just glance over a few of the many selling points that are contained in the

MUNSON FOLDING HORN

OFFERS YOU GREATER SALES AND LARGER PROFITS

FOR DISC AND CYLINDER MACHINES is the only one-piece indestructible Folding Horn on the market. Made of the finest quality of selected Leatherette—in plain solid colors—Gold, Black or Red, inside and out.

WHEN FOLDED AND CARTONED it occupies a space only 28 inches long by 3½ inches square—an ideal parcel for carrying or handling and impervious to damage.

THE MUNSON FOLDING HORN greatly improves the tone of the records and means increased record sales.

CLEVELAND'S BUDGET OF NEWS.

Trade as a Whole Slightly Disappointing, but Compares Well With Other Lines of Business—Dealers Generally Optimistic—New Records Made for "The Wolf"—Louis Devineau Sued—F. K. Dolbeer a Visitor—What Various Talking Machine Houses Have to Report Anent Trade Conditions.

(Special to The Talking Machine World.)

Cleveland, Ohio, April 9, 1909.

As in other lines of trade, the awakening of business in talking machine circles has not proven as satisfactory as was anticipated early in the year. But the bulk of trade in this line will compare favorably with that in most others. The demand is for the higher grade machines and records, and the main complaint of dealers is their inability to procure from the manufacturers sufficient Victrolas to supply the demand.

Dealers generally are optimistic in their views as to future prospects, and are making preparations to meet a sure-to-increase season's demand.

An indication of the growing popularity of the talking machine and moving picture show, is in their installation in a Sunday-school at Canton, Ohio, with an enrollment of 2,200. Through their instrumentality the pastor has made his church and Sunday-school the most popular and attractive one in northern Ohio.

When the play of "The Wolf" was given at the Colonial last week it was discovered that the original records for the production, which were made at the New York Zoo had been damaged. As the long, dreary wolf howl bears an important part in the play the manager decided to have new records made, and accompanied by C. J. Ross, visited the five wolves at the Wade Park Zoo. Some good howls were canned and the finishing touches put on at the talking machine store of W. J. Roberts, Jr.

Suit, charging forgery and embezzlement, has been brought by the city solicitor in Common Pleas Court against Louis Divineau, inventor of the Ideal Horn and the Divineau Biophone. He was, and had been for several years, secretary of the city sinking fund commission, and as such was bonded by the American Bonding Co. of Baltimore, in the sum of $25,000. The sum alleged to have been embezzled is $12,800. The bonding company refusing to make good the deficit in accounts are included in the suit.

Cleo S. Bourgeois, formerly with the Columbia Phonograph Co., and later with the International Talking Machine Co., is now engaged in the automobile business with the Oldsmobile Co. He is figuring on connecting up a graphophone with an auto.

F. K. Dolbeer, sales manager of the National Phonograph Co., Orange, N. J., was a visitor with the talking machine dealers of Cleveland March 31st.

Conditions were reported but little changed from the previous month at the store of W. H. Buescher & Sons. The demand for records was said to be excellent and all the while broadening, and fairly good for machines, especially those of the higher grade. Mr. Buescher said the double-faced Victor records for April were unusually good and selling well, while the Red Seal records were as popular as ever. "The many admirers of Madame Sembrich are acquiring a store of her great operatic airs and concert songs, of which we have a complete list," said Mr. Buescher.

"Business is very good and has been for the past two weeks," said Miss Loretta H. Byrne, manager of the talking machine department of Brown Bros. "We have recently made sales of several high-priced graphophones—sold three today—and customers all express themselves highly pleased with their purchase. Purchasers also express themselves delighted with the double-disc records."

W. J. Roberts, Jr., reports business moving along about the same as for several weeks past. His sales of machines continues good, and record customers usually monopolize the demonstration rooms from morning until night. He stated the demand was for the higher grade of machines and records. May 1st Mr. Roberts will move to a larger and more suitably located store, and contemplates largely extending his business.

Mr. McMillin reports that the demand is largely for Victrolas and the high grade records, and that the greatest trouble experienced is that Victrolas cannot be procured as fast as the demand requires. Mr. McMillin said: "We are reaching the high class trade, and this requires the best in machines and records, as well as all classes of musical goods."

The Rudolph Wurlitzer Co., No. 206 Prospect avenue, have in stock a large number of various kinds of instruments, and are doing a good business.

Business, said A. W. Robertson, of the G. J. Probeck Co., is going along as usual. The demand for machines, he said, was fairly good, and excellent for records, the April lists of double discs and indestructible cylinder records being accorded high praise. Mr. Robertson stated that the indestructible cylinder records had largely increased the demand for cylinder machines. The company are doing a nice business in both the retail and wholesale departments.

Mr. Probeck, who has been confined to his house for the past six weeks, is convalescing and expects to be back to business in a few days. He has passed through a dangerous and prolonged siege of erysipelas.

The Arcade talking machine dealers, B. L. Robbins & Co., are having a fine run of trade. Since occupying their new quarters their sales have increased 50 per cent. The company carry a complete stock of Edison and Victor goods.

Business is somewhat interfered with in the talking machine department at the Bailey Co.'s, owing to the building of the annex now under way. E. A. Friedlander, manager, said: "Considering our torn up condition and the difficulty of properly serving customers, business continues remarkably good."

All the leading concerns report good business and this includes Collister & Sayle, who are doing well with the Edison and Victor; the May Co., who report increasing sales of Victor machines, Cuban and Mexican records; C. H. Denslow, who are having an excellent call for Victrola and Triumph machines; Aldrich, Howey & Co., who report good sales of Columbia disc graphophones and double disc Columbia records. At Mr. Denslow's warerooms, 27 Taylor Arcade, I noticed on exhibition in the show window an auto-talking machine, said to be the only one ever imported from Germany. It is a small imitation of an automobile in detail, the phonograph hidden in the body of the auto. It is operated by electricity, plays a disc record and everybody passing stops to examine it.

Flesheim & Smith say trade is quiet.

Managers of Cleveland picture shows express their pleasure at the establishing of a censorship by the New York companies controlling the manufacture and output of films. They say it will have a tendency to improve the standard and more thoroughly popularize their business, and admit that there are certain features which may be eliminated without havoc being done.

A NOVEL EXPERIMENT.

A novel experiment is in process of development at the McNeil Island Federal penitentiary, near Tacoma, where the convicts are rearing Chinese pheasants and Rouen call ducks for the market, affording the prisoners a diversion that relieves their minds from the pall of prison life and gives them a small income which they are devoting to the purchase of books, newspapers and magazines and which has enriched them also by a phonograph, the vocal and instrumental strains from which resound to their delight through corridors and cells. The experiment is the result of an idea which originated with United States Marshal C. B. Hopkins, whose headquarters are in Seattle and who advanced the prisoners the necessary fund for the purchase of original stock.

"No one really fails who does b'3 best."

Keep stocked up

Nothing disgusts a customer quicker than to find you are "just out" of what he asks for. Ten chances to one he'll go to the other Victor dealer for the next records or needles or supplies that he wants.

You know how you've felt yourself when you've tried to buy some article that *you* wanted, and the store-keeper didn't have it right then. You can't blame *your* customers for getting huffy, can you?

There's one thing sure—the dealer who has the goods gets the business, and keeps his customers.

Right here is where we come in. We will keep you stocked up. You can send to us for anything in the Victor line and you'll get it. And what interests you more—*we'll ship it the same day we receive your order.*

We have a great stock of Victors, Victrolas, Victor Records, record cabinets, horns, fiber cases, English needles, and all Victor parts and accessories. In fact, we are one of the largest Victor distributors in the United States. We handle Victor goods exclusively. We do *one* thing, and do it well.

We'll guarantee you four results of buying from us: You will get just what you send for; you will get it immediately; you will not pay more than elsewhere; you will be completely satisfied.

Drop us a line to-day for our handsome booklet, "The Cabinet That Matches," and our catalogues.

VALUE OF ATTRACTIVE WINDOWS

So Often Overlooked by Dealers Emphasized by Victor Co. Who Have Employed a Specialist to Arrange Special Displays for Dealers All Over the Country—Some Philadelphia Victor Windows Seen Recently.

The value of the window as a publicity promoter is too often overlooked by some of our progressive talking machine men. There is perhaps no better means of concentrating attention on one's stock than a properly displayed window—that is a window gotten up in an attractive style—in a style to be entitled peculiarly individual. For it must be out of the ordinary to win the desired amount of notice.

The Victor Talking Machine Co. have realized the tremendous value of window display, and are now employing a specialist in the person of Ellis Hansen, who has been associated with the noted houses of Sherman, Clay & Co., in San Francisco, and Lyon & Healy in Chicago, and he is developing plans to arrange special Victor windows for all the leading Victor men in the principal cities from New York to the Coast.

On the opposite page are reproduced photographs of Mr. Hansen's work in the windows of the leading Philadelphia talking machine stores and the pictures of the actual displays emphasize better than any words their attractiveness. Of the windows illustrated the three on the left beginning at the top are H. A. Weymann & Son, Lit Brothers, Penn Phonograph Co.; the center windows are: James Bellak's Sons Co.; C. J. Heppe & Son, and the Musical Echo Co., while the three on the right are Sol Bloom, Inc., Louis Buehn & Bro., and the Western Talking Machine Co.

The various jobbers and dealers were highly pleased with the displays and stated that they had brought considerable business into the respective stores.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., April 10, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past eight weeks from the port of New York:

FEBRUARY 17 AND 24.

Berlin, 38 pkgs., $135; 31 pkgs., $200; Bombay, 9 pkgs., $227; Calcutta, 35 pkgs., $1,156; Callao, 4 pkgs., $240; Copenhagen, 3 pkgs., $105; Guayaquil, 10 pkgs., $210; 3 pkgs., $475; Hamburg, 1 pkg., $189; Havana, 2 pkgs., $110; 3 pkgs., $387; 7 pkgs., $195; Hong Kong, 11 pkgs., $287; London, 13 pkgs., $1,034; 569 pkgs., $7,668; Panama, 12 pkgs., $887; Para, 14 pkgs., $1,046; Progreso, 107 pkgs., $2,156; Puerto Plato, 3 pkgs., $258; Rio de Janeiro, 4 pkgs., $248; San Francisco, 6 pkgs., $715; Shanghai, 151 pkgs., $5,751; Southampton, 6 pkgs., $160; Valparaiso, 4 pkgs., $136; Vera Cruz, 33 pkgs., $640.

MARCH 3 AND 10.

Amsterdam, 2 pkgs., $100; Berlin, 2 pkgs., $200; Buenos Ayres, 7 pkgs., $622; Caracas, 2 pkgs., $118; Cartagena, 21 pkgs., $1,596; Colon, 15 pkgs., $277; Havre, 4 pkgs., $109; London, 5 pkgs., $231; 4 pkgs., $3,280; 462 pkgs., $12,143; Montevideo, 31 pkgs., $2,531; Puerto Plata, 4 pkgs., $115; Rio de Janeiro, 29 pkgs., $911; 29 pkgs., $926; Shanghai, 20 pkgs., $297; Tampico, 15 pkgs., $219; Trinidad, 13 pkgs., $733; Valparaiso, 24 pkgs., $936; Vera Cruz, 129 pkgs., $1,779; Wellington, 2 pkgs., $502.

MARCH 17 AND 24.

Amapala, 10 pkgs., $432; Bangkok, 5 pkgs., $347; Barranguila, 5 pkgs., $172; Berlin, 34 pkgs., $300; Buenos Ayres, 150 pkgs., $3,002; Cape Town, 13 pkgs., $298; Georgetown, 36 pkgs., $1,229; Guayaquil, 3 pkgs., $217; Havana, 6 pkgs., $342; 18 pkgs., $450; Havre, 6 pkgs., $181; Iquique, 3 pkgs., $207; Kingston, 5 pkgs., $129; La Union, 3 pkgs., $110; Limon, 4 pkgs., $404; London, 192 pkgs., $4,882; 21 pkgs., $738; 103 pkgs., $3,246; Manila, 4 pkgs., $245; Madrid, 3 pkgs., $375; Montevideo, 12 pkgs., $1,702; Para, 9 pkgs., $543; Puerto Barrios, 3 pkgs., $130; Rio de Janeiro, 7 pkgs., $816; 17 pkgs., $767; 9 pkgs., $813; Shanghai, 253 pkgs., $26,904; St. Johns, 9 pkgs., $171; Surinam, 15 pkgs., $383; Tampico, 42 pkgs., $698; Trinidad, 13 pkgs., $342; Valparaiso, 1 pkg., $207; 8 pkgs., $111; Vera Cruz, 31 pkgs., $1,375; 109 pkgs., $1,368; Wellington, 14 pkgs., $172.

APRIL 1 AND 8.

Antofagasta, 8 pkgs., $365; Batavia, 9 pkgs., $282; Berlin, 38 pkgs., $478; Buenos Ayres, 3 pkgs., $297; 2 pkgs., $172; Cape Town, 5 pkgs., $161; Cartagena, 7 pkgs., $862; 12 pkgs., $789; Cienfuegos, 5 pkgs., $114; Colon, 5 pkgs., $171; Corinto, 7 pkgs., $685; Hamburg, 3 pkgs., $220; Havana, 7 pkgs., $418; 5 pkgs., $276; Kingston, 5 pkgs., $126; La Guaira, 20 pkgs., $510; Liverpool, 1 pkg., $133; 23 pkgs., $3,910; London, 4 pkgs., $326; 398 pkgs., $10,074; Manila 20 pkgs., $925; Montevideo, 5 pkgs., $114; Para, 7 pkgs., $466; Porto Barrios 9 pkgs., $102; Rio de Janeiro, 6 pkgs., $175; 14 pkgs., $390; Singapore, 19 pkgs., $561; Tampico, 3 pkgs., $106; Trinidad, 16 pkgs., $474; Valparaiso, 19 pkgs., $1,744; Vera Cruz 47 pkgs., $3203; 77 pkgs., $2,937.

SOME INTERESTING VIEWS

On Copyright Law—How Royalty Plan Has a Broad Application in Patent Matters—A Remedy for Monopolies Suggested.

Commenting upon the new copyright law the Grand Rapids, Mich., Herald believes that the protection given to composers by the compulsory payment of two cents royalty by the manufacturers of talking machine records and perforated music rolls has a broad application in the patent field. It says:

"An act passed by Congress on the eve of its adjournment suggests a remedy for patent and other similar monopolies that might with advantage to the public be made more general, if not uniform, and without detriment and possibly with material benefit to inventors. The act in question, passed for the protection of the composers of "canned" music—that is, records or rolls used in talking machines and piano players—provides for a 2-cent royalty to the composer on each record or roll so used; while monopoly is guarded against by the provision that, if reproduction of the music is permitted at all by the composer, any record manufacturing concern shall have the right to reproduce it on the payment of the same royalty. This, of course, was a case of copyright, and not of patent proper; but the principle is the same. How to safeguard the rights of inventors to their legitimate earnings without at the same time building up patent monopolies, has long been a troublesome problem. The existing patent laws, both in this country and Europe, as a rule, do neither. In certain cases—as in the cyanide process for gold mining, for instance—the New Zealand government has sought a remedy for such monopolies by buying up valuable patents and making their use free to all on equitable terms. But, as in many, if not most cases, the value of a new invention is problematical, the royalty plan adopted by congress in the case of talking machine records seems decidedly the better.

PHONOGRAPH SAFE LOCK.

Charpiot's Invention Referred to Before in This Paper Now Demonstrated a Success.

A couple of months ago in The World there was a long story relating to a safe lock phonograph apparatus. This lock, which is the invention of Geo. J. Charpiot, of Denver, Col., was given an exhaustive test by the authorities in that city recently, and found to be absolutely perfect. In fact, it is a device of great value which will undoubtedly come into general use. It has in place of the ordinary knob the mouthpiece of a telephone transmitter. Attached to its diaphram is a delicate needle, its end resting in a groove of a sound record made on a phonograph cylinder.

The phonograph cylinder is part of the mechanism of the lock. The record is the countersign spoken by a certain voice.

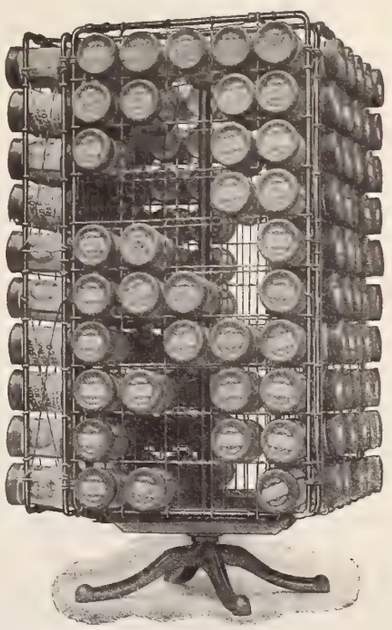
When this countersign is spoken into the safe by the same man the vibration of the needle coincides with the record on the cylinder and a continuous electrical contact opens the safe door. No other voice will do it.

FILMS AND TALKERS BURNED UP.

(Special to The Talking Machine World.)

Portland, Ore., April 1, 1909.

Six hundred thousand feet of motion picture films were destroyed in a fire in the supply depot of Sam Newman, 293 Burnside street. Loss, $16,000, fully covered by insurance. In addition to 600 reels of moving-picture subjects, each carrying 1,000 fee of film of value of 10c. a foot, 800 illustrated song slides of value of $5,000, seven motion picture machines worth $2,100, six stereopticons totaling $900, phonograph records of the estimated value of $1,000 and four $60 phonographs.



The Monarch Midget IS IT.

¶ You don't know how good it is if you don't use one.

¶ Revolves on Ball bearings and sets on your counter giving access to every one of the 200 records without the necessity of the demonstrator stepping away from his machine.

¶ Keep all your latest and most popular numbers in a Midget and let it assist you in selling.

¶ If your jobber hasn't them in stock give us his name. **DO IT NOW.**

INDIANAPOLIS TRADE NOTES.

Business Rather Dull During March—Various Reasons Given—Columbia Co. Doing Good Advertising With Symphony Grand—Indestructible Records Shipped Unwrapped—Wanted Worst Talking Machine to Combat Piano-Player—Musical Echo Co. Report Good Demand for Red Seal Records—Other News.

(Special to The Talking Machine World.)

Indianapolis, Ind., April 6, 1909.

Business has been quiet among the talking machine dealers for the last month. Unsettled weather has been the chief cause, and not much better is expected until the weather improves. The penny arcades and moving picture shows also did a quiet business last month. The first few days of the present month, however, were better, as the Northern Indiana Teachers' Association and the Southern Indiana Teachers' Association met in Indianapolis at the same time, and there were thousands of school teachers in the city, so many, in fact, that they had great difficulty in finding lodging places, even when the supply of private lodging houses was drawn on. These visitors brought business to many.

The Columbia Phonograph Co. have been making good use of the Symphony graphophone in advertising among the wealthier classes of the city. On the opening night of the Indianapolis Club, the aristocratic Jewish organization of the city, one of these machines was on display and was used with the famous series of Fonotipia records. During automobile show week one of these machines was on display at the Willis-Holcombe Co.'s show rooms and was viewed by thousands of people. The automobile show continued for one week—week before last—and was a grand success, bringing thousands of people to the city.

Somewhat of a curiosity was received at the Columbia store last week. It was a crate, 3 by 12 feet, containing about 2,000 indestructible records. The records were placed in the machine without any excelsior packing, which is usually used in such shipments. This is regarded as the champion single package shipment of talking machine records ever received in Indianapolis, and goes to show the possibilities of the indestructible records when it comes to shipping.

Thomas Devine, of the local Columbia store, has noted a marked increase in the sale of 12-inch records since his company originated the scheme of issuing double records at the price of the old single record. Among the best-selling 12-inch records, Mr. Devine says, are "The Old Folks at Home," by Mrs. Holt, and "The Phantom Brigade," as played by the Princess orchestra. "The Phantom Brigade" seems to make a hit, especially among the lodge men.

An Indianapolis talking machine dealer was greatly surprised the other day when a customer came in and wanted the worst old machine he could find and one of the most weird and tiresome records he could get. The sale was made, and then the customer explained. He said he lived in a double house, and that on the other side the family kept a piano player going constantly. It was the first thing he heard in the morning and the last thing at night. He had hired a man to keep a talking machine wound up and he proposed to keep the machine going all of the time until he killed out the piano player. The music he got was a weird bagpipe selection.

Charles Koehring, of the Musical Echo Co., the new store in North Pennsylvania street, says that business is most promising. There is a great demand, he says, for the Red Seal records, and the "hit" they are making is very pleasing to the company. The display rooms of this company have been fitted up tastily with large framed pictures of some of the famous musicians of the world. They handle Victor machines only.

The Kipp-Link Co., jobbers and dealers in Victors and Edisons, are advertising records to give the actual voice of Admiral Evans in his farewell address to the navy. The Edison Amberol four-minute records are selling fast at this store.

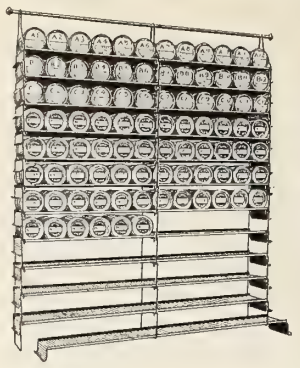
The Musical Echo Co. have sent out pamphlets giving warning to those who take records on approval. It is explained that records sent out on approval are not sent for the entertainment of those who get them, and that it is expected they will not be played more than one time and must be kept only one day. It is also stated that damaged records will not be taken back.

The first recital of the Indianapolis talking machine companies which was given to show off the March records was a success, and there were large crowds at all of the stores. The business of giving monthly recitals will be kept up by all of the stores that have entered into the plan. The stores in the plan are the Kipp-Ling Co., Joseph Joiner, Frank Teasley, E. E. Hall & Co., Joseph C. Pfleger, William F. Burns and George W. Maze.

The New Orpheum Theater opened the first of the month in East Washington street, near Pennsylvania, one of the best locations in the city. The house is to be devoted to moving pictures and other attractions. The cost of the theater was $10,000, and the seating capacity 475.

Walter Rosengarten, an accomplished pianist, has been engaged to play for the big four circuit of moving picture shows owned by E. S. Sutherland, including the Bijou, the Bijou Dream, the Mystic and the Casino, four of our best houses.

A preliminary injunction has been granted in the Federal Court, in the case of the New Jersey Patent Co. and the National Phonograph Co., against the Paxton & Baker Co., of Hammond, Ind., by which the defendant is restrained, until further order of the court, from selling certain phonograph records at less than the prices stipulated in a contract with the National Phonograph Co. It was alleged in the complaint asking for an injunction that the defendant company had entered into a license agreement with the National Phonograph Co., by which the defendant company was to sell the records at not less than specified prices. It was alleged that the defendant company had sold the records at less than these prices.



Patented July 28, 1908

Mr. Dealer: The Schubert Extensible Rack Shelves

for keeping cylinder records in the home are proving a "Business Builder" for dealers who are pushing them.

Something entirely new which appeals to every Phonograph owner for the reason that it can be had and made into any required size, beginning with but one shelf and then adding as needed, at a cost less than 5c. per record.

Made entirely of metal, nicely enameled, shaped so when put together a rack any size can be made ranging from 1 to 20 or more shelves holding from 12 to 240 or more records.

It's the simplest thing you ever saw, hangs on the wall like a picture, and with the printed matter that dealers are supplied with brings in the extra dollars.

If your jobber has not told you about them yet, send your address and your jobber's name and learn the "Secret" about them to

G. H. SCHUBERT, 199 W. Madison St., Chicago, Ill.

EXPRESS CO. LOSES.

Court Gives the Law on Legible Addresses on Parcels—A Decision of Interest.

In a decision in the Appellate Term of the Supreme Court, affirming, to the extent of $50, a judgment which Julius Magnus recovered in the First District Municipal Court against Thomas C. Platt, as president of the United States Express Company, Justice Maclean reviewed at considerable length the history and obligations of express carriers. He said in part:

"There is no legal rule that carriers will only take parcels legibly addressed, or that parcels without address at all may not be given to and taken by the carrier's driver. The pioneers of parcel transportation between the Hudson and the Pacific, and who became chiefs in their line, could hardly read; scarcely write at all. Even now, at least within a few years, systematic stowage in the vehicle is or was the mnemonic aid for distribution of the parcels carried, because the capable driver, intelligent in other things than letters, could not even make out the tags on the star route pouches of the United States mail."

Magnus sued in the Municipal Court to recover $82.50 for the depreciation in weight of woollen goods which it was said had been mislaid in transit by the defendant company. He secured a judgment for the full amount. This verdict was affirmed by the Appellate Term on the condition that the plaintiff accept $50 in settlement as express contract is limited to that amount.

Record Sweeper in Action

DEMURRER IS SUSTAINED

And the Bill Brought Against the Hawthorne & Sheble Co. by Victor Co. Is Dismissed.

The demurrer of the Hawthorne & Sheble Mfg. Co., manufacturers of talking machines, records, horns, etc., Philadelphia, Pa., to the bill of complaint by the Victor Talking Machine Co., Camden, N. J., charging the defendants with infringing patent No. 832,896, known as the Dennison hollow arm patent, was sustained and the bill dismissed by Judge McPherson, United States Circuit Court, Philadelphia, on March 12, for lack of invention. The opinion in full follows:

"It is true that the improvement covered by the patent in suit (No. 832,896) is prima facie novel; the grant of letters carries with it such a presumption, but the presumption must give way if the court is clearly convinced, from examining the improvement, that the element of invention does not appear. In my opinion, such a situation is presented, as it seems to me no invention is disclosed by the device in question. What the patentee did was simply to take the old amplifying horn of a talking machine, cut it in two for reasons of convenience, and provide well-known means for refastening the parts when the occasion to operate the machine should arise. The specification does not refer to the reasons that suggested the change of construction, but they are thus stated—and no doubt correctly stated—in the brief of complainant's counsel:

"'It will be evident to this honorable court that a talking machine having an amplifying horn, such as is shown at 11 in Figure 1 of the drawings, immovably fixed to its supporting bracket, would be most unsuitable for transportation and shipping purposes; and furthermore, when not in use, the amplifying horn would occupy a large amount of unnecessary space, and if it should be desired to store the talking machine having its amplifying horn immovably mounted upon its bracket the clumsiness and inconvenience of handling and storing the talking machine will be obvious. And furthermore, it may be desired to change horns.'

"As thus stated, all this is 'evident,' and I think that the device of the patent by which these inconveniences are avoided is evident also, and did not call for the exercise of the inventive faculty, but merely for such skill as a capable artisan is not likely to lack. The demurrer is sustained and the bill is dismissed."

Indorsed: U. S. C. C., E. D. of Pennsylvania. No. 179 October Session, 1908. Victor Talking Machine Co. against Hawthorne & Sheble Mfg. Co. Opinion; McPherson, J., sustaining demurrer; filed March 12, 1909. Henry B. Robb, clerk.

A motion for an appeal has been filed.

PIANO DEALERS FALLING IN LINE

And Taking on Talking Machines—Increasing Number Join Jobbers' Association.

It will be noticed that of the ten new members of the National Association of Talking Machine Jobbers, whose applications were favorably acted upon by the executive committee at their meeting in Columbus, O., on March 28, all are piano dealers with the exception of a couple. They are representative firms in their respective localities and therefore valued acquisitions to this live, progressive and practical organization.

CHANGE IN FIRM NAME.

The Rhodes & Haverty Furniture Co., Savannah, Ga., large dealers in Columbia graphophones in that city and vicinity, have changed their firm name to the Haverty Furniture Co.

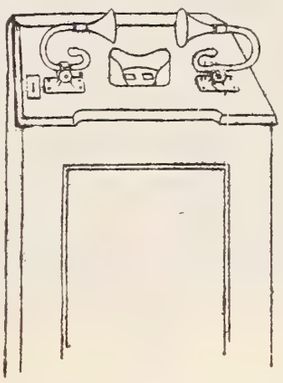
PACIFIC PHONOGRAPH CO. FORMED.

The Pacific Phonograph Co., of San Francisco, Cal., has been incorporated. The object of this company is to take over the talking machine department of the Kohler & Chase Co., and keep it as a distinctly separate institution.

BOTH SING AND TALK.

Combined Talking and Exhibiting Machines.

In view of the success which is obtained by the moving picture apparatus, the idea naturally occurred to use the phonograph in connection with it, so as to hear the voice at the same time that we see the picture. Among such devices is a combined talking and picture-exhibiting machine recently devised and patented by a New York man. At the top is an opening for viewing the pictures, and adjacent thereto, where they will come in contact with the ears of the user, are



sound tubes. The latter are adjustable to accommodate the many sizes of heads naturally encountered. In making the pictures for these moving pictures that sing and talk, the actor takes his position before the camera and his movements are photographed. Coupled with the moving picture machine is a phonograph. While the latter is repeating the actors' words he goes through the necessary motions to accompany the words. The moving picture machine thus secures the photographic record of the series of gestures during the whole time that the phonograph is working. Duplicates of the pictures are then made from the original for use in the penny-in-the-slot machine, the mechanism operating the phonograph in conjunction with the moving of the pictures.

NEW COLUMBIA DEALERS IN FLORIDA.

Thos. K. Henderson, special eastern ambassador of the Columbia Co.'s wholesale department, paid an extended visit recently to the Ludden-Campbell-Smith Co., of Jacksonville, Fla. He has made a trip over the State, and besides establishing a large number of small dealers has secured orders from J. L. Stowers, a dealer in pianos, organs and everything in the line of musical instruments in Key West, Fla. Mr. Henderson also closed a contract with the South Florida Music Co., of Tampa, Fla. Mr. Henderson reports that the Florida tourist crop this year was a hummer, and, as a consequence, all of the dealers in the State are wearing a broad smile.

"VICTOR SALESMANSHIP."

A Volume of Exceeding Interest Just Issued by the Publicity Department of the Victor Talking Machine Co.

Recently the publicity department of the Victor Talking Machine Co., Camden, N. J., presided over by C. M. Brown, issued what is entitled "Victor Salesmanship," a book of over sixty-three pages, with a stiff paper cover, and the famous fox terrier trade-mark embossed thereon, printed in the company's usual elegant manner and fully illustrated. It contains "a series of salesmanship lessons compiled for the benefit of those interested in the sale of the Victor and Victor records." Every detail in the manufacture of the Victor goods is interestingly described, and regarding the selling proposition the following general observations are given in the brief preface:

"In these lessons we have endeavored to impart to you a comprehensive knowledge of Victor salesmanship acquired through years of intimacy with the Victor and Victor records. Everything depends on the way you read these salesmanship lessons. We assume that everyone interested in the sale of the Victor is ambitious and anxious to increase his or her value to the limit of their ability, and we believe, and in fact know, that a thorough reading and study of these lessons will increase the efficiency and income of everyone who sells the Victor, be he employer or employe."

WURLITZER PUBLICITY.

The Rudolph Wurlitzer Co., of Cincinnati and Chicago, are issuing some effective talking machine publicity in the form of miniature newspapers covering the wholesale and retail field. They are skilfully "made up," and reflect the ability of C. W. Page, the Wurlitzer Co.'s clever advertising manager.

INCORPORATED.

The Wooden Phonographic Horn Co., of Syracuse, N. Y., has been incorporated with the Secretary of the State of New York, with a capital of $8,000, for the purpose of manufacturing talking machines and horns.

We Want Your Business

¶ Our message is specifically to the dealers of Northern Ohio, and Indiana, and all Michigan. We want your business because we are in shape to care for your orders promptly, immediately. This does not mean that we will fill them to-morrow, or the day after, or next week, but on the day received. Within the hour your order is received, we will begin work, getting it ready for shipment.

¶ Our shipping facilities are excellent, in fact, they could not be improved. When you order from us, by mail, by telegram, or long distance 'phone, you will not be disappointed.

¶ Our lines in every department are most complete. Stocks are full, running over. We have everything and anything you want. We make it a point to keep forearmed at all times so that our customers shall not suffer through detail. Suppose you give us a trial order—nothing is so conclusive as the actual business, the practical test.

¶ We want your business, and if we get it we shall make it so advantageous to you that we will hold it.

RECORDS FOR THE CHILDREN.

Every Dealer Can Add to His Record Sales by Striving in Behalf of Their Introduction.

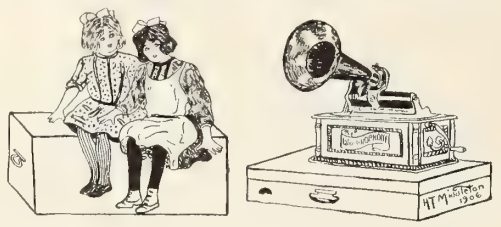
Juvenile records are not nearly so numerous as they should be, but there are a few to be found in every talking machine catalog, and it will pay you, Mr. Dealer, to demonstrate to your customers their ability to amuse.

Just think for a moment of the millions of children who tax the patience of mothers and nurses every evening at that fretful hour which comes just in advance of the sandman. They grow weary of the same old story heard so many times before. Even their favorite nursery rhyme, crooned to them ever so softly, loses its charm at last, and they wail for something new. Would not a talking machine concert comprised of a few good tales, well told, a lullaby, or a Mother Goose ditty, be eminently to the point? Instead of the wakeful, obstreperous youngster, you possess the power to create in his place a happy and contented child reveling in the delight of bedtime, lulled to sleep by a storyteller who never tires.

Very often, I'll wager, children visit your store in company with their parents, and are compelled to submit to a long program of Wagner, Beethoven or from Suppe, perched on a chair with their little legs dangling a foot from the floor, and all the while, within the very room, perhaps, are records capable of bringing a cry of sheer joy to their lips. Would it not pay you to play a juvenile record occasionally for their benefit? Most assuredly, for it would show the parents your interest in their children. Your interest is reciprocated, and there you are.

Did you ever think of suggesting to a doting father of a large family, who has just purchased an outfit from you, that in order to protect his machine from rough usage at the hands of his diminutive but highly inquisitive progeny, he should buy them a cheap machine and a few indestructible records for their very own? If this were done, they would be pleased and satisfied, having no desire to experiment with the more expensive instrument. Instruct every new customer who has children along the above mentioned lines, and if he does not deem it expedient at first to abide by your advice, refuse to be discouraged. Your victory will not be long in coming. Wait until the nursery squad make a successful raid on the record cabinet, and Father comes to you with a long face and a tale of woe about mischievous kids and broken records. Then bring once more to his attention the subject of the cheap outfit. He will see the point very clearly this time and will thank you for your suggestion. Result:—Another outfit disposed of.

Conversing with a veteran talking machine man the other day on the subject of records for



children, he told me that during the days when the phonograph was a novelty in school houses, churches, halls, etc., he went from town to town giving entertainments.

"In all my travels," he stated emphatically, "I never forgot the children. I made it a point to include something of a juvenile character in every concert, and the result was always gratifying. Often I was compelled to spend the night at a farmhouse, and that proved a paradise for the little ones. Seated on my luggage, they would beg for a certain selection that had taken their fancy at the exhibition the night before, clapping their chubby hands in ecstacy at its conclusion. I think it very strange," he added in closing, "that manufacturers do not turn out more records for children. They would meet with a ready sale the year round, and at Christmastime, if judiciously advertised, their sale would be extremely satisfactory."

There is a logic in this gentleman's opinions, Mr. Dealer; give them your consideration.

Just a suggestion in parting: How would it do to add one juvenile record to each monthly record supplement?

HOWARD TAYLOR MIDDLETON.

HEAR ALUMNI BY PHONOGRAPH.

(Special to The Talking Machine World.)

Chicago, Ill., April 1, 1909.

Phonographic addresses by graduates of Amherst College now occupying positions of trust and honor in various departments of the United States government, illustrated with stereopticon views of the Massachusetts college, were features of the seventeenth annual banquet of the Amherst Club of Chicago, given at the Grand Pacific Hotel last week. President George Harriss of the college was the guest of honor and reviewed the ten years of his connection with the institution. Thirty-five classes were represented at the banquet from 1856 to 1911, the class of 1890 with five members being the largest present.

ACHIEVING NEW TRIUMPHS.

Commenting upon some late inventions in the talking machine field, the Troy Times, in a recent issue, said: "The talking machine, like other inventions, is achieving new triumphs. A Denver man has invented an attachment to a telephone transmitter, in connection with a phonograph cylinder, by which the mechanism of a lock can be controlled and a safe unlocked by use of a countersign. However, provision against tampering with the safe is said to be assured by the fact that the mechanism can be worked only by the voice of the man who gives the countersign in the first instance. Any other voice will fail of the desired effect. Whether a cold in the head or any other influence that will change the voice will make a difference is not explained."

A PROGRESSIVE MAINE JOBBER

Is John Dunn, of Portland, Who Has Built Up a Great Business, Now Known as the Maine Phonograph Co.

One of the men who can claim the title of "the pioneer talking machine dealer of Maine" is John Dunn, of Portland, who is said to be known to more talking machine dealers in Maine than perhaps any other man.

Four years ago Mr. Dunn made the first quantity purchase of talking machines, possibly excepting one, necessary to become a jobber in the State of Maine, and opened the first store devoted to talking machines exclusively. At that time, only four years ago, conservative business men thought it a venturesome proposition to

JOHN DUNN.

endeavor to maintain a store in the metropolis of Maine with nothing to sell the public but talking machines and records. At that time $10,000 would have probably represented the purchase price of all talking machines and records in the entire State. The goods were carried as a side line in the back part of hardware stores, etc. No one then realized the wonderful possibilities of the business. To-day $100,000 would not cover the jobbers and dealers' investments in Portland alone. Four years ago there was but one jobber and three dealers in Portland, all of whom handled talking machines as a side line in a small way. To-day in Portland there are six jobbers and ten dealers. This is a wonderful illustration of the development of the industry in this one State. It is a known fact that the development has been just as rapid and pronounced elsewhere throughout the country.

The talking machine industry is based on the firmest foundation in the world—the home. The strength of our country is represented by our homes—anything that will increase the prestige and our interest in our homes is in turn reflected in the security and greatness of our country. Talking machines are used principally to furnish wholesome amusement in the home—they keep the members of the family together in the evening—they make the family more solidly united.

A short time ago Mr. Dunn associated himself with David H. Watson and organized the Maine Phonograph Co., incorporating it for $25,000. This company handles Columbia goods only—they have the exclusive jobbing rights for the entire State of Maine and a portion of New Hampshire.

In retail business it is well to remember the fate of the orator who called upon his friends to witness the defeat of his opponent and the next day found that his friends had gone over to the other side and he was friendless. Opposition is fair; competition is healthful; abuse is unfair and to defame is dishonest.

TRADE IN THE SAINTLY CITY.

Business for March Shows Improvement Over Last Year—E. D. Easton a Visitor—Good Report from St. Louis Talking Machine Co.—News of the Travelers—Columbia Graphophone for Alumni Meeting—Grand Leader to Handle the Victor—Other Items of the Month Which Merit the Consideration of Readers.

(Special to The Talking Machine World.)

St. Louis, Mo., April 7, 1909.

The talking machine business is in a fairly good state of activity, and has been better for the last month than it was for the same period last year by a good percentage. The demand for high-class machines is quite good.

E. D. Easton, president of the Columbia Phonograph Co., accompanied by his wife and daughter, spent Wednesday and Thursday, March 17 and 18, here. They were returning from a three weeks' tour of the leading offices of the company in the South and West, going as far as San Francisco. Mr. Easton expressed himself as being well pleased with the showing made by the various offices visited. He left here for Chicago and from there to New York.

W. C. Fuhri, western district manager of the Columbia Phonograph Co., spent the same two days here that Mr. Easton was in town.

O. A. Gressing, manager of the St. Louis Talking Machine Co., reports that their trade is very good. This concern recently closed a large deal with the Grand Leader, our leading department store here, for a complete Victor line, which they will handle exclusively. They have installed three handsome sound-proof booths on their third floor, and their new department is very finely equipped in every modern detail. Mr. Meyers is manager.

Mr. Gressing recently returned from a ten days' trip to Evansville, Ind., points in Kentucky, Memphis and Little Rock and reports that he found things picking up very nicely in those parts and that prospects look very good in those sections.

L. A. Cummins, traveler for this concern, recently returned from a successful trip through Illinois, on which he sold a $500 Auxetophone to A. Sellner & Co., dealers at Quincy, Ill. Mr. Cummins will leave on another trip shortly.

The annual meeting of the Amherst College Alumni Association was held Saturday evening, March 27, at the Buckingham Hotel, one of our swell hostelries here. The Columbia Phonograph Co. furnished one of their B. C. Graphophones to reproduce special made records of the leading Amherst College professors, who were unable to attend the banquet. This entertainment was received with great enthusiasm by those who heard it, and it was pronounced a great success.

E. B. Walthall, manager of the Columbia Phonograph Co., states that their trade for March is about double that for the same month one year ago, but not quite as good as their February business for this year. W. S. Byrd, traveler for this company, returned recently from a successful trip through Illinois and is now in southwestern Missouri. D. E. James, late with Jenkins & Co., of Kansas City, is now a member of the selling force of this company. B. F. Phillips, salesman for this concern, was called to New York suddenly on March 15 on account of the serious illness of his sister. She is now out of danger and Mr. Phillips has returned home.

D. M. Myers, the well known Zonophone jobber here, reports having had a good month's business, and that trade is moving well with him.

The Knight Mercantile Co. report having had a good business during the last month, and that their record trade has been very active.

The rest of the concerns stated they had only a fair trade during the last few weeks.

When a man is caught in a business injustice there are just two things to do—acknowledge it, or get mad; but he usually gets mad.

CLOSE AFTER PRICE CUTTERS.

The National Phonograph Co. continue right on the trail of price cutters. They recently secured restraining orders in the Federal Court against Henry C. Hopkins, doing business under the name of H. C. Hopkins & Co. at Dover, N. H., Joseph G. Williams, a retail dealer at Worcester, Mass., who advertised the Edison records at cut prices, claiming he was closing out that stock, and E. H. Martin and the Martin Telephone Co., of Webster City, Ia.

BUILDING WILL COST $93,000.

The four-story brick building which is now being erected in Camden, N. J., for the Victor Talking Machine Co., to meet the increasing demands of their business is scheduled to cost $93,000.

UDELL CABINETS

stand for all that is best in the art of building GOOD FURNITURE. You get only CABINETS that "have been through the mill." That is to say CABINETS that when they are crated and ready to ship are as near perfect as human hands can make them. The superiority of UDELL CABINETS will be manifest to your customer. Of course it costs more to produce UDELL CABINETS, but making them in the quantities we do enables us to not only produce better Cabinets but also to produce them at prices which, when you see them, you will also be a buyer and a booster of UDELL Cabinets. Write us please. Just say send illustrations and prices of UDELL Disc Record and Cylinder Record Cabinets.

INDIANAPOLIS, IND.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., April 7, 1909.

REPRODUCING STYLUS FOR TALKING MACHINES. George K. Cheney, New York, assignor by mesne assignments to Victor Talking Machine Co., Camden, N. J. Patent No. 915,936.

This invention relates generally to talking machines and consists more specifically of an improved form of reproducer adapted for use in connection with the sound record described and claimed in co-pending application Serial No. 160,431 filed June 6, 1903. The record referred to is preferably of the disc type having a spiral groove cut or otherwise formed in its face and the record in the form of a connected series of indentations contained on the thread or that portion of the surface of the disc remaining between the turns of the spiral groove.

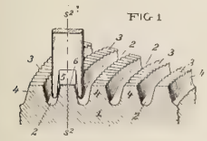

FIG. 1.

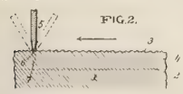

FIG. 2.

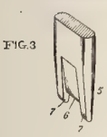

FIG. 3.

FIG. 4.

The reproducer point is preferably of suitable form to engage both the record thread and the groove on one or both sides thereof, it being thereby guided and maintained in proper relation to the record, also fed across the disc as the latter is rotated.

By reducing the bearing surface of the reproducer to the extreme point of the stylus and forming the spiral guide groove with perfectly smooth walls, unpleasant sounds, such as harsh, shrill tones and grating noises, may be either entirely avoided, or so greatly reduced as to be rendered unnoticeable.

In these drawings: Figure 1 is a view in perspective on a greatly enlarged scale, showing a portion of a disc sound record and the reproducer point or stylus in operative relation thereto. Fig. 2 is a vertical sectional view taken centrally of the record thread, on the line s^2, s^2, of Fig. 1. Fig. 3 is a detail view in perspective of the reproducer point, and Fig. 4 is a vertical sectional view thereof.

GRAMOPHONE. Luther T. Haile, Philadelphia. Pa., assignor by mesne assignments to Hawthorne & Sheble Mfg. Co., same place. Patent No. 914,826.

This invention has for its object to provide means for operatively supporting and propelling the sound-box mechanism and its adjunctive stylus or needle over the rotating sound-record or tablet, in order that the latter shall be relieved of the necessity, as in the known type of such machines, for the performance of that function. Advantages flowing from this invention, in the performance of that function by means distinct from the record-tablet itself are manifold, chief of which are that considerable of the weight of the sound-box mechanism is no longer borne by the record-tablet, resulting in its sound-grooves being less worn by any given amount of use of the machine, and also tending largely to compensate for inequalities in the record; and the needle has less, if any, scratching against the non-vibration producing bottom of the sound-grooves; and last, but of equal if not greater importance, the needle is kept in closer contact with the side walls of the sound-grooves, resulting in imparting to it stronger vibratory movements and consequently effecting like vibrations of the sound-box diaphragm and consequent louder and clearer tones therefrom.

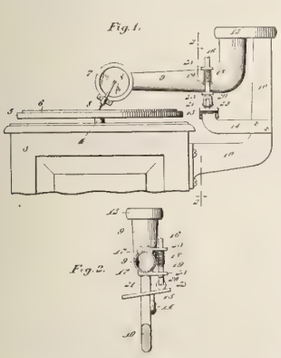

Fig. 1.

Fig. 2.

In the accompanying drawings wherein Figure 1 is a side elevation, and Fig. 2 a section on line 2—2 of Fig. 1, is shown the invented mechanism as applied to a known type of gramophone, only so much of the latter being shown as is necessary to understand and apply the invention thereto.

TALKING MACHINE. Dean S. Edmonds, New York, assignor by mesne assignments to Hawthorne & Sheble Mfg. Co., Philadelphia, Pa. Patent No. 915,022.

This invention relates to talking machines, particularly those of the type employing a disc sound-record.

The invention is directed to the provision or means for exerting a yielding pressure upon the part carrying the reproducing mechanism, to move the latter across the grooved portion of the record disc, rather than permitting the sound-box to be propelled across the disc by the record-groove.

In accordance with the invention, the reproducing mechanism is moved across the disc by the yielding-pressure device in correspondence with the rotation of the disc so that the stylus will track in the record-groove and give a faithful reproduction of the recorded sound, the sound-box being restrained against too rapid movement by the wall of the record-groove toward the end of the spiral. The provision of such a yielding-pressure device for feeding the stylus across the record offers many advantages; the stylus will move automatically under the pressure into the beginning of the record-groove, the wear on the record is materially decreased, and when a groove-wall is worn through the machine will not repeat. In accordance with the invention, a spring is employed for providing the yielding pressure. The reproducing mechanism may be secured to one end of a sound-conveying device, such as a tone-arm or amplifying-horn, and this device may be pivotally mounted upon a suitable support adjacent to the holder for the sound-record. The spring is preferably arranged between this support and the sound-conveying device and exerts yielding pressure on the latter to turn it about its pivot so as to move the reproducing mechanism across the record. With such a spring is also employed means for precluding movement of the sound-box entirely across the record to the center thereof. Such means is of importance, in order to guard against injury to the stylus and sound-box, for if the reproducing mechanism were moved by the yielding-pressure device beyond the end of the record-groove, the stylus and the lever carrying the same might engage the shaft of the record-holder or such a projection as is sometimes provided on the holder extending through an opening in the record.

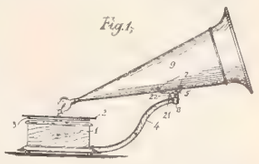

Fig. 1.

Fig. 2.

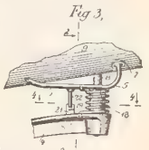

Fig. 3.

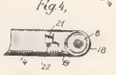

Fig. 4.

Figure 1 is an elevation of a talking machine; Fig. 2 is a section through the support and cradle on line 2—2 of Fig. 3; Fig. 3 is an enlarged detail view of some of the parts shown in Fig. 1; and Fig. 4 is a detail view in section on line 4—4 of Fig. 3.

PHONOGRAPH HORN. Francis M. Murphy, Jersey City, N. J. Patent No. 915,874.

The present invention has for its object to provide an improved form of horn of the sectional type, designed most especially for sound-reproducing machines, such as phonographs, although adapted for use where sound is to be amplified.

The invention relates to the means for connecting the sections of the horn, whereby close, firm, substantial and neat joints result, and which joints strengthen, brace and stiffen the horn in the direction of its length, while at the same time admitting of the structure being light and cheap.

For a full understanding of the invention and the merits thereof and also to acquire a knowledge of the details of construction and the means for effecting the result, reference is to be had to the following description and accompanying drawings.

Figure 1 is a perspective view of a horn embodying the invention and comprising a body portion and a base; Fig. 2 is a longitudinal section of the upper portion of the coupling end portions of the body and base, showing the parts on a larger scale. Fig. 3 is a view of the inner

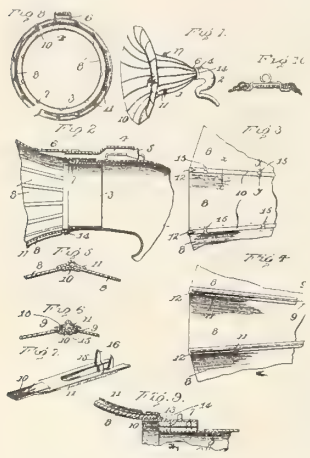
if they don't keep posted on every cabinet line made. We want you to have our cuts and prices on file, so that every time you want cabinets you can compare it with others.

Your business will come to us if you are at all interested in good cabinets. This is confidence, we know, but our reputation is well established and our goods sell on their merits. Ask for our illustrations and prices.

Record Cabinet
No. 697

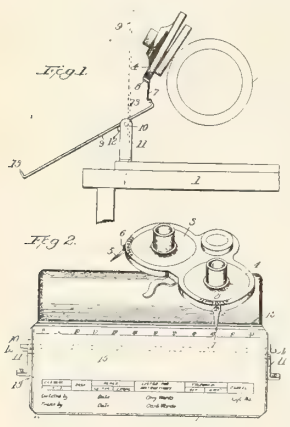
Rockford Cabinet Co., 1920-30 12th Street, **Rockford, Ill.**

side of the joint formed between adjacent sections; Fig. 4 is a view of the parts illustrated in Fig. 3, as seen from the outer side; Fig. 5 is a section on the line *x*—*x* of Fig. 3; Fig. 6 is a section on the line *y*—*y* of Fig. 3; Fig. 7 is a perspective view of the outer end of an outer rib; and Fig. 8 is a transverse section of a part of the inner end of the body, showing the same on a larger scale. Fig. 9 is a sectional view of a portion of the horn and base showing more clearly the connection between the two and the ring provided with the valve controlled openings. Fig. 10 is a sectional view of a portion of the horn showing more clearly the manner of connecting the suspending loop thereto.



PHONOGRAPH. Richard C. Farrington, Boise, Idaho. Patent No. 916,287.

The invention relates to new and useful improvements in phonographs and has for its object to provide a device whereby predetermined positions on a record receiver may be readily found and instructions indicated in connection therewith, if desired.

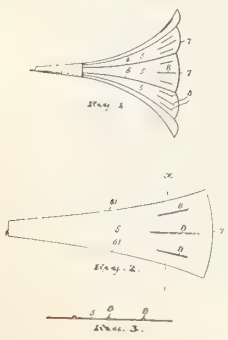


In the drawings which show by way of illustration, only one embodiment of the invention: Figure 1 is a side elevation of the essential parts of a phonograph embodying the invention. Fig. 2 is a front view of the same.

AMPLIFYING HORN. Clement Beecroft, Philadelphia, Pa. Patent No. 915,013.

This invention relates to that class of amplifying horns for talking machines in which a series of sections of metal are united by suitable joints common in metal joining and given the form of a flower, more particularly the flower known as the "morning glory," the sides of the horn flaring outwardly toward its large end upon curved lines. These horns are, further, formed of a series of longitudinal strips, each of which has its opposite edges diverging upon curved lines, and is before assembling bent into a curved shape, such curvature increasing toward the wide end of the strip.

The objects of the invention are to cause the individual strips to properly retain their curvature as formed or stamped until they are finally joined together in the complete horn; to prevent their distortion before, or while being assembled; to thus facilitate the operation of assembling the strips into a complete form and save time and labor; to obtain a more finished product or perfect horn; to enable by these means, light thin sheet metal to be employed without in any way detracting from the appearance or utility of the horn; to lesson the cost of such amplifying horns, and to obtain other advantages and results as may be brought out in the following description.

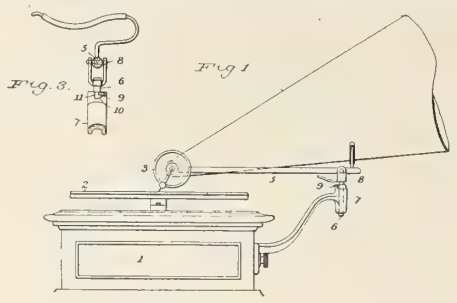


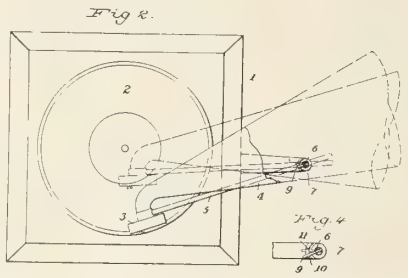
Referring to the accompanying drawings, in which like characters of reference indicate corresponding parts in each of the several figures, Figure 1 is a side elevation of the improved horn, Fig. 2 is a plan of one of the sections thereof before insertion, and Fig. 3 is a transverse section of the same taken at line *x*.

TALKING MACHINE. Louis P. Valiquet, Newark, N. J., assignor by mesne assignments to Hawthorne & Sheble Mfg. Co., Philadelphia, Pa. Patent No. 914,765.

This invention comprises a simple means for positively feeding the reproducer across the sound record in that type of machine known as the disc record talking machine.

Figure 1 is a side elevation of a talking machine with invention applied thereto; Fig. 2 is a plan view of the same with parts broken away



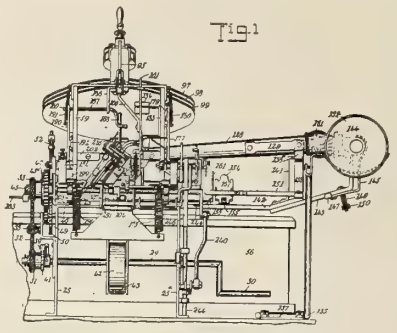


or shown in section; Fig. 3 is a detail view of the pivot pin and feed cam, the cam being shown in elevation, and Fig. 4 is a detail plan view of the cam, the pivot pin being shown in cross section.

MAGAZINE TALKING MACHINE. C. E. and W. H. Krueger, Minneapolis, Minn. Patent No. 915,448

This invention relates to talking machines, the purpose being to produce a device in which a large number of distinct operations are performed automatically, so that the machine requires a minimum of attention.

To this end the invention embodies the following objects: I. To provide a magazine for holding a number of separate records and means for changing these records so that they are played in a predetermined order of succession, the substitution of one record for another being made automatically by the machine. II. To provide mechanism whereby a needle, when used upon one record may be discarded and a new needle substituted for use upon the next successive record, the substitution of this needle being performed automatically by the machine. III. To enable the operator, by an adjustment



of certain parts of the machine, to change the action thereof so that each record may be played twice in succession before the substitution of another record, and each needle may be used twice before the substitution of another needle. IV. To enable certain parts to be disengaged from the main apparatus, thereby enabling any record or records to be repeated as many times as desired, new needles being substituted automatically for those already used. V. To enable the magazine of the machine to be adjusted so as to accommodate large or small records as desired. VI. To enable certain parts of the machine to be thrown out of action at will so that the records may be changed automatically, a single needle being used to operate upon all of the records in succession.

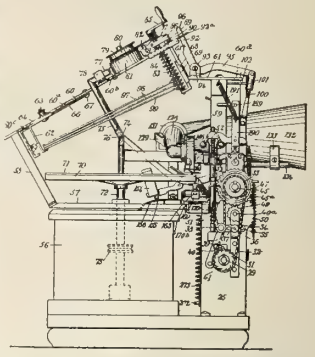


Figure 1 is a front elevation of the talking machine, this view showing at the right the phonographic horn, at its top a number of disc records to be dropped one at a time upon the turntable, and showing at its middle and bottom portions the gearing and various parts operated thereby. Fig. 2 is a side elevation, parts being broken away, this view showing more particularly the manner in which the several records

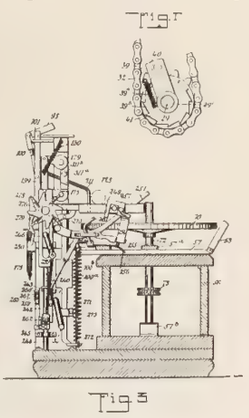
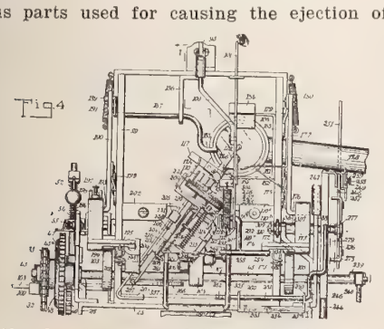
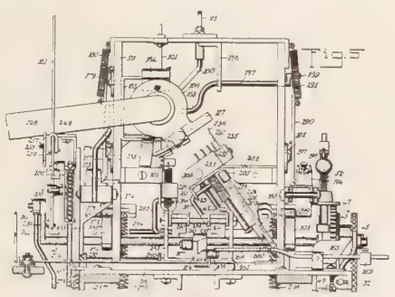
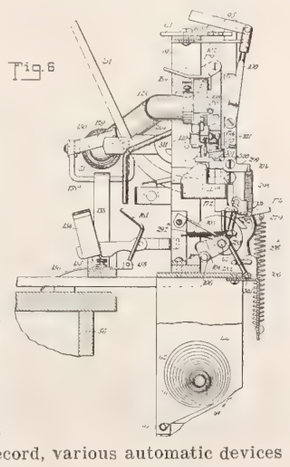
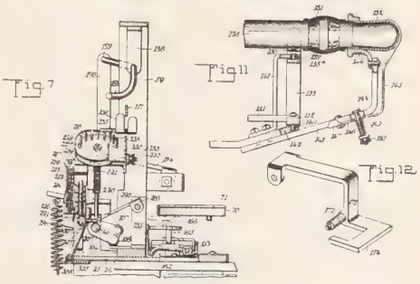
are temporarily supported and how they are dropped one at a time upon the turntable. Fig. 3 is a fragmentary section through the casing showing the turntable and various moving parts not connected directly with the turntable, and also showing a star-wheel and its connections for periodically throwing certain parts out of action when arranged by the operator to do so; Fig. 4 is a fragmentary front elevation of the machine showing particularly the needle wheel serving as a magazine for holding the needles, this view further showing the various parts for moving the needle wheel bodily toward the needle holder, and still further showing the various parts used for causing the ejection of a needle already used and the automatic substitution therefor of a new needle. Fig. 5 is a fragmentary rear elevation, certain portions appearing in section, this view showing substantially the same portion of the mechanism as that disclosed in Fig. 4; Fig. 6 is a substantially central vertical section through the machine showing the sound-box, the receptacle for holding the needles when ejected, and the various parts used for causing the ejection of the needles when used and the substitution therefor of new needles; Fig. 7 is a fragmentary section upon the line 7—7 of Fig. 4, looking in the direction of the arrow and showing the needle wheel and the accompanying parts whereby it is actuated; Fig. 8 is a plan view of the central portion of the apparatus, indicating in full and dotted lines various movements of the tube, this view further showing the mechanism whereby, upon the completion of a record, various automatic devices are thrown into action for the purpose of substituting the next record and changing the needle; Fig. 9 is a side elevation showing the star-wheel as the same would appear to an observer located at the right of Fig. 1, and further showing the movable rest for supporting the phonographic tube, and showing also the movable arm for shifting this tube in a lateral direction; Fig. 10 is a perspective of a slide upon which is mounted one of the levers used for extracting the old needle used in opening and closing the needle holder for the purpose of changing the needles; Fig. 11 is a fragmentary section through a portion of the phonograph horn

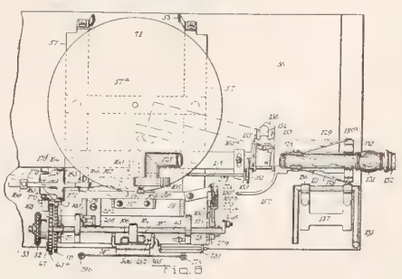


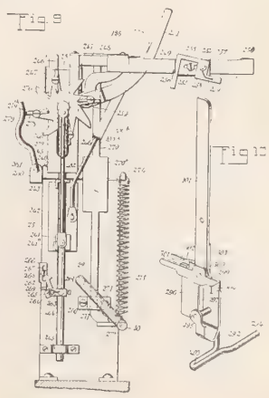




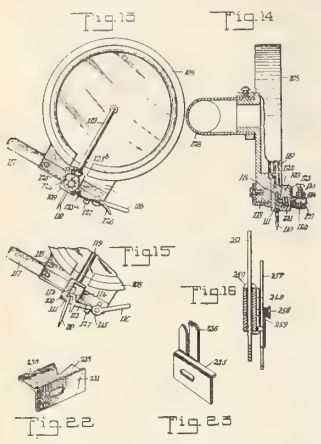


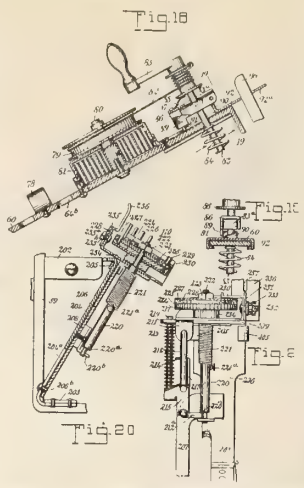




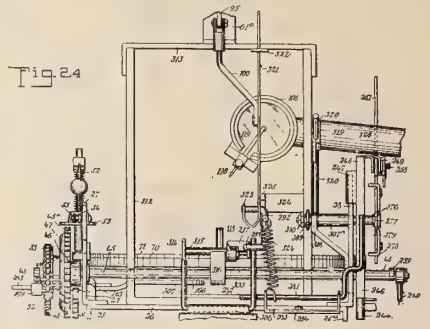


and the phonograph tube, this view showing a flexible connection for these parts, and further showing various adjustments for the horn; Fig. 12 is a perspective of one of the cam levers and its shelf used for actuating the needle holder; Fig. 13 is an enlarged front elevation of the sound box and needle holder; Fig. 14 is an enlarged fragmentary section through the sound-box and needle holder; Fig. 15 is an enlarged fragmentary section through a portion of the needle holder, this view showing the ejector for throwing out a needle after it has been used; Fig. 16 is an enlarged fragmentary section through a portion of the guide used for guiding the sound-box into a predetermined position; Fig. 17 is a fragmentary section showing the ratchets mounted upon the main shaft for enabling the latter to be turned in order to wind up the main spring; Fig. 18 is an enlarged central section through the winding barrel and





time, so as to drop them upon the turntable; Fig. 19 is a fragmentary section upon the line 19—19 of Fig. 18, looking in the direction of the arrow, and showing the escapement whereby movements of the magazine mechanism are checked periodically in order to prevent dropping of more than one record at a time; Fig. 20 is a central section through the needle wheel and its mountings showing how the needles are stored within the wheels; Fig. 21 in an enlarged elevation of the needle wheel and other parts shown in Fig. 20; Fig. 22 is a perspective of the needle guide, this part co-acting with the needle wheel for the purpose of stopping the needle wheel in such position that each needle arrives at exactly the same point in order to be more readily grasped by the needle holder; Fig. 23 is a perspective of the guide used for directing the bodily movements of the needle wheel and its accompanying parts relatively to the needle holder; Fig. 24 is a front elevation showing the device as provided with a different form of auxiliary frame, and as discarding certain parts so



as to enable the machine to be used without the automatic change of needles after each record is played.

GOGORZA'S BIG EARNINGS.

In the suit for separation and alimony brought by Mrs. De Gogorza, wife of Emilio De Gogorza, the distinguished baritone, it was stated that he received five thousand dollars per year from the Victor Talking Machine Co. for making records and made thirty thousand dollars in all last year from his concert tour. Mrs. De Gogorza was awarded three hundred dollars a month pending trial.

The TALKING MACHINE WORLD

AND NOVELTY NEWS

Published Each Month by Edward Lyman Bill at 1 Madison Avenue, New York, May 15, 1909

"The Window is the Eye of the Store"

You make up your opinion of a man very largely from the expression of his eye. Your customers form their judgment of you very largely from the appearance of your store windows.

The first essential of a window is freshness. The well-dressed window is the one that is **always fresh.** The best-planned window loses its effect after the dust has begun to settle on the merchandise and the glass gets a little dim.

Every Victor dealer should be on the safe side and give his windows a fresh dressing every so many days, whether it seems to need it or not. Each new window display has its advertising value. A good window dresser can make the window pay the rent of the whole store.

Don't crowd the window. If it is well arranged with a few articles it commands attention, when the same space jammed full with a variety of objects is passed unnoticed. Make your window tell the news of your store. Your window display can show **real** things, and has a great advantage over print, which can only tell about things.

The best window display is one that associates the Victor with some person or event of general interest. For instance, suppose you get a fine portrait of Sousa, frame it handsomely, and arrange it against a background of drapery in the most prominent place in the window, and place beneath it a neat card giving a list of the Sousa records you have in stock.

Windows like this command a great deal more attention than windows filled with a promiscuous stock of goods, and the labor and expense are much less. After you have accumulated a number of suitable draperies, frames and other articles that can be used over and over again, it is an easy matter to add the note of current interest, similar to the one described. This method of window dressing saves the handling and exposure of many articles of merchandise and gives the passing crowds something to stop and look for.

Have the "eye" of your store bright and wide open.

The Talking Machine World

Vol. 5. No. 5. New York, May 15, 1909. Price Ten Cents

THAT VOCAL SAFE LOCK.

Inventor Charpiot Has Had Many Inquiries from All Parts of the World.

George J. Charpiot, of Denver, the inventor of the safe which opens by the sound of the voice and referred to recently in The Talking Machine World, has been the constant recipient of letters and clippings from eastern cities inquiring as to the working of the innovation.

Instead of the regular handle, which the safes have now, this one is supplied with a receiver, to which, on the inside, is attached a needle similar to those used in phonographs. The safe will open only to the sound of one person's voice. Trials have been made with several people representing the sound of the voice, but the safe would not open except to the voice of the one person to which it had been made sensitive.

Since a description of this invention appeared Charpiot has heard from interested parties throughout the world. Letters from many of the leading banks ask such questions as the following: "What could be done in case the person who owned the safe died?" Supposing the man who owned the safe became hoarse, what then?" "Could not this same appliance be used on doors, and then, if a man came home hoarse or his voice thick on account of being drunk, how could he unlock his door?" "Couldn't a burglar who wished to open a safe like that imitate the sound of the man's voice who owned it sufficiently to open it?" "Couldn't a person take a phonographic record of the man's voice who owned the safe, and then, by putting the phonograph up to the receiver, unlock the safe?"

EDISON KILLS RATTLESNAKE.

Back from a Southern Sojourn With a Trophy in the Shape of a Skin of a Rattlesnake Which He Killed.

Among the other luggage that Mr. and Mrs. Thomas A. Edison brought back to their home in West Orange, N. J., recently from Fort Myer, Fla., where they had been spending the winter months, was the skin of a very fine specimen of the diamond back rattlesnake, measuring nearly six feet in length. Had it not been for the quickness of the inventor in landing a real home strike blow on the snake's head there might have been a different story to tell.

Every winter Mr. and Mrs. Edison go to Florida. While there the inventor works out the various problems which he has not had time to complete in his laboratory in New Jersey, and goes fishing between times. On the last day they were at Fort Myer, Mr. and Mrs. Edison were taking a walk along one of the palm shaded avenues when there was a warning whir from the side of the road, and the inventor pulled his wife to the side just in time to get her out of the way of a monster rattler that had been coiled up almost beneath their feet. The snake coiled for another spring, but before he could strike the inventor picked up a stick.

As the snake darted forward on the second spring Mr. Edison stepped aside, and taking careful aim, hit the reptile a vigorous blow with his club. The rattlesnake was instantly killed. It was one of the largest ever killed in the vicinity.

TAKES ON THE VICTOR.

The Driggs & Smith Co. Put in a Talking Machine Department.

The Driggs & Smith Co., Waterbury, Conn., have recently opened a talking machine department, which is under the supervision of J. H. Dodin. This is one of the leading music trade institutions of Connecticut and have placed in a full line of Victor goods, and without doubt, with the progressive methods which they have placed behind the new department, it will be a success from the start.

P. R. Cumming, president of the company, remarked to The World recently that the establishment, although less than a month old had transacted an amount of business which exceeded his most sanguine expectations.

RAY ROCKWOOD A WONDER.

Monrovia Features Him as One of Its Greatest Attractions—Doesn't Hide His Light Under a Bushel—A Prolific Inventor.

(Special to The Talking Machine World.)

Los Angeles, Cal., May 5, 1909.

One of Monrovia's attractions is the workshop and laboratory of Ray Rockwood, a young inventor 24 years of age. So well known have the attractions of his workshop become that he is kept busy entertaining parties who visit it, not only from Los Angeles, but from the entire State.

His most taking invention with the public is the "phonograph." It consists of a good sized carpenter's bench with two large concrete horns, much like the ventilators on a man-of-war, protruding from either end. The mechanism is cleverly hidden within. The concrete horns, which are ten feet long, entirely do away with that metallic sound so noticeable in the ordinary phonograph, rendering a beautiful and distinct tone.

Rockwood also worked three years on a cornet, and has finally succeeded in producing an instrument which many musicians declare to be far ahead of anything on the market at the present time, the entire fingering having been simplified.

Next in importance comes the gaslighter and tickless clock. The former is a small contrivance, whereby the ordinary gas jet may be ignited by simply pushing a button. The latter is an ordinary clock, on which the mechanism has been so revised that while it keeps perfect time no noise is heard.

AUXETOPHONE AT BANQUET.

Piano Men Listen to Grand Opera Performance.

The annual banquet of the Connecticut Piano Dealers' Association, held at Waterbury, Conn., on April 22, was enlivened by music from the Auxetophone.

A pleasing program, which included grand opera numbers, delighted the banqueting piano men, many of whom expressed surprise at the marvelous entertaining powers of the Auxetophone.

The program was arranged by the Driggs & Smith Co., of Waterbury, who have recently taken on the Victor line.

BALLARD PHONO. CO. MAKES ITS DEBUT.

Victor A. Welman has made his appearance as a talking machine dealer in Seattle's hustling suburb, Ballard, a town of about 20,000 inhabitants. Mr. Welman has acquired the stock and good will of H. C. Tharp, who has been conducting the business for the last two years. Mr. Welman is not new at the work, but leaves a lucrative berth with the D. S. Johnson Co., the largest talking machine dealers in the Northwest where he was connected with both the selling end and the advertising department. With the opportunities of the location and his preparation for the work his success is almost assured. The house will be known as the Ballard Phonograph Co., and will handle Edison, Victor and Columbia products, besides a good line of small goods.

E. C. Goodwin, of Lyon & Healy, Chicago, was a visitor at New York headquarters of the National Phonograph Co. last week.

DEATH OF ANDREW DEVINE.

The Senior Vice-President of the Columbia Co. Passes Away in His 67th Year.

Andrew Devine, senior vice-president and the oldest director of the Columbia Phonograph Co., General, died May 4 at his home in Brooklyn after a short illness. Mr. Devine was stricken with paralysis the Sunday previous, an attack from which he never recovered. The deceased was sixty-seven years of age, and was associated with Edward D. Easton, president of the company, from the earliest days of the enterprise, when the old Bell and Tainter patent, which means the actual beginning of the modern talking machine business, was acquired. Mr. Devine, like Mr. Easton, had full faith in the future of what may frankly be described as a novel venture, and their belief in the ultimate success of the present day trade never wavered.

The deceased was well known among public men, having been for many years one of the official stenographers of the United States Senate, and during the Blaine campaign for the Presidency he not only reported the speeches delivered by the "plumed knight," but also acted in a confidential advisory capacity. Mr. Devine, who was also one of the founders and prominent officials of the Merganthaler Linotype Co., was highly esteemed by a large circle of friends, and his business associates spoke of him in the highest terms of praise. He left a large estate, variously estimated at a million dollars.

A PHONOGRAPHIC WARNING.

Indiana Man Invents Device to be Attached to Gasoline Cans to Prevent Mistakes.

John W. Adams, of Farmersburg, Ind., is credited with the invention of a phonographic attachment for gasoline cans that utters "Gasoline—explosive!" whenever the cap is being unscrewed. By this means one can tell when he has the gasoline can, even in the dark. Mr. Adams says that he has been offered $50,000 for the invention, but declines to sell. With this device perfect safety is obtained, as one cannot make the mistake of placing gasoline in an oil lamp without knowing it.

CLEMENT BUYS SAWYER'S STOCK.

(Special to The Talking Machine World.)

Bar Harbor, Me., April 8, 1909.

S. J. Clement, of Clement's music store, has bought the entire stock of Edison phonographs and records of J. H. Sawyer and has combined it with his already large stock at 160 Main street. Thus making the largest and most complete stock of Edison goods in Eastern Maine. Mr. Clement has a large room separate from the main store devoted exclusively to this line, the walls of which are lined with Edison records, every number of the extensive catalog being represented. This room is fitted up with special reference to the comfort and convenience of phonograph customers.

The Continental Royalphone and Phonogram Co., of Kittery, was recently incorporated in the State of Maine with a capital of $5,000,000. President, A. H. Peavey; treasurer, G. E. Burnham, and clerk, E. J. Burnham, all of Kittery.

Geo. E. Seavey, successor to Seavey Bros., Haverhill, Mass., has built up an excellent trade in talking machines, pianos, sporting goods and other specialties in that section. He handles the Victor, Edison and Columbia machines and a full line of records, as well as supplies of all kinds.

MILWAUKEE'S BUDGET OF NEWS.

Spring Trade Will be Double That of Last Year —New Victor Styles Popular—McGreal's Great Campaign of Publicity—Many New Victor and Edison Agencies—The Talking Machine in the Church—Hille Takes Charge at Flanners—The Cream City Supply Co. Open Up—Columbia Trade Active—About the Bull Terriers—Other Items.

(Special to The Talking Machine World.)

Milwaukee, Wis., May 8, 1909.

Despite unseasonable weather, dealers are predicting that the total spring trade will more than double that of last year, and there is every assurance that the prediction will be borne out. The wholesale business is especially good and dealers all over Wisconsin seem to be stocking up. The past year has witnessed nothing short of a housecleaning in stocks and the present spring business started out with more new records and machines on hand than at any time in years. Dealers say that this will work for the general good of the trade, and that nothing could be more satisfactory than in clearing out the shop-worn stocks.

The new styles of the Victor, 2 and 3, have been meeting with ready sales in Milwaukee and promise to be classed among the leaders for some time to come. The larger cabinets and substantial makeup of the machines seem to be popular with the trade.

Lawrence McGreal seems to be following a most successful campaign of publicity for his machines which partly accounts for the big business secured by the McGreal establishment. No social event, no matter how large or small, ever takes place in Milwaukee without Mr. McGreal placing one of his popular talkers at the disposal of the gathering. The result is that Mr. McGreal himself is regarded something in the light of a benevolent benefactor and has won hosts of friends, a fact which is bound to react favorably in a business way, but the machines themselves are advertised as they could not be in any other manner. Milwaukee seems to be making a name for itself in the sale of Victrolas and undoubtedly the demand for this machine and other talkers of a high class has been materially strengthened by Mr. McGreal's methods of advertising.

Mr. McGreal is a particular friend and a privileged member of the Milwaukee Press Club, and this organization never conducts an event without the aid of a Victrola or some other machine from the McGreal establishment. He is also a member of all the leading commercial organizations of Milwaukee and is most liberal in offering his machines for every event under the auspices of these associations. It is not only Mr. McGreal's own business that has been strengthened and increased in this way, but dealers in the city and all over the State have profited in a business way. One well known Milwaukee dealer relates how he sold two machines directly after a successful concert held by Mr. McGreal before one of the business organizations of the city.

Mr. McGreal took a prominent part with one of his machines last week at the annual meeting and dinner held by the Milwaukee Foundry Foremen's Association. A Victrola also helped to make merry the recent May party of the Milwaukee Press Club.

Several new agencies for the Edison line have been opened up at various points in Wisconsin and northern Michigan by William P. Hope, representative for the National Phonograph Co. for this territory. Mr. Hope was in Milwaukee recently and reports that prospects in the talking machine field are of the very best.

Several new dealers have been started in the Victor line by William Schmidt, Wisconsin representative of the Victor Co. Mr. Schmidt was in Milwaukee last week after a busy trip through his territory.

Mrs. W. J. Voss, wife of the proprietor of the Voss Phonograph Co., at Appleton, Wis., was a recent Milwaukee visitor.

The talking machine seems to be in bad repute among the members of a certain well-to-do congregation on the upper east side of this city. And all because it "butted in" at an importunate time. The service had progressed through a particularly edifying sermon on the application of the Christian spirit to housekeeping, and the proselyting among servants and other members of the household. Everyone felt particularly devoted and righteous when the soloist of the congregation rose to sing. The song was one of the old favorites of the congregation. With thrilling sweetness the singer thrilled out the refrain, "How Far With Thee, How Far With Thee-e e." In the ensuing moment of questioning pause a talking machine in the residence next door, probably turned on by some maid in the absence of the mistress, whirred and came out clearly with the refrain of its song, "You Can Go As Far As You Like With Me." The singer finished her hymn, but there were smothered indications of a riot in the congregation.

Lawrence McGreal is again president of the McGreal team in the city baseball league, an aggregation which promises to "do up" all other teams in the league this year. Mr. McGreal recently donated two score boards to Milwaukee baseballdom, one for the White City Park and the other for the South Side Park, both in honor of the league's new president, Dick Marcan, former manager of the McGreals.

That the moving picture shows of Milwaukee are not of a nature requiring censorship is the stand taken by several of the leading talking machine dealers of the city. Dealers say that they do not make the statement simply because the five and ten-cent theatres are good buyers of machines, but because they have made personal investigation of the matter. One talking machine dealer calls attention to the fact that the films used by the shows are now thoroughly inspected by an official board at either Chicago or New York before they are sent out. One theater manager claims that he exercises a censorship in his own house and that an objectionable film never gets by him.

Alfred Hille, formerly connected with the sheet music department at the Joseph Flanner Music House, has been made manager of the talking machine and musical merchandise department of the establishment. Charles H. Iddings, former manager of these departments, is now connected with the Cable Piano Co., at New Orleans, as salesman.

E. L. Peterson, of Plymouth; Bert Poat, of Waterford, and Mr. Erbe, of Lawn & Erbe, of New Holstein, were recent Milwaukee visitors and reported trade on the upward trend.

Roy Keith, of the Talking Machine Co., of Chicago, called upon the Milwaukee trade recently.

The Cream City Supply Co. have organized to carry on a general talking machine business at the former stand of the Huseby Co., at 454 Grove street in this city. George Cremer, formorly with the Huseby Co., and later connected with a Chicago concern, is treasurer and general manager of the new business. Both the Edison and Victor lines will be carried, as well as a full line of records and supplies. A general repair business will also be conducted. It is rumored that the new company is backed by Chicago capital and interests. Milwaukee dealers are not over enthusiastic over the prospects of another company in the local field, because while trade is satisfactory, there is every indication that the latest concern will only add to the competition.

The "Merry Widow" took Milwaukee by storm recently and sales of sheet music and talking machine records of the leading hits of the opera were far more brisk than dealers had hoped for. As usual, the Hoeffler Mfg. Co. took the honors for a catchy window display. Manager J. H. Becker, Jr., of the talking machine department, had arranged a life-size "Merry Widow" seated on a "Merry Widow" machine in his window, calling attention to the popular records of the opera. Ready sales of Red Seal and domestic records for a period of two weeks were reported by Manager Becker.

The family of Jessie, the bull-terrier mascot of the Milwaukee branch of the Columbia, has been dwindling of late. Manager A. D. Herriman has been true to his word that he would distribute the young pups among the managers of the several Columbia establishments in the Middle West and East and only one or two of the happy family remains.

A big sale of Columbia double-faced and Columbia indestructible records was made at the Columbia establishment during the past two weeks. Manager Herriman reports that demand for the higher-priced machines seems to be daily growing with the trade.

A. D. Bullock has opened a talking machine parlor in Onset, Mass.

DO YOU REALIZE

that to get all there is in the Talking Machine Business, that you ought to be able to supply the demand for either a Disk or Cylinder Machine or Record ?

THERE IS A DEMAND FOR BOTH

Why not place yourself in a position to meet it if you are not now. ?

VICTOR AND EDISON

have the call, are the best and the largest advertised lines.

IF YOU HANDLE ONLY ONE

Write us about the other.

IT'S TO YOUR ADVANTAGE TO BUY OF A JOBBER WHO HANDLES BOTH. IT MEANS ONE SHIPMENT, ONE EXPRESS

Victrola

The perfect musical instrument

Perfect musically The Victrola plays all the unmatchable Victor music and entertainment in the richest, sweetest, most mellow tone ever heard—as pure and true as life itself. The Victrola satisfies the most critical musical tastes. It creates a deeper appreciation for operatic and classical music.

Perfect artistically The Victrola cabinet is a fine example of dignified beauty. Its graceful lines make it particularly pleasing to the eye. It is worthy of a prominent place in the most exclusive home. The woods used in making the Victrola cabinet are specially selected for their richness of color and fineness of grain —quartered oak, San Domingo mahogany and Circassian walnut. There is a wide choice of beautiful finishes.

Perfect mechanically The Victrola has the absolutely accurate, noiseless-running Victor mechanism, an indispensable for perfect playing. The horn is entirely concealed. The music flows through the small doors, which can be opened or closed, to regulate the volume of sound.

The Victrola is the greatest musical instrument in the world

It is receiving unbounded and enthusiastic approval. There is absolutely no other instrument to compare with it. It draws the patronage of the most wealthy and refined. It is the highest example of Victor "quality."

Sell this wonderful instrument, Mr. Victor Dealer! Get the most out of the phenomenal Victrola popularity! There is Victrola business all around you. This means greater sales—greater profits for you. And think of the possibilities for increased sales of Red Seal Records.

F

DECISION IN CONTEMPT SUIT

Of the Victor Talking Machine Co. Against the Leeds & Catlin Co—Will be Worth Reading by Many of Our Subscribers.

(Special to The Talking Machine World.)

Washington, D. C., May 3, 1909.

In the contempt case of the Victor Talking Machine Co., Camden, N. J., against the Leeds & Catlin Co., New York, the Supreme Court of the United States, on April 19 affirmed the decision of the Circuit Court of Appeals, second circuit. On January 5, 1907, Judge Lacombe, Circuit Court of the United States, southern district of New York, fined the Leeds & Catlin Co. $1,000 for violating an injunction issued by the court, restraining them from selling their records to be used on Victor machines, thereby becoming contributing infringers of the Berliner patent. The case was taken to the highest tribunal on a writ of certiorari, and a motion to dismiss the suit was argued January 14, 1909. The opinion was written by Justice McKenna, and is in part as follows:

"The lower courts found that most of the sales (we quote from the opinion of the Circuit Court of Appeals) of the records by petitioner 'were knowingly made to enable the owners of the Victor talking machines to reproduce such musical pieces as they wished by the combination of the Leeds & Catlin record with said machines; and that the Leeds & Catlin Company made no effort to restrict the use to which their records might be put until after motion to punish for contempt had been made; that the only effort at such restriction ever made was to answer upon the face of the record and notice to the effect that such record was intended and sold for use with the "feed-device machine"; that the records sold by plaintiff in error (petitioner) were far more frequently bought to increase the repertoire of the purchaser's Victor machine than to replace wornout or broken records.' The 'feed-device machine' referred to by the court was a talking machine bought by petitioner after, as petitioner avers, the Circuit Court of Appeals affirmed the injunction, and in connection with which it sold, as it also avers, and used, its sound records. The court assumed, for the purpose of the cause, that the feed-device machine might be regarded as not infringing any of the rights of the Victor company under the Berliner patent.

"The court further found that it was established by the evidence that the discs were equally suitable for that machine as for the machine of the Victor Co., but that it 'was not at or before the time of beginning this proceeding a practically or commercially known producer of musical or spoken sound, whereas the Victor machine, embodying the claims of the Berliner patent here under consideration, was at such times widely known and generally used, and that the plaintiff in error (petitioner) knew, and sold its records with the knowledge, that if its output was to be used at all by the public it would be used with the Victor machine, and in the combination protected by the claims of the Berliner patent, before referred to.' And the court concluded that upon these facts it was clear that petitioner had "made and sold a single element of the claims of the Berliner patent, with the intent that it should be united to the other elements and complete the combination. And this is infringement.

* * * * * * * * * * * * * * * * *

"Can petitioner find justification under the right of repair and replacement? The Court of Appeals, in passing on these cases, considered that there was no essential difference between the meaning of the words 'repair and replacement.' That they both meant restoration of wornout parts.....The sales of petitioner, as found by the courts below, and as established by the evidence, were not to furnish new records identical with those originally offered by the Victor Co., but, to use the language of Judge Lacombe in the Circuit Court, 'more frequently in order to increase the repertory of tunes than as substituted for wornout records.' The right of substitution or 'resupply' of an element depends upon the same test. The license granted to a purchaser of a patented combination is to preserve its fitness for use so far as it may be affected by wear or breakage. Beyond this there is no license.

"It is further contended by petitioner that the disc records, being unpatented articles of commerce which could be used upon the mechanical feed device machine or exported to foreign countries, or concededly for repair of machines sold by respondent, petitioner could legally sell the same. A detailed comment on this contention or of the cases cited to support it we need not make. The facts of the case exclude petitioner from the situation which is the foundation of the contention. The injunction did not forbid the use of the records, except in violation of claims 5 and 35 of respondent's patent. The judgment for contempt was based upon the facts which we have detailed and they show a sale of the records for use in the Victor machine, 'an entirely voluntary and intentional' (to use the language of Judge Lacombe, contributory infringement.

"We have seen that the Circuit Court of Appeals assumed, for the purposes of this cause, that the feed-device machine was not an infringement of the machine of the patent. We may assume the same, and we are relieved from reviewing the very long and complex affidavits submitted by the petitioner to explain the same, petitioner's relation to it or its position in the art of sound reproduction. Petitioner was found guilty of selling records which constituted an element in the combination of the patent in suit, and for that petitioner was punished. Upon whatever questions or contentions may arise from the use of the feed-device machine we reserve opinion. We have not reviewed or commented upon the other cases cited respectively by petitioner and respondents in support of their contentions, deeming those we have considered and the principles we have announced sufficient for our decision. Judgment affirmed."

It's So Easy

Yes, it is not only easy **to learn** a foreign language by the I. C. S. system—the easiest and most perfect way in the world—but it is also easy **to sell** I. C. S. language outfits. It is easy to sell them to people who are tired of their machines as an amusement device and will be glad to turn them into a source of profit. It is easy to sell them to persons going abroad and who otherwise desire to learn a language for the sake of the knowledge of it alone. It is easy to sell it to men and women who desire to qualify for positions as translators and foreign correspondents. It is easy to sell it to foreigners, in order that they may learn to speak English. In fact there are a great many sound reasons why it is easy to sell the

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

Do **you** sell I. C. S. Language outfits? If not, why are you thus neglecting such an important and profitable field of your work? Why are you thus absolutely throwing away at least one-third of your business? The Phonograph system of language instruction is now recognized as an educational factor of great importance and the demand for this sort of language instruction is growing by leaps and bounds. The I. C. S. system is undoubtedly the one of the greatest merit obtainable today. Write us a postal **now** for further particulars.

Box 918, SCRANTON, PA.

MR. CONRIED'S DEATH REGRETTED.

The death of Heinrich Conried, formerly manager of the Metropolitan Opera House, which occurred recently, was sincerely regretted by Signor Caruso, who is now sojourning in a quiet suburb of London. It was Mr. Conried who brought Signor Caruso to New York and exploited him, and without Mr. Conried there would have been little chance for Signor Caruso in the Metropolitan Opera House. Signor Caruso said:

"He was my first American manager and I shall always cherish his memory, not only as an impresario but as a friend. None could have been better."

When Mr. Conried first engaged Signor Caruso he did it on his reputation alone. He had never seen the great tenor nor heard him sing. When he did meet Signor Caruso in a little reception room in the Metropolitan Opera House it was with a burst of pleasure, and he told me he was so glad that Signor Caruso was not as short as he had feared.

"I was afraid he would be one of those little bits of fellows," said he. Then after I had introduced the star to the impresario, we all went up stairs to listen to a record of some of Signor Caruso's songs. Mr. Conried was very proud of that talking machine and I suspect those records had a great deal to do with bringing Signor Caruso to New York.

GREETINGS FROM THE EAST.

Thomas Edens Osborne, the well-known talking machine dealer of Belfast, Ireland, sends greeting to the World from Tunis, Africa. He says "the glamor of the East with its bewitching climate is a striking contrast to the dull and prosaic life of Belfast, even when relieved by graphophone and phonograph."

The Eden Musée has arranged some new groups of wax figures of the present-day inventors, among which are Count Zeppelin and his model airship, and Thomas A. Edison and his model phonograph.

RECITALS MAKE BUSINESS.

How M. J. Roth Carries on His Campaign for Trade by Means of Recitals—His Appeal to the Children and Adults.

M. J. Roth, the enterprising talking machine dealer of 1495 Third avenue, New York, is stimulating trade most successfully these days by means of special Victor recitals on every Saturday morning at 10.30 for children, and every Saturday evening at 8 o'clock for adults. The concerts which are given on the fifth floor of the Roth Building are under the special supervision of Mr. Isaacs, the manager of the talking machine department.

At these concerts special literature is distributed, bearing on the talking machine, and

CHILDREN ENJOYING CONCERT AT ROTH'S.

as a consequence the audience receives a liberal education regarding its possibilities and becomes so enthusiastic that in due time goodly purchases result.

Perhaps the most enthusiastic audience is that which attends the children's concert. The photograph herewith was taken on Saturday forencon, April 24th, and gives an idea how Mr. Roth develops his business. The programs for the children's recitals are especially attractive and designed to be interesting and educating. The programs for the adults' recitals of course are much more ambitious.

Talking machine dealers throughout the country could well take a lesson from Mr. Roth's enterprise. There is no better means of developing "prospects" than by recitals of this kind and no better missionaries than the children. What they want their parents usually must get, and it is very difficult for them to hear a Victor or Edison machine without desiring to secure it.

Mr. Roth occupies a very fine building and carries a full line of Edison phonographs and Victor talking machines, as well as accessories.

WAX FROM A MEXICAN WEED.

The Once Despised Candelilla Now Worth $200 or More an Acre—Wax Used for Talking Machine Records.

(Special to The Talking Machine World.)

Monterey, Mexico, May 7, 1909.

The discovery by Oscar Pacius, of this city, of a process for extracting wax from the candelilla weed is causing the establishment of a new industry in Mexico and Texas. The candelilla grows abundantly upon many millions of acres of semi-arid land in Northern Mexico and parts of Texas, Arizona and New Mexico. Land owners who have this formerly despised weed growing upon their holdings are now in a fair way to reap a fortune.

When it was discovered a few years ago that a good grade of crude rubber could be manufactured from the guayule shrub experiments began to be made by Mr. Pacius and others with various other kinds of wild vegetation to learn if they possessed commercial properties. Mr. Pacius found that the candelilla contained wax to the amount of 3½ to 4½ per cent. He gathered a supply of the plants and began experiments with a view of arriving at a process of economical extraction of the wax. He perfected this process a few months ago and it is now in practical operation.

The manufacture of this vegetable wax is already on a paying commercial basis. The demand for the product comes at this time chiefly from Germany. The present price of the wax in Mexico is $600 gold a ton. It is said that it takes about thirty tons of the weed to make one ton of the crude wax. The cost of producing a ton of wax is $75 gold.

The land upon which the candelilla weed grows profusely is producing a big revenue in the localities where factories have been established. It is said that where land is well set in the plant it can be made to yield a profit of $200 to $300 gold an acre a year.

The candelilla wax is said to be harder than any other wax. This fact has caused it to be in demand for the manufacture of talking machine records, pharmaceutical articles, varnishes, shoe, leather and wood polishes, insulation in electrical wiring, gums, candles and many other things.

The fact that the guayule shrub and the candelilla plant are now known to contain valuable commercial properties has aroused the interest of the Federal authorities of Mexico and it is said that a series of chemical experiments and tests of the various other desert plants which cover great stretches of land in Northern Mexico will be made under the direction of the Government with the view of discovering any commercial properties that they may contain. One plant which grows profusely along the Rio Grande is called gubernador and is being used extensively for the manufacture of a boiler compound. There are also two or three kinds of shrubs and weeds which possess cleansing properties almost identical in effect with washing soap. The roots of one of these shrubs are used by the native Mexicans to the exclusion of manufactured soap.

AFTER SALE WORK.

What Must be Done to Retain Trade—Effective Follow-Up Work.

An English concern that has a number of stores in various parts of the United Kingdom has a follow-up plan that can be readily adapted to the talking machine trade. About a month after a person has purchased a suit of clothes of the English concern a reply postal is sent, asking if it wears well, if it is giving satisfaction, etc. The replies received give the managers excellent ideas. Even those who do not reply are impressed with the interest manifested.

After you sold a talking machine, have you taken the trouble to send an inquiry, by mail, as to whether it operates satisfactorily; if not, that you desired to offer suggestions? Or, did it get slightly out of adjustment and thereby cause disappointment? Don't think for an instant that after you get the customers' money in your safe that is all that is to be done—if you desire to retain his trade.

The department stores are insistent follow-up people; they keep right after their customers, not once a season, not once a month, but an average of twice or more times a month, in the large cities. If they find it advantageous, you ought to. Don't wait until you are forced into it, because by that time some of your possible customers may then belong to the other fellow. There is also another class of competition, the personal element of which never shows up, but the constant solicitation by mail is always going on. What are you doing to offset, overcome and keep out this competition?

REGINA CO. SELL EDISON STOCK.

The Regina Co., New York, on April 23, sold their entire stock of Edison machines, records, etc., to James K. O'Dea, a jobber of Paterson, N. J. The Regina Co. thus retires from the talking machine business, with the exception of handling the Columbia line and their own machines and instruments. They will fill orders for the Edison May records and then are through.

COLUMBIA CO. IN DES MOINES.

(Special to The Talking Machine World.)

Des Moines, Ia., April 27, 1909.

The Columbia Phonograph Co. have secured the east half of the room in the Grand department store, formerly occupied by the McQuaid Company, and will take possession May 1.

NOW THE YAKIMA CO.

The Yakima Music Co. have absorbed the Guernsey music store at North Yakima, Wash. The proprietors are: C. W. Harris and Bertha B. Guernsey Harris. They are carrying a complete line of Victor and Edison goods.

Wisdom cries in the streets when it has fish to sell.

Wisconsin or Northern Michigan Talking Machine Dealers!

If you want service, I am able to give it and besides save you time and freight.

Complete line of EDISON and VICTOR Machines, Records and Supplies.

Send me your new monthly record orders for May and June and try my service.

NEW YORK, MAY 15, 1909.

AN article appearing in another section of this paper from the pen of Eldridge R. Johnson, president of the Victor Talking Machine Co., contains much of interest to every talking machine man.

Mr. Johnson wields a forceful pen and his utterances anent the recent Supreme Court decision and upon the future of the talking machine business are presented in an original and striking manner.

In this connection we may state that this is the first time that Mr. Johnson has publicly expressed his views upon matters of vast import to the talking machine trade, and inasmuch as he is the founder and the present head of the great Victor Company his utterances must therefore possess unusual interest to everyone identified with the industry to which The World appeals.

THUS far, Spring business has not shown the activity which was predicted earlier in the year.

Business is not materially brisk in any line, and dealers in most trades are buying only to meet immediate requirements.

The tendency is to make purchases for temporary needs only.

That sums up briefly the general condition of trade, although the last reports received at The World office in regard to business are on the whole more satisfactory than for some time.

There is a better feeling in trade circles and the indications are re-assuring.

An improvement is noticeable not merely in the talking machine trade but in many other lines.

Manufacturers are receiving fair orders from dealers, and many affirm that the disposition not to adhere as closely as heretofore to the policy of extreme conservatism is observable.

The tone of the general market is without important change.

Communities dependent to a large degree upon the railroads and manufacturers for their commercial prosperity reflect the retarded activity of those interests in a sluggish demand, while on the other hand the business carried on in purely agricultural sections is in most cases really if not unusually normal.

The reports from the West are of a most encouraging nature, but Eastward they are less satisfactory, due doubtless to the fact that there are many thousands of men who have not yet secured employment.

HOW great has been the transformation which has taken place in those parts of the West and Northwest, which but a few years ago, were regarded as almost beyond the confines of habitable territory, is emphasized by the striking resourcefulness displayed under present conditions.

The results of a recent sale of bonds for municipal improvements in a Dakota city of about 10,000 inhabitants furnishes an instance in point.

Bids on the securities amounting to $100,000 were tendered by representatives from a number of the leading financial centers, but the entire issue was taken by local capital, representing wealth gleaned from the soil, and there is not much wonder that the farmers of the great agricultural sections are buying more largely, of what may be termed the luxuries of life. From a debtor class they have graduated into the creditor class.

The demand for talking machines, particularly the higher priced talking machines in the great agricultural sections of the country is more and more emphasized.

The talking machine jobbers who cater to the needs of the dealers in those sections of the country report a steady increase in trade.

Of course the talking machine business is not in an exuberant state, nor could it be expected that it would move ahead of other industries in the business revival, but it is growing better all the while, and when the flood tide is on it will be found that the big producing institutions will be in a better condition than ever to meet the requirements of the trade.

IT is an inspiring sight to visit such a plant as the Victor at Camden, N. J.

The directors of this great enterprise show their confidence in the future of the business by planning additions which will mean when completed many acres of additional factory space.

The Victor plant of the present time is an extensive one, and a trip through the various departments will furnish one with food for thought for many a day.

The splendid business system, the exactness and the clock-like precision which directs the workings of this great industrial enterprise will be apparent to every observer.

It is system and thoroughness which is apparent in every department and the present enormous plant of the Victor is run to its utmost capacity. While we have visited hundreds of factories we never have seen one in which more men were actively employed within the same number of square feet than is seen in the case manufacturing department of the Victor.

When the new addition which will be rushed rapidly to completion is in working form it will mean vastly increased creative facilities.

Such work as this concern is doing is encouraging, and is worth emphasizing, not merely because the Victor Co. occupy such a prominent position in the talking machine trade, but because of the fact that the manufacturers exhibit their willingness in such times as we have just had, to go ahead and plan bigger factory facilities, which should inspire all whether they are selling talking machines or any other specialty or commodity.

THE attitude of the great talking machine institutions toward the trade has been one of progress, marked by liberality in the treatment of their factors.

In what other trade have interests been so safeguarded as in the talking machine line, and if it had not been for the wisdom of the directors of the big talking machine companies the trade would not have held together in the manner which it has during the strain of the past two years.

Price cutting and demoralization of conditions have been impossible and it is through the maintenance of rigid rules that the trade itself has been saved from disintegration, and it must be conceded by men who go closely into the inner conditions of this industry that it is in the hands of competent and progressive business men. It is folly for one moment to suppose that the conditions which profit the manufacturing companies do not also assist the retail trade, and it is well, too, when some people are inclined to be pessimistic over the talking machine future to emphasize the money-making qualities of talking machines to jobbers and dealers.

WE can name institutions in Boston, Chicago, Cincinnati, St. Paul, New Orleans and San Francisco and in scores of other cities, who have netted splendid profits annually through talking machine agencies, and it's well for men to figure that the talking machine business is a profitable one, for it is.

It pays a larger percentage of profit to dealer and jobber than any other specialty which we can name, and what is there in the history of trade which compares for liberality with the record exchange proposition?

Ransack history and you will find nothing to approach it.

Furthermore, the men selling talking machines are afforded an opportunity to turn their stock many times a year, and when a sale of a talking machine is made, profits have just commenced.

The customer who has bought the machine becomes a steady contributor to the profits of the business concern which sold the machine.

Think of one purchaser, spending more than $1,000 for records in a single year and yet such cases are not remarkable.

In fact hundreds of dollars have been spent in a single purchase for records.

No! The talking machine business is all right.

The only trouble is that on account of the generally depressed conditions it has suffered and simply because men have not kept on making money in the same degree that they were years ago, they have lost heart and have commenced to grumble at conditions.

NOW, the only way to get on the right road again is to compare the conditions which exist in the talking machine line with other trades.

What other line of business pays better profits or affords the dealer chances to build up a paying line of customers than the talking machine business?

It must be encouraged and stimulated by men who have their heart in the business and have confidence in its future, and who have confidence in the business methods established by the great manufacturing concerns which practically control the situation.

It needs confidence all around, and it's just as well during the month of May to draw in a few deep breaths of confidence and go at the business with a vim and vigor which will insure success.

The manufacturers are certainly doing their part in lines of splendid publicity.

They are keeping the talking machine talked about, making its desirable features known to millions of people and are making possibilities for sales which are simply wonderful.

They are sowing the seed with a liberality and determination which should instill courage and confidence in the hearts of thousands of men who through some cause or other have become passive in their efforts.

They are sowing seeds which will result in a profitable harvest.

Now, what are you going to do, Mr. Talking Machine Man?

Sit by and let someone else reap the harvest—or are you going in with a fixed determination to get your full share?

It is folly to assume that a good level-headed business man is not going to take advantage of the situation, and it's absurd for any man to figure that he can sit down and conduct his business in an indifferent manner and expect that trade will come to him, and that he will grow rich.

It is not merely drifting with the tide.

It's trying to swim ahead if possible and turn some of the current perhaps in a new channel.

Dig the channel!

Do something!

Get out of the rut!

Have faith!

Have confidence and get business!

THE announcement that the great composer and conductor, Victor Herbert and his orchestra, have become associated with the National Phonograph Co., will be read with keen interest by thousands of talking machine men everywhere.

In line with this, what marvelous educational powers the talking machine has in bringing the works of the great composers within reach of thousands of people who otherwise would have no means of obtaining a knowledge of classical or popular compositions!

And right here, the educational value of the talking machine is beyond power of estimate.

The association of Victor Herbert with the National Phonograph Co. is but another move showing the progressiveness of the directors of this great institution, and the fact that they propose to exert all legitimate means to give to their dealers and representatives the best obtainable.

BLACKMAN BUYS EXCELSIOR STOCK.

The Blackman Talking Machine Co., New York City, have purchased the remaining stock of Victor and Edison machines, records, business lists, etc., and other effects of the Excelsior Phonograph Co., 89 Chambers street, of the same place, which closed their doors last month. Miss Peters, who has been on the floor of the latter concern and its predecessor, the Douglas Phonograph Co., for a couple of years, has joined the house selling staff of the Blackman Co.

VISITS AMERICAN FACTORIES.

Christian Duwe, a Leading Talking Machine Man of England Visits American Plants.

Christian Duwe, one of the leading talking machine men of Great Britain, whose headquarters are at Manchester, has been tarrying a while within our gates. Mr. Duwe represents the Edison, Columbia, Zonophone and Odeon lines.

While here he had the opportunity of visiting the Edison and Victor plants, and when discussing trade matters with The World he expressed great admiration for the enormous plants operated by the American producing institutions.

Mr. Duwe stated further that talking machine conditions in Great Britain were steadily improving, that there had been a weeding out process there and that some of the weaker concerns had succumbed, but he looked forward with great confidence to the future of the talking machine business.

Also, in this connection, it may be stated that Mr. Duwe sells from his Manchester and Sheffield branches to more than four hundred dealers throughout England.

He will return on the 19th inst. on the Lusitania.

TO HANDLE THE VICTOR LINE.

(Special to The Talking Machine World.)
Boston, Mass., May 3, 1909.

George L. Parker, the well-known piano dealer of this city, has arranged a portion of the second floor of his store as a talking machine department and will handle the Victor line. Frequent calls for talking machines and records within the past year or two prompted Mr. Parker in his new move.

SAVE THE LIFE OF YOUR RECORDS

CONDITIONS IN INDIANAPOLIS.

Talking Machines for Army Posts—Columbia Co. Feature "Merry Widow" Records—Kipp-Link Co.'s Good Report—New Edison Dealers Established—Amberol Records Grow in Popularity—Craig Advocates Tariff Commission—Moving Picture People Pessimistic.

(Special to The Talking Machine World.)

Indianapolis, Ind., May 6, 1909.

April was a dull month for the talking machine business, according to the Indianapolis dealers. This was due in part to the fact that nearly all taxes were paid this year in April to keep them from becoming delinquent, as the first Monday in May this year, the last day for tax paying, was on the third day of the month. It was also due in part to the bad weather, and probably the tariff agitation was accountable to an extent.

The Columbia Phonograph Co. have sold a number of machines to officers and others at the army post, at Fort Benjamin Harrison, north of the city. Among those who bought Columbia machines was Chaplain John F. Ferry, who is an enthusiastic talking machine man.

Talking machine men during the last winter have taken the advantage of shows which came to the city in order to increase their business in records. This was noticeable last week when "The Merry Widow" was at English's opera house. Mr. Devine, of the Columbia Co., fixed up an attractive Merry Widow window. Pictures for the window were suppl ed by the show people. The Columbia Co. also had an attractive Easter window. Fifteen or twenty market baskets were filled with records and were tastily adorned. The window was supplied with poster advertising to make the people understand that there were plenty of Columbia indestructible records to be had.

The Kipp-Link Phonograph Co., who handles Edison and Victor machines, have just completed their annual inventory. "The inventory shows," said W. E. Kipp, of this company, "that we have the finest stock of records, machines and appliances that we have ever had. It undoubtedly establishes our claim to being the largest handlers of our class of goods in the State. We have about 75,000 (seventy-five thousand) records and 200 (two hundred) machines in stock."

Mr. Kipp has just made a trip through the State visiting a number of agencies where he had not had an opportunity to become acquainted heretofore. "We feel that our business is holding its own with other lines of merchandise," he said in discussing his trip. "The chief trouble we have now is in collecting money. A number of dealers have sold on the instalment plan. The country people now are not just as prosperous as they might be and as a result money is coming a little slowly."

The Kipp-Link Co. have been establishing out in the State a number of new dealers who were recommended by the Edison people. "We can notice a daily increase in the business on the Amberol four-minute records," said Mr. Kipp. "The dealers like them because they give better profits and have new talking points and the people like them because they are good value for the money."

Managers of the Indiana Phonograph Co. who handle Edison's declare that they also have noticed a remarkable increase in the sale of the Amberol four-minute records. The Amberol is selling better than all of the others put together, they declare. "Our business has been pretty dull for the last month," said a representative of the Indiana Phonograph Co., but in the last few days we have noticed quite an improvement and we feel much encouraged as to the future. Dealers over the State report to us that there has been a decided improvement in the last week or so."

This company states that the best selling records during the last month were "Golden Rod," an Amberol record and "How Firm a Foundation," a record of sacred music.

Charles Craig, who formerly was the proprietor of the Indiana Phonograph Co., declares that he believes a tariff commission will be created. "I have been advocating a tariff commission for years," he said. "It is the only way to regulate the tariff schedules in a satisfactory manner." Mr. Craig has just bought a new Buick touring car.

Allan A. Jay, of the Kipp-Link Co., has been sick for several days, suffering from bronchial troubles. His condition now, however, is greatly improved.

The five-cent theaters and picture shows have been having tough sledding for the last month. The weather has been cold and disagreeable and few people have been on the streets at night. That business has been dull at nights when the picture shows draw their chief patronage is shown by the fact that one fashionable restaurant here, which for the last eighteen years has been open day and night, has closed at night for the last week and will continue to do so. The door of the restaurant has not been locked for eighteen years and it was necessary to get a carpenter to equip it with a lock. The proprietor gave as his reason for closing up the statement that it did not pay to keep open at night.

The new picture show in North Illinois street, just across the street from the Traction Terminal station, was opened for business last Saturday. Charles Olson, the champion lightweight wrestler of the United States, is the proprietor of this place. The building is owned by Capt. W. E. English, formerly an Indiana congressman.

The Indianapolis Sun, one of the Indianapolis papers, ran a paragraph in its news columns naming a number of judges and prominent men who are regular patrons of the five-cent shows.

NEW USE FOR PHONOGRAPH.

Famous Chinese bands and palace singers are now engaged to make records for leading talking machine companies. They are brought from all parts of the Empire to the three record-making centers—Pekin, Shanghai and Hongkong. Here the apparatus for making the master records is set up and the recording done under the direction of an expert. A record popular in the north of China seldom is popular in the south.

The "Tusko" Talking Machine Needle

FOR DISC MACHINES

Patent applied for **Name copyrighted**

PERFECTION REACHED AT LAST

Possesses all of the good qualities of the steel needle and none of the bad ones.

Is practically indestructible—one "Tusko" will play an entire evening's entertainment and then can be made as good as ever by repointing with a simple sharpening device, enclosed in every package.

Does Not Injure the Record. **Absolutely Eliminates the Scratch**

The "Tusko" needle is a natural product and its substance is so nearly the temper of the record that there is no wear whatever.

A record lasts a lifetime when played with the "Tusko" needle.

Fits any needle arm. No change in soundbox and no attachment needed.

The "Tusko" is the needle for the musically artistic. It is absolutely fool proof.

Every needle is perfect and will play any record made.

If your jobber can't supply you write direct to the patentee and sole manufacturer,

TRADE ON THE PACIFIC COAST.

General Trade Dull and Dealers Look for a Quiet Summer—Preparing to Fill Orders for Special "Vacation Records"—Wholesale Trade Fair Along the Coast—Columbia Co. Retain Distributing Business in Los Angeles—Some Personal Notes—Bacigalupi Featuring Edison Business Outfits—News of the Travelers—Sherman, Clay & Co. Activities—Clark Wise & Co. Busy—Curtaz & Son in New Quarters—Other Items of Interest.

(Special to The Talking Machine World.)

San Francisco, Cal., May 6, 1909.

The talking machine trade in San Francisco and most of the neighboring cities has continued to share the general dullness most of the past month, and the dealers generally are inclined to look for rather a quiet summer. There has been a decided improvement in the sale of both machines and records in the last week or ten days, and just at present the movement is about up to the normal, but things are expected to quiet down again by the latter part of May. Of course, most of the dealers are now settled in permanent quarters, and have much better facilities for display and sales than before, but this is not expected to bring very much response before the fall season. The warm weather has already commenced, and in a couple of weeks more people will be starting on their vacations. In the meantime, retailers are preparing to fill a lively demand for extra records to be used at the summer resorts and camping grounds.

The general wholesale trade over the Coast is very fair, but by no means booming. No more unusually large orders, such as were taken by one company a month or two ago, are reported, and most of the dealers in smaller towns content themselves with moderate orders of a sorting up nature.

A wrong impression has been given in regard to the Columbia Phonograph Co.'s deal with the Southern California Music Co. The latter concern has put in a very large stock of Columbia records, which will be disposed of at retail through their large Los Angeles establishment and numerous branches, but the distributing business with other members of the trade in that territory has been retained by the Columbia organization. The Southern California Music Co. have for a long time carried on an extensive jobbing business in Edison goods, with which it has had great success. Mr. Borgum, traveling representative of this company, was in San Francisco a few days ago.

The place of O. W. Cyrus, who recently left the service of the Columbia Phonograph Co. to travel for their new jobbing representatives, Kirk, Geary & Co., of Sacramento, has been taken by Willis Storms, formerly connected with the Columbia store at Los Angeles.

P. H. Beck, who last month vacated the position of local manager for the Columbia Phonograph Co., and Francis W. Downe, who occupied the same position a few years ago, are now lined up with opposing forces. Mr. Downe has for the last year been Coast representative of the Dictaphone Company of America, and Mr. Beck has entered the employ of Peter Bacigalupi & Sons as manager of the Edison business phonograph department. Mr. Beck has commenced work in his new position in an aggressive manner, and from all indications the Edison business machine will take a more important place in this city than it has held before. The entire window of the Bacigalupi store this week is devoted to a display of this machine, and a number of them have been placed with the Sperry Flour Company, the principal milling concern in the State.

Peter Bacigalupi & Sons state that their retail business has been rather quiet ever since the first of the year, though they consider that it is much better than if they had remained in their old location. The wholesale trade outside, however, has been coming ahead all the time, and a number of good outside connections have been made in the last few weeks.

John H. Gill, traveling representative of the National Phonograph Co., has been in San Francisco for the last few days. He has been on the Coast for several weeks, but visited his territory in the South and North before coming to San Francisco.

C. M. Jones, manager of the Pacific Phonograph Co., made a trip through the northern part of the State last week.

Andrew G. McCarthy, treasurer of Sherman, Clay & Co., states that the talking machine business of that house has been as good as can be expected in the spring for the last two weeks, though it was very quiet up to that time. He attributed the revival partly to the arrival of a new lot of Victrolas, which continue in steady demand, both as wholesale and retail, and partly to the concerts held here during the last two weeks by Mischa Elman, which have given a great impetus to the sale of his records. Mr. McCarthy is chairman of the publicity committee for the Portola festival, which will be held here early next fall, and which, Mr. McCarthy believes, will be a great thing for the business of San Francisco, giving a good send-off to the first fall season since the fire when business will be really established on the old thoroughfares. It will be made as important and interesting a celebration as the Mardi Gras at New Orleans, and is expected to attract people from all over the country.

Clark Wise & Co.'s talking machine department is at present about the most profitable department in the store, and Mr. Wise is delighted with the turn business has taken since his removal down town. The second floor is divided into six fine demonstration rooms, with a large sale and stock room extending the whole length of the building. A large quantity of stock has arrived this week, and this, added to what was brought down from the old store, gives him a very complete line of goods. Mr. Wise has a large Victor machine playing in the second story window every afternoon, and usually keeps the opposite side of the street lined with interested listeners.

Benj. Curtaz & Son are just moving into their new establishment, and as the finishing is incomplete it is impossible to get much idea of what the talking machine department will be like, but from the preparations that are being made it will rank among the finest in the city. Mr. Curtaz will open his new store for business at the end of the week, but it will probably be the middle of May before he can get everything in order, as a great deal of work is still to be done on the store.

"That Man Pitts," a large stationery dealer of this city, has taken up talking machines in a small way as a side line.

NEW TALKING MACHINE NEEDLE

Being Introduced to the Trade by Its Inventor R. H. Jones—It Is Called the "Tusko."

(Special to The Talking Machine World.)

Chicago, Ill., May 6, 1909.

Chicago is to the front with a new disc talking machine needle which its inventor says "will ultimately relegate the steel needle to the rear," at least so far as the lovers of high grade records are concerned. The "Tusko" is the name. It is a natural product and fits any needle arm. It is not a cheap needle but it is claimed that a single needle will play as high as fifty records without repointing, and that there is absolutely no wear on the record. We are indebted for the "Tusko" needle to R. H. Jones, already well-known to the trade as the inventor and manufacturer of the economy and perfection record racks. Mr. Jones, who, by the way, has just recovered from a severe attack of pneumonia, is this week moving his factory from 1-17 Bryan place to 5521 Monroe avenue. Here he will have ample room for the manufacture of both the racks and needles and a fine ground floor salesroom which will be fitted up in an attractive manner.

NEW EDISON HALL IN SCRANTON.

New Edison Phonograph Hall at 523 Lackawanna avenue, Scranton, Pa., is one of the most up-to-date talking machine establishments in that section of Pennsylvania. The hall was formerly located on Wyoming avenue for several years and despite the title, Edison phonographs and records do not constitute the entire line, a complete stock of Victor machines and records also being carried.

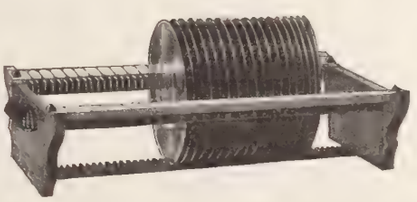
The Blackman Talking Machine Co., New York, became the purchasers of the Edison stock of machines and records of the Musical Echo Co., Philadelphia, Pa., recently acquired by Landay Bros., of the former city. The records alone numbered 26,000.

Wm. E. Metzger, talking machine and bicycle dealer of 252 Woodward avenue, Detroit, Mich., has moved into the handsomely remodeled store at 351 Woodward avenue, corner of High street.

HERE'S A BIG SELLER FOR YOU

AND WE'LL HELP YOU SELL IT

Hundreds of talking machine owners can't pay $10 to $25 for a cabinet. They will be glad to buy a



CRESCENT

Disc Record Cabinet

for $3.25 or $3.75 (according to finish), and thank you for the opportunity.

The CRESCENT holds fifty records, holds them securely and SEPARATELY—absolutely no rubbing or scratching as the record comes in contact with no other record or surface.

People already owning cabinets will buy the CRESCENT for the new double face records when its advantages are explained to them.

The CRESCENT is convenient, occupies small space, is attractive in appearance. The selections can be inscribed on the white spaces in full and instantly located, thus doing away with the numbered index.

RETAIL PRICES:

Weathered Oak or Mission Finish.....$3.25

Mahogany or Golden Oak Finish.....$3.75

THE RECENT UNITED STATES SUPREME COURT DECISION; ITS EFFECT; AND THE FUTURE OF THE TALKING MACHINE BUSINESS

By ELDRIDGE R. JOHNSON
PRESIDENT VICTOR TALKING MACHINE COMPANY

The Victor Talking Machine Co. gains the seal of the Supreme Court of the United States by its recent decision sustaining the Berliner patent, the decisions of the lower courts being sustained.

Around every successful enterprise stand, in a crowded circle like wolves surrounding a herd of buffalo on the plains, certain envious ones who hope, by some lucky circumstance, to share in the reward due to others. The talking machine business seems to be more than ordinarily attractive meat, and I know of many seemingly bright and able men who have left the bounteous open field of a business, theirs by opportunity and training, to try to break into the talking machine business. It is the same sad old tale of forbidden fruit. Some other fellow's business is always the best.

To imitate goods that others have developed at a great cost, for the purpose of saving a certain percentage of overhead expense by dispensing with a department of engineering, development and design, appeals strongly to men who do not understand the talking machine business and its future. There is a popular misconception and belief that large profits are to be made by such methods, provided the parties undertaking the enterprise come up to a certain standard of shrewdness. That business is not a matter of sentiment is always the cry of the man who is going to do something he should be ashamed of; but there is sentiment in the talking machine business, and plenty of it. The firm that appropriates the plans of another is always behind and always looked down on. They must sell their goods at a cut price and lose at one stroke more than their questionable methods save. They are always just too late. Such a policy carries no strength of position; I have never known of a great success to come from such methods, but I have seen many great failures. The firm that originates its own improvements and designs has great moral support from the trade in general, a bright future and a strong rear guard in the line of patents to protect the path it has hewn out at its own expense. The people who think they are smart enough to infringe any patent that happens to stand in their way, or the benefits of which they happen to covert, always have a storm in their faces; their road must always be crooked and rough. They have no control over the market. They never know what is going to happen until after it has happened. A large portion of their stock must always be sold over the bargain counter at prices below the cost of the goods. The people they are imitating are sometimes so inconsiderate as to put an improvement on the market without informing them in advance. The talking machine business is advancing and improving so rapidly that it is, and always will be, a poor field for imitators. Theirs is a silly game.

There are to-day but few men in the whole world who understand the talking machine business thoroughly and to a point where they could successfully organize and operate such a business, which, on account of the peculiar character of the said business, must always be a large enterprise. The few men who thoroughly know the business, however, have learned by hard, bitter experience, by disappointment and, in some cases, loss of health, that the talking machine business, while most fascinating, holds no greater reward for its followers than many of the other standard lines of manufacturing. Indeed, I know of no one who has grown rich, according to the standard of what is now considered a rich man, from the talking machine business, save those who are disposed to count at a high and impractical value properties composed of patent processes and plants devoted to the purpose of manufacturing special articles—a most unsatisfactory asset, as they will find when the question of a financial transaction involving their value comes up. Shoes, coal, iron, copper, timber, sewing machines, typewriters, cameras, and even pins have produced their millioneras, and even pins have produced their millionthrough following the standard pursuits of every-day business, reached such a high financial position as to be counted multi-millionaires. But the talking machine "baron" has not yet appeared. Not a single person has been able to retire from active business with a fortune that compares even with the more moderate fortunes

ELDRIDGE R. JOHNSON.

of men engaged in the common every-day pursuits.

In spite of this very obvious condition, the final decree of the highest court in our land was hoped to be the signal for a grand rush on the part of those who wait surroundng the Victor Talking Machine Co. all over the world. If the Supreme Court had failed to sustain the Berliner patent, it was supposed to be only a question of picking up the gold dollars and feeling sorry for the blind who could not see to pick them up. This was the situation according to the opinion of the waiting geniuses and financiers. This was the situation as the man explained it to his backer while he urged him to stake his money on what is always a dangerous chance; i. e., without unlimited capital, experience and an efficient organization, to infringe the patents of a going concern; the chance that fails ninety-nine times out of a hundred. They were going to rush us. Such a rush, had it started, would have produced nothing but ruin, and perhaps no small amount of loss to the Victor Co. temporarily; but after the first excitement was over the rushers would have found themselves slaughtering each other in a field barren of profits, and to the Victor Co. would have been left, as usual, the grim task of burying the dead and cleaning up the field, with no one to pay us for our services. Practically every concern that has tried to jump into our trade in this manner has gone to the wall before litigation which we were able to bring against them could come to final hearing, and this is one reason why the Victor Co. has been so long in sustaining its patents. Many pathetic stories have been recited to us by innocent investors, who were told that the talking machine business was a rare field of profit. Of course these victims always come to us as a last resort and try to sell us their enterprise, which we have invariably found to be useless and their stories of lower cost of production and lower cost of selling to be wiped out by the hard plain facts, which have always shown that their cost of production was higher and their cost of selling was higher, and that they were operating at a loss instead of a profit.

There is no longer a great profit to be made for a small effort in the talking machine business. There is a profit, but it must be earned, and well earned at that. It now requires large capital, large manufacturing plants, and most of all a well chosen and well organized army of experts. The Victor Co. has, at present, 284,274 square feet of floor space, and we are adding, by new buildings under construction, 133,158 square feet of floor space, making a total of 417,432 square feet. This large and expensive addition is being made, not so much to take care of increased business, as to enable us to make more completely and of a better quality the goods we use; but most of all we are making these additions in order to enable us to produce our instruments at a lower cost. The days to count the pennies have arrived. We are now forced to make large expenditures for small savings, and by the time the day arrives (if it ever does) when we have no patent protection we will be well prepared to meet the crowd who are waiting to come in. Last and first, this expensive, sensitive and perishable organization, a great active community, housed in the most expensive buildings and provided with the most expensive machinery and other equipment, must be presided over by one who is in a position financially to control the corporation. That one has a hard job, and there are very few men in the world to-day prepared, by experience, capital and temperament, to fill such a position successfully. Further, he must be surrounded by a cabinet of unusually efficient executive officers and faithful employes. Such an organization is not easily acquired.

My explanation of the talking machine situation is but a statement of the simple facts, and every word of it is true. I hope this explanation, combined with the recent decision of the United States Supreme Court, will have the effect of saving money for the numerous innocent investors who are continually being fooled by many so-called talking machine experts. As a rule, these men know practically nothing about the business; their stock in talk is generally based on figures showing the Victor Co.'s progress during the last twelve years and the manufacturing cost of a cheap talking machine made in Germany. The figures may be correct in both cases, but conditions have changed since our enterprise was started. We could not do the same thing over again, nor can anyone else; and the demand for cheap talking machines is falling very fast. The Victor Co. is still selling goods in the land of the men who think they are only waiting for our patents to be knocked out or to expire. The persistence of concerns in no way qualified to conduct a talking machine business is in some cases marvelous; the question of profits does not seem to be of importance, but, like stock gamblers, they are happy to do business forever—or as long as they can—at a loss. Some mysterious fascination that holds men to a hopeless, profitless task seems to seize, in some cases, those who are initiated into that fanatical circle of activity called the talking machine business. Injunctions, fines and even danger of imprisonment do not stop them. People infected with this curious spell seem more like the followers of some strenuous religious belief than simple business men who are working for a livelihood. This condition, I believe, always accompanies the early stages of a new business to some extent, but the talking machine business has suffered far more than its proper portion from this sort of thing.

The Berliner patents, including the purchase price and cost of litigation, have so far cost the Victor Co., in round figures, a million dollars. Why should we have spent a million dollars for a new thing if the old would have answered? The old would not answer. The Berliner patents

cover the best possible and only practical disc talking machine, and embody the combination of a record and reproducer. It may be classed as the automatic feed. Mechanical feeds, when applied to disc talking machines, fail to give satisfactory results, and, further, are mere evasions of the Berliner patent, intended in every case to be used with the Berliner record. They are invariably a complicated and unnecessary feature added to the simple, perfect gramophone construction. The United States Circuit Court of New York has sustained our contention that a so-called mechanical feed machine was a mere evasion of our Berliner patent and an infringement of it.

The tendency in talking machines is to higher prices and better goods. The signs of the future do not point to the necessity of sweat-shop methods or prices. No two-for-one proposition is particularly progressive; but the cry of the trade is for better and better quality. The price should be fair, but a profit can be had. The future does not rest so much on a low price of goods as it does on a high quality and progressive business method. The Victor Co. is now in a position to make goods cheaper than any other talking machine company in the world, and the possibilities of lowering the cost of our goods are still very great. We are also disposed to sell our goods at the lowest price, in most cases, that will yield a fair profit all around, to the jobber and dealer as well as to ourselves; and the enterprise that establishes a line of prices materially lower than the prices established by the Victor Co. is not likely to prosper. The records of bankruptcy proceedings will sustain this.

THE FUTURE:

Is the talking machine business a fad?

Will it last?

These questions are frequently asked me by jobbers and dealers, as well as by solicitous friends. The jobber may have, say, fifty thousand dollars tied up in a stock of talking machines; therefore, the jobber wants to know. But the question is not of vital importance to him; whenever he thinks the end is near, he can reduce his stock and turn to some other line. The Victor Co., however, is in a different position; we have five million dollars invested, and there is no turnout for us. We have cast our lot with the talking machine trade and it is "root hog or die!" We could have put much more of our profits in our pockets during the past few years than we have, but we fully believe in the future of the business, and we like the investment.

To the world at large there are but two kinds of prophets—the optimist and the pessimist. The quiet observer knows there are others, but, as they never cause particular excitement, they attract no attention. The optimist and the pessimist are alike a plague upon the human race. If Mr. Roosevelt fails to bring down his first white rhinoceros, it will make but little difference to that happy animal whether our beloved "Teddy" aimed too high or too low. In the seclusion of his safe retreat, Mr. Rhino may rub mud on the wound, be it at the top of his neck or at the bottom of his brisket, with equal satisfaction, but in either case, he will know he was right; he was neither too high or too low in his ideals at the critical time. Therefore, in giving my prognostication of the talking machine's future, I try to avoid the soaring conceptions of the optimist as well as the depressing impressions of the pessimist, and to be at least as intelligent as a white rhinoceros.

As to the questions:

Will the business last?

Yes; it will last as long as progress.

Why?

Because it is an art, and art is a product of progress; the more progress, the more art.

Because it is an education, and education goes hand in hand with progress.

Because it is a pleasure, and pleasure is a part of progress.

Because it can always be made better and better; this IS progress itself, and the public never loses interest in anything so long as it continues to improve.

Because the world is better for the talking machine and does not want to get along without it.

Because the talking machine will make each coming generation better acquainted with its predecessor; and the world will always stop to listen to its great-grandfather. If there had been talking machines in the days of George Washington, this nation would hold a far more treasured relic than exists to-day.

Because the Victor Talking Machine Co. makes it its business to see that the demand will continue, and our organization is founded on lines that can go on and on. We have adopted the principles of evolution itself and know that we can keep abreast of the times. The Victor Co. creates; it does not copy. Its standard reads:

FAIRNESS—QUALITY—PROGRESS.

Just what the talking machine will be in fifty years I cannot tell, but it will be far better than it is at present.

There are many questions of detail, such as disc versus cylinder. If you ask me which will win, I shall say: "There is room for both, but the Victor Co. will continue to devote all of its attention to 'rolling the disc,' which is quite enough for any one concern; and we are quite content that others shall 'roll the cylinder.'" The Victor Co. has ample capital and ample organization, but it is about all we can do to handle one line. Sometimes it is a hard pull to get it up a hill, and at other times it seems to run away from us; but we are going in the same direction, and whenever it seems to slow up we are ready to give it a push.

Therefore, let me say to the timid ones: "Don't worry about the future of the talking machine business; just make sure that you can keep up with it."

WASHINGTON CO.'S NEW QUARTERS.

The Washington Music Co., successors to the Tilley Music Co., Spokane, Wash., have moved into a new three-story building. They have five sound proof rooms for testing records and are making a specialty of the Edison goods.

TO THE DEALER

Fibre Needles are especially recommended for use with Grand Opera records and other high priced records, because of the fact that they do not injure them and in addition will give a more pleasing reproduction.

They produce a sweet, clear tone—true to nature. They improve the quality and prolong the life of the record.

If you wish to increase your business, recommend the Fibre Needle to any and all of your customers, but especially to those who are *discriminating* and *critical*—these are the ones that want *real music* and will appreciate *this means* of securing it.

The Fibre Needle is scratchless, therefore harmless. They are *non-repellant* and possess the requisite amount of elasticity which is essential for the elimination and prevention of rasping and blasting sounds.

Converts to these needles not only become enthusiasts but evidence their appreciation by a lavish expenditure of money for additional records.

Samples and particulars on application.

OHIO TALKING MACHINE DEALERS' ASSOCIATION MEET.

Hold Their Third Regular Meeting in Cleveland on May 5 and 6—A Representative Gathering of Talking Machine Men—The Leading Manufacturers Well Represented—Important Papers Read—Next Meeting Will be Held at Sandusky, Ohio, August 4.

(Special to The Talking Machine World.)

Cleveland, O., May 10, 1909.

The third regular meeting of the Ohio Association of Talking Machine Dealers was held in the assembly room of the Hollenden Hotel in this city on Wednesday and Thursday, May 5 and 6. The meeting was called to order at 1 o'clock by the president, A. C. CaJacob, of Wapakoneta, and the secretary, W. H. Snyder, of Columbus, called the roll of officers and members, all of whom were present.

After transacting the regular order of business a recess was taken and under the head of "Good of the Association" the jobbers, as well as the manufacturers' representatives, were invited into the hall to participate in "the further proceedings."

Three representatives of the National Phonograph Co., A. C. Ireton and W. H. Hug, of the sales department, and M. B. Romaine, their expert repair men, responded to the invitation. Mr. Ireton, being called on, gave a very instructive talk on various subjects pertaining to the phonograph business, from the manufacturer's standpoint, and on the subject of the new style Jem, and the new Fireside machine, which were on exhibition. He mentioned the fact that while the National Phonograph Co. were deeply sensible of the enterprising, loyal efforts of the dealers and jobbers, therefore it was, and had been, the policy of the company to cultivate the friendship of the dealers and lend them every assistance in their power. His remarks, which were somewhat extended, were received with great applause.

Mr. Romaine, the expert, gave a practical demonstration of the mechanical construction of the new machines, and also of general repairing, including the correct method of attaching the four-minute attachment to old style machines.

The Victor Talking Machine Co. were represented by Sam Goldsmith, of the sales department, and H. N. Rudderow, their expert repair man, who gave a practical demonstration of repairs. As many of the dealers did not consider they were thoroughly proficient in the science of repairs, the demonstrations were witnessed with manifest interest.

President A. C. CaJacob took occasion during the meeting to address the association on the subject of The Talking Machine World. He urged every member, if any were present who were not already subscribers, to send in their subscriptions at once. One member stated that he subscribed for two copies, one for the store and one for the house, so that he could always have it handy to read.

A paper was read by Henry Goldsmith, of Columbus, on the subject of "Tactful Salesmanship," which gave evidence of thoughtful consideration and ability.

A paper was also read by the secretary, W. H. Snyder, on the subject of "Instalment Contracts for Ohio." As this was a subject in which every member felt deeply concerned, it was listened to with close attention. Mr. Snyder has given the subject years of careful study, and in the preparation of his paper was ably assisted by two attorneys who have had wide experience on lease contracts and chattel mortgage law.

At this point the regular meeting adjourned, and at 8 o'clock the members and guests sat down to a sumptuous banquet, to which they did ample justice, and which brought the day's deliberations to a close.

The president of the association acted as toastmaster of the occasion, and all present gave brief talks on subjects pertinent to the business which had called them together.

T. H. Towell, president of the Eclipse Musical Co., of Cleveland, responded to the toast, "The Possibilities of the Talking Machine Business."

S. W. Goldsmith, of the Victor Talking Machine Co., on "Developing the Red Seal Business."

W. F. Davisson, of the Perry B. Whitsit Co., Columbus, on "How Much Stock Should Be Carried."

The talkfest closed with volunteer remarks by most of those present.

After some routine work on the 6th, the convention voted that it had been the most successful and instructive meeting yet held. Seventeen new members were enrolled, and everyone expressed themselves delighted with the meeting.

Sandusky, O., was selected as the place for the next regular meet, to be held August 4, 1909 (at Cedar Point), on which occasion the association desires all the members to attend, accompanied by their wives or sweethearts. A committee has been appointed to arrange for the entertainment of the ladies during the business session of the association.

PATENT RIGHTS AND BANKRUPTCY.

Judge Purdy Holds That the Trustee of Hough Property Can Sell Machines at Own Figure.

(Special to The Talking Machine World.)

Minneapolis, Minn., May 3, 1909.

Judge Purdy has decided that the owners of patents cannot restrict the selling price of an article when it gets into the bankruptcy courts.

T. C. Hough, a Minneapolis dealer in talking machines and records, turned over to the trustee in bankruptcy several talking machines, which the trustees desired to sell.

The manufacturers, through their agents, asked for a restraining order, setting out the fact that all their machines were sold on a contract that none should be sold at less than a stipulated figure. They demanded that the trustee observe that contract by selling at full retail price.

Judge Purdy held that the title to the property had passed to the trustee, and he could dispose of it without the contract restrictions which bound the insolvent dealer.

COLUMBIA DISPLAY AT EXPOSITION.

(Special to The Talking Machine World.)

Louisville, Ky., April 24, 1909.

There are few more attractive spots to visitors to the Southern Electrical Industrial Exposition being held in this city than the booth of the Columbia Phonograph Co. which is in charge of Morris Silverstein. All the leading styles of machines are shown, and concerts are given at stated times. The result of the exhibit has been most gratifying in a business way, many sales of machines and grand opera records having been made.

April 26 Frank L. Dyer, president and general counsel of the National Phonograph Co., Orange, N. J., was one of the chief speakers at the mass meeting of the Sunday Liberal League in Carnegie Hall, New York. Mr. Dyer made a vigorous plea for the legalizing and liberalizing of Sunday and the rational enjoyment of the day, which is the purpose of the league.

ASHBACH'S "TALKER" DEPARTMENT.

One of the Handsomest and Best Equipped in That Section of the Country.

(Special to The Talking Machine World.)

Allentown, Pa., May 9, 1909.

One of the first and oldest piano houses handling talking machines in this city is that of G. C. Ashbach at 539 Hamilton street. Both the representatives of the Edison and Victor companies who have visited the Ashbach talking machine department pronounce it to be the most completely equipped to be found anywhere, Mr. Aschbach having introduced many original features for the display and easy handling of both cylinder and disc records. All the necessary accessories are carried in stock and a complete repair department is also an adjunct of the department. The display of cylinder and disc cabinets is quite a store in itself.

VICTOR ROOM AT ASHBACH'S.

The talking machine department is located on the second floor of the handsome four-story building, occupied by Mr. Aschbach, where special departments are set apart for the Victor and Edison machines, records and discs, and other accessories belonging to the talking machine trade. The views herewith show the Victor room, the Edison room and another section of the same room arranged for recitals, showing the new rack for the storage of disc records which is of their own creation. The rack comprises 184 drawers for ten-inch discs and 112 drawers for twelve-inch discs. Each drawer, which is dust proof, holds twelve discs and envelopes, making the total capacity of the rack 3,552 records.

EDISON ROOM AND RECITAL HALL.

The various rooms can be separated from each other by sound-proof sliding doors, and yet the entire floor can be thrown into one room if necessary, making the dimensions 21 x 125 feet.

Dealers and Jobbers say it is the best automatic device they have ever seen. After you have tried this you will say the same.

CINCINNATI'S BUDGET OF NEWS.

April Shows Falling Off in Machine and Record Sales—Tariff Blamed for Poor Business—Strong Revival Expected in Fall—Poorman in New Quarters—High Class Goods Have the Call Say the Rudolph Wurlitzer Co.—Feature the Fibre Needle in Elaborate Window Display—Good Sales Reported for Columbia Double Disc and Indestructible Cylinder Records—Other News of Interest.

(Special to The Talking Machine World.)

Cincinnati, O., May 9, 1909.

The talking machine and record trade for April was not what the dealers here would like to have had it. The month was off in comparison with the preceding month. The machine trade is still confined largely to the better class of trade. The bulk of business being done is cash. This means that the workingmen are not yet buying on the instalment plan to any extent. The opinion of local dealers is that trade will not be other than what hard digging will make this summer. The tariff is holding up a large amount of business in all lines. Not a few trades are finding the necessity for curtailing expenses as strong as it was a year ago. The tariff is blamed for this. The firm belief of local dealers in talking machines is to the effect that trade will revive this coming fall, and from then on a return to old time busy conditions will be markedly strong. While the outlook for summer is not therefore any too encouraging for the dealers who wait for business to find them, it has its encouraging features for the busy dealers in the fall outlook.

Poorman, the dealer in sporting goods and talking machines, at 31-33 West Fifth street, will change his location to 639 Main street on June 1. This location is considered a good one.

The Milner Musical Co. report a fair amount of talking machine trade for April. The record trade was of better proportions. The company are running a daily advertisement under the amusement columns of the daily papers, and are getting fine results therefrom. The souvenir postal card department reports a big run on cards during the past month. Sheet music shows up splendidly on account of special sales and much advertising. Manager Strief says the prospects for May in all departments are as bright as could be desired at this time of the season, and that his store will get its share of the trade.

The trend of the business to high class outfits is very apparent according to the stock shown in the talking machine stores, and the advertisements and selling schemes used by the dealers.

The Rudolph Wurlitzer Co. have been advertising the Victor Victrola and Red Seal records exclusively, because the demand is almost entirely for high class goods and the instalment business is very light. This firm are taking advantage of the big possibilities that the concerts offer in the way of introducing the Victor Victrola in select circles. Red Seal Concerts are being given by means of the Victor Victrola by some of the leading clubs and churches of Cincinnati. Several sales result from practically every concert, showing that this kind of advertising is undoubtedly the most effective to use.

Mr. Dietrich, of the talking machine department of Wurlitzer's, reports that the Wurlitzer Co. have been featuring the fiber needle very extensively. An elaborate window display of bamboo poles and native grass matting, together with material showing the needles in different stages of manufacture, and a handsome Circassian walnut Victrola, made up the display, and attracted very much attention. The front of the Wurlitzer store has been so arranged that a number of chairs are placed facing a Victor Victrola, and a sign in the window states that a free concert is given inside. This has attracted a number of people, who step in to hear a record or two, and quite a few Victrola sales have been directly traced to this arrangement. Catalogs are distributed in the audience, and hearers are encouraged to call for selections that they would like to hear. In the plate glass Victor salesrooms are other Victrolas in sight of the audience upon which the loud Victor needle is used, so that every opportunity is given to a prospective customer to become thoroughly acquainted with the merits of the Victor Victrola.

Several Auxetophone sales were made during the last week, and the future in this line looks particularly promising.

Cincinnati was represented at the Cleveland meeting of the Ohio Association of Talking Machine dealers by Mr. Sigman, of the wholesale Wurlitzer talking machine department, and Mr. Salm, the Cincinnati member of the Executive Committee.

The Edison business phonograph department of the Wurlitzer Co. made some very substantial gains during the past month. A number of big installations were made and the future in that line looks extremely promising. A number of inquiries have been received in reply to an exceptionally good letter sent out by this department, and the sales during the coming month will undoubtedly reach up higher than usual.

Cincinnati originated an article which is doing the best kind of missionary work for the Red Seal record, namely, the Record Album. This is a cloth-bound book with outside index. It contains 12 record envelopes or pockets, with an attractive leather finish, guarantees systematic record filing, instant access and perfect protection from scratching and breaking. One of the best features of this album is, that talking machine owners are encouraged to make collections of Red Seal records and keep them in the bookcase with other valuable volumes.

Manager S. H. Nichols, of the Columbia Phonograph Co., sees a steady improvement in trade locally and in outlying territory. Tariff discussions, or the failure of the Congress to settle the tariff, is, in the opinion of Mr. Nichols, a retarding factor of trade. The fall will mark a strong resumption of old-time conditions. Mr. Nichols had the following to say of trade conditions: "The month of April proved to be a month of increased sales and business interest, showing a decided increase in both wholesale and retail business over corresponding month of last year. The sales of the double-face disc records and the Columbia Indestructible cylinder records are increasing almost daily, proving the popularity of these two records, which have created such a sensation in the talking machine world. The Columbia Indestructible cylinder records have proven themselves to be as popular as the double-face disc records. The demand for our grand opera Fonotipia records is also very pleasing. We find the higher grade instruments are the most popular, the sales increasing satisfactorily in both wholesale and retail trade, the majority of the machines sold being from $45 to $200. This is an encouraging fact to our dealers as well as to ourselves, that the wealthier class of people are interested and purchasing. This class added to the regular class of purchasers, the talking machine business will show a wonderful increase, and will be greater than ever before."

THE OLD CUSTOMER AN ASSET.

Regular Patron Should be Cultivated as Much as New Trade—Act as Advertising Missionaries and Stimulate Business.

Always bear in mind that an old customer is every bit as valuable to your store as a new one, and while you keep on expensively campaigning for additions you can do so successfully only by retaining what you have.

The store that takes good care of regular customers sends them out as advertisers and missionaries. They feel themselves so well treated that they gladly advise their friends to share the benefits of your good storekeeping.

That's why you should accord cheerful and ready exchanges.

That's why you should have clerks who can remember names and faces.

That's why you should have comfortable chairs and a rest-room.

That's why you and your clerks must always tell the exact truth about your goods and avoid the faintest suspicion of misrepresentation.

That's why you must insist on a standard of quality about your goods, so that you can be assured they will give the service intended.

That's why your advertising is productive; because it rallies your old customers, while fishing for new ones, who come the more readily upon the advice of those who already know you.

NATIONAL CO. AFTER PRICE CUTTERS.

Several suits instituted by the National Phonograph Co. against Edison jobbers and dealers for violation of their agreement in reported cutting of prices are under way. These cases are decided one way only, and that is the restricted price is legally enforceable in conformance with the many decisions handed down by the United States courts in different parts of the country.

You can make dollars out of the horn trade with such a product as this.

VICTOR HERBERT

The eminent composer and musician has identified himself with the Edison Organization

WE have just secured the exclusive services of Mr. Victor Herbert as adviser in connection with the making of Edison Records. He will suggest plans for further development of our Record business; will aid in the selections of compositions and the artists to sing or play them and will act as critic in making master Records.

The arrangement also includes the exclusive right to have the famous Victor Herbert Orchestra make Records for the Edison Phonograph.

You, as a dealer must realize the importance of this connection which is bound to put the Edison Phonograph and the entertainment it offers on a plane even higher than it is at present.

With the Amberol Records, offering selections beyond the limits of all other records; with the world's best talent at its disposal and with a man of Mr. Herbert's ability as adviser and critic, the Edison Phonograph stands pre-eminent and alone as an instrument for discriminating lovers of musical entertainment.

If you do not handle Edison Phonographs and Records, arrange to do so at once, so as to take advantage of the new and far-reaching interest which these recent big Edison achievements will arouse.

There is an Edison jobber near you ready to fully inform you about our terms and supply you with the goods. Write us for his name and address.

National Phonograph Company

59 Lakeside Avenue **ORANGE, N. J.**

EDISON AMBEROL RECORDS

Offer songs and selections never before obtainable in record form

BEFORE Amberol Records were perfected it was necessary to select music that would adapt itself to the playing time of the records. If the music did not fit, it was hurried or cut. This limited the field of entertainment for all sound reproducing instruments.

It was to obviate this condition that Edison Amberol Records were conceived. These new Records play twice as long as the standard Edison Records and longer than any other records of any kind.

Practically nothing in the way of music is beyond them. No songs or selections are barred, or cut or hurried.

It is a great thing to be able to offer your trade exclusive selections—the work of the world's best artists. It is decidedly to your advantage to handle Edison Phonographs, the only instruments that will play Amberol Records, and to keep on hand a full stock of these Records which afford a range of entertainment beyond that of all others.

Have you the attachments for changing over Edison Phonographs already sold so that they will play Amberols? There is a big profit in selling them and a bigger profit to follow.

If you need Edison Phonographs, Edison standard Records, Amberol Records or attachments, write an Edison jobber. There is one near you.

59 Lakeside Avenue ORANGE, N. J.

HOW "TALKER" MUSIC AFFECTS WILD ANIMALS.

Results of Interesting Series of Experiments Conducted Under Auspices of New York Times—Majority of Animals Exhibit Active Interest in Tones of the Victor.

The talking machine was brought to public attention in an unusual light recently when a Victor outfit was secured by reporters for the New York Times and taken up to the New York Zoological Gardens in Bronx Park in order to see just how the various animals, reptiles and birds are affected by the strains of music. A photographer accompanied the party and about forty excellent pictures were secured of animals in various interested attitudes.

The effect of the music was first tried upon the snakes. R. L. Ditmars, curator of the reptiles, tried several snakes, and one finally got interested enough to uncoil and raise its head with an alert and interested look. After the music was over the snake dropped its head and went back in a lazy fashion into its coil.

Next the talking machine was planted in front of an elephant and the music was turned on. At first the elephant looked a little scared, but in a minute or two he got accustomed to it. There is no question that the elephant loves music. The big ones stood up alongside the machine, with solemn, ecstatic faces, extended their big ears and flapped them in time to the music. Every now and then they would raise their trunks and trumpet. They were having the time of their lives.

One young elephant came up to the machine and stuck his trunk in, inquisitively, as if trying to find out for himself where the music came from. One of the elephants got excited, and began to run about and suck up the sand in the neighborhood with his trunk. The most entertaining thing about the demonstration, however, was the way in which the elephants waved their ears to music. Nobody heretofore, so far as is known, has ever used an elephant's ear as a metronome.

Then the procession moved to the tiger's cage. You've seen a cat in a catnip bed? You've seen him lie down and roll over, and fight with the catnip, and pull it to him? Well, this big cat called a tiger tried to go through all those performances as soon as "Get a Hoop and Roll Away" was sprung on him. At first, when the machine was unlimbered and planted in front of his cage, he thought it was something to eat; when he found it wasn't, he went away disgusted. But the first strains of the music awoke his attention. He came to the front again, listened eagerly, and then lay down and began to roll around with the catnip roll, the roll of ecstacy. He stuck his four legs in the air, rolling as he did, and whenever the music stopped he would get up in a dignified manner and walk off, with the air of one who had totally lost interest. As soon as it began again he would come back and begin rolling once more.

They next unlimbered the battery before the lions' cage and began. The lions surpassed all expectations. Tickled? Why, they were tickled to death. Anybody who has an idea that a lion is dignified is raucously mistaken; he ought to see that lion under the influence of music. One of these lions got up and danced. He kept his hind legs on the floor and danced with his front legs, waving them around in time to the music and hitting the floor with them at the proper intervals.

As the next best thing to "trying it on the dog" the party decided to give the gray wolves a concert and placed the "talker" in front of their cage. It took a good while to get the talking machine in action, because there was something wrong with one of the screws, and everybody in the expedition was an amateur. The wolves came down from their eyrie and looked inquiringly at the machine, and listened with evident regret to the profanity that was in operation while the screws were being put in place. After a while, disgusted at the profanity, they trotted back up to the little hillocks where they make believe they are back home on their own real estate. But at last they trotted back again, and just as they did a waltz blared forth from the talking machine.

The wolves were frightened. They ran tumultuously back to their places of refuge, and stayed there until the tune was played out. Then they came back again, and at first, when it began once more, they ran away; but after a while one of them mustered up courage to come down to where the talking machine was playing, turn his back on it, and listen with an air of ennui which

REACHING FOR THE BAND.

was obviously put on. Further back another wolf was affected most unhappily by the music. At intervals he would lift up his head perpendicularly and let out a long howl. This always occurred when the talking machine was playing some particularly lively air. He could stand sad music with only a howl or two per bar, but whenever it was something good and lively the wolf would be depressed beyond the usual limits of gloom.

It is said that camels are unemotional animals, but the talking machine refuted that argument. Nothing that has ever happened since the camels immigrated has given them so much pleasure as did that concert. Out of compliment to their clan the piece chosen was "The Campbells Are Comin'," and the camels appreciated it. They reached their long necks as near as they could to the machine and put their noses in it, trying evidently to eat a few bars. Sometimes they would get awkwardly up and walk around, but always with their attention strained, and always they would come back and try again to

BEGINNING TO SHOW INTEREST.

ram their noses into the horn. At one time two of the ungainly brutes had their big noses stuck into the machine at one time.

After a while the talking machine was switched from this lively air into a pathetic ballad. One of the camels began to cry. When the radical member of the party called the philosopher's attention to this that cynic snorted and said it wasn't possible, but he looked and sure enough tears were coursing down the camel's nose.

The biggest achievements of the day, however, except for what was done in the bird house—and that is to be related later—were secured in the monkey house. It was agreed that Caruso should be the artist there, and so when the machine was put into action a Caruso record was put on. The first experiment was in front of the cage of the blue-nosed mandril. At the first blast of Caruso's voice the monkey gave a leap into the air as if he had received an electric shock. He didn't like Caruso at all, that was plain from the start. He protested in every way he could, gnashing his teeth and growling, and when he found it was of no use, that Caruso was going on singing in spite of all he could do, the mandril began walking up and down his cage shaking his head in hopeless despair.

It is impossible to give an idea of the ludicrousness of the scene. Everybody in sight was shouting with laughter. The mandril was sincerely moved, there was no doubt of that, and not the least doubt that he did not like music. At intervals he would turn and face the talking machine and gnash his teeth with the most vindictive expression ever seen on a human or animal face. Then, evidently convinced that his wrath was unavailing, he would resume his walk, shaking his head from side to side in a way that said as plain as words could have, "For heaven's sake, when is this nonsense to stop?" At last, still shakin his head, he retired to his boudoir in the back and gnashed his teeth again.

The orang-outangs are more musical and they were highly delighted with Caruso. One of them came dashing out with a delightful expression at the first note, caught hold of his swing, and began swinging around his cage in time to the music, and as long as it was kept up he continued in this metrical swinging. Whenever the music stopped he would stop, and would come down to the edge of his cage and peer into the machine with eager eyes, evidently trying to find out what made the sounds he enjoyed so much. But as soon as it started up again he would make a leap for his swing, and begin again his joyous and musical career.

Another, in the next cage, was deeply engrossed. He swung on to a bar as near as he could possibly get to the instrument and stayed there with unblinking and unwearying interest, staring with all his eyes into the funnel of the machine below him. His expression was one of rapt interest and even of ecstasy.

The bird cage was the event of the day. Most of the birds took no interest in the experiment, but there was a big macaw, a beautiful creature, dressed in blue, who went crazy with the first note. As soon as it sounded the macaw gave a convulsive start, and then began to dance about his cage. This expression of his emotions was too limited, and he flew to the bar that stretches across his cage and began a cakewalk.

There was no mistake about it—it was a cakewalk. The music lent itself to that form of dance, and the macaw lifted his feet and paraded around the bar in exact measures that have been made familiar by countless strutting Afro-Americans.

The macaw bent himself almost double across his rod or bar and distended his body in rhythmic motions to the dance music that was being played. Anybody who thinks that either the cakewalk or the danse du ventre is an artificial product should have seen the delighted way in which this bird spontaneously produced them in his joy at the sound of music. Then he tried his skill at singing. He listened attentively, with his head bent, on one side, until he discovered that the simple tune that was being played was in regular measures, and then he undertook to express his musical appreciation by butting in with a chorus at the end of each line.

A black coyote was tackled next. He was even more frightened than his cousins, the gray wolves. He ran away and ducked behind a tree, and poked his nose out from it pitifully and inquiringly as the machine wrestled stolidly with "The Evening Star."

As for the buffalo, they are about the most musically disposed animals in the Zoo. The whole herd came down and listened to it, and finally one big bull, disgusted at having the herd intrude upon his enjoyment of "Then You'll Remember Me," turned and drove them all away.

The Victor machine and records were loaned to the party by the New York Talking Machine Co.

The Burton Music Co., Los Angeles, Cal., have discontinued their talking machine department.

FROM OUR EUROPEAN HEADQUARTERS

69 BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

TRADE HAPPENINGS IN LONDON.

Talking Machine Trade in Worse Condition Than Ever Before in Its History Due to General Hard Times—Tide Believed to be Slowly Turning—Factors Need Protective Measures—British Manufacturers Investigating the Canadian Market—American Copyright Law Arouses Trade—Committee Appointed to Examine International Copyright Convention Now Active—To Endeavor to Get Consensus of Opinion—Frank Dorian, of the Columbia Co., on the Question—Mr. Balcombe's Views—Demand for Loud Records Falling Off—Public Prefer Softer Music—New Beka Records—"B. & H." Fibre Needles Popular.

(Special to The Talking Machine World.)

London, England, May 6, 1909.

The talking machine and allied trades throughout the whole of Europe are weathering a time of stress of a more depressing aspect than ever before experienced in the whole history of the trade. It is certainly not the outcome of public aversion to the talking machine as some would have us believe, but simply the reflex of the commercial upheaval which has shaken the security of the markets of the world for the last year or more. The inevitable sequence is hard times for everybody, and while the shortage of surplus or spending money continues, the great buying public is unable to get more than the necessaries of life. And what else can one expect in face of the present iniquitous budget, which has rightly been described as plundering the middle classes. We must not, however, hang all our troubles on the budget or any other cause. To dwell on the past doesn't make sales. Look ahead and endeavor to originate some of those little selling schemes from which business progress is the outcome, even at the worst times. Although nothing great can be expected before next season, the tide has already turned, slowly it is true, but the index is sufficient to warrant hopes of a continued and gradual improvement in the future. Some manifestation of this is shown by the decrease of unemployment in many of the skilled trades, while the shipping, coal, building and other industries appear to be in a slightly better condition.

Recent Patent Decision.

An important patent decision of great interest to the trade was recently given, as its effect is rather wide-sweeping in so far as to give quite a different interpretation of the new act than that generally accepted, I shall include a full review of the matter in my next report.

Protective Measures Necessary.

Business troubles appear to be fairly rampant just now, and I have it on good authority that three of the principal factors are in difficulties. If this proves to be so it can surprise no one, for the talking machine factor in England can barely get a living to-day, and I have no hesitation in saying that this is largely due, not so much to bad debts, as the inconsistent policies adopted by many of the manufacturers. Competition and the lack of combined protective measures probably forces the manufacturers to act as they do, but what with the exchange overstocking schemes, restrictions, failures, jobbing of old records and other unnecessary trade evils both the factor and the dealer have to write off huge losses every year. I do not for one moment suggest that an association combining the interests of the parties chiefly concerned would be a panacea for all these adverse elements, but certainly such an association could do a great deal in controlling and offsetting the many troubles which this trade suffers from. When will it come to pass?

Gramophone Recitals in Church.

We hear of many remarkable instances of the use to which the gramophone is put, but the latest is worthy of special mention. At Oxley Church, Watford, two recitals, "The Messiah" and "Elijah," were recently given by the gramophone. The operator, clad in cassock and surplice, undoubtedly lent a more realistic atmosphere to the performance.

The Canadian Market.

From the many conflicting opinions relative to trade with our colonies, there stands out the good sign that the various countries offer all the encouragement possible to merchants of the old country to enter the arena of friendly commercial relations. The Canadian dominion especially gives practical evidence of her desire to support all things British, and to this end a handsome preferential tariff opens the door wide enough for home talking machine and record manufacturers to send their goods through. The capabilities of the Canadian market have not yet been thoroughly investigated; the rate of progress and development of the country fully warrants an advertising outlay by all enterprising manufacturers, for experience has proved time and again that if you offer your goods persistently and well, they will be taken up with avidity against even the strongest foreign competition. It would be sensible to consider the opinion of a United States Consul, who, speaking of the best ways of doing business with Canadians, advises his countrymen to offer goods that give the easiest turn of profit. The English talking machine trader can do this, in combination with reliable goods. For the benefit of those desiring to cultivate the Canadian field, I may as well give the tariff charges, which are as follows: On talking machine and musical merchandise: England 20 per cent., Germany 40 per cent., other countries 30 per cent. Catalogs and trade literature, if posted singly and in separate envelopes, enter free, but in bulk, England 10 cents per pound, Germany 20 cents, general 15 cents.

Regarding Copyright Legislation.

The far-reaching and drastic copyright legislation so recently passed by the American authorities has had the effect of awakening British talking machine and perforated music roll manufacturers to the need for immediate action on their part, especially in view of the fact that the Board of Trade officials have now appointed a committee of influential men to examine the various points in which the revised International Copyright Convention signed at Berlin last November, and to which this country was a signatory, is not in accordance with the law of the United Kingdom, and to consider whether the law should be altered to give effect to the revised convention. I am glad to note that Trevor L. Williams, of the Gramophone Co., is on the committee, and he may safely be left to closely watch the interests of the talking machine industry. It must, however, be remembered that the committee will base their findings for the most part on the evidence of witnesses interested in the various trades and professions which the inquiry will cover. The imposition of a royalty or subsidy is generally regarded in the light of probability. But it is the conditions and stipulations of the new law which we shall have to guard against. Probably these rulings will be drastic or otherwise just according to the strength of the case made out by members of this industry. The most important consideration in this matter is a united front by, not only the large, but the small manufacturers as well, for the stronger the objective force, the greater the impression. The committee have already invited among others, Mr. Dorian, of the Columbia Co., and Messrs. Barnett Samuel & Sons, Ltd., to give evidence, but we want to see every manufacturer not yet invited make application to be interrogated, and air their views as they have every right to do. No monopoly must be allowed to spring up, which means that once a music publisher gives permission to a manufacturer to make records of a particular selection, any other manufacturer will have the right to use that piece, of course, under the royalty terms. It is almost certain that the new Act would not be retrospective, and any royalty or subsidy will therefore be imposed only on music or compositions copyrighted after the Act comes into force. And in this the manufacturer will have cause to

FROM OUR LONDON HEADQUARTERS—(Continued.)

congratulate himself upon having already recorded most of the gems of the past and the present. As the proposed legislation would benefit nobody except the music publisher, let all upon whom it would adversely affect, fight and oppose it for all they are worth. Now is the time; it may be too late a few months ahead. Supposing it to be inevitable, our energies must be centered upon obtaining a fixed and stated royalty, and having the conditions framed in the most equitable manner, bearing in mind the iniquitous impositions embodied in the American copyright act, which provides for royalties on every record manufacturer, and not only on those actually sold. This latter point should receive careful treatment, while the matter of credits needs consideration. The majority of record makers could not afford to pay royalties monthly, since they are saddled with the enormous cash expense of recording, and upkeep of the business, against returns of unknown quantity; their customers in many cases requiring two, three, or more months' credit. In this respect, therefore, the manufacturer needs three months' grace in which to pay royalties (if any).

We propose to open these columns to the opinions of manufacturers and agents, and have pleasure this month in presenting our readers with expressions of views on the subject from Frank Dorian, European general manager of the Columbia Phonograph Co., and A. Balcombe, of Barnett Samuel & Sons, Ltd., the exclusive selling agents for Odeon, Fonotipia and Jumbo records.

Frank Dorian's Views.

"Dear Mr. Sturdy:—Referring to your request for a brief outline of my views on the copyright question, I regret that the time at my disposal is so limited that I can give you only a hastily prepared sketch of little value. The subject is so important that I would like to have sufficient time to go into it with care and present my ideas in logical order. However, if you will make proper allowances for the pressure under which this letter is written and its consequent incompleteness and crudeness, I am glad to comply with your request.

"You are probably familiar with the agitation which has been going on for six or seven years past on this subject, having for its object the inclusion in the copyright domain of mechanical reproductions of music. Our company has, unfortunately, been very much to the fore in the matter. We were among the original defendants in the first suit filed in France, about 1900, which was, I believe, the first serious effort made to stretch existing copyright law to cover mechanical musical productions. After years of strenuous litigation, the suit resulted in a partial victory for the representatives of the publishing interests. Only one similar suit resulted favorably for the publishing interests, and finding this method unsatisfactory as well as slow and costly, a public agitation has been carried on under the auspices of an international association of publishers for the past six or seven years, culminating in the recent Berlin Conference for Revision of International Copyright Laws. With the conclusions adopted at that conference you are also probably familiar. But those conclusions do not become binding on the nations represented at the Conference until confirmed and enacted into law by the legislatures of each country. The British Government have not been slow in following up the subject and the recent appointment of a committee to investigate and report on the matter would certainly appear to be the wisest course that could be adopted. The personnel of the committee justifies the belief that all the interests concerned will have a fair hearing and that the conclusion reached will be as equitable as the evidence before the committee permits. The situation calls for eternal vigilance on the part of all concerned in the talking machine trade. The question affects the dealer and the factor as well as the manufacturer. If a tax is put on records, it is fairly certain the manufacturer must increase his selling price to cover it. This means that the factor and dealer must either be content with less profit or must demand an increased price from the public. Under either condition the dealer is likely to feel the pinch of the shoe. Unless the talking machine trade rises to the situation and presents an unbroken and solid front it is doomed to defeat. The music publishers are wealthy, powerful, well organized and practically unanimous in their aim to bring a big industry under their control and squeeze additional profits from it. Although the amount of capital invested in talking machine manufactures and in the industry generally in Great Britain is very substantial, the individual manufacturers represent very little in numbers, as compared with the interests allied against them on this question, and unless the factors and dealers join hands with the manufacturers and support them they will surely have cause to regret it later on.

"Although by no means indubitable, there seems to be a feeling among those in the trade who have followed the subject that the eventual inclusion of records under copyright law is inevitable. This is qualified by a comforting sense of assurance that no conclusion is likely to be reached and no new law passed during the present Parliament. It seems to me your influential publication might well sound a note of warning

KLINGSOR

THE "WAGNER"
Highly finished solid Oak Cabinet

THE new season is here and you cannot, to your own advantage, do better than to apply to us for our new colored illustrated catalogue of our celebrated ***Klingsor*** Talking Machines and Sundries. We challenge any machine on the market concerning working, tone-quality, finish, etc. We do not claim cheapness, as you are well aware that a good machine cannot be cheap, but we are still cheaper than any other machine for what we give you for your money.

All machines are of the best and solid wood, either in oak, mahogany or walnut, British made throughout, specially adapted for export to stand any change in temperature.

The machines are fitted with the best motor in the market "the well known and famous Excelsior Motor."

on both these points. There is still a possibility of convincing the committee and Parliament that mechanical reproduction of music is not an infringement of the publishers' rights and should not to be taxed for their profit. More important still is it that there should be no false sense of security and a Micawber-like attitude of expectancy for something to turn up. Committees have a way of surprising the public, and even parliaments have been known to pass laws that were not anticipated or were set down for consideration in the dim distant future. The time to prepare for battle is *not* after the first gun has been fired. In the present instance, the time is NOW, and you will be doing a substantial service to the trade if you can impress upon every individual in it that this is a question which affects his interest, and his pocket, and needs attention NOW—right this minute!

"But assuming for the moment (and to avoid going into a feature which would take more time than you have allowed me for this letter), that talking machine records are eventually certain to be made subject to a publishers' tax, there is still much to be done. The recommendation of the Berlin Conference includes a provision that 'The authors of musical works shall have the exclusive right of authorizing (1) the adaptation of those works to instruments which can reproduce them mechanically; (2) the public performance of the said works by means of these instruments.' Here are two very broad provisions, which, if incorporated into law without restriction or qualification, places every manufacturer of records and every owner of a talking machine who attempts to publicly exhibit his instrument, at the mercy of the publishers of music. The publisher can make an exclusive arrangement with one manufacturer whereby all others are precluded from making records of new music, and thereby drive out of business a manufacturer who may have thousands of pounds invested in manufacturing plant. Or the publisher may make prohibitive demands as to royalties which will have the same effect as a refusal to permit the music to be recorded. Any law enacted should carefully guard against monopolistic favoritism. The fixing by law of the maximum royalty to be paid the publisher, as has been done in the United States, would be a preferable arrangement; but with this should be coupled a condition that the granting to one record manufacturer of the right to record any musical composition should automatically extend the same right to all other record manufacturers upon payment of the same royalty paid by the first licensee. The possibilities of that portion of the provision which applies to 'public performance' are so far-reaching that it is impossible to go into them in detail in the limited time at my disposal; but a great many of them will be apparent to every user of a talking machine.

"I regret that I cannot go into greater detail and point out more of the serious problems connected with this subject and which vitally concern the industry; but if I have given you herein any material which will be useful to you, and particularly serves to stir up interest among those whose business it should be to join the manufacturers in fighting for existence, I shall be glad to have been of service. Very truly yours, Frank Dorian."

Mr. Balcombe's Views.

I found Mr. Balcombe quite emphatic in his views on the matter. In the justice of the supposed rights of the music publishers' attitude, he considered that they were much indebted to the talking machine manufacturers for the sales of their music; the putting out of a talking machine record being a great incentive to people to buy the music. He said:

"As a matter of fact there is plenty of evidence that music publishers have asked talking machine manufacturers to make records of their music in order to popularize same. The publishers of music cannot adduce any evidence of the assertion that sales have fallen off owing to the music being mechanically reproduced. On the contrary, there is ample evidence that their sales have enormously increased through it. The "copyright" only costs the music publisher five shillings, and to give him a subsidy on the thousands of talking machine records seems ridiculous on the face of it. If a royalty is given at all to the music publishers, it should be the efforts of the talking machine manufacturers to see that the publisher pays more like £50 for the right to copyright a piece of music which gives him the privilege of exacting a tax from talking machine manufacturers. The sums of money that have been spent in patenting and improving talking machines and records is enormous compared with the money spent by music publishers." I, therefore, gathered from Mr. Balcombe that it was their intention to oppose any privileges being granted to music publishers on the rights of records. If such rights are granted to them they will endeavor to see that the publishers pay a pretty sum for it. Another aspect of the case is, that the publishers in their greed to capture a subsidy on talking machine records can be outdone by record manufacturers, as the music publishers have admitted themselves that they pay small sums of money for the buying outright of a copyright piece, knowing well that they can print and publish 100 pieces, and a very small portion of them only being successful, it will be quite within the province of talking machine manufacturers to buy these compositions from the composers themselves, popularize the piece as they believe the talking machine has the tendency to do, and exact a sum from the publishers for the right to publish same. The firm have been invited to give evidence before the commission and they will take care that the interests of the talking machine trade will be looked after to the utmost extent.

a feature of last season's trade, is now fortunately on the wane. Certain manufacturers, no doubt prompted by a small section of the community, thought to make a commercial demand by issuing series of loud-tone records. Being something new they sold. But not for long. Their sales have dropped to an unknown quantity in favor of lighter music and records of more mellow tone. Is it not a fact that half the prejudice existing against talking machines (so-called) is largely brought about by the blatant and loud harsh reproduction; the embodiment of "loud" records, foisted upon a suffering public? The answer must unquestionably be in the affirmative. There is no permanent demand for records above the average standard volume (except, of course, for concert and outdoor work), and this view is now endorsed by several leading manufacturers, who recognize that if mechanical music is to obtain a lasting hold upon public favor, only that music which shall cause sympathetic interest and amusement must be issued with full regard to the sensitiveness of feeling in the great middle and upper classes. The majority of dealers find that soft tone records are best appreciated, but there are traders who want records louder and yet louder, which reminds me of a little story I came across recently in relation to the great American orator, Corwen, who was constantly interrupted when addressing a big meeting at Buffalo by a man who cried, "Louder, louder!" The orator paused, and then said, "At the last day, when Heaven and earth shall pass away like a scroll, when the Ancient of Days shall sit on His great white throne, thousands and tens of thousands of the heavenly host ranged on His right hand and on His left, when the Archangel blows the trumpet that shall rend the tombs and wake the dead, some damned fool from Buffalo will be heard shouting, "Louder, louder!"

213 Deansgate, Manchester, Eng.

Current Beka List.

The current Beka list contains some original selections, well recorded, and at the price of 2s. 6d. per double disc, exceptional value. The Beka, London Orchestra, admirably conducted by our old friend, Mr. Julien Jones, figures with "Masken Polonaise," "Venus on Earth," "Adrienne March" and the "Gay Hussar," all pretty music and which so successfully fills the bill at this time of year. In "There's a Land" and "Abide With Me" Miss Jessie Broughton is well up to her good standard, while Mr. Harry Thornton (a new artiste to the Beka Co.) renders "Ho! Jolly Jenkins" and "The Bendolero," with much vim. Two musical sketch records of a particularly amusing nature by Charles Conyers are "An Evening Party" and "Jimmy Law." Other good records appear in this list by such well-known artists as Bernard Turner, Henry E. Geehl (piano) and Mr. Bantock Pierpoint.

Specialties Greatly in Favor.

The B. & H. fiber needles and Flex diaphragm seem to go hand in hand for public favor, and the progress of their popularity is summed up by Mr. Daws Clarke in a very few words. He writes that business is good, and that's something nowadays!

Hough Buys Edisonia, Ltd.

Edisonia, Ltd., as a going concern, under auction recently, was knocked down to Mr. J. E. Hough, late manager of the Edison Bell Phonograph Co., at the price of £10,400. The future policy of the purchaser is indicated by the following new company registration: J. E. Hough, Ltd., registered April 16. Capital £10,000 in £1 shares. Objects: to carry on the business of manufacturers and contractors for the sale, erection and maintenance of phonographs, gramophones, phono-disc records and machines, etc. To acquire the undertaking and assets of Edisonia, Ltd., and to adopt an agreement with J. E. Hough. Private company; registered office, 62 Glengall road, Peckham, London, S. E.

Gem Attachment to Play Amberols.

The National Phonograph Co. announce that their factory is now engaged in perfecting an attachment that will enable the "Gem" phonograph to play Amberol records. They add: "The 'Gem' attachment will be ready for the coming season and will be sold at a price that will bring it within the reach of all 'Gem' phonograph owners."

New Prices on Needles.

Notice has been forwarded to dealers that from May 1 they are authorized to sell Gramophone ordinary, Piano and Pianissimo needles at 8d. per box of 200, or 3s. per thousand. The price of Melba needles remains unaltered at 1s. 6d. per box of 200, or 7s. 6d. per thousand.

New Lindstrom Styles.

Several new styles of the well-known Lindstrom machines will shortly be introduced to this market. A special feature is the new principle upon which the motor is built, and there is every evidence of a big demand for these new models.

The May Zonophone List.

The May Zonophone list is headed with the

FROM OUR LONDON HEADQUARTERS—(Continued.

6th Grand Opera Record, i. e., "Ah, Minii!" the famous duet from the opera "La Boheme," the recording of which is superb. In this duet Messrs. Ernest Pike and Peter Dawson appear at their best. The popular Black Diamond Band is responsible for several fine selections, of which I would mention: "Raymond" overture, "H. M. S. Pinafore" and "Russian March." Mr. Ernest Pike gives a truly sympathetic rendering of "Tell Me, Mary, How to Woo Thee," while Mr. Dawson makes a fine record of "The Gallants of England." "The Lass of Killiecrankie," by the one and only Harry Lauder, needs no recommendation. Signor Francisco's xylophone record "Intermezzo" is splendid in every way and should be a good seller. Other well-known artistes figure in this list with selections of a popular character.

A Talking and Singing Doll.

H. Langes Successors, Ltd., are marketing a real novelty in the shape of a talking and singing doll, who will make her debut under the name of "Arnoldia." She can sing and talk in any language, is a good companion to the children, and, above all, promises to obey always. She will sell for 50s. upward.

Wireless Marvels.

The Wireless Marvels are further demonstrated by a report from Paris, which gives details of a successful conversation held over thirty miles during an experiment with a wireless telephone, the invention of two lieutenants in the French Navy. The conversation was heard with great distinctness by either side, and the experiment was in every way a complete success.

Universal Talking Machine Co., Ltd.

Universal Talking Machine Co., Ltd., issue of debentures, dated March 12, 1909, to secure £2,000 charged upon the company's undertaking and property, present and future, including uncalled capital. Holder, Aldridge, Salmon & Co., Ltd., 4 Fenchurch avenue, E. C.

Gramophone News.

Intimation has been conveyed to gramophone dealers that hereafter the Senior Monarch, Monarch and Junior Monarch machines in mahogany will be sold at the same prices as the oak models. The most important news this month from the Gramophone Co. is the announcement of quite a new style machine called the "Pigmy" Grand. The novelty of this model is that there is no horn at all, excepting a very small aperture in the case through which the sound is carried. The "Pigmy" packs into a neat leather case measuring only 17 in. long, 15 in. high and 8 in. wide, and its compactness and portability renders it very suitable for picnics and boating parties. In fact, the "Pigmy" Grand undoubtedly fills the proverbial long-felt want for a really good summer selling line. Dealers should take full advantage of this opportunity to increase their returns.

The new Gramophone celebrity list just issued contains some magnificent records by artistes who have obtained high positions in the La Scala opera at Milan.

In the current list of ten and twelve-inch records, the company must be congratulated upon both the quality of the artistes and selections given, for this is unquestionably one of the best lists ever, "Evening Hymn and Last Post" (Makenzie Rogan), "Phoenician Dance"—Herodiade (Massenet), and "Amina Egyptian Dance" (Lincke), are splendidly recorded by the Band of H. M. Coldstream Guards; "La Paloma," a beautiful selection by Sousa's Band; Tennyson's "Crossing the Bar" is faithfully rendered by Evan Williams, as also is "On Wings of Song" (Mendelssohn). "The Pipes of Pan" (Elgar) is a lifelike record, by Frederic Austin, while of "Revenge" (Hatton) nothing could be more realistic than Robert Radford's rendition; "Softly Sighs," from Weber's great work "Der Freischuetz," receives sympathetic vocal treatment by Miss Perceval Allen; "Best of All," by Madame Jones-Hudson; while another good record is "Ah! Rendami quel core" (Rossi), sung by Miss Alice Lakin. The Whitney Quartet give a well-balanced rendition of "Hail! Smiling Morn." George Edwards latest continental musical piece, "The Dollar Princess," cannot be heard to better advantage than the three gramophone records by The Dollar Princess operatic party. So good are these records that it is safe to say the success of the theatrical production of this musical comedy will be considerably enhanced thereby. "I Used to be Afraid to Go Home in the Dark," a good comic by Billy Murray. One of the most interesting talking records issued is that by Cyril Maude, the great actor, who records a speech on behalf of the Actors' Benevolent Fund; the Gramophone Co. are giving a royalty of 6d. on every record sold toward the fund. An excellent piano solo, "Prelude and Fugue in C Sharp," is given by Herr Wilhelm Backhaus, while one of the best 'cello records we have heard is "Minuetto," by Hugo Becker. Other good records are: "The Electric Polka" piccolo, Eli Hudson; "Larghetto," by the famous Renard Trio, and the famous old song, "Cherry Ripe," is whistled by Charles Capper.

Will Not Drop Queenstown.

The Postmaster-General has refused to drop Queenstown as a port of call for the Lusitania and Mauretania on their outward voyages to New York, and thus make a saving of ten to twelve hours in the voyage.

Selfridge's Line of "Talkers."

Selfridge's great American store in Oxford street, as may be expected, have a complete range of gramophones, and stock Irvin, Gramophone and Zonophone records in large numbers. They feature these goods effectively in their advertising announcements, making special mention of the daily demonstrations by means of hearing tubes, which from all accounts is highly successful and much appreciated by their customers. Such an innovation might with advantage be adopted by other dealers, for it is originality

Talking Machines in Canada.

From time to time the High Commissioner for Canada, 17 Victoria street, London, W., receives application from English talking machine and record firms wishing to place agencies in Canada. Those of our readers in that colony who are in a position to energetically push the sale of reliable talking machine merchandise should communicate with the Canadian Commissioner, at the above address, and he will gladly forward all applications to the right quarter, or I will give the matter my personal attention on receipt of advice to the London office of The Talking Machine World, 69 Basinghall street, E. C.

May List of British "Amberols."

The second or May list of British "Amberols" to hand contains fourteen good selections of a popular character, as follows: "Pomp and Circumstance" march, "Under a Peaceful Sky" and "Mikado Waltz," by the National Military Band; "Thou'rt Passing Hence" (Sullivan), a very fine record by Arthur Grover; "Songe D'Automne, Waltz" (Joyce), splendidly played by the British Concert Orchestra; "There's a Foe at the Gates of England," a timely piece well rendered by Harry Fay; "Leicester Square" is a good comic by Tom E. Hughes—a new artiste to the Edison list; the famous Olly Oakley is another new artiste, well represented by an exceptionally fine banjo solo; "Poppies and Wheat," barn dance; "Ora Pro Nobis" is sung in Mr. Peter Dawson's best style; of which the same may be said for "Alice, Where Art Thou?" by Ernest Pike; "Plink Plonk" is rendered by George Formby, in his usual droll way; while Arthur Osmond airs his most virtuous sentiments in "The Harem"; "Forgotten Melodies" is a prince of a record by Alexander Prince on his concertina.

The "Aspir" Makes Its Debut.

The "Aspir" is a new name of yet another new disc record—eleven-inch double-sided.

TRADE REPORTS FROM THE PROVINCES

NORTH OF ENGLAND NOTES.

(Special to The Talking Machine World.)

Liverpool, Eng., May 3, 1909.

Notwithstanding the signs that trade was likely to improve during the early part of the year, we regret to say that it has not come up to expectations by any means. In Liverpool shipping is still bad, and the leading dealers just now are having poor sales which may continue until after the summer holidays. This is the case of practically every house in the town.

At Messrs. Richardson's and Messrs. Johnson's, the wholesale dealers, business was reported as moderate. Thompson, Helsby & Co. report a falling off during the past few months. Messrs. Archer find business a little slow. At Jake Graham's they are doing their share of the business, principally kept going with repeats and small incidental orders. At Messrs. Van Geuissen's business had considerably increased of late, owing to their having taken up Zonophone and Twin records.

The Melograph Co. report that although they have been kept busy with an export order for some time past, general trade is very slow. Their new list of records, comprising the very latest titles, is winning praise on all sides.

Manchester Business Is Quiet.

In Manchester, business is also very slow. There seems no likelihood of the cotton operatives, and others interested in the engineering trades, resuming full work for some months to come. Most of the mills are only running about half time, and the consequence is that Lancashire generally is having a pretty bad time.

By the time these lines are in print C. Duwe, the well known factor, will be in the States. Mr. Richardson, of Messrs. Richardson, Manchester, Liverpool and Blackburn, is also away on a Mediterranean cruise for the benefit of his health. Generally speaking, Messrs. Richardson report that although the trade is quiet; since they have had a delivery of the British Amberol records their sales have considerably increased. Their latest venture at Blackburn is rapidly getting into working order, and they have every reason to believe it will be a most successful business a little later.

At Messrs. Burrows, High street, business is somewhat slow. They report that they have done fairly well with the British Amberol records, and when the list is more complete business will be still better.

Mr. Alker, of the Rena Mfg. Co., 93 Market street, reports that Rena records are being pushed very extensively in the North, and he expresses himself satisfied with record sales so far.

Gleanings from Leeds.

In Leeds generally, trade is not as brisk as talking machine men would like. To further the sales of Zonophone records a Zonophone evening concert was given in the Leeds Town Hall on April 19, the following artists appearing: Messrs. Peter Dawson, Ernest Pike, Olly Oakley and Madame Marie Goodall. There was a large audience.

Messrs. Hilton and Messrs. Scott report business as moderate. The British list of the Edison Amberol records have given somewhat of a fillip to the cylinder sales.

At Messrs. Appleton's Columbia and Rena records are holding their own, and with the other wholesale houses, Zonophone and Twins are having fair sales.

Messrs. Hopkinson's have recently taken up Klingsor Cabinet machines, and from what we hear, are doing well with them.

Messrs. Skyes, of Albion street, are looking forward to large sales in the Gramophone new model, "The Pigmy Grand," samples of which have just been received. They express themselves satisfied with the past season's trade.

Messrs. Jenkins, Queen Victoria street, has recently introduced a new model of a cabinet disc machine to take the place of the street piano-organ. Fitted with an inverted wooden horn and a closed top lid, it provides plenty of room for the records, and being mounted upon two ball bearing bicycle wheels it will be quite a novel machine. Usually the piano-organ is heavy and unwieldy to push along the streets, but in this case the weight will be very little. The instrument will attract attention, which will be to the financial benefit of the user.

Messrs. Tilly & Co., in Queen's Arcade, concentrate upon Edison, Gramophone, Zonophone and Twins very extensively. With a good stock and a well organized shop, the manager reports business as fair during the past season, but a slight falling off at the present time.

We understand that the late "Magazine Holder Co." have recently been formed into a Limited Co., under the name of "Perfectophone, Ltd." They have acquired spacious premises in Kirkstall road, where they are equipped with new machinery and making large preparations for the next season's business. Mr. Bleakley is the managing director.

L. J. GERSON WITH WANAMAKER.

With the announcement that the Musical Echo Co., Philadelphia, Pa., had retired from business, Louis J. Gerson, manager of that business, sent a letter to his friends and patrons informing them that he and his entire force from the Musical Echo Co. would in future be found in the talking machine and small goods department of the John Wanamaker store, of which Mr. Gerson has become manager. The Wanamaker department is equipped with a full and complete line of both Victor and Edison machines and records. The repair section of the department will be in charge of Mr. Adams.

BERLINER PATENT FINALLY ADJUDICATED.

The Supreme Court of the United States Affirms Decisions of Lower Courts in the Berliner Case in the Suit of the Victor Talking Machine Co. Against Leeds & Catlin—Suit Has Been Pending Since 1906, and the Decision Is One of Great Moment to the Talking Machine Industry—The Court's Summary Is Reproduced Herewith.

(Special to The Talking Machine World.)

Washington, D. C., May 3, 1909.

The Supreme Court of the United States on April 19 affirmed the decisions of the lower courts in what is known as the Berliner case (Victor Talking Machine Co. against Leeds & Catlin Co.). The suit has been pending since April 9, 1906, when a motion for a preliminary injunction was argued in the Circuit Court of the United States, southern district of New York. On the 26th succeeding, the temporary restraining order was issued and stayed pending an appeal to the Circuit Court of Appeals. The hearing on the appeal came on October 11 of the same year. Judge Townsend was sustained. The case was then taken to the Supreme Court of the United States on a writ of certiorari, argued January 14, 1909, and decided adversely, for the third time against the Leeds & Catlin Co., with costs, on the date first above mentioned. This is final. A summary of the facts in this celebrated suit, in which the talking machine trade is vitally interested, together with the essential portions of the decision, are subjoined.

COURT'S RESUME OF THE CASE.

This case was before the Court on certiorari to an interlocutory decree of injunction restraining the petitioner, Leeds & Catlin Co., from manufacturing, using or selling sound reproducing apparatus or devices embodied in claim No. 35 of letters patent No. 534,543, issued to Emil Berliner, bearing date 19th of February, 1895, and also from manufacturing, using or selling or in any way disposing of apparatus or devices which embody the method specified in claim No. 5 of the same patent.

The petitioner explicitly denied infringement, and alleged anticipation of the invention described in the patent by a great number of patents and publications in this country and other countries. And hence it is alleged that, in view of the state of the art, Berliner was not the first inventor or discoverer of any material or substantial part of the alleged improvement and invention described or claimed. The answer further alleged that said letters patent did not describe or specify or claim any subject matter patentable under the statutes of the United States, and are and always have been null and void. Abandonment is alleged and a two years' use of the invention in this country before the application for the patent, that the invention and improvement were known and used by others and were in public use and on sale in this country by divers persons, a list of whose names is given.

It is alleged that before the invention was patented in the United States the same was patented, or caused to be patented, by Emil Berliner in foreign countries, and that by reason whereof, under section 4887 of the Revised Statutes of the United States, the letters patent in suit were limited to expire at the same time with said foreign patents and each of them—two in Great Britain, three in France, three in Germany and one in Canada. And it is alleged that in consequence thereof the said letters patent of the United States have long since expired and plaintiff is not entitled to any relief by injunction or other relief in equity, that a court of equity has no jurisdiction of the suit, and that plaintiff has an adequate remedy at law.

Upon the bill and certain supporting affidavits an order to show cause against a preliminary injunction was issued, which coming on to be heard upon such affidavits, and other affidavits and exhibits, a preliminary injunction was granted. It was affirmed by the Circuit Court of Appeals.

SUMMARY OF THE DECISION.

Justice McKenna, in delivering the opinion of the court, said in part:

"The motion for preliminary injunction was made upon affidavits. Those of respondent (complainant in the Circuit Court) described the invention and the machine made in accordance therewith, averred the practical identity of petitioner's machine therewith, and set forth the record in the case of *The Victor Talking Machine Co. and The United States Gramophone Co.* against *The American Graphophone Co.*, instituted in the Circuit Court for the southern district of New York. The affidavits averred that the suit was pending and awaiting decision when this suit was brought, and was subsequently decided; that by the decision, claims 5 and 35 of the patent in suit were held valid and infringed by the talking machine of the defendants, and that an injunction was ordered. And it was stated that the Circuit Court of Appeals, though not concurring with the Circuit Court in all of its reasoning, affirmed the decree.

"The affidavits of petitioner (the defendant in the courts below) set forth the defenses which were made in the case just referred to, a summary of the proofs introduced to sustain the defense, and submitted new matter. The affidavits also contained a description of the patent in suit and what was considered to be its basic invention, averred its identity with certain foreign patents which were not in evidence in the other suit. The affidavits also undertook to meet and refute the charge of infringement. The affidavits were very long and circumstantial, and had attached to them copies of the foreign and domestic patents relied on, translations of foreign laws, copies of publications and certain testimony.

JUDICIAL EMBARRASSMENT.

"Upon this body of proof, formidable even in its quantity, and having no other elucidation than the arguments of counsel and some mechanical exhibits, presenting grave questions of fact, we are asked by petitioner to go beyond the action of the lower courts, and not only reverse them as to a preliminary injunction but decide the case. If we should yield to this invocation and attempt a final decision it would be difficult to say whether it would be more unjust to petitioner or to respondent.

"The Circuit Court felt a like embarrassment, as will be observed from its opinion. The court did not pass on the defense of infringement, and said that, except as to one patent, the petitioner had failed to introduce any new matter which would have led the courts in the other case, if such matter had been before them, to have reached a different conclusion. And, speaking of the patents referred to, the circuit judge said: 'But even if I am mistaken in this view, and if the expiration of the Suess Canadian patent is a complete defense, or if a decision of the questions raised as to the character and scope of the various patents now introduced for the first time should be postponed until final hearing, yet I am constrained to grant the injunction in order to permit an appeal and a determination of the questions at the earliest possible moment.'

"And the lower courts also reserved to the merits the consideration of the defense that claims 5 and 35 were invalid because they were the functions of machines, resting those defenses, so far as the preliminary injunction was concerned, upon the adjudication in the prior suit. We shall do the same, remarking, however, that the contention, if it has any strength as to claim 5, seems to us untenable as to claim 35. We think the latter is a valid combination, consisting of the elements, (1) a traveling tablet having a sound record formed thereon; (2) a reproducing stylus, shaped for engagement with the record, and free to be vibrated

and propelled by it. It is, therefore, a true mechanical device, producing by the co-operation of its constituents the result specified and in the manner specified.

DISINCLINED TO PASS ON QUESTIONS OF FACT.

"In passing on the other foreign patents the Circuit Court considered that the prior adjudications fortified the presumption of the validity of the patent in suit, and established its scope, and that the new matter introduced by petitioner did not repel the presumption or limit the extent of the patent. That the lower courts properly regarded the prior adjudications as a ground of preliminary injunction is established by the cases cited in Walker on Patents, section 665. And in that aspect the question must be considered, and so considering it we may pass the defenses of anticipation, whether complete or partial, and the defense of infringement. These are, we have already said, questions of fact which we are not inclined to pass upon unaided by the judgments of the lower courts made after a hearing on the merits.

"The patent in suit and the patents which, it is contended, anticipate it or limit its extent or duration are for methods or devices whereby sound undulations trace or inscribe themselves upon a solid material, and are by suitable devices made to reproduce themselves and the sounds which made them. One of the questions in the case is, as we have seen, the relation of the patent in suit to the prior art. It is contended by the respondent that Berliner (he was the patentee of the patent in suit) improved the prior art, not only in the methods of recording and reproducing sounds, but in the devices by which the methods are accomplished.

"In the old method the sound record was produced by vertical vibrations, either indenting a pliable material, by and in accordance with the sound waves along a helical or spiral line, as in the Edison patents, or by like vibrations engraving a suitable material, by and in accordance with the sound waves, as in the Bell and Tainter patent. By both of these methods there was produced a record consisting of a groove of varying depth, that is, containing elevations and depressions corresponding to the sound waves which produced them. In the Berliner patents the vibrations are made to inscribe a laterally undulating line in the general direction of a spiral. The line, therefore, is of even depth, the inequalities or sinuosities produced by the sound waves being upon its sides. By this method there is produced a sound record tablet, consisting of a flat disc of hard resisting material, having in its surface inscribed a spiral groove of practically even depth, but undulating laterally in accordance with the sound waves. The patent in suit describes and specifies the ways of making such record tablet, as do the prior patents the sound records of the respective patentees. Further description of the records, however, is not necessary, as we shall have with them but incidental concern.

FREE MOVING STYLUS DESCRIBED.

"The records being made, the next step is the reproduction of the sounds which they record. This is done by adjusting to the line or groove inscribed upon the records a point or stylus attached to a diaphragm, which, being vibrated by the indentations or sinuosities of the groove, reproduces the sounds that made them. In the prior art the reproducing stylus and sound record were brought in operating relation to each other in two ways. The sound record was mechanically conveyed across the reproducing stylus, or the reproducer and its stylus were mechanicallly conveyed across the record. By one or the other of these means the stylus was kept in engagement with the record and accommodated to the shifting positions of its operative portions. In the patent in suit such independent means are dispensed with. The stylus is made to engage with the grooves in the record tablet, is vibrated laterally by its undulations, and guided or propelled at the same time with its diaphragm attachment across the face of the tablet, the successive portions of the groove reproducing the sound waves, which are transmitted to the air.

"The sound records are made of hard, indestructible material and, as stated in one of respondent's affidavits, the groove impressed therein 'serves the twofold purpose of vibrating the stylus and producing the necessary vibrations in the diaphragm of the sound box, and also to automatically propelling the stylus in the groove across the surface of the record without a feed screw or other mechanism independent of the record itself.' The method of doing that is the subject matter of claim 5, and the means for performing the method is the subject matter of claim 35. They are, respectively, as follows: 'No. 5, the method of reproducing sounds from a record of the same, which consists in vibrating a stylus and propelling the same along the record, substantially as described. No. 35 is a sound-producing apparatus, consisting of a traveling tablet having a sound record framed thereon and a reproducing stylus shaped for engagement with said record and free to be vibrated and propelled by the same, substantially as described.'

NEW MATTER CONSIDERED.

"We may now understandingly consider the new matter which was relied on in the courts below. The first in importance of these is that the patent in suit is for the same invention of certain foreign patents and expired with them. These patents consist of three French patents to Emil Berliner, respectively dated Nov. 8, 1887, May 15, 1888, and July 19, 1890; German patents to Berliner dated Nov. 8, 1887, May 16, 1888, and Nov. 20, 1889; a Canadian patent of Feb. 11, 1893, assigned by W. Suess to Berliner; English patents of Nov. 8, 1887, and May 15, 1888.

"In the foreign patents relied upon, special stress is given to German patent No. 53,622 to Berliner, and it is contended that it expired before this suit was brought, and that the patent in suit expired with it. * * * The expiration of the German patent No. 53,622 for the reproducer did not affect the duration of the patent in suit so far as claims 5 and 35 are concerned, even though such reproducer is made the subject of one of the claims of the patent in suit. To some extent these remarks are applicable to all the foreign patents relied on by petitioner.

"It is contended by respondent that the recorder and reproducer of the patent in suit differ in certain details of construction and operation from the recorder and reproducer of the German and French patents, but the Circuit Court said that that question could only be determined by expert testimony, and assumed the details to be substantially identical. We shall do the same, and are of the opinion, for the reasons which we have given, that the expiration of those patents, the French patent as well as the German patent, did not carry with them the expiration of the inventions exhibited in claims 5 and 35 of the patent in suit.

PREVIOUS PUBLICATION NOT PUBLIC USE.

"Among the publications referred to in petitioner's answer, and introduced in evidence, was one in The Electrical World for Nov. 12, 1887, one published in the same paper Aug. 18, 1888, and a paper read by Berliner before the Franklin Institute May 16, 1888. In these publications there is description of the invention, and in the paper read before the Franklin Institute Berliner describes the genesis of his ideas and the ideas of others in the process of recording and reproducing sounds. He entered into a somewhat detailed description of his invention, exhibited a machine and gave an illustration of its powers, among others letting the audience 'listen to some phonaulograms,' which he said he had prepared within two weeks before in Washington. This was urged as a public use, but the Circuit Court decided that neither that lecture and exhibition nor the description in The Electrical World in 1887 constituted a public use within the meaning of the statutes. And the court also decided that the broad claims of the patent in suit were not made a part of the earlier application for patent No. 564,586, and that that omission, even when combined with such exhibition and publication, was not an abandonment and forfeiture of those claims.

"The Circuit Court of Appeals did not discuss those questions or express an opinion upon them, but decided that the specifications in the application for patent No. 564,586, issued subsequently to the patent in suit, were broad enough to warrant the making of the claims in controversy (5 and 35), and that the second application could fairly be considered a continuation of the first and antedated the alleged public use. If this be so, petitioner contends, the two patents must be treated as one patent covering one invention, that described in No. 564,586, and, it is further contended, that as that invention was previously patented by the three foreign patents, the patent in suit expired with them. The reasoning is extremely technical, and we may adopt the answer made to it by the Circuit Court: 'An examination of the drawings of the prior British patent shows that there is omitted therefrom Fig. 10 of the United States patent No. 564,586, which was the only figure illustrating the form of the device covered by the claims here in suit.

CANADIAN PATENT DOES NOT APPLY.

"There yet remains the Suess Canadian patent to be considered. It was granted to Berliner as the assignee of Suess, and Judge Townsend in the Circuit Court said that the patent disclosed and broadly claimed the invention covered by the claims in suit, and on account of it defendant (petitioner here) contended that Berliner thereby admitted that Suess was the inventor of the reproducing apparatus of those claims; that in his application as the assignee of Suess he abandoned the broad claim in suit and that as the patent covered the invention of the patent in suit and expired in 1899, the patent in suit expired with it.

DURATION OF UNITED STATES PATENT.

"The court, however, decided that the Canadian patent in terms described and claimed 'the broad generic invention of Berliner covered by the claims here in suit,' and to establish this quoted claims 5, 7 and 11 of the Canadian patent and concluded that if that patent expired in 1899 the patent in suit also expired. The court, however, decided, expressing, however, some hesitation, that the patent did not then expire, stating the rule to be, as established by the cases, that a United States patent is limited by the term expressed in the foreign patent and that it is not affected by any lapse or forfeiture of any portion of the term by means of any condition subsequent. The patent was granted for the term of eighteen years from its date, Feb. 11, 1893.

"We think the questions involved are determined by *Pohl* against *Anchor Brewing Co.* It is there decided that 'the statute manifestly assumes that the patent previously granted in a foreign country is one granted for a definite term; and its meaning is that the United States patent shall be so limited as to expire at the same time with such term of the foreign patent.' And it is further said that the duration of the United States patent is not 'limited by any lapsing or forfeiture of any portion of the term of such foreign patent by means of the operation of a condition subsequent, according to the foreign patent.' From these views it follows that there was no abuse of discretion in granting the preliminary injunction, and the decree is affirmed."

TRADE IN THE MONUMENTAL CITY.

April Proves Very Good in Machine and Record Sales—Appreciation of Tone Quality Causes Demand for High Class Outfits—Strong Call for Starola and Starola Grand Machines—Music Master Horns Enjoy Increased Popularity as do Fibre Needles—Cohen & Hughes' New Quarters Completed—Well Arranged.

(Special to The Talking Machine World.)

Baltimore, Md., May 5, 1909.

Reports from all the leading talking machine dealers show that the past month was generally a good one for sales of machines and records. Three things were brought out especially as features of the trade in this city, namely, that the high-priced machines of all makes are becoming more and more the rage, the wooden horns are in greater demand than any of the others and, from a Columbia standpoint, the indestructible records are placing the wax cylinder records practically in the "has been" class. In speaking of the increased popularity of the high-priced machines, a leading jobber said:

"It has become quite noticeable in the last month or two that Baltimoreans are buying talking machines more for the tone qualities than ever before. Formerly most of the purchasers were satisfied with any kind of a machine just so it made some kind of noise. They would use these machines until they wore out and then throw them to one side and forget that such a thing as a talking machine exists. Now, however, they are beginning to realize that the high grade machines are actually musical instruments and that they have a desirable tone quality. The result is that the purchasers take the good machines in preference to the others and show a pride in keeping them in first rate condition at all times. I have very little call nowadays for cheap machines whereas formerly these were always sought after."

Fred Scheller reports that during the past month the demand for Starolas and Starola grands was heavy. He added, "Only the past week I sold several of these high grade instruments for spot cash. I am thoroughly satisfied with the prospects in the talking machine line."

Manager Lyle, of the local store of the Columbia Phonograph Co., and Manager Bowden, of the talking machine department of Sanders & Stayman, state that the Music Master wooden horns have been more in demand than ever the past month. Another popular novelty at the Columbia Co.'s store which has taken hold with purchasers has been the fiber needles, which have just recently been put on sale here. Manager Lyle also reported that he is closing out the stock of wax cylinder records which he has in stock at reduced prices. This has become necessary because of the success of the Columbia Indestructible records.

The high-priced Victors and Columbias have been good sellers at Sanders & Stayman. Especially has this been the case the past two weeks, during which time there has been quite a boom in the talking machine business. The record trade has also been brisk.

At the store of E. F. Droop & Sons Co., Manager Joseph Grottendick said that the firm have had their share of the trade in Victor and Edison machines the past month.

Cohen & Hughes, who handle the Victor machines here, have their new talking machine quarters at 315 North Howard street, to which they moved last month, entirely completed The entire second floor has been set apart for this line of the goods. There are 175 feet of floor space divided into six parts. The front is used as the Red Seal and Victrola room, next comes the retail record room, and display room, then the wholesale record room, five soundproof rooms for tests for customers, the stock room and repair room. A feature of the entire arrangement is that the retail and wholesale storerooms are separate and the records are kept flat, so as to prevent the possibility of warping.

Sense that can be converted into cents is the real article.

VICTOR HERBERT BECOMES ACTIVELY CONNECTED WITH THE NATIONAL PHONOGRAPH CO.

To Take an Active Part in Supervising the Making of Master Records—Victor Herbert Orchestra Will Also be Associated With Company—The Distinguished Composer and Conductor Chats of His Plans With The World Representative.

The engagement of Victor Herbert, the eminent American composer and famous conductor, by the National Phonograph Co., of Orange, N. J., just announced, to act as musical supervisor of their recording laboratory, is not only a move of great importance, but one of unusual significance, inasmuch as it marks a recognition on the part of eminent musicians of Mr. Herbert's caliber, of the distinct place which the talking machine has won as a great educator and up-lifter of music in America.

On the other hand, be it said that the National Phonograph Co., like Mr. Herbert, are of the belief that every record manufactured should be adapted to reproduce as near a perfect reproduction of the musical work as written by the composer as possible. In other words, the composer's intentions must be respected. And there is no man better fitted to carry out this work than Victor Herbert, who to-day ranks as the foremost American musician and composer. He has to his credit as a composer twenty-six operas, which have not merely delighted the people of this country from the Atlantic to the Pacific, but which are sung and played the world over, wherever well-written music is appreciated. He has also composed hundreds of smaller orchestral numbers which have won a great vogue. To cap the climax, he is at the present time engaged in writing a grand opera for Oscar Hammerstein, to be produced at the Manhattan Opera House in the early part of next January.

Mr. Herbert is not merely a great composer but a conductor whose talents are widely recognized. For years he had charge of the Pittsburg Symphony orchestra and to-day he is conductor of his own organization in New York—a body of men who have been carefully trained, and who constitute one of our finest orchestras.

In addition to being associated in a supervisory way with the laboratory of the National Phonograph Co., Mr. Herbert will also lead his celebrated orchestra while making master records for the company. He will also be consulted as to the people who will sing, or play the better class of compositions, and will doubtless be a great factor in improving the records of the popular music, although this has not been definitely arranged.

Personally Mr. Herbert is "the prince of good fellows" and affability itself when one is properly introduced. As may readily be imagined his time is taken up wholly by the various musical works which he has under way, or in contemplation, and when The World called upon him at the Lamb' Club the other day he was in the midst of rehearsing the music of a play which will be given at the Club's annual gambol at an early date and which will last for a week, being given in various parts of the country.

When the subject of his alliance with the National Phonograph Co. was brought up and discussed, he talked most enthusiastically about the phonograph and its possibilities. Like many other noted musicians he is fully of the belief that the talking machine has a special mission to convey good music to thousands of people who can hear it in no other way, hence the importance of producing records that are artistically conceived, and that perserve the spirit and ideas of the composer. In other words, records that are carefully edited by a master hand, who is entirely in sympathy with the composer.

After making The World at home in one of the club's cozy reception rooms he said in an informal and chatty way:

"I have always had strong views regarding the shortcomings of the average record from a musical point of view. What is lacking is the life and spirit of the music as originally written by the composer. That is to say, the better class of music as distinguished from the so-called popular, or coon song. I am frank to say that on this grade of music many others are more competent to pass judgment than myself. I shall not only inspect and criticize the music previous to its reproduction, but shall carefully go over the masters, also, with a view of bringing out the real melody and spirit of the selections, so that each and every one of them that has passed my personal inspection may receive my approval and endorsement.

"My purpose in accepting the position as musical supervisor of the National Phonograph Co.'s recording laboratory is to develop the artistic side of the music as reproduced in the records, imparting to them the fire of the composition. This feature has either been overlooked or neglected and the average leader or director

VICTOR HERBERT.

seldom, if ever, pays much, if any attention to this part of his duties. Besides giving my attention to this work, I shall lead my own orchestra at the laboratory, and I feel assured that a grade of masters will follow that has never yet been attained in phonographic records.

"While my agreement with the company does not become effective until June 1," continued Mr. Herbert, "I shall be a frequent visitor to the laboratory before then to familiarize myself with the work in a practical way. I am satisfied a great improvement can be effected along the lines mentioned. In fact I am so assured of this that had the offer of the National Co. been simply an ordinary business proposition I should not have considered it for a moment. It is more than that, or else I would not give my time to it.

"I usually go to my place in the Adirondacks about June 1, and I stay there until October, and you may know that every moment of my time is taken up. I have accepted a commission to write a grand opera for Mr. Hammerstein, of the Manhattan Opera House, to be finished in October, not to mention several light operas and compositions of various kinds I have planned. The duties of musical supervisor of the National Phonograph Co., I think, from a musical standpoint, most important, and I shall undertake them with enthusiasm, for it will mean a great deal, not only for them, but the public also. The talking machine business is becoming a factor that the best class of composers and musicians no longer attempt to ignore. Rather they feel that justice was not done their work in the reproduction, and this is my main object to remedy.

"Indeed, I regard this new connection as one that opens great opportunities to me for carrying on a great educational campaign among the masses of the people, who only lack in the appreciation of the best in music, simply because they do not hear it properly presented. Imagine the difference in the impression made by the playing of the record of a splendid overture; for instance, 'Tannhauser,' by a great orchestra for the National Phonograph Co., and the playing of that number by the average band one hears in so many parks, piers or other resorts during the summer time. One represents the spirit and life and individuality of the composer; the other an indifferent, incapable reading which totally destroys the composer's intention.

"It will be my aim as conductor of my own orchestra to give that life, color and individuality to the talking machine record that will enthuse the hearers, and make them believe they are listening to a live band and not automata. The marvelous improvements made in the phonograph within recent years and the opportunities that exist, thanks to Mr. Edison, through a longer record, open up a wide field for the reproduction of a repertoire that can embrace many of the finest numbers in high class music. Mark you, this will not include chopping up operas, or taking inartistic liberties with composers' intentions. There is plenty of high class music which can easily be taken on a record without indulging in this regrettable practice.

"In recording music for the phonograph common sense as well as knowledge is necessary. In fact, the more I talk of this field the more enthusiastic I become. There is no reason why records cannot be produced that will astonish the skeptical. The future of the talking machine as a great educational and musical factor the world over centers entirely upon the character of the compositions which they reproduce, and the really artistic and musical manner in which they are recorded in the laboratory."

It goes without saying that the advice and assistance of a man of Mr. Herbert's ability as a musician and composer will do much to maintain and improve the present high standard of the Edison product. It will also cause those disposed to speak slightingly of the talking machine to revise their opinion and place a new value upon its place in the musical world. A man of Mr. Herbert's fame would not enter into an arrangement of this kind without a careful study of all its phases. He has weighed its possible effect upon his name as a composer—a name to-day easily ranking as first in this country. He has realized that the arrangement will give the Edison phonograph the tremendous advantages of exploiting records made by his orchestra, the fame of which has taken years of time and large money expenditure to acquire. Yet he is willing not only to have his orchestra make records, but to lead his men in person. Mr. Herbert must be credited with having a higher motive in identifying himself with the phonograph than a money consideration, however large it may be, for his position frees him from any charge of being mercenary. His chief motive must be an earnest belief in the future of the phonograph and of his own ability to add to its prestige.

As stated above, his exclusive contract with the National Phonograph Co. insures his taking an active part in the work of making master records for the Edison phonograph. The arrangement is not one of those by which the name of a prominent character is obtained for advertising. Mr. Herbert would not sell his name for such a purpose. It is an arrangement by which Mr. Herbert will strive as hard as any official of the company to augment the prestige of the Edison product. He places full value upon the present standing of the phonograph, but he also believes that with his training as a conductor and writer of music he can put it upon a still higher plane, from a musical standpoint.

The arrangement, which becomes effective June 1, gives the National Phonograph Co. the exclusive right to his services in the talking machine field and also to the exclusive services of the great Victor Herbert orchestra in making Edison records. Mr. Herbert will be consulted

upon every phase of the work of making records of the better class of music, and especially of instrumental compositions. He will assist in the selection of suitable music for record-making purposes, aiming always toward such music as will widen the field of the phonograph.

Mr. Herbert will go frequently to the recording laboratory of the National Co. and supervise and criticise the work of making records. He is so earnest about this feature of the work that he is already apprehensive of getting so deeply interested in it as to interfere with his other duties as a composer and leader. He will personally conduct his orchestra in making records, and states that the records must be no less creditable to his name than the concert work of his orchestra. In getting Mr. Herbert to identify himself with the Edison organization the National Phonograph Co. have brought about one of the most notable achievements in the history of the phonograph.

THE VALUE OF EFFORT.

The difference between success and failure, between getting business and not getting business, is not always so much in the quality of the effort put forth, as in the amount. In other words, the effort which gets business frequently differs from that which does not get business, more in degree than it does in kind.

Men who do things and are heard from accordingly, seem to do their work a great deal like other men who never are heard from. The difference is that they are a little more intense, they hold out a little longer, and when the other fellow stops, thinking that the case is hopeless, they make another big effort and win what they are after.

It takes a lot of fuel and heat to bring water to the boiling point. It takes just about as much fuel and heat to raise the temperature of the water to 210 degrees Fahrenheit, but if you take away the fire when you have reached the 210 degrees, the water will never boil.

Moral—Add a little more fuel and keep the fire going.

He who can read the signs of the times should know all about patent medicines.

SOUTHERN CALIFORNIA NEWS.

Talking Machine Men Believers in Advertising —Wide Territory Covered— Big Call for Expensive Victors—Amberol Records in Spanish Will Have Great Demand—Columbia Indestructibles and Double Discs Selling Well —Renovating and Improving Stores—Recent Visitors to the City of the Angels.

(Special to The Talking Machine World.)

Los Angeles, Cal., April 30, 1909.

The month of April has closed more quietly than usual, although the opening was very brisk. This lull, however, has given the dealers an opportunity to make preparations for the future, in which there promises to be some keen competition. The methods used in advertising the talking machine in this section are beyond criticism, especially the ads. which appear in the daily papers. In every way the dealers are realizing more clearly the possibilities of the future. Southern California is already a great field for talking machines and records, and the growing demand for these goods is very large in both wholesale and retail. Jobbers here not only supply Southern California, but Nevada, Arizona, New Mexico and parts of Old Mexico. These parts are not the field they will be in a short time, as they are growing very rapidly.

Sherman Clay & Co. report a strong demand for the new style Victors II and III and also for the Victor wood horn. Referring to the latter, Manager Ruggles says, "We seldom receive an order for machines with metal horns since the dealers have recognized the fact that an additional profit can be made by selling to their customer a wooden horn. The appearance of the instrument is much better, to say nothing of the great talking point regarding the tone quality."

The Southern California Music Co. have received a large shipment of special design cabinets for both disc and cylinder records, among which are many attractive shapes and styles. Their business phonograph department reports several sales of commercial outfits recently, and some strong advertising is being done for this line. The news of a first list of Amberol records in Spanish has been greatly welcomed, as many inquiries have been made regarding them. Their arrival is anxiously waited by the trade. The retail department has several shipments of Victor-Victrolas, among which were several in special finishes of oak and circassian walnut.

The Columbia Co. have had a steady demand for double disc records from the out-of-town dealers. Chas. Kauffman is now making his regular trip through Arizona, where he will call on the trade. W. S. Storms, who for two years has been connected with the Los Angeles branch, has gone to San Francisco to join the company's forces. He will travel through Northern California. E. W. Scott, who was at one time connected with the Los Angeles store, has succeeded Herman Beck as manager of the retail department of the San Francisco store. Mr. Beck has resigned and expects to open a store of his own at an early date.

The Fitzgerald Music Co. have completed their new department and have announced their opening to the public in a series of clever newspaper advertisements. Mr. Fitzgerald is personally interested in the new department and watches every detail in its affairs. Their splendid show windows on Broadway afford a splendid opportunity for their attractive displays.

The Angelus Talking Machine Co. are now using an automobile as a business getter. Mr. Pfaff says he finds it very handy for use on prospective purchasers, who cannot refuse him when he asks them to take a ride with him in his auto.

The Geo. J. Birkel Music Co. have just finished installing a new system of record racks for disc records. Their entire stock is kept in heavy cardboard covers, and every number is given a separate partition in the new rack. More space has been added to accommodate the catalog of double-faced Victor records.

The Holmes Music Co., one of the new Victor stores, is welcoming old customers in that location. Their stock is in splendid condition, a complete line of Victor goods being carried.

The Wiley B. Allen Co. are continuing the arrangement of attractive window displays, which are truly original.

Fiske & Co., Edison dealers, are featuring the I. C. S. language teaching machines with much success. Hamberger's, who have the handsomest show windows of any department in the city, have given considerable space for display of talking machines and records.

H. T. Walz, of the W. G. Walz Co., of El Paso, Tex., was a recent visitor in Los Angeles. While there Mr. Walz studied the conditions of the trade and also investigated the arrangement of some of the different stores handling talking machines. The Walz Co., who are Victor jobbers for Texas, are expecting to make many changes for the improvement of their trade-handling facilities.

The great success with which the Russian violinist Mischa Elman met with in concert in this city is due more to the Victor, which preceded him with the splendid records of his playing, than all the foregoing press comment. His records have been and are among the most popular in the Victor catalog.

Mme. Johnstone-Bishop's voice is delighting many of her local friends and admirers in a sweet little Hawaiian song which she has sung for the Victor. Her records are in considerable demand in Southern California, Los Angeles being her home.

GEORGE W. LYLE OFF TO EUROPE.

The departure of George W. Lyle, general manager of the Columbia Phonograph Co., general, for Europe was delayed until May 6, when he sailed on the "Kaiser Wilhelm II." He will be away four or five weeks.

Following the custom inaugurated some months ago the following talking machine dealers of Indianapolis keep open house monthly when they invite the general public to hear the latest records. The dealers who dispensed hospitality recently were: Messrs. Kipp-Link, Frank Lesley, Joseph Joiner, E. E. Hill & Co., George Maze and William F. Burns.

Have YOU seen IT?

"THAT'S JUST WHAT WE'VE WANTED!"

EVERY disc talking machine dealer who sees the New Idea Disc Record Album says, "Just what we've wanted."

His customers say so, too.

A beautiful Album that preserves records perfectly—protects them absolutely from scratching and breakage—keeps those of a certain artist or class together.

Powerfully bound and reinforced to last a lifetime. Finest thing out for Red Seal collections. Capacity; 12 records. Dealers' prices **90 cts.** for 10-inch size, **$1.20** for 12-inch (used also for 10-inch records).

We furnish handsome two-color advertising circulars, ready for your imprint, FREE.

Send for a few of these Albums on approval. Dealers everywhere say they are going fine. Be the first to show them in your city.

Have you gotten our offer on the agency for **Regina Music Boxes?**

We are the Regina Company's only jobbers and can fill orders promptly for all styles of Regina Music Boxes and Tune Discs.

THE RUDOLPH WURLITZER CO.

CINCINNATI AND CHICAGO.

VICTOR, EDISON and REGINA JOBBERS

☞ Two points of supply; order from the nearer.

VICTOR, EDISON and REGINA JOBBERS

CONVENTION OF NATIONAL JOBBERS' ASSOCIATION

Will be Held at Atlantic City—Headquarters at Hotel Chalfonte and Dates Selected July 6th, 7th and 8th—A Large Attendance Expected.

The annual convention of the National Association of Talking Machine Jobbers, in response to an almost unanimous vote, will again be held at Atlantic City, the famous eastern seashore resort. President Bowers appointed J. Newcomb Blackman, of New York, and Louis Buehn, of Philadelphia, a committee of arrangements.

Mr. Blackman, who is chairman of the above committee as well as of the press committee of the association, gives the following report:

"The convention at Atlantic City in 1908 was so generally satisfactory, both in attendance, accommodations and results accomplished, that it seemed a duplication of last year's success would be the best plan to follow. It will, therefore, be the desire of the committee of arrangements to not only furnish as excellent accommodations as last year, duplicating everything that will help insure a success for this year, but in addition to make such improvements over last year as may be found advantageous.

"In order to give the active members a chance to help make this year's convention a grand success, a sub-committee to be known as the reception committee will be appointed, representing various sections of the country, and they will be requested to work hard among the jobbers in their territory to insure a large attendance. In addition, this committee will be given an opportunity to help in the business details in connection with the programme during the convention.

"The Hotel Chalfonte have placed at the disposal of the association the same room for meeting purposes, and the rates for accommodations prevailing last year are again offered to those attending the convention. While it is my intention to promptly issue advertising matter, giving full particulars regarding the hotel rates, those who attended last year will agree that the Chalfonte rates were extremely reasonable for the service rendered. As this opinion prevailed, no other hotel will be advertised, and we hope that everybody will arrange to stay at the Chalfonte. If cheaper accommodations are desired, there are plenty of hotels and boarding houses where arrangements can be made to suit. It is extremely important that accommodations be secured in advance, as last year many arriving on the 4th of July could not be taken care of at the Chalfonte until the usual holiday rush was over.

"As the 4th falls upon a Sunday, it is hoped that many jobbers will take advantage of this opportunity by leaving home on Saturday, the 3d, thus taking advantage of Sunday and Monday, which with the three convention days, will give them a very pleasant vacation at Atlantic City.

"The ladies will again be invited; in fact, their presence is particularly requested, for this feature of last year's convention was pronounced a decided success and no doubt was a great help in increasing the attendance.

"The banquet will be a feature of the convention to which the ladies are also invited, and nobody will want to miss this part of the program. It is very likely that the factories will take advantage of this opportunity to meet the greater portion of jobbers and will also send various members of their organization to talk over the situation in general and give such information regarding business improvements, changes or suggestions as may be possible.

"It is quite generally conceded that this fall will see the turning of the tide in the business depression which has affected all lines of business and with certain desirable improvements, a healthy revival of business should result in our line. Jobbers should realize the importance of attending the convention not only to help in formulating plans for the uplifting of the industry, but to visit the factories and have a heart-to-heart talk about the business. Those who are pessimists should rub elbows with the optimists. We do not realize what narrow views we have of some things until we mix with others in the same line who see things in a broader light, who see the 'doughnut' rather than the 'hole in it.'

"There will be a great turn-out at this convention and any jobber who has the mistaken idea that the talking machine business has seen its best days will return from the convention convinced that the good things in this business are just starting. Some have fallen by the wayside, but a weeding out is very often needed, and those remaining will have stood the test, feel stronger for it, have a larger field and better opportunities. The factories are promising more protection, rather than less, and this is certainly no evidence of a lack of confidence on their part.

"Let all the jobbers and as many as can, represent the factories, attend this convention, exchange ideas and work in harmony to bring about any improvement that will benefit all.

"Consider what has been accomplished since the last convention. The factories acted favorably on almost everything recommended, and what is the result? Protection to the dealer and jobber, an even exchange on records, a method to dispose of second-hand machines, a change in the time of shipping new records to dealers, Victor records are enclosed in envelopes, Auxetophones and Victrolas cannot now be obtained at dealers' prices by fraudulent qualification as a dealer and many other things which do not come to my mind at the present time. The association has grown, now having a membership of about 125. Every jobber has much at stake and to add strength to whatever recommendations the association will make a large attendance at this convention is essential.

"Make up your mind to come and use your influence with others. Complete information regarding the convention will be furnished by addressing J. Newcomb Blackman, chairman committee of arrangements, No. 97 Chambers street, New York City, and any inquiries are invited regarding membership as well. Make your plans now and be sure to arrange to attend."

COLUMBIA CO.'S NEW ST. LOUIS HOME

Take Five-Year Lease of Quarters at 1008 Olive Street for Both Wholesale and Retail Departments—Close Important Deal With Big Publishing House for Library Table Graphophones.

(Special to The Talking Machine World.)

St. Louis, Mo., May 10, 1909.

The Columbia Phonograph Co. have taken a five-year lease on the store at 1008 Olive street and expect to be in their new quarters by June 1. Their new location is a very large, well lighted building, two stories, and will accommodate both the retail and wholesale departments. They expect to put in four small booths for record demonstration and a large room, equipped exclusively for their grand opera and Fonotipia records, and their $200 and $225 machines.

The company will have a new hornless machine on the market within the next sixty days. It is a library table with enclosed machine and horn and combined record cabinet. The table can be used for books, flowers, etc., without interfering in any way with its reproduction. It will retail for $225 and will be furnished in mahogany and mission oak. W. C. Fuhri, district manager, former local manager in this city, is the designer of this instrument, and the company are enthusiastic over its future.

The St. Louis office has just closed one of the largest and most important, in many ways, deals with the Lewis Publishing Co. in selling them 25 "W. C. F." $225 Library Table graphophones to be made up specially for them in mission oak. These graphophones are to be installed by the Lewis Publishing Co. in their great chain of chapter houses located in each prominent city in the United States. The first order is for twenty-five to be delivered as quickly as the company can turn them out, and as they are now organizing something like 700 of these chapter houses with a great many others in process of being organized, and as one of these Library Table graphophones will doubtless be installed in each chapter house, the St. Louis office, as well as the Columbia Phonograph Co., have cause to congratulate themselves.

COMPLIMENTS THE PENN CO.

When Landay Bros., New York, bought out the Musical Echo Co., Philadelphia, and in preparing the Edison goods for shipment, they were materially aided by the force of the Penn Phonograph Co. The work was done under the supervision of Max Landay, and in speaking of the work accomplished said: "I would like to pay a tribute to the employes of the Penn Co., for they hold the record for rapid packing. In one day they packed 26,000 records, each carton being handled separately and placed in numerical order, besides—and not an error. I never saw a force do better team work, or any more industrious. It was a revelation to me how they handled themselves. No wonder the Penn Co. are successful with such loyal people in their employ."

AWAITING JUDGE KNAPP'S DECISION.

(Special to The Talking Machine World.)

Kalamazoo, Mich., May 10, 1909.

Since the Supreme Court of the United States has handed down a decision in the Berliner case (Victor Talking Machine Co. against Leeds & Catlin Co.), the attorneys in the suit of the Victor Talking Machine Co. against the Duplex Phonograph Co., of this city, have asked Judge Knapp, United States Circuit Court, Grand Rapids, to take up the papers and write an opinion. Judge Knapp assured counsel on both sides he would dispose of the matter last August, but it is still to be "disposed." The lawyers held that the Supreme Court cleared up the situation in the Berliner patent, which was also before the Michigan Federal Judge, and it is therefore urged that only minor points are to be determined. It was in this case, when the hearing was on, that Judge Knapp stated that if the tension, or elastic, or mechanical feed machine was constructed to evade the gravity feed machine, he would have to declare it a contributory infringement of the Berliner invention.

TO REVIEW JONES PATENT DECISION.

Papers were served May 5 on the American Graphophone Co., relative to the application for a writ of certiorari to the Supreme Court of the United States, to review the recent decision of the Circuit Court of Appeals, New York, on the Jones patent. This petition acts as a stay against any mandate that might otherwise be issued by the Court of Appeals. The matter will be disposed of inside a month.

DISCONTINUE WAX CYLINDERS.

Columbia Phonograph Co. Will Only Make Indestructible Records Hereafter—Clearing Out Their Stock of XP Cylinders at Special Prices—Special Exchange Started Good Until May 30.

Under date of April 30, the Columbia Phonograph Co., General, notified their trade that the manufacture of XP wax cylinders had been discontinued, and that after May 5 only Indestructible records would be made and sold. The essential portions of the circular letter follow:

"To the Trade:—The Columbia Indestructible record has proved itself. We shall quit manufacturing XP wax cylinder records. On and after May 5 you may cut the XP cylinder record price (with the exception of vocal records in foreign languages, on which former list and trade prices must be maintained), to any figure you please, from 15 cents up.

"We are giving you this notice the first minute possible. The Columbia Indestructible record has unmistakably captured the cylinder market—and is rapidly putting the wax record completely out of business. Now that this fact is evident and undeniable, we know it is up to us to follow our unvarying policy and see that our dealers are not left with any dead or obsolete stock on hand. We don't see how any owner of a cylinder machine can get away from Columbia wax cylinder records at 15 cents.

"One thing sure—you won't have to demonstrate these Columbia XP cylinder wax records to sell them at 15 cents. If we were in your place we would make every sale a quick one, and hand the XP cylinder records over in a take-them-or-leave-them way without taking time to play selections for demonstration. But don't lose that splendid opportunity to switch every caller over to a demonstration of the Columbia Indestructible records. Have a tone-arm cylinder Columbia Graphophone ready equipped with the special Indestructible reproducer, and insist on every buyer of XP cylinder records knowing for himself just what it is that has put the wax record out of business.

"If you find yourself for any reason so crowded that you cannot take full advantage of this 15-cent-at-retail sensation, we will exchange any unbroken records for Columbia Indestructible records on a basis of three to one. (See special exchange to the trade, expiring May 30, 1909.) If you need to complete your assortment of XP cylinder records we shall be glad to supply them to you at 10 cents each net, f. o. b. point of shipment, while our factory stock lasts. Dealers are not authorized to sell these records at less than 15 cents each."

The substance of the accompanying circular follows:

"Special to the Trade.—Columbia Indestructible Cylinder Record Exchange: Effective until May 30. On the conditions named below, Columbia XP cylinder records will be received by us and credited at the price at which they were billed you: First: Records returned must be in their original cartons, unbroken. Records received broken, chipped or cracked will be credited at 10 cents per pound. Second: For each XP record credited three Columbia Indestructible records must be purchased."

SECURE LARGE QUARTERS.

Manufacturers' Outlet Co. Lease Additional Factory Space.

The Manufacturers Outlet Co., No. 89 Chambers street, New York City, have leased a large loft at No. 93 Chambers street, which runs completely through the block to No. 75 Reade street. This will be used for the manufacturing department, as the demand has become so great for this company's product, the Peerless suction cleaner, that they are compelled to seek larger quarters for manufacturing.

The talking machine jobbers and dealers all over the country have become interested in the "Peerless" line of suction cleaners, and some of the largest concerns have been handling them with great success. There is no doubt but that the vacuum cleaner business is the coming one, and there is no side line on the market which an enterprising phonograph dealer can better add to his stock. The machines are very easily sold, and a handsome profit can be derived from their sale. A feature of the cleaner business, which will no doubt appeal to the talking machine men, is that it is just as brisk during the summer as in the winter.

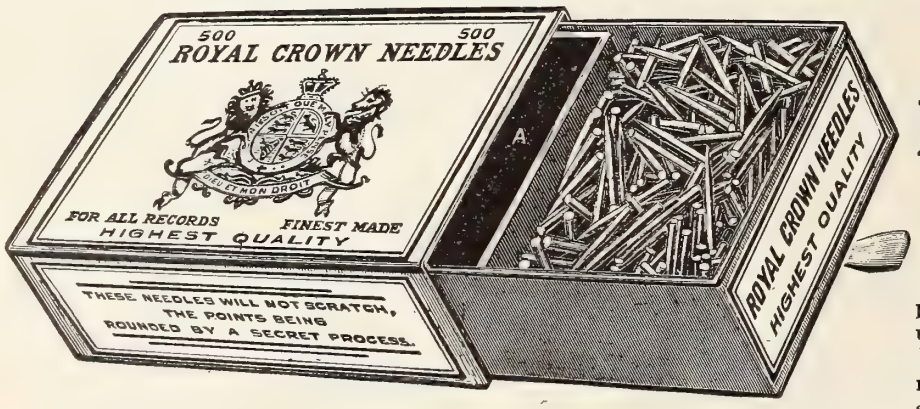
Owing to the enormous amount of advertising throughout the country, coupled with the fight against tuberculosis and the campaign for sanitation in the home, the modern method of cleaning—the dustless one—has steadily grown until the progressive business house of to-day can no longer fail to recognize the fact that the addition of this line is a step taken in the right direction.

BUSINESS STILL RESTRICTED.

General Manager Williams, of the New York Talking Machine Co., 83 Chambers street, New York, reports that business is not what it should be; in other words, it is quiet. The smaller dealers, he averred, carrying restricted stocks, were complaining more than the larger dealers and jobbers. Outside of New York, however, trade was very much better, so far as their company went. In his opinion fall business promises to be very brisk. The reports from the traveling force were encouraging. W. S. Moffatt, chief of the finance department, who made a short run through Pennsylvania recently, said he found a disposition among dealers to buy cautiously at present.

Make your store attractive to ladies. A woman likes "bargains," but she does not like to be seen going into a cheap-looking or disorderly store. She feels a glow of pride when she meets her social acquaintances in the "swellest" store in town.

Mr. Atkinson has opened a store in the Lewis block, Winthrop, Mass., where he is handling the Victor machines and records.



SOMETHING NEW!

Royal Crown Needles

MADE FROM THE BEST SHEFFIELD ENGLISH STEEL.

In Patented Needle Box. Box has two compartments; one for new Needles, the other for used Needles. Made in two sizes, for 500 and 1000 Needles. The finest Needles made and the most attractive Needle Box on the market. All styles of Needles packed in this manner.

These boxes are red in color with imprint in finest quality gold bronze.

LETTER A shows used Needle compartment. You cannot take from this box a used Needle by mistake as from the peculiar construction of the box the fingers cannot enter the used Needle compartment. When the box is closed, a used Needle cannot be shaken into the new Needle compartment.

LETTER B shows patented slot and button. The cover cannot be entirely removed from the box on account of the stop button. This prevents the Needles from scattering or spilling when opening the box.

The material and workmanship of the Needles are the highest grade known and guaranteed superior to those of any other make. Warranted to play any Disc record without variation.

We supply Jobbers only. If your Jobber cannot supply you, write us.

EDW. N. BURNS' INTERESTING CHAT.

Growth of the Graphophone Trade in China—Chinese Crazy About the Machines—Records Required to Meet Demands in That Country—Some Mexican Experiences—Wonderful Growth of Business in That Republic—Beat Germans in Competition.

While Edward N. Burns, general manager of the export department of the Columbia Phonograph Co., General, when interviewed by The World relative to the million-dollar order placed with them for machines and records, furnished interesting data about the trade in China, the following additional facts were given the Mexican Record by Mr. Burns when in that city, and from where he returned May 6, as follows:

"Mr. Burns states that the Chinese are going crazy about graphophones, and it must be true when the amount of this one order is considered. These graphophones will be distributed over a great part of the Chinese empire, however, and when it is considered that even this large order will supply only one graphophone, having an average value of $20, for each 9,000 of the population, it is probable that many more million-dollar orders must be placed before the yellow brethren are fully satiated.

"'This catering to our large foreign trade is very interesting,' said Mr. Burns, 'and we run upon many peculiar and surprising idiosyncrasies of various people. For instance, when we began to make records for the Chinese trade, which, by the way, are records in their own language and of their own music, it occurred to me that a bright flaming yellow would be just the right color to choose for the discs. However, before finally manufacturing any of this color I sent to the Chinese embassy at Washington and asked if that would be appropriate and please the Chinese trade. They promptly responded that the color would not be tolerated; that the trade not only would not, but could not purchase anything of this color, unless the purchaser happened to be of the royal family. So another color had to be selected. Again, for the Japanese trade I thought of making the records white. This color scheme had to be abandoned also, for I discovered that white is the mourning color of the Japanese, and they would not purchase amusement devices colored white.'

"Mr. Burns has visited many parts of the Republic and has established here seven jobbing agencies. He states that his company has an exclusive contract with Maria Conesa, popularly known as 'La Conesa,' who has retired from the stage, for Columbia records. Virginia Galvan de Nava is also making records for his company, and he says that her voice is considered equal to the best of the operatic stars of Europe and the United States. Constantino, the great Spanish tenor, and the probable successor of Caruso, is also making records for the company, and the first of them have just arrived in this city. Records have been made for this concern by all the famous bands of Mexico.

"Mr. Burns says that business conditions here seem to be improving and his company anticipate a very successful year in the Republic."

* * * *

When seen by The World after his return to New York Mr. Burns said: "A year and a half ago our company had about ten per cent. of the talking machine business in Mexico. Now I am satisfied we have fully 80 per cent. That is something of an increase. Jose Hoffay, manager of our Mexican house, has made a brilliant success. Agencies have been established in the principal cities throughout the Republic, and things are in excellent shape. General business conditions are improving, but the change is slower coming about than in the United States. Agricultural interests are greatly depressed and mining is dead. Our Constantino records have made a great hit. I consider Constantino equal to Caruso as a tenor; he has a finer voice and a larger repertoire. When he returns from South America he will make a number of tenor records for us in New York.

"We have met the competition of the Germans in Mexico, and practically beat them out, as Mexicans much prefer American-made records, and business is growing so rapidly with us as to be almost astonishing. Our export department is certainly splendidly equipped, not only here, but all through the Latin-American countries and the West Indies. We get the very best results in our masters made on the ground, for our men are instructed to get only the best, no matter how long it may take. Therefore, the esprit de corps of the department is always at the highest notch and we work together harmoniously and enthusiastically."

BLACKMAN'S VICTOR WINDOW.

Arranged by Ellis Hansen, of Victor Company—Exploiting "Red Seal" Records—To Renovate and Redecorate Entire Store.

The show window of the Blackman Talking Machine Co.'s store at 97 Chambers street has been filled by a special display of Victor records arranged by Ellis Hansen, connected with the Victor Talking Machine Co., who will remain in New York for several weeks arranging attractive displays for the various jobbers and dealers. The keynote of the window is "Which is Which," and dwells upon the difficulty experienced by the average person in distinguishing between the living voices of the singers and the same voices reproduced through the medium of Victor records. Records of Caruso, Eames, Sembrich, Calve and other grand opera stars are tastefully arranged about the window, bearing portraits of the singers and appropriate sentences. Several Victor machines also lend attractiveness to the display.

The Blackman Talking Machine Co. are at present busy taking stock after which the entire store, outside and inside, will be entirely renovated and redecorated.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., May 10, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

APRIL 15.

Amsterdam, 8 pkgs., $138; Berlin, 28 pkgs., $667; 8 pkgs., $703; Bombay, 9 pkgs., $290; Brussels, 15 pkgs., $303; Callao, 8 pkgs., $975; Hamburg, 3 pkgs., $209; Havana, 15 pkgs., $498; Havre, 4 pkgs., $131; Limon, 6 pkgs., $458; London, 164 pkgs., $4,025; Melbourne, 236 pkgs., $5,808; Para, 7 pkgs., $536; Rio de Janeiro, 7 pkgs., $108; Santa Domingo, 9 pkgs., $478; Southampton, 4 pkgs., $378; St. Petersburg, 6 pkgs., $243; Sydney, 1,265 pkgs., $26,739; 8 pkgs., $1,260; Valparaiso, 12 pkgs., $765.

APRIL 22.

Amsterdam, 8 pkgs., $193; Berlin, 4 pkgs., $249; Callao, 3 pkgs., $132; Colon, 33 pkgs., $1,802; Corinto, 1 pkg., $150; Esmeraldo, 4 pkgs., $204; Havana, 2 pkgs., $122; Havre, 21 pkgs., $415; London, 230 pkgs., $5,653; Progreso, 4 pkgs., $366; Rio de Janeiro, 3 pkgs., $449; 30 pkgs., $1,330; Sydney, 5 pkgs., $750.

APRIL 29.

Belize, 14 pkgs., $246; Berlin, 12 pkgs., $276; Cape Town, 90 pkgs., $1,131; Havana, 5 pkgs., $131; 39 pkgs., $923; Hong Kong, 1 pkg., $100; Kingston, 4 pkgs., $253; London, 3 pkgs., $128; 200 pkgs., $5,011; Melbourne, 188 pkgs., $4,831; Penang, 11 pkgs., $168; Savanilla, 7 pkgs., $161; 28 pkgs., $1,264; Shanghai, 8 pkgs., $448; Soerbaya, 11 pkgs., $400; Vera Cruz, 53 pkgs., $1,920; Zamboango, 6 pkgs., $168.

MAY 8.

Berlin, 10 pkgs., $240; Bremen, 2 pkgs., $104; Buenos Ayres, 34 pkgs., $1,634; Calcutta, 5 pkgs., $203; Colon, 4 pkgs., $158; Genoa, 1 pkg., $175; Guayaquil, 5 pkgs., $171; Havana, 3 pkgs., $100; Liverpool, 10 pkgs., $271; 5 pkgs., $502; London, 4 pkgs., $112; Rio de Janeiro, 31 pkgs., $1,129; Soerabaya, 6 pkgs., $228; Sydney, 937 pkgs., $11,040.

WORDS WITH TALKER MUSIC.

In Order to Overcome Imperfect Enunciation of Record Makers a French Scientist Invents Apparatus Whereby Words of Song on a Paper Strip Accompany the Reproduction of the Record.

A large proportion of public singers have a faulty pronunciation, as is well known. This defect is further exaggerated by the phonograph, even in the case of the best instruments, and it often happens that one's pleasure in hearing a record is lessened by not being able to understand the words. According to the Scientific American M. De Pezzer, a Paris scientist, overcomes the difficulty by using an apparatus which can be adapted to any phonograph and carries a paper strip with the words to accompany the music so that we see the words as the music is heard, and at the proper time. To this end a box is fitted to the phonograph and it has a guide in which the paper band can slide along. The band is unrolled from a roller on one side and it is driven along by perforations in the sides of the band which work with a toothed roller. At the other end, a roller winds up the strip as it is fed along. A groove or window cut in the box makes a part of the band visible. The toothed driving wheel of the strip is connected by gearing with the phonograph mechanism, but it can be thrown out of gear at any moment by a suitable device. An already prepared band is put in place and it is started at the moment the first note is heard. The essential point lies in preparing the paper strip, and this is carried out by obtaining a first graphic diagram which the apparatus furnishes. To this end a strip of white paper is mounted in the above box and there is mounted an electric registering device whose stylus, a lead pencil point, bears upon the paper as it runs along. Contact can be made for the electric device by a telegraph key. A phonograph disc being mounted in place, a skilled person listens to the piece of music and beats time by means of the telegraph key, so as to make a record of intervals or notes upon the paper by means of the stylus, thus giving the structural

(Continued on page 34.)

COLUMBIA JOBBERS

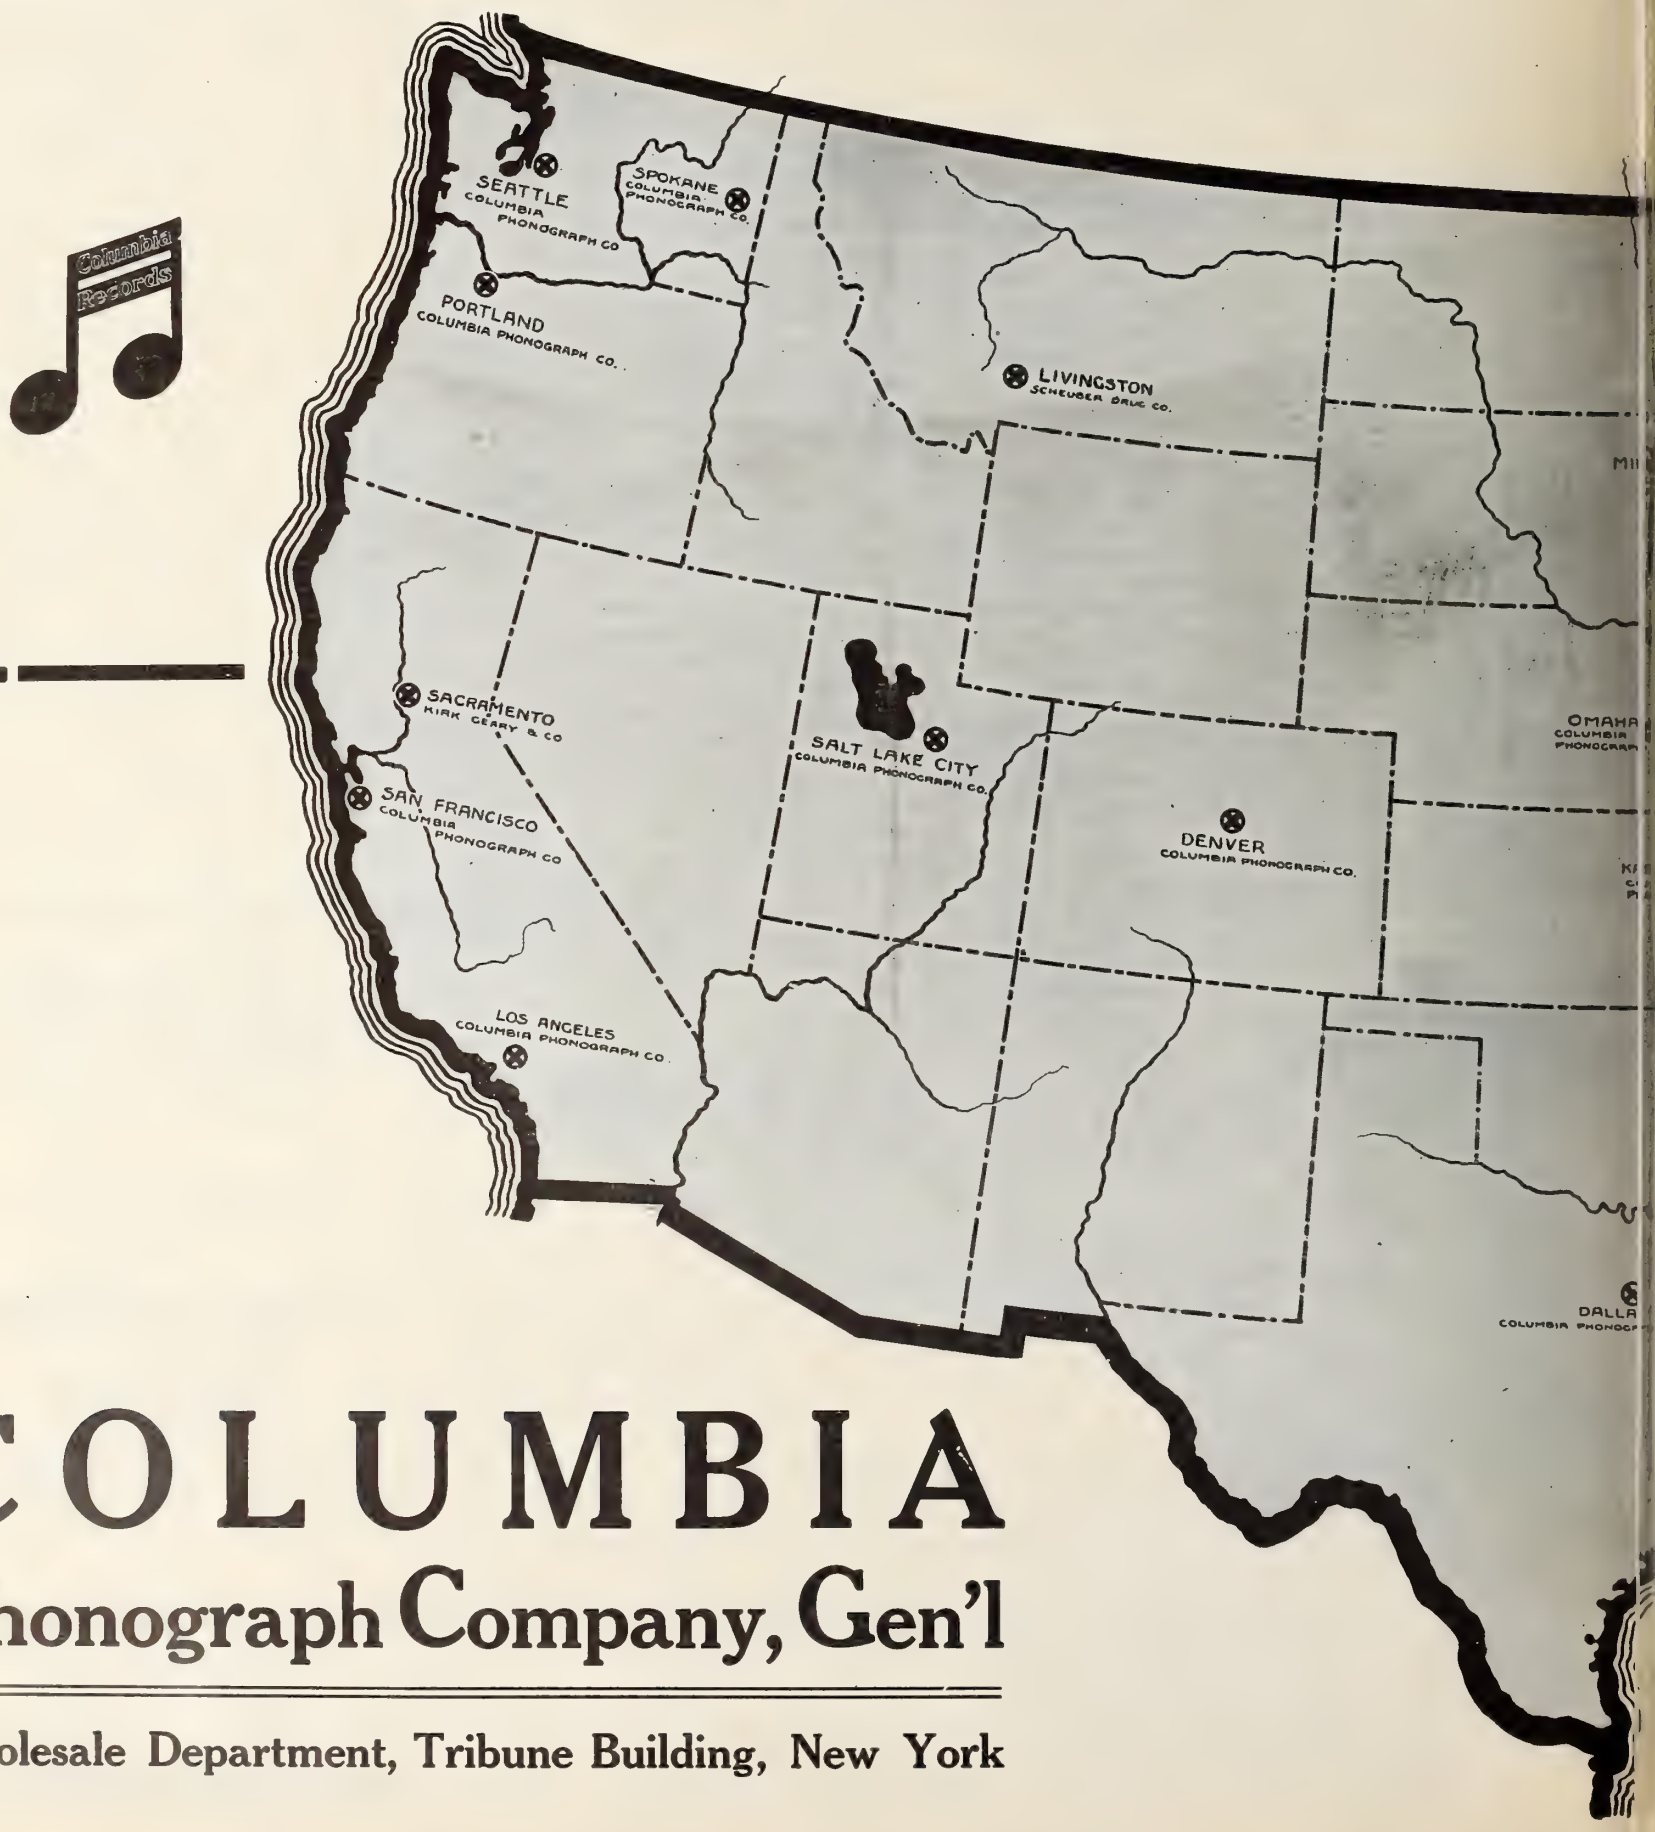
Sending your orders is one thing.

Getting your goods is another.

There are plenty of cash-drawer reasons why your orders should go to a **Columbia** jobber.

Columbia jobbing territory is clearly and positively defined and every jobber is an exclusive Columbia house—either a branch of the Columbia Phonograph Company or an independent concern. Either way they are all right there on the job for business, eager to serve the dealers in their territory, ready and equipped to fill orders by the quickest and cheapest route.

We are offering every facility for Columbia dealers to make the most of the healthy demand that we have created by our advertising and by the quality of our product.



COLUMBIA

Phonograph Company, Gen'l

Wholesale Department, Tribune Building, New York

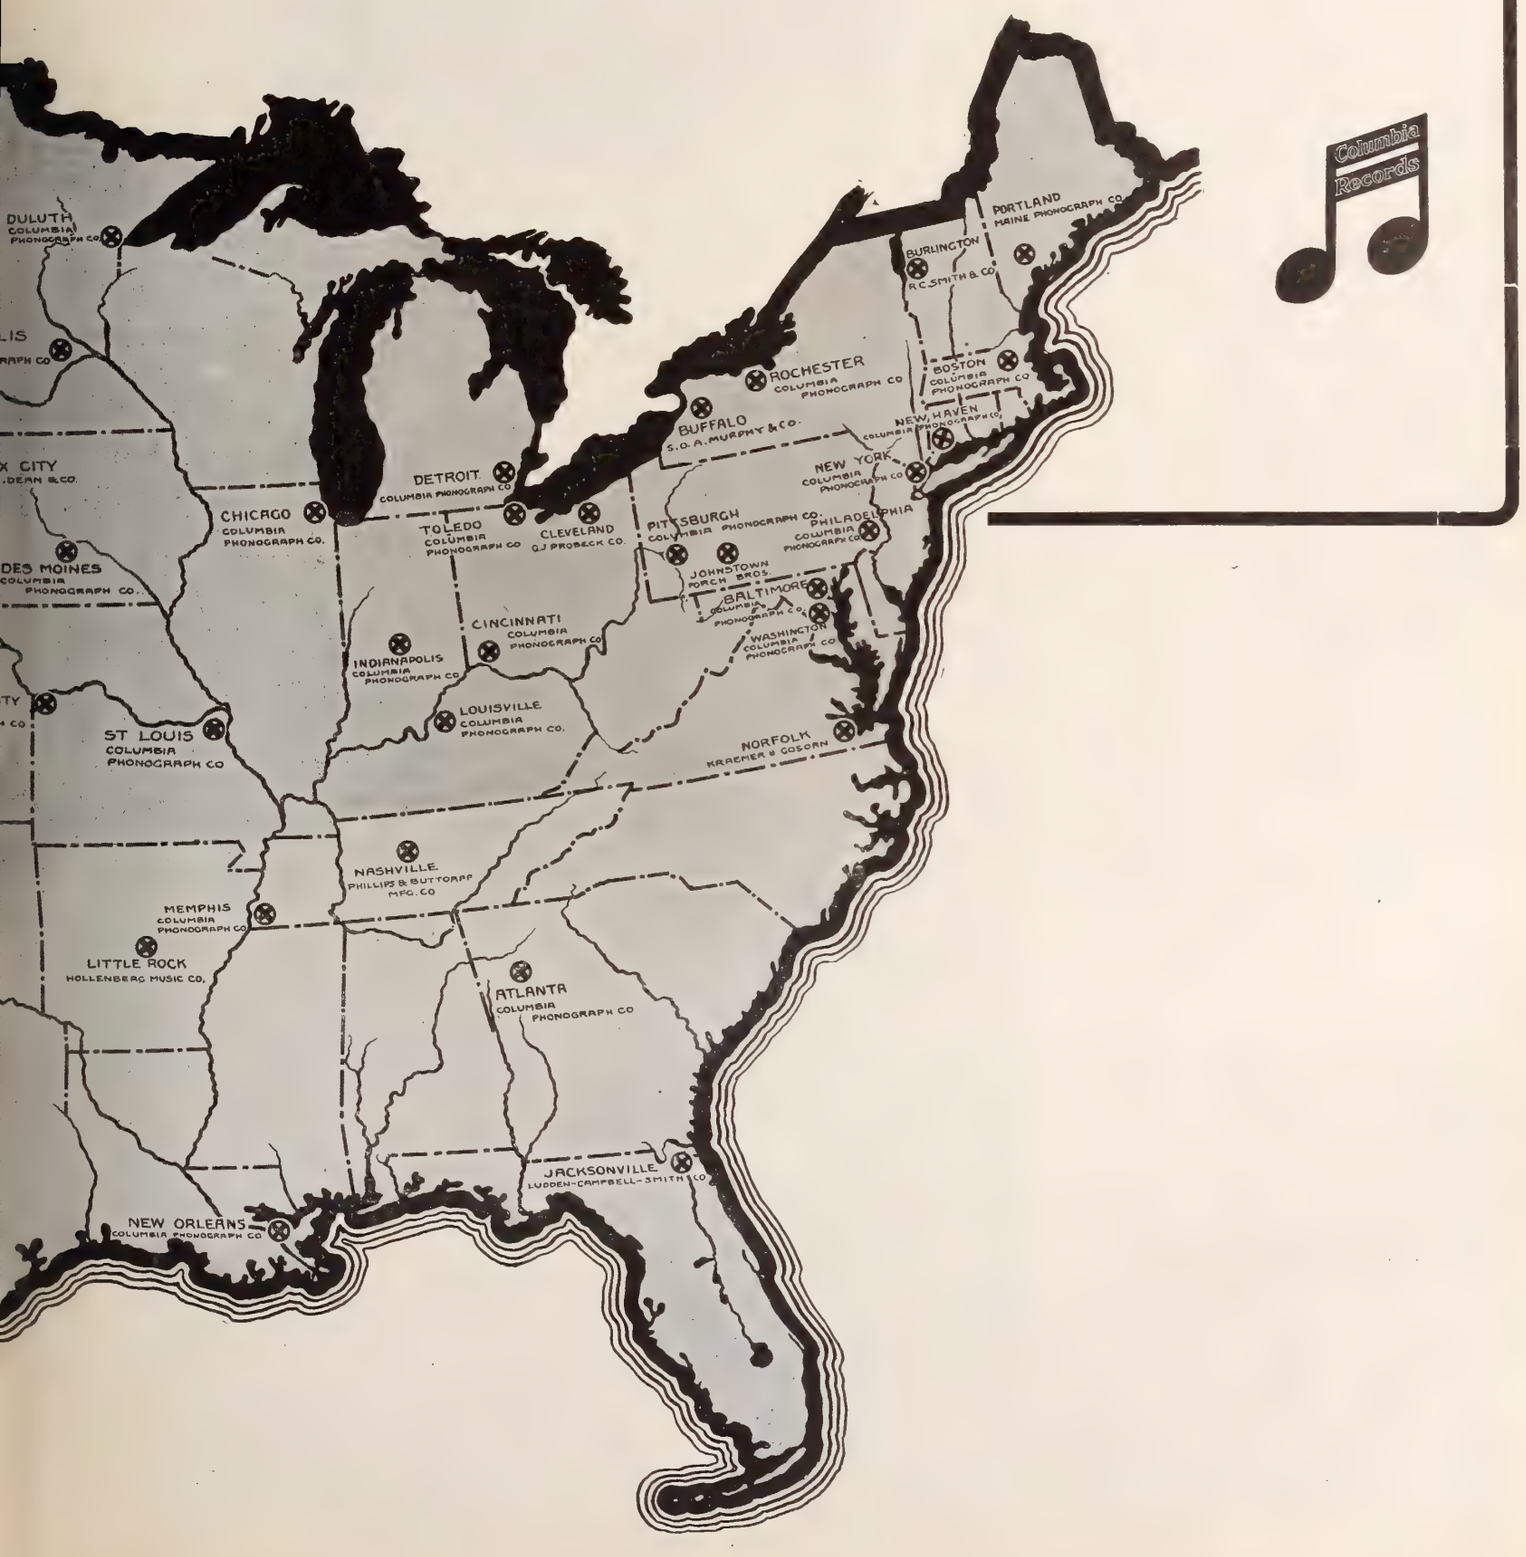
ALL OVER THE MAP

Columbia Double-Disc Records—Columbia Indestructible Cylinder Records—Columbia Disc and Cylinder Graphophones—the one broadest, completest line in the business this minute—and you know it!

The Columbia exclusive-dealer plan is the one biggest thing in the music-market this year—and if you don't know you ought to do some figuring.

Honestly, have you gone at this question right side up? It's **your** business, now and later on, that's concerned. It's **your** profits, this month and next year, that we are talking about.

Build for the future! Get your legitimate territory fenced in! Write in for full particulars.



record of the piece. Each beat represents a note and the intervals between the notes are then shown. Afterward the proper syllable is written opposite each beat and we thus have the record of the musical piece. This first record gives a model from which printed records are easily made, the only essential point being to observe the time divisions of the original.

SOME CHICAGO NEWS ITEMS.

C. E. Goodwin Returns from Eastern Trip—T. F. Bentel a Visitor—W. S. West Moving Into New Store in Joliet—After High Class Trade—J. A. Dean a Composer.

(Special to The Talking Machine World.)
Chicago, Ill., May 12, 1909.

C. E. Goodwin to-day returned from the East, where he has been for the past three weeks. He visited his parents at Washington, D. C., was entertained by Oliver Jones of the Victor Co., at his cottage, "Ace of Hearts," at Atlantic City, and visited the factories. In reply to inquiries regarding rumors connecting him with various responsible positions, he declared that there was nothing in them, that he had reached no definite decision as yet.

Theodore F. Bentel, secretary of the Hawthorne & Sheble Mfg. Co., arrived in Chicago to-day and is making the rounds of the trade with their local representative, Malcolm B. Henry.

W. S. West, of Joliet, is moving into a new store, which has been fitted up in a manner which constitutes it one of the finest small city talking machine establishments in the West. The formal opening will be on Saturday of this week. It has three attractive sound-proof record booths. He has put in the complete line of Edison and Victor goods.

J. A. Dean, secretary of the W. A. Dean Co., piano and talking machine dealers of Sioux City, Ia., is the composer of the "Varsity Man" (two-step), which appears in the July list of the Columbia Co.

The Auxetophone, which was displayed at the Industrial Exposition at Scranton, Pa., by the proprietors of the Edison Phonograph Hall of that city, attracted considerable attention.

ADMIRAL EVANS LISTENING TO THE VICTOR-VICTROLA.

We present herewith a reproduction from a photograph taken of Admiral "Fighting Bob" Evans listening to the Victor Victrola in the warerooms of the Rudolph Wurlitzer Co. in Chicago. The Admiral is keenly interested in the talking machine and his "Farewell Address to the Navy" is one of the big sellers in the record catalog. The arrangements for the taking of this photograph were made by C. W. Page, advertising manager of the Rudolph Wurlitzer Co., with J. H. Cruikshank, the Admiral's secretary. It is destined to be historical.

TIMELY TALKS ON TIMELY TOPICS

Considerable space is given elsewhere in this issue of The World regarding the engagement of Victor Herbert, easily the leading American composer and musician, by the National Phonograph Co. Mr. Herbert makes clear in his very interesting interview with The World what he means to accomplish as musical supervisor of the company's recording laboratory in the production of "masters" that will be a distinct addition to the wonderful art of record making and a credit to the musical profession. That there is a steady and growing demand for high class musical records cannot be gainsaid, and the enterprise and foresight of the National Co. in securing the services of Victor Herbert is a step in the right direction and is to be highly commended. It means progression and advancement and every manager of a recording laboratory throughout the world views it in this light.

Finally the bitterly contested Berliner patent has been adjudicated by the Supreme Court of the United States. The decision, handed down April 19, is published in part on another page; that is, the portions which are of greatest interest, bearing on the essential points at issue and free from technicalities of a legal nature. The court ruthlessly brushes aside a lot of hair-splitting indulged in at length by the defense, sustaining the lower courts in every particular of moment. It is the old story in litigation of this character, that when the patent situation becomes acute by reason of basic inventions being upheld by the courts, no end of intemperate comment is indulged in by the opposition. Foreign manufacturers who were arranging to enjoy the emoluments of the great American market, had the highest court in the land rendered an adverse opinion, will be compelled to wait a while longer before flooding the trade with their goods.

The Jones patent covering the duplication of disc records by the electroplating process, has for the second time passed the ordeal of a review in the United States Circuit Court of Appeals, second circuit, and its validity sustained by a unanimous bench. Owing to the late day—April 14—when the decision was handed down, only the briefest mention of it was made in last month's World. The chief particulars of this opinion, however, are now furnished elsewhere, and it is worth a careful reading. Notwithstanding the solid attitude of the court both times the suit has been before them, the defense will make an attempt to have the case taken up to the Supreme Court of the United States on a writ of certiorari. Formal notice to this effect was served on the complainants last week, and it is expected the papers will be filed so that the court will either grant or refuse the writ before their adjournment for the term on May 30. No argument is heard on the motion, the record and briefs only being submitted. In the meantime all proceedings are stayed.

On the "dubbing" case, now pending in the United States Circuit Court, Brooklyn, N. Y., Judge Chatfield has informed counsel for the complainants (Columbia Phonograph Co.) that owing to pressure of especially important suits of more general importance before him, he will be unable to write a decision for some time. This is unfortunate, in a sense, but as the alleged "dubbers" are tied up with an agreement to cease the questionable practice until the court acts, no great harm is caused by the delay.

The continuous exchange proposition of the National Phonograph Co., that went into effect May 5, is a concession that will be appreciated at its true worth by Edison jobbers and dealers. Of course, the exchange is confined to cut-outs and defective records—not surplus stock; but as the company are making a liberal list of slow sellers in their cut-out list from time to time, giving their trade ample advance notice, the benefits of the arrangement are not only obvious but manifest.

An announcement likewise of importance is that made by the Columbia Phonograph Co., General, concerning the discontinuance of their XP wax cylinder records. The Columbia Indestructible record takes its place, and will therefore be the only cylinder manufactured and sold in the future by the Columbia Co.

RECORDS OF INDIAN MUSIC.

Something of the Remarkable Work That Is Being Accomplished by Miss Frances Densmore for the Bureau of Ethnology in Washington—Important Part Which the Talking Machine Is Playing in This Work.

Before the old Indian music dies out or gets contaminated and mongrelized, so to speak, by intertribal communication, the bureau of ethnology wants to get as complete a record as possible of all tribal airs. To this end it has engaged Miss Frances Densmore, an accomplished musician who studied with some of the leading musicians in this country and in Europe. Miss Densmore lived in Minnesota for a long time and became keenly interested in the study of tribal music. She heard a good deal of it from semi-barbarous Indian settlers there and then went regularly into the work, making a study of it and tabulating the results for the benefit of the ethnologists of the bureau who might not have a musical ear but who know the value of statistics when they are once set down and tabulated.

While a studied musician, Miss Densmore, did not have the contempt that many musicians have for the phonograph and she boldly called it to her aid as a musical notebook. She went among the Indians, and by living among them, cultivating and humoring them and exercising all sorts of diplomacy she got them to sing for the phonograph. Then she carried the records back home and transcribed them, writing out the words with the aid of Indian interpreters and setting the phonograph records in piano score form.

It was about the most curious work that a musician ever tried, but she says that it has been well worth the trouble. The songs run both to melody and harmony, and some of them are really beautiful, though most of them are plaintive. Miss Densmore does not think of them as the possible basis for any great American symphony or anything of that sort, but says that they are beautiful and entertaining in themselves, and are no more fit to be popularized for general use than wild flowers are to be planted in a hothouse.

She has made about 300 phonograph records, most of which have already been transcribed. All her work so far has been among the Chippewas, though after thoroughly mastering their tribal songs she wants to extend her work to the other tribes, using the Chippewa music as a unit of measure and standard of comparison.

Most of the tribal songs are now the property of the old people and the medicine men. She says the younger generation is careless and learns easier songs from the neighboring tribes, especially the Sioux.

The Chippewas have a curious sort of shorthand picture record for the songs, and she has a number of sheets of birchbark with little pencil sketches, none of them more than two inches square, each of which represents a story that is the basis for some particular song. One, for instance, is a conventionalized tepee. Out of it are coming two figures, an old medicine man and a young man. The young man asks the old man if he has taught him all the music that he knows. For answer the old man leads him to the edge of a cliff and tells him to jump off. The young man jumps and a dotted line shows where he falls down senseless at the bottom of the cliff. Here there is a circle with four dotted lines around it. This represents four bears who walk around the young man and sing him a wonderful magic song. He immediately comes back to life, or to his senses, if he was not actually dead, walks back up the cliff and is greeted by the old man, who tells him that now he knows this song nothing can harm him.

This is the story of the song. The song itself is an entirely different matter, but the few scratches on the birchbark represent this long story and the story fixes the song in the mind of the singer.

In the same way many of the songs tell a long story to the Indians, though they may actually contain only two or three words. Most of the airs are short, running only two or three or at most five bars. This is lengthened by innumerable repetitions and the story of the song is presented to the minds of the hearers though only a few words are actually sung. This sort of shorthand music is rather confusing to the novice, but it is standard currency with its native auditors.

There is one song, for instance, that sounds monotonous enough, for all the words are "Somebody is wrapping up my godson." Yet this is the story of a great juggler who was tied up by evil spirits and succeeded in wriggling out of his bonds by the aid of the especial spirit that watched over him.

There is another song, a very beautiful little air too, the words of which are, "I love him in spite of his being so unkind to me." Yet this song has a whole love story behind it, and the air and these few words suffice to call up the story to the audience.

There are scores and scores of other songs, each distinct in words and music, but some of which Miss Densmore said took as many as nine interpreters to satisfactorily straighten out. There are harvest songs, hunting songs, love songs and songs of war and songs for the cure of the sick. The Indians use many herb remedies, some of which may have some medicinal effect and many of which are probably inert, but the accompanying songs always have to go with them, and Miss Densmore says she is inclined to think that the rhythm of the song oft repeated may have something to do with the cure, when there is one, through the medium of mental suggestion.

She says that she approached the study of Chippewa music with no particular theory to prove and has been willing to take it as she found it, but the matter of rhythm has forced itself upon her attention so that she is making it more and more of a study. She says that she does not like to use the term hypnotism, but there is something in the rhythm of special songs that appears to lend itself strongly to mental suggestion, and mental suggestion certainly plays a large part in their medicine, their magic and their working up of quiet Indians into war parties. She says she hopes ultimately there will be a sort of psychologic laboratory to take up the study of the mental effect of rhythm, but at present she is simply busy collecting the material before it dies out, and is willing to leave the psychology of the matter to other students.

A Mr. Atkinson has opened a talking machine store in the Lewis Block, Winthrop, Mass.

CUT IN GERMAN RECORD PRICES.

Zonophone Co. Reduce Price of Disc Records.

(Special to The Talking Machine World.)

Berlin, Germany, May 3, 1909.

Great excitement prevails in the ranks of dealers and manufacturers of disc talking machine records in this country owing to the fact that the Zonophone Co., which is connected with the Gramophone Co., and sells the latter's second-class discs, has suddenly reduced the retail price to Mk. 2. Up to the present all discs of better quality have been sold in Germany at Mk. 3, some makes costing as much as Mk. 5, and the special red-seal discs of the Gramophone Co., which are obtained only at great extra expense, have fetched as much as Mk. 20. It is feared that there will now have to be a general reduction from Mk. 3 to Mk. 2, which would, of course, be the detriment of the dealers. It is true that the dealers' discount has been raised from 33⅓ per cent. to 37½ per cent., but the fact remains that up to now in order to earn Mk. 15 gross the dealer had to sell only 15 discs, whereas in future he will have to sell 20.

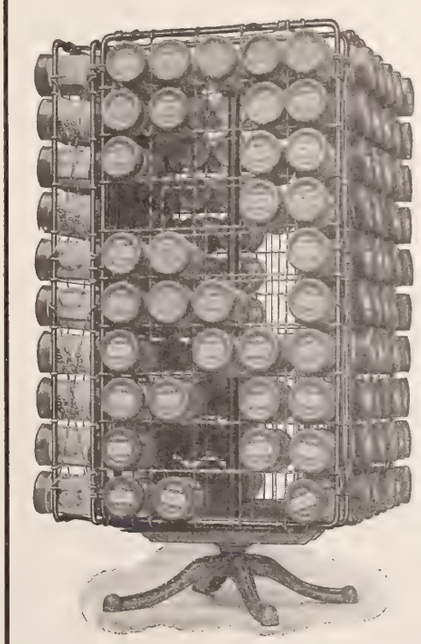
WORKED THE WRONG WAY.

Up-to-Date Merchant Had no Use for Boy Who Had Time to Pick Up Pins

If you see a pin and pick it up the good luck which the adage promises is nevertheless largely problematical. Every one knows the familiar story. The poor but honest boy looking for work applies to the man of business, who promptly turns him down. The boy turns to leave the room, spies a pin on the floor, instantly stoops and picks it up. The man of affairs calls him back, praises his thrift and gives him a position on the spot. Generations of business men have been brought up on the familiar formula.

With the time-honored story in mind a young man from the country found his way into a busy downtown office the other day and applied for a position, says the Hardware Dealers' Magazine. The man of affairs asked a few rapid questions, promised the position and abruptly closed the interview. On his way out the boy saw a pin on the floor. It was much too good a chance to miss, and, stooping carefully, he made sure of the pin under the manager's watchful eye. He was called back to the desk.

"See here, young man," said the up-to-date business man, "I don't want a boy who goes about with his eyes on the floor and has time to pick up pins. You're discharged."



The Monarch Midget IS IT.

¶ You don't know how good it is if you don't use one.

¶ Revolves on Ball bearings and sets on your counter giving access to every one of the 200 records without the necessity of the demonstrator stepping away from his machine.

¶ Keep all your latest and most popular numbers in a Midget and let it assist you in selling.

¶ If your jobber hasn't them in stock give us his name. **DO IT NOW.**

JONES PATENT AGAIN DECLARED VALID.

For the Second Time This Important Patent, Which Covers the Process of Duplicating Disc Talking Machine Records, by the Electrotyping Process, Has Again Been Sustained by the U. S. Circuit Court of Appeals—A Great Victory for the American Graphophone Co.

For the second time the Jones patent, No. 688,739, issued December 10, 1901, covering the process of duplicating disc talking machine records by the electrotyping process, has been sustained and declared valid by the United States Circuit Court of Appeals, New York City, the unanimous opinion of the court being handed down April 14. The previous findings of the same court in the case of the American Graphophone Co. against the Universal Talking Machine Mfg. Co., joined with the American Record Co., were filed January 14, 1907. On August 24, 1908, Judge Hough decided the patent void, in the suit of the American Graphophone Co. against the Leeds & Catlin Co., New York, holding that an English inventor anticipated the patent in issue. This opinion the Court of Appeals reversed. The decision is of a broad and sweeping character and finally adjudicates the Jones patent. After reciting the history of the suit and quoting the specifications, Judge Coxe says, in part:

"The Circuit Court decided that the patent was anticipated by the Adams-Randall British patent, No. 9996, of July 10, 1888. The court also decided that the first method admitted by the defendants, viz.: 'Copying or reproducing and multiplying by familiar electro-metallurgical process, records bought in foreign countries and lawfully imported into the United States,' did not constitute infringement, but that discs made by the second method adopted by the defendants did infringe.

"The only debatable question, therefore, left for decision is whether or not the Jones patent is anticipated by the Adams-Randall disclosures. * * * Can it be said that this describes the Jones invention in such full, clear and concise terms as to enable a person skilled in the art to produce a commercial sound-record by the Jones method? We think not, and this conclusion is confirmed by an examination of the drawings and other portions of the Adams-Randall patent. It may be conceded that when Adams-Randall wrote the language (in the patents) he was possessed of an idea of some kind, but neither an idea nor a thought is patentable and neither can anticipate a patent. Assuming the existence of the idea, what was it, how was it to be carried out, and what was the result produced? The patent fails to answer with any degree of definiteness. A valid patent should not be destroyed by a vague, confused, indeterminate document.

"If to-day a skilled artisan, who had never heard of the Jones or Adams-Randall patents, were given a Jones disc and the Adams-Randall patent, and directed, after reading the patent, to construct similar discs, we doubt whether he would be able to do so.

"Is not the fact that the patent was never heard of, until it was resurrected for the purpose of this litigation, persuasive evidence that it contained nothing of value to the art? It deals with laterally grooved sound-records made by a revolving cutter or burr vibrating in hard material, so hard, indeed, that sound, it is said, can be reproduced from the originals. The patent does not suggest the use of the electroplate matrix as a die, but provides for coating the cylinder with copper, nickel or other tenacious metal to make it durable. In short, we are unable to see that Adams-Randall's contribution to the art advanced it a single step.

"The burden of proving anticipation by clear and convincing evidence rests heavily upon the defendants. We cannot avoid the conclusion that the sanguine and optimistic view taken by the defendants of the Adams-Randall patents is not justified by anything found in the patents themselves. The patent upon which the chief reliance is placed fails to give a clear statement of the method of producing the Jones disc. The naked assertion that a certain result has been accomplished without stating how, without describing the means which produce the result is insufficient as an anticipation.

"The most favorable view for the defendants is that the question of anticipation by the Adams-Randall patents is involved in doubt, and this is fatal to their contention. If the process pursued for its development failed to reach the point of consummation, it cannot avail to defeat a patent founded upon a discovery or invention which was completed. * * * The law requires not conjecture but certainty. It is unnecessary to discuss the other alleged anticipating patents and articles said to appear for the first time in the present record. They add nothing of importance to the controversy. In other words, if the references discussed by this court upon the former appeal plus the Adams-Randall patents are insufficient to destroy the patent in suit, it is manifest that the alleged new references are equally ineffectual.

"As before stated, we hold that the second method adopted by the defendants, and admitted by them in their stipulation to have been practiced prior to the commencement of the suit, constituted an infringement of the claims of the complainant's patent. It would seem that nothing further is required. Where a patent has been declared valid and infringed, a decree follows as a matter of course. As the Circuit Court has twice decided, once on a motion for a preliminary injunction, as we understand it, and again at final hearing, that the first process employed by the defendants does not infringe, we should hesitate long before reaching a different conclusion. It is, however, for present purposes sufficient to say that the complainants' proofs and the defendants' stipulation as to their second process amply sustain the charge of infringement. The decree is reversed with costs of this court and the cause is remanded to the Circuit Court with instructions to enter the usual decree in favor of the complainant."

The counsel appearances were Philip Mauro and C. A. L. Massie for the American Graphophone Co., and Louis Hicks for the Leeds & Catlin Co. A petition to the Supreme Court of the United States for a writ of certiorari, which acts as a stay, was filed May 17. The motion is either granted or denied without argument.

Judge Lacombe on April 17 signed an order, by consent, reinstating the preliminary injunction, which he had previously granted, on the petition of the American Graphophone Co. against the International Record Co., Auburn, N. Y., and then suspended, but not vacated, pending the appeal of the Leeds & Catlin Co. to the Circuit Court of Appeals in the Jones patent suit. As this case has been adjudicated it is not likely the International Record Co.'s case will ever go to final hearing.

VACATION TIME.

The Talking Machine the Basis of Summer Enjoyments—A Strong Statement but You Can prove It, Mr. Dealer.

Vacation time is almost here and every talking machine man should bring the fact to the attention of every passer-by by means of appropriate window publicity. Do not depend upon your window display entirely, though, but have a small electric buzzer working overtime from a hidden retreat, singing a song of trade to the curious public.

Did you ever walk along a street, gazing neither to the right nor left, your mind concentrated upon a business deal or busy with the list of necessities your wife asked you to bring home in the evening, when, suddenly, a seductive purring sound came to your ears close at hand, and you turned to find yourself gazing into an attractive window? Of course, you have, and so have tens of thousands of your fellows, and you will keep right on doing it as long as you live, and so will they. So much for the buzzer.

Appropriate Window Publicity.

You will say, gentle reader, that the subject of window displays is about worn bare; that there has been too much written about it already, and that it is full time to grant it a well-earned rest. The writer admits the truth of this, but he thinks there is just a little more of interest to be said before the last farewell is spoken; so here goes:

The keynote of vacation advertising is appropriateness. Every progressive dealer advertises at this season of the year, but does he make that publicity entirely appropriate? Does the poster he hangs in his store window and the reading matter that surrounds it suggest the enjoyments of holiday time with the talking machine as a foundation? Does it speak of the lawn fete, the row on the lake, the trip to sea, of if the vacationist is to remain in the city, the roof garden? It should be so, and somewhat as follows:

Mr. City Dweller, a Word With You.

Have you decided where to spend your holiday this year? It doesn't mater; take a talking machine with you, anyway. Consider that first and your destination afterward. Make it the foundation of your good time and the locality in which you find yourself will adjust itself to your desires.

If you pack a "talker" in your trunk you will be sure of one thing, viz.—the pleasure of the city theater, which embraces sweet ballads sung superbly by the best vocalists of the world, the uproarious mirth of the vaudeville stars, the brassy, soul-stirring blare of the military band and the soft, caressing melody of the orchestra. With these with you, what else matters?

Think of it out upon the dreamy limpid lake, far away from the haunts of man and the dust and clamor of the metropolis, with the talking machine pouring from its golden throat, mirth, melody or sadness in harmony with your mood. Great, isn't it?

What will the lawn fete be without an orchestra for dancing after the dainty supper is eaten? A failure? No. Not if you have that "talker" in your trunk.

Maybe you are going to sea. Well, when the ocean is calm and the moon is casting her magic spell upon the billows, would it not add greatly to the romance of the occasion to have an appropriate phonographic obligato? You will be in doubt until you try it.

To the man who can't get away, whose business cares chain him to his desk throughout the summer and who loves Bohemia, the "talker" is a friend, indeed. It will bring the roof garden to him when he cannot go to it, and with all its delightful Bohemian atmosphere. With something cold in the ice chest and a "talker" in the house, the city loses its terrors even in the most torrid weather.

Make your purchase now. You may not pass this way again.

HOWARD TAYLOR MIDDLETON.

INDEBTED TO ANDREW DEVINE.

Andrew Devine, whose death is recorded elsewhere in this issue, is credited with being the "father of the talking machine business." He, with two associates, bought the Bell and Tainter patent, and was the first to recognize the commercial possibilities of the reproduction of sound; but what Mr. Devine had particularly in mind was a machine for dictation. The amusement side was developed later and incidentally. When the American Graphophone Co. was organized by Mr. Devine, Edward D. Easton was made president, a position he has since filled so acceptably.

NATIONAL CO.'S EXCHANGE SYSTEM.

Important Letter Issued to the Trade Covering All Details of This Most Liberal Offer in Connection With Their New Continuous System of Exchange—Affords Dealers Great Opportunities.

Relative to their new continuous system of exchange the National Phonograph Co., Orange, N. J., in a circular letter dated May 1 furnish the following details:

"To the Trade: We would respectfully call your attention to the exchange papers herewith enclosed. We believe the proposition offered you is a most liberal one, and will entirely overcome the objections offered by the trade to previous exchanges. The jobber and dealer alike are now placed in a position where they may return to our factory such 'cut-out' and 'defective' records as they may have in stock, at such times as will suit their convenience, and it makes it entirely unnecessary for either jobber or dealer to return records for exchange at a time when it would be inconvenient to order enough records to offset those returned.

"We would particularly call your attention to the fact that 'cut-out' records must not be returned for exchange until such time as they have been eliminated from our regular catalogs, and even then some of the trade will feel inclined to continue to carry some 'cut-out' selections, as in a great many cases some records are equal to, and, in some respects, superior, to some of the newer selections; furthermore, there is bound to be a continued demand for some of these records, as they are listed in thousands of catalogs now in hands of phonograph users. This we feel will also cover the numerous complaints we have received from a number of dealers, when it became necessary to 'cut out' a quantity of records, as very frequently the dealers found that some of the numbers appearing in the 'cut-out' lists were among their best sellers."

Some of the details are appended: Beginning May 5, and until further advised, authorized Edison dealers may return direct to the National Phonograph Co., exchange department, Orange, N. J., for exchange through a jobber, cut-out and defective (not surplus) Edison Standard or Amberol records (not grand opera or concert). Dealers must, at the same time, send an order for immediate shipment for a quantity of Edison standard or Amberol records at least equal to the number of such records as he is returning, which order we will forward to the jobber designated when credit has been rendered for the records returned. Orders must be for stock records only, and not for any records contained in advance lists.

This proposition does not include records taken in exchange from consumers, slot machine operators or exhibitors, and any records of this nature or second-hand records returned to us will be absolutely refused. No records can be returned through jobbers; they must all be shipped the National Phonograph Co. All records returned will be given a careful examination by our inspectors, and should any be discovered that are not subject to credit under conditions outlined, they will be disposed of by us, and should there be any shortage in count our decision as to the quantity to be credited must be final.

Defective records are those that are defective from manufacturing causes only, and do not include those that have been damaged after leaving our possession. Cut-out records are those that have been dropped from the regular catalogs, from time to time, numbers of which have been supplied to the trade through the regular bulletins.

The phonograph is suggested by a French photographer as means of timing when a clock cannot be watched. He has fitted his machine with a cylinder counting from 1 to 240, with intervals of one second between the numbers.

Where ignorance is bliss 'tis folly to be one of those fellows who know it all.

BOSTON'S TRADE HAPPENINGS.

Optimism Reigns Supreme in Boston Town Although Talking Machine Men in That City Would Like to do More Business—Royer Succeeds Cornell as Manager at Steinerts, Donnelly Looking After Columbia Retail Trade—Edison Amberols Liked—Eastern Talking Machine Co.'s Club a "Live" Organization—Other News Worth Recording.

(Special to The Talking Machine World.)

Boston, Mass., May 15, 1909.

In the spring, when young man's fancy turns to thoughts of talking machines, it is the time when the dealers in these necessary articles are usually pretty busy in attending to the wants of said young men. But this spring has evidently found the young man with other thoughts under his Dunlap, for business "ain't like it was years ago," as Bill says.

Still, everyone is an optimist, and everyone feels that to-morrow things will be different. The warm days have stirred up the summer young man and, like that of light literature, the sale of light musical records increases as the tribe gets thicker. Few local dealers expect much improvement in the general trade until the tariff question is settled.

Chief thing of interest in Boston talking machine circles this month is the change in the management of the M. Steinert & Sons, Manager E. P. Cornell retiring, and Herbert L. Royer, until recently eastern representative of the Victor Co., taking his place. Mr. Royer is one of the brightest men in the trade. He has had the advantage of the experience of a traveling salesman, a store salesman and manager, and the Steinert Co. is to be congratulated on securing such an unusually able man. Mr. Cornell is to devote his energies to the wholesale carpet business—something to deaden noise instead of making it, as it were.

D. D. O'Neal, the Victor man, made a flying trip through the Boston district this week and dredged up a number of orders.

At the new store of the Columbia Phonograph Co. G. P. Donnelly has been made manager of the retail department. Business here has increased very noticeably over that at the old store. The arrangement of the retail floor is much better and the window display is more attractive. Manager Erisman declares himself satisfied with the volume and character of the business done.

An interesting feature of business at all the stores where the Edison is handled is the demand for the new Amberol records. They have created practically a new class of trade, for a large percentage of persons who are buying them have never owned a machine and have become interested through this new record.

Many of the Edison dealers remarked this week that they will be very glad when the National Co. puts out a machine after the style of the Victrola. They believe there is a great demand for this kind of an instrument.

Ambassador Henderson, of the Columbia Co., called on the local trade this week. "Trade's great," he remarked.

The Eastern Talking Machine Co.'s club of employes had a very interesting meeting recently, at which four papers were read on as many different topics connected with the trade, and the "boys" relieved themselves of some good ideas. The rearranged retail floor is working like a charm in bringing in trade, especially now that the doors can be kept open. An extra effort at making attractive window displays is being made here.

"Business is very satisfactory, and we expect a boom to hit us before very long—just as soon as the warm weather is settled," says Manager Winkelman at the Oliver Ditson's Victor department. The demand for Victrolas is an important factor here.

The new Victor department of the Hallet & Davis Co. is now installed and business has started in nicely.

The Boston Cycle & Sundry Co., Edison jobbers, report business in New England as "getting ready for a sprint."

Send us your order and "forget it."

You'll get the goods in double-quick time, for *every order we receive is filled and shipped the same day we get it.*

What's the use of being tied to a jobber who makes you promises and then fails to "make good"? When you order Victors and Victor supplies you usually want them in a hurry. You can't afford to wait for the jobber to send them when he gets ready.

And don't let him bluff you with any "too rushed" talk. He ought to have enough employes to handle all his orders immediately. We have.

But why take any more chances? If your jobber has disappointed you once, he may do it again. You don't run any risks when you deal with us, and you don't have any feeling of uncertainty. We never "fall down."

Try us on Victors or Victrolas, or Victor Records; or record cabinets, fiber cases, horns, English needles, or anything else in the Victor line. We carry an enormous stock of all these goods, and can fill your order at once, no matter how large it is.

You ought to send for our handsome booklet, "The Cabinet That Matches," describing our record cabinets which exactly match each style Victor. Ask for our catalogues, too!

New York Talking Machine Co.

Successors to
The Victor Distributing and
Export Company

83 Chambers St., New York

The Cabinet That Matches

¶ No machine is complete without a Record Cabinet.

¶ The pleasure of a Talking Machine is doubled if you can put your hand on any Record you want.

¶ Has your difficulty been to find a Cabinet entirely in harmony with your Talking Machine?

¶ In our "Cabinet That Matches," we have given you something that is a component part of the Victor Machine. The living room or parlor table is saved—you have a place to set your Machine.

¶ The Talking Machine becomes, in an outfit, an artistic piece of furniture.

¶ The uniform finish on all four sides makes our Cabinet as desirable in the middle of a room as backed up against the wall.

List Prices:—$11.00, $15.00, $20.00, $25.00, $30.00, $40.00.

¶ Your regular discount applies. Send for catalogues.

May Install Talking Machine Department—Some Personal Notes of Interest—News of the Travelers—Tresch, Fearn & Co. New Talking Machine Dealers—O'Neill, James Co. Move—"Washlady" Buys $100 Machine—Milton Lyons Joins Father—New Talking Machine Co. Cabinet—Closes Out Business in Burlington, Ia.—A Live "Talker" House in Waukegan—E. C. Barnes Complimented on "Tips" and Caruso's Misfortune Used as Advertising Material—Saleswomen Prove Successful—Other Trade News from the Metropolis of the West.

(Special to The Talking Machine World.)

Chicago, Ill., May 8, 1909.

April was a pretty fair month, all things considered. The volume of business as reported by local jobbers showed a slight falling off as compared with March of this year, but scored quite a material increase over April of 1908. This is the second month since the commencement of the business depression, which struck us the latter part of 1907, to be universally reported as showing an increase, and this in itself furnishes food for encouragement. Local retail trade has moved along in an uneventful manner, making about an even break with March. It is quite possible that May will show some improvement, as the time for the exodus of the summer cottage class is approaching, and this generally means the sale of not a few machines and liberal stocking up of records.

L. F. Geissler, general manager of the Victor Talking Machine Co., spent several days in Chicago this week, and on his return East visited Evansville, Ind., where his father, E. L. Geissler, resides. The senior Mr. Geissler has been very ill, but his condition has considerably improved. Many years ago he was in the piano and musical instrument business in Evansville and was one of the pioneer dealers in that line in the state, but has, of course, long since retired.

The Story & Clark Piano Co. closed a lease last month for the large five-story-and-basement building at 250-252 Wabash avenue, directly across the street from their present location. They do not get possession before May 1, 1910, but it is quite possible that they will then install a talking machine department on an extensive scale.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy, leaves tomorrow night for a trip to New York and to the Victor and Edison factories. This is Mr. Wiswell's first visit to the East since he assumed charge of the department.

E. A. Phillips, who for several years has been manager and buyer of the talking machine, sporting goods and toy departments of Rothschild & Co., has tendered his resignation, effective June 1. His successor will be Harry Solomon, who has charge of the trunk and sewing machine departments of the same house.

A. C. Ireton, assistant sales manager of the National Phonograph Co., is expected in Chicago to-day.

E. W. Dean, the needle manufacturer of Lowell, Mass., called on the Chicago jobbers last month and it is understood bagged some very nice orders.

Joseph Sheehan, who has been called America's greatest tenor, will leave in a few days for Winnipeg, Man., where he will appear in opera during the summer. He spent a great deal of his time at the record rooms at Wurlitzer's the past week making comparisons between his interpretation of standard arias and those of Caruso and the rest of the skyscraping crowd. Incidentally he made some good records on the Edison.

E. H. Uhl, Western manager of the Rudolph Wurlitzer Co., returned last month from his trip to the coast accompanied by Mrs. Uhl. He is now on a visit to the parent house in Cincinnati.

Tresch, Fearn & Co. is the name of a new firm in an old "talker" location, 73 Fifth avenue. James I. Lyons had this store for many years prior to occupying his present location at 265 Fifth avenue. George Tresch and E. A. Fearn, who compose the new firm, are both former employes of Mr. Lyons and were with him in the store in which they are now established on their own account. Mr. Fearn recently opened at 1041 Lincoln avenue, but has given up that store to go into business with his former associate. They opened on Monday of this week and are handling Victor and Edison goods and the Columbia disc product, and they carry cameras and photographer's supplies as a side line.

The O'Neill James Co., the large talking machine premium house, have moved from Lake and Fifth avenue to the new Hunter Building, corner of Market and Madison streets, where they occupy the entire eighth floor, besides a space in the basement for storage purposes.

They carry an immense stock of machines and records and have much more room and more conveniently arranged quarters in the new location. The Aratino Co., which they also control, is located on the third floor of the same building. Arthur J. O'Neill returned this week from a trip East.

The everlasting struggle to keep up appearances whether the pocketbook warrants it or not undoubtedly works to the advantage of the talking machine dealer as well as the milliner and dressmaker. An instance in point is related by a local "talker" man. He had just sold a $100 Victor to a handsomely dressed woman the other day when in came Mrs. O'Flaherty, who by her labors of the washtub assists Mike in eking out his scanty income. The salesman directed her attention to the Victor, but Nora wouldn't have it. She made at once for the $100 machine, remarking that phwat was good nuf for the loidy phwat chust lift phwas good nuf fur meh.

James I. Lyons has a new assistant in the person of his son, Milton Lyons. The young man is a live wire in every respect and is breaking into the work of the retail department in fine shape. He will work through all branches of the house and will no doubt be heard of in a decided manner in the future.

The Talking Machine Co., of this city, have completed the line of "Cabinets that Match," with one especially made for the Victor O. It makes a beautiful little outfit retailing at $28 for machine, flower horn, mahogany finished record cabinet and all. The company are now able to offer a cabinet to match every type of Victor machines, and so cleverly has the work of the designer been done, that the machine case and the record cabinet on which it is placed seems a single piece of furniture. The matching of the wood has been done as skilfully as that of the designs, and Arthur D. Geissler is reaping the reward of his ingenuity and enterprise in a demand for the "Cabinet that matches," reaching remarkable proportions with straight carload shipments of by no means infrequent occurrence.

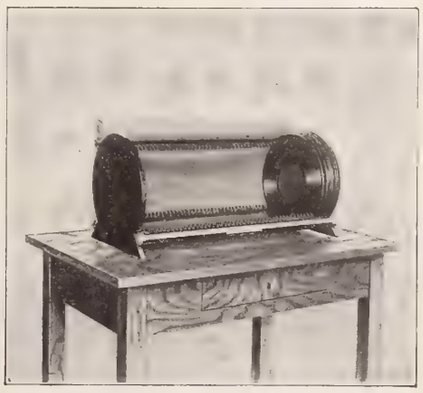
M. E. Reynolds, who has had a large jewelry and talking machine store at Burlington, Ia., for a number of years, has closed out his business and contemplates going to Oklahoma, where he will re-engage in the talking machine business or open a moving picture theater. H. B. Hopkins, of Lyon & Healy, spent a couple of days in Burlington last week and arranged for the sale of Mr. Reynolds' Edison and Victor stock to the Guest Piano Co., of that city.

Waukegan, Ill., which is about fifty miles north of Chicago on the lake shore, is the headquarters of Alden, Bidinger & Co., a retail talking machine and piano firm who are doing some very vigorous and resultful work in northern Illinois and southern Wisconsin. They have just taken a five-year lease on the building adjoining their present location in Waukegan, and this gives them a fine big double store. They have erected two additional booths. They carry an extensive stock of both Victor and Edison goods and are prolific in unique ideas in prosecuting their talking machine business. They have an automobile which is constantly in use by some member of the firm in traversing the country soliciting piano and talker business. A

Why RACK Your Brains

Over the selection of a record cabinet, when you should be helping your trade **Rack** their single and double-faced records with the

ECONOMY or the PERFECTION RACKS



combining the sterling qualities of Neatness, Portability, Utility and Salability? One record to a compartment. The only way to protect double-face records.

Economy Rack for 10-inch Records	$3.50
" Rack for 12-inch Records	3.75
Perfection Rack for 10-inch Records	1.50
" Rack for 12-inch Records	1.75
" Rack for Insertion in Cabinets	1.50

The Perfection Rack Cabinet is on the same principle as the Economy, but less ornamented, and therefore cheaper.

R. H. JONES, Patentee and Sole Manufacturer **5513-25 Monroe Ave., Chicago**

Are You Making
Enough Money
Mr. Dealer?

¶ *Perhaps not! But there is really no reason why you shouldn't be making more money than you are.*

¶ *The quickest way to increase your sales and thus your profits —is to give prompt service and furnish reliable goods.*

¶ *It is not necessary perhaps that you carry a large stock—but you simply must know where to get the goods your customer wants and get them quick.*

¶ *You can't afford to take any chances of losing a profitable sale by embarrassing delay on the part of the firm with which your order is placed.*

¶ *Our large and capable sales force, under the supervision of expert foremen, is in position to handle all orders—large or small—with extraordinary facility and dispatch.*

¶ *Don't be content with selling your customer a Victor or Edison outfit only—cultivate the record business. Remember that the record sales which follow the machine sales are really the most lucrative part of the transaction.*

¶ *If you want your record business to grow, you must keep it up-to-date. You should have at least a small stock of all the latest selections. We will fill your orders promptly for any you may not happen to have when called for—but better place an order with us to-day for a late assortment. Then there will be no cases of lost customers.*

¶ *We keep you posted from time to time on all kinds of money-making musical goods, just as soon as they come out.*

¶ *Victor and Edison outfits and supplies of all kinds in large quantities constantly on hand.*

¶ *Write for Talking Machine catalogue, and let us put your name upon our mailing list at once.*

Lyon & Healy

CHICAGO

Victor machine is always taken along, and quite a number of Victrolas have been sold the farmers. The firm give frequent concerts at Fort Sheridan, the Government military post near Waukegan, and they have sold a large number of Victors to the officers and members of the garrison. Mr. Alden and Mr. O'Shea are located at Waukegan, while Mr. Bidinger operates the branch at Kenosha, Wis.

A recent number of "Tips," a sprightly little journal issued by the Edison Business Phonograph Co., of Orange, N. J., contains an appreciation of Edwin C. Barnes, the company's Chicago dealer. It tells his story from the time he commenced selling business phonographs in Chicago, and winds up by handing him this bouquet: "Barnes does nothing else but sell phonographs. He puts his brains in it, and it is a compliment to the industry that he does so to the exclusion of everything else, for there is plenty of room for men of his energy and ability in every line."

An event which caused a great deal of interest among local stamp collectors was the sale at auction last month of the fine collection of Edward C. Plume, Western wholesale manager of the Columbia Phonograph Co. Mr. Plume has been afflicted with stampitis ever since he was a kid, and he is known as an authority on the subject. Hereafter he is going to specialize, however, and devote himself entirely to mementos of the Confederate States of America. The sale of the "Plume collection," as it was known, brought its owner about $600.

The fact that Caruso's voice went back on him so as to prevent his appearing with the Metropolitan forces in Chicago last month gave an opportunity for some effective talking machine advertising. For instance, the following card appeared in the amusement columns of the dailies during the opera season: "Caruso WILL sing at the Stratford Hotel between the hours of 6-8.30—10.30-12.30 p. m. He is still singing there, as the Stratford uses an Auxetophone for the delectation of its patrons."

Lyon & Healy believe in the efficacy of the feminine touch when it comes to retail record selling. They have a man, M. Blackman, in charge of the department, and he is a dandy, but his assistants are of the feminine persuasion. Like Mr. Blackman, they are all musicians and can tell the story of every opera represented in the Victor list and the particular incident covered by each record. Miss Eckner and Miss Bauer have been in the department for some years. Miss Wood, formerly with Grinnell Bros., of Detroit, and Miss Loomis are comparatively recent comers, and Miss Lessick, formerly with Rudolph Wurlitzer's Chicago branch, has just been added to the staff. They all have a strong personal following, and with Miss Fitzmaurice, the cashier of the department, constitute as bright and attractive a group as one would wish to see.

C. F. Baer, Chicago manager of the Columbia Phonograph Co., is building a bungalow on Lake Catherine, near Antioch, Ill., and is inviting his friends to spend the week-ends during the summer with him. Anyone who has been overlooked will kindly inform Mr. Baer, as he wishes to slight no one.

A. E. Croft & Co. are highly pleased with the reception being accorded the "Crescent" disc record cabinet by the trade. It's convenient, of attractive appearance, inexpensive and adapted for double-face as well as single records, as each disc has a compartment to itself. The firm have many letters commending the "Crescent" and also a special sales plan by which they send customers to the dealers.

George W. Lyle, general manager of the Columbia Phonograph Co., General, visited the Chicago office twice the week of April 21, running up to Minneapolis for a day in the interim. Mr. Lyle while here received a telegram announcing the decision confirming the validity of the Jones patent in the case of the American Graphophone Co. versus Leeds & Catlin, and was naturally jubilant over the news it contained.

A. W. White, formerly manager of the Columbia Co.'s branch at Duluth, Minn., was in the city recently calling on his old friends prior to going to Montreal, Can., where he will assume management of a branch store of the Toronto Phonograph Co. The Columbia have sold their store at Duluth to Mr. Edmonts, of that city, who will continue it and will also have the wholesale agency for the territory formerly covered by the Duluth branch.

The credit man of a local house recently got out his sharp stick and went after a talking machine customer who was several months behind on his payments. The latter made the excuse that he had not given the matter attention because he had been so busy aiding in the building of a new church. The credit man was not particularly of a religious turn of mind and the customer paid up, and that right speedily.

John A. Waring, who formerly managed the store for the Columbia Co. at Peoria, Ill., now has charge of the credit department for Rothschilds & Co. He is by no means out of touch with the trade as the instalment sales of the talking machine department naturally come under his purview.

The Talking Machine Co., in their regular monthly letter of advice for May, give their customers a splendid line of argument for use in selling Victrolas, and suggest a plan of campaign in the pursuance of which they offer to give the dealer substantial aid.

George Davidson, of the Talking Machine Shop, is on a ten days' eastern trip, accompanied by Mrs. Davidson. Cecil Davidson received yesterday a souvenir post card from Atlantic City which revealed an interesting group consisting of George and his wife and Harry Ellis who, by the way, was formerly with the Talking Machine Shop, but is now manager of Sol Bloom's branch store at Atlantic City.

The Salter Mfg. Co. are having a very large demand for the improved Salter disc cabinet, the kind with horizontal, felt-lined shelves. The Salter Co. were the originators of this arrangement for talking machine record purposes, and the idea sprang into instant and universal favor upon its introduction.

They are using Victor talking machines to good advantage in the sheet music department of Rothschilds for demonstrating popular numbers for which there are Victor records. The young woman pianiste accompanies the machine in a very effective way. It's a good scheme, as it saves the salary of a vocalist.

The Columbia Phonograph Co. are slowly getting settled in their new quarters at 210 Wabash avenue, which were described in last month's World. It's a fine location—an immense improvement over the old one at 88 Wabash avenue, both for the wholesale and retail branches of the business.

The fiber needle is making fine headway abroad. Daws Clarke of Manchester, is the sole representative in England for the time being, and judging from the way he is sending in orders to the manufacturers, the B. & H. Fiber Mfg. Co., of this city, the needle is finding great favor with the conservative Britishers. Germany is waking up to the merits of the fiber needle and the same is true of the other continental countries. Some very interesting, specially designed machinery is now being installed by the company.

The removal of the lid off the wax record business as the Columbia Phonograph Co. expresses it in their briskly worded circular announcing their latest move, naturally caused considerable stir in the trade. No more XP wax cylinder records are to be made by them, the success of the Columbia indestructible records being given as the reason for the decision. The Fair department store, of this city, is the first Chicago concern to take advantage of the authorized closing out retail price and are using liberal space in the dailies to announce it.

Joseph Vasey, in charge of retail machine sales at Lyon & Healy, spent his vacation getting settled in a handsome new residence he has built at the suburb of Brookfield.

The Regina Co.'s Chicago branch has moved to larger and more convenient quarters on the eighth floor of the McClurg building.

NEW STYLE EDISON PHONOGRAPH.

The "Fireside," which takes the place of the Edison Standard phonograph, about the same size with combination gear so that either the regular or Amberol record can be played, will be shipped the jobbers by the National Phonograph Co., Orange, N. J., between now and May 25. The first shipments were sent the Pacific Coast territory, so that machines will be in the hands of the jobbers throughout the country about the same time, as has always been the policy of the company when placing anything new on the market. The advance orders for the "Fireside" are heavy. The new machines will be placed on retail sale July 1. The list price is $22.

TRADE GLEANINGS FROM CLEVELAND.

Business Conditions Reviewed—Look for a Strong Buying Movement in the Fall—Dealers Should Attend Association Meeting—Devineau Affairs—Caldwell Co. Closing Out Talker Business—Roberts' Handsome New Quarters—Edison Business Phonographs in Demand—Goodman Piano Co. Handling Talking Machines—Gibson Purchases Hartwell Store—Other Items of Interest.

(Special to The Talking Machine World.)

Cleveland, O., May 10, 1909.

The talking machine dealers are not enthusiastic over trade conditions, but they all report a fairly good business during the past month, notwithstanding the unfavorable weather and other drawbacks. Jobbers, while noting a diminution in the volume of trade, are booking orders quite as frequently and regular, but curtailed as to quantity. Business in the aggregate is of fairly satisfactory volume, when a retrospect of boom years is omitted. It is the general belief that while business will show the usual summer quietness there will be gradual improvement to a strong buying movement as the season advances.

There were a number of dealers and gentlemen interested in the talking machine business in attendance at the association meeting in this city May 5. Among others, Wm. McAlpine, of Toledo, who had with him several of the Stevens indestructible records, the invention of Geo. H. Stevens, of that city. The records are translucent, and Mr. McAlpine says they have demonstrated their practicability and durability and will soon place them on the market.

In behalf of the city the auditor has executed to the American Banking Co. an assignment of all right, title or interest to every claim or cause of action which the city would have against any person or corporation for any action or omission in connection with the alleged embezzlement of funds by Louis Devineau, former secretary of the city sinking fund commission. The company have paid the full amount of the alleged embezzlement, $12,800, with interest. Mr. Devineau was the inventor and manufacturer of the Ideal horn, and at the time of his flight to Europe was building up a good business.

Miss Edna A. Rankin, formerly with the Witt Music Co. and latterly manager of the talking machine store in the Taylor Arcade, was married to Mr. Edward I. Leighton, a resident of this city, April 17.

Geo. J. Doerzbach, of Sandusky, O., dealer in Edison, Victor and Columbia goods, was a visitor here April 22. It was remarked by local dealers that his visit was coincident with the opening of the baseball season.

The Caldwell Piano Co. are closing out their talking machine business and will confine their efforts exclusively to the piano trade. The rooms heretofore devoted to talking machines and records will be used for the display and demonstration of player-pianos.

W. J. Roberts, Jr., has moved from Erie and Huron and now occupies the Prospect avenue end of the Hippodrome building. The store has been neatly fitted up and conveniently and attractively arranged. At the entrance is the display room, then in sequence Victor and Edison demonstrating booths, an exclusive Red Seal and Edison stock room, a testing and tuning and repair room. The fixtures are of quartered oak and mahogany. Several new features in window display have been introduced. It is the intention of Mr. Roberts to utilize one room as a concert hall, giving concerts the last of each month demonstrating the new records.

W. H. Buescher & Sons said they have recently increased their force and had been quite busy during the past month.

"Considering the condition of business generally," said G. J. Probeck, of the Probeck Co., who has so far recovered from his illness as to be at the store part of the time, "the talking machine trade is fair. Record sales are a considerable percentage better than that of machines. Under court procedure we purchased "Philadelphia." the machinery and finished Ideal horns of the Federal Manufacturing Co. We have not yet determined what we will do with them."

T. H. Towell, president of the Eclipse Musical Co., says that country orders were coming in in substantial volume and the outlook improving.

J. H. Roach, manager of the Edison commercial system, who has an office in the Eclipse building, has installed the system in a large number of offices and is doing a good business.

The opening of the Goodman Piano Co. at 220 Superior avenue occurred April 27. Visitors, who were numerous throughout the day and evening, were favored with a recital in the concert hall during the afternoon, an Apollo player-piano and Victor Victrola being used. The store has been arranged providing several private demonstration rooms for pianos and four rooms exclusively for Edison phonographs, Victor talking machines, with ample record rooms. Mr. C. F. Foote is in charge of the talking machine department and says it is the intention to carry a complete line of everything in Victor and Edison goods.

M. A. Gibson, purchased the Hartwell phonograph store, No. 3032 Lorain avenue, April 1, and has remodeled the store and enlarged the business. He stated business during the month had been very good and was improving.

John Reiling, the West Side Columbia phonograph man, says he had a fine run of trade during April, making sales of a number of graphophones with a constant and increasing demand for records. He said he had been disappointed in not being able to get all the foreign records his customers demand.

B. L. Robbins & Co., the Bailey Co., May Co., Collister & Sayle and other dealers, all make practically the same statement as to business conditions.

Instead of sailing for Europe June 6, Sol Bloom, New York, has been compelled to postpone his trip until July 3, when he goes on the

CONTINUED TRADE IMPROVEMENT IN ST. LOUIS

Manager Gressing, of St. Louis Talking Machine Co., Reports Good Demand for Victrolas and Auxetophones—Columbia Co. Say Business Is Twice as Good as a Year Ago—Conroy Sells Talking Machine Department to Silverstone Co.—Union Furniture Co. to Have Recital Hall.

(Special to The Talking Machine World.)

St. Louis, Mo., May 4, 1909.

The talking machine business still shows a continued improvement both in wholesale and retail, and it has had an excellent effect on the dealers.

Manager O. A. Gressing, of the St. Louis Talking Machine Co., states that their April trade was excellent. This concern recently received a large shipment of Victrolas in different oak finishes and circassian walnut, of which they made a handsome window display. Before noon the same day Miss Goetz, one of their saleslades, sold the circassian walnut to F. W. Horn, a prominent railroad official here. This concern has just installed an Auxetophone in the new Independent Amusement Co. theater at 4961-4965 Delmar boulevard, this city. Their entertainment will consist of high-class moving picture exhibitions. The Auxetophone will be featured in connection with their orchestra of six pieces. Mr. Gressing returned recently from a successful trip to points in Indiana, Kentucky and Tennessee. He was gone a week. L. A. Cummins, of this concern, is home from a two-weeks' trip through southern Missouri and southern Illinois. He had a good trip.

Manager E. B. Walthall, of the Columbia Phonograph Co., reports that their business for April was nearly twice as good as one year ago, and that it was the best month's business of the year. He also reports their wholesale trade good. He states that the demand for the high-priced machines from one hundred dollars up was particularly good, showing that there is better class of trade coming into the field right along. W. S. Byrd, traveler for this house, is now on a three-weeks' trip through Illinois. W. C. Fuhri, general western district manager of the company, and C. W. Smith, manager of the company at Kansas City, spent some days here recently.

The Conroy Piano Co. have sold their talking machine interests to the Silverstone Talking Machine Co. The latter concern has moved the purchase stock to their store at 1010 Olive street and to their new warehouse at 1009 Pine street, which they have recently leased. John Stevener and G. J. Knapp, formerly of this department with the Conroy Piano Co., have accepted positions with the Silverstone Talking Machine Co. The Conroy Piano Co. were the first dealers in talking machines in this city, having commenced to handle them twelve years ago. They sold out their interests in this line because they needed the room for their piano department. They handled the Edison line exclusively.

The Koerber-Brenner Music Co. report that they have been having a good demand for high-priced machines, and that their record trade is good. A. Haas, formerly traveler for the Koerber-Brenner Music Co., has accepted a similar position with the Silverstone Talking Machine Co. Marks Silverstone, of the Silverstone Talking Machine Co., reports that trade is becoming more active.

The Union Furnishing House Co., who have an exclusive Victor talking machine department, announce that in their new eight-story store at the northwest corner of Seventh street and Washington avenue, which will be completed about October, they will have a talking machine recital hall on one of their floors, which will be 45x60, and in which they will give daily concerts. Miss Leah Gray is manager of their talking machine department. She reports that their business has been fairly good.

D. K. Myers, the Zonophone jobber, reports having had a splendid month's trade during April in all departments.

Manager E. P. Waterhouse, of the Dictaphone Co., reports that their trade has been good for the past month.

The Knight Mercantile Co. report business fair with them. A. A. Knight has just returned from a two-weeks' pleasure trip to Texas.

Eugene Ketterer, formerly manager of the talking machine department of the Conroy Piano Co., has been assigned to a position as salesman in their player department.

COLUMBIA CO.'S NEW STORE.

Take Possession of Their New Retail Quarters at 89 Chambers Street, New York.

The Columbia Phonograph Co. are now in their new store at 89 Chambers street, and R. F. Bolton, the manager, who said they commenced business last week, is very much pleased with the outlook. Their sales at retail are very gratifying, and the wholesale end is also expanding. C. P. Graffen is now making a trip for the Columbia Co.'s Chambers street establishment through New York State, and his sales represent a goodly volume of business booked, while his reports to Mr. Bolton are very optimistic.

WOODEN HORN LITIGATION.

The case of Lipman Kaiser, manager of the talking machine department of the S. B. Davega Co., New York, against the General Phonograph Supply Co., of the same city, involving the validity of the so-called wooden horn patent, was argued on demurrer Wednesday of last week in the United States Circuit Court, Judge Hough sitting. Decision was reserved. Suits on the alleged infringement of the same patent are also pending against a couple of other concerns, who are marketing wooden horns, Mr. Kaiser being the complainant.

NEW COLUMBIA RECORDS.

The Columbia Phonograph Co. have recently placed on the market a number of new grand opera disc records, both 10 and 12-inch size, by Constantino, which are said to possess unusual merit. The new records are catalogued in the symphony series, making the price considerably lower than the regular grand opera records.

MUST NOT CONSIGN EDISON GOODS.

The National Phonograph Co., Orange, N. J., have notified Edison jobbers they must cease consigning goods to dealers, in the appended circular letter:

"To Edison Jobbers—We have been reliably informed that some of our jobbers are still consigning goods of our manufacture to Edison dealers, this, notwithstanding the fact that such action is a distinct violation of a clause in our jobbers' agreement. We were firmly convinced that this undesirable feature of our business had been entirely eliminated, until the matter was very recently drawn to our attention, and we would now respectfully request that if any of our jobbers have been indulging in this practice that they immediately discontinue this method of handling our goods."

COLUMBIA CO. USING B. & H. NEEDLES.

The Columbia Phonograph Co. have adopted the B. & H. fiber needle as a feature of the company's regular line of supplies.

WHY J. B. LANDAY IS HAPPY.

It is a bouncing girl that was brought by the stork some weeks ago to the happy home of James B. Landay, of Landay Bros., Victor distributers in two places, New York. Jim's smile is a yard wide and all wool over this pleasing visitation.

THE BERLINER PATENT DECISION.

Horace Pettit Defines the Position of the Victor Co.—Infringers Must be Careful—Says Victor Co. Will Maintain Their Rights.

Horace Pettit, counsel for the Victor Talking Machine Co., has issued the following important announcement to the trade, dated Philadelphia, Pa., May 3, 1909:

"Gentlemen: On behalf of my client, the Victor Talking Machine Co., I desire to notify the trade that the Supreme Court of the United States, on April 19, 1909, filed opinions in the suits brought by the Victor Talking Machine Co. et al, against the Leeds & Catlin Co. in one case sustaining the basic Berliner patent No. 534,543, as to the contested claims 5 and 35, holding the defendant, the Leeds & Catlin Co., liable for infringement, and in the second case holding the defendant liable for contempt of court in manufacturing and selling disc sound records in violation of the decree of the court below, which enjoined the defendant from making, selling and using the apparatus or process of claims 5 and 35 and imposing a fine.

"These decisions of the Supreme Court of the United States affirm the previous decisions in these cases of the United States Circuit Court of Appeals for the Second Circuit and of the United States Circuit Court for the Southern District of New York and decided definitely in favor of the Victor Co. all questions raised by the defense regarding the Berliner patent.

"It is hardly necessary to call to your attention the fact that this Berliner patent, No. 534,543, had previously been sustained several times in the United States Circuit Court of Appeals and the United States Circuit Court. Some of the decisions referred to are as follows: Victor Talking Machine Co., et al vs. American Graphophone Co. (140 F.R. 860 and 145 F.R. 350). Victor Talking Machine Co. et al vs. Leeds & Catlin Co. (146 F.R. 534 and 148 F.R. 1022). Victor Talking Machine Co. et al vs. Talk-O-Phone Co. (146 F.R. 534 and 148 F.R. 1022). Victor Talking Machine Co. et al vs. Douglas Phonograph Co. (decision dated December 19, 1907). Victor Talking Machine Co. et al vs. William H. Hoschke, trading as Sonora Phonograph Co. (158 F.R. 309).

The decisions of the Supreme Court sustain our contentions, viz.:

"(1) That the Berliner Patent No. 534,543 controls the manufacture and sale of disc records for the Victor style machine.

"(2) That the manufacture and sale of disc cords alone for such use is an infringe-t of the patent.

) That no one without a license has the o manufacture or sell either machines or ords for the purposes of the patent.

desired also to call your attention to the ; some manufacturers are attempting to on the market machines having a so-nechanical feed' attachment, which so-'mechanical feed' is obviously employed urpose of attempting to escape infringe-e machine can operate better without ed 'mechanical feed' attachment than Attempts of this kind have already scountenanced and enjoined by the ed States Court. In our judgment these ructions are clear infringements of the said ms of the said Berliner patent. It is unnecary to add that all said infringements will be igorously prosecuted.

"This notice is given with a view of informing the trade of the situation regarding the Berliner patent and its scope, to give notice of the facts, and of my client's rights. We would state, however, emphatically, that it is the intention of the Victor Talking Machine Co. to maintain its rights and to vigorously enjoin all infringing acts not only as to manufacturers, but all dealers and distributors who insist upon handling infringing goods and in such cases to press for damages and profits for all past infringements.

"Yours very respectfully,
"(Signed) HORACE PETTIT."

We Want Your Business

¶ Our message is specifically to the dealers of Northern Ohio, and Indiana, and all Michigan. We want your business because we are in shape to care for your orders promptly, immediately. This does not mean that we will fill them to-morrow, or the day after or next week, but on the day received. Within the hour your order is received, we will begin work, getting it ready for shipment.

¶ Our shipping facilities are excellent, in fact, they could not be improved. When you order from us, by mail, by telegram, or long distance 'phone, you will not be disappointed.

¶ Our lines in every department are most complete. Stocks are full, running over. We have everything and anything you want. We make it a point to keep forearmed at all times so that our customers shall not suffer through detail. Suppose you give us a trial order—nothing is so conclusive as the actual business, the practical test.

¶ We want your business, and if we get it we shall make it so advantageous to you that we will hold it.

PERFECTS TALKING MACHINE HORN.

Civil Engineer of Waukegan, Ill., Demonstrates New Harmonic (Vibratory) Horn Constructed According to New Principles.

(Special to The Talking Machine World.)
Waukegan, Ill., May 5, 1909.

Entirely perfected and ready to be placed on the market, R. J. Smith, a local civil engineer, has on exhibition at Alden & Bidinger's music store one of his harmonic (vibratory) phonograph horns and amplifying devices, attached to a Victor machine. His work is complete after three years of constant experiment and work and the product of his labor is ready to be placed on the market.

The horn is a stepped horn, each step representing a note or half note, consequently he can have as many octaves as are required. The purpose of his invention is to amplify and at the same time to retain all of the sweetness and naturalness of tone. The vibrations created by the diaphragm passing through an acoustic chamber into the horn, readily find such portions of the horn as are in sympathy, thereby giving a true and natural reproduction of great volume.

It is said that Mr. Smith was granted a patent on his invention, only after a personal visit to Washington and an actual demonstration there. The government officials did not believe that it would be possible to construct a device of one piece of metal that could be made to give forth various tones, hence a demonstration was required. The simple running of one's finger over the horn proves its capability of giving forth the various tones and the vibrations ring for some time after.

While the present experimental horn is made of brass, Mr. Smith believes it is possible to use other materials in their construction. Soft steel, tempered, he believes will make an excellent horn and he thinks it may even be possible to construct a wooden horn on these same lines.

The device on exhibition at Alden & Bidinger's is attached to a Victor machine, but Mr. Smith has on exhibition at his home one of his horns fitted up in cabinet form and used in connection with a sounding board that gives the horn still greater freedom of vibration. The cabinet is very ingeniously arranged so that either cylinder or disc machines can be readily played through it with slight changes.

There are others

Making Record Cabinets and good ones at that. **We** grant **You** this but no one is making any better Cabinets than we are and few as good. Looking back ten years **We** find most of the accounts **We** then had still buying Cabinets of **Us.** You know there is a reason. **We** will tell you why they continue to buy:

1. **Attractive Designs** 2. **Fine Cabinet Work**
3. **Excellent Interior Arrangements**
4. **Unexcelled Finish** 5. **Low Prices**

You will like UDELL CABINETS and every sale will make **You** a satisfied customer.

We make them (Cabinets) for Disc and Cylinder Records.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., May 8, 1909.

PROCESS OF MAKING SOUND-RECORDS. John O. Prescott, Summit, N. J. Patent No. 913,765.

The object of this invention is to provide an improved process of producing duplicate sound-records from an original record having a record-groove cut therein in any suitable manner, as by means of a cutting stylus vibrated by sound waves while traveling over the record.

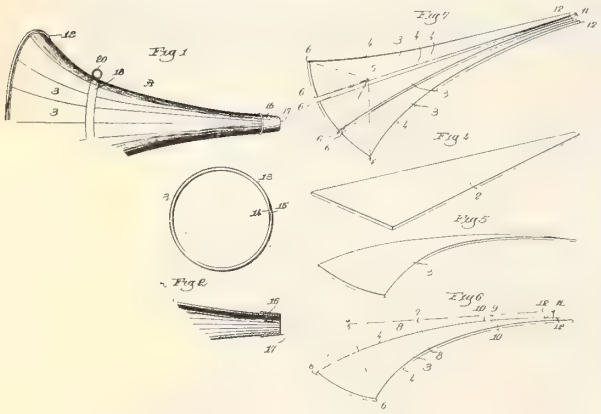
The invention relates more particularly to the production of duplicate sound-records of the disc type having a laterally undulating record-groove therein, but is not limited in this respect. The improved process involves the provision of a tablet in which the original sound-record is cut differing from those heretofore used in that it

will withstand changes of temperature of considerable degree without injury. By this process, one or all of the expensive operations of electroplating may be entirely eliminated and duplicate records equally as good as those made by the process heretofore practiced are obtained. Furthermore, less time is required to produce the duplicate records as the original record is ready to have the matrix formed thereon as soon as it is cut and as the casting operation requires much less time than electroplating.

HORN FOR TALKING MACHINES. Stanislaus Moss, Philadelphia, Pa., assignor to Sheip & Vandegrift, Inc., same place. Patent No. 889,480.

This invention relates to horns for talking machines.

In order that sound waves may be produced or transmitted with substantial perfection, it is essential that the transmitting instrument shall offer no obstruction to the free vibratory or other sound-wave movements, and that its transmitting surface present no abrupt or angular change of direction, either in the line of transmission or transverse thereto. It is of importance also that the transmitting instrument itself shall not give forth vibrations calculated to interfere with the sound waves, all as well understood by those skilled in the art. These considerations are particularly true in the production and transmission of musical tones, so much so that even slight interference with the true sound-wave



movements, either by abrupt angular changes in direction of transmission by the horn itself, or discordant vibrations in the horn material, becomes a matter of serious objection.

It has been proposed heretofore to construct horns for sound reproducing machines of metal either of a single piece or number of pieces joined together by a seam extending longitudinally of the horn. The metallic vibration interjected by such horns is well recognized, and the joints or seams offer objectionable interruptions to the sound waves. It has also been proposed to form horns of wooden strips laid together in two or more layers or plies to break joints, the strips of the several plies mutually contributing to hold the strips of the other from separation at their edge points. In such veneer construction, however, strips forming the inner ply, along the surface of which the sound waves travel, are not transversely curved into a true circle as prescribed by the dimensions of the horn at any point in its axial length, and, moreover, there is an interruption in the continuity of the inner horn surface near the flare of the horn where the outer strips cover the spaces between the edges of the inner strips, with the result that there is an objectionable interference with the transmitted sound. It has been further proposed to form phonographic horns of a single ply or layer of strips by assembling a number of the strips and then subjecting them to endwise and lateral compression to secure the desired horn contour, but in such construction the edges of the strips do not present surfaces which can be brought into close union and joined, the result being that the strips separate along their adjacent edges. Moreover, in this construction the individual strips do not present true circular curves throughout the axial length of the horn.

With these briefly stated considerations in view the present invention has for its object to provide a phonographic or like horn which shall be free from the objections noted, and present a structure formed of a single layer of thin wooden strips, which, previous to being assembled, are permanently bent longitudinally and transversely to give to the horn its proper longitudinal shape and transverse circular form, and wherein also the edges of the strips are beveled to present each to the adjoining strip, a contacting surface susceptible of being permanently connected throughout with no interiorly projecting interruptions to the sound waves either transversely or longitudinally.

In the drawings:—Figure 1 is a side perspective view of a horn embodying the features of the present invention; Fig. 2 is a central longitudinal section thereof; Fig. 3 is a detail view of the strengthening hoop which is secured to the flaring end of the horn; Fig. 4 is a perspective view of one of the wooden blanks prior to being bent longitudinally and transversely; Fig. 5 is a similar view of the blank of Fig. 4 after being permanently bent longitudinally and transversely, but prior to the bevel formation of its longitudinal edges; Fig. 6 is a view similar to Fig. 5, showing the previously bent strip provided with the radially beveled edges; and Fig. 7 is a perspective view of three of these permanently bent strips showing how they are assembled with the radially beveled edges face to face.

TALKING-MACHINE MECHANISM. Thomas Kraemer, Philadelphia, Pa., assignor to the Hawthorne & Sheble Mfg. Co., same place. Patent No. 913,828.

This invention relates to talking machines and is directed to the provision of improved means for controlling the rotation of the record, whereby such rotation may be started and stopped and its speed regulated as desired.

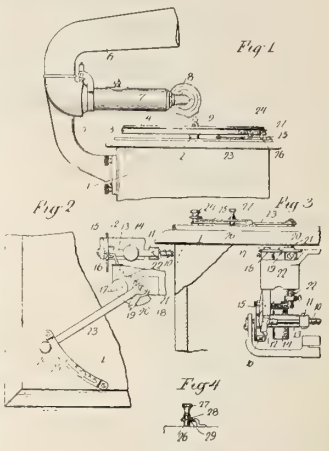


Figure 1 is a view in elevation of a talking machine broken away in part; Fig. 2 is a top view of a portion of the machine, having the motor-box broken away in part to show the governing mechanism; Fig. 3 is a side view of a portion of the machine with the casing similarly broken away; and Fig. 4 is a detail view.

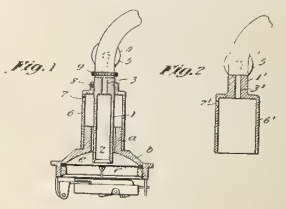
SOUND-MODIFIER. Alexander N. Pierman, Newark, N. J., assignor to the New Jersey Patent Co., West Orange, N. J. Patent No. 917,654.

This invention has for its object the provision of means for eliminating harsh or disagreeable sounds which sometimes accompany phonographic reproduction and which are particularly unpleasant when the sounds are received by the hearer through ear tubes, as for example, in the ordinary use of the phonograph for commercial purposes. It appears that the tones which are produced by the central portion of the diaphragm of the reproducer are purer in quality and freer from vibrations which produce the harsh sounds above referred to, than those which emanate from other portions of the diaphragm, and it is therefore the object more particularly to provide means whereby the vibrations from the center of the diaphgram are transmitted to the



Talking Machine Dealers

are Making a Great Mistake

if they don't keep posted on every cabinet line made. We want you to have our cuts and prices on file, so that every time you want cabinets you can compare it with others.

Your business will come to us if you are at all interested in good cabinets. This is confidence, we know, but our reputation is well established and our goods sell on their merits. Ask for our illustrations and prices.

Record Cabinet
No. 697

Rockford Cabinet Co., 1920-30 12th Street, Rockford, Ill.

hearer while the vibrations from other portions of the diaphragm are largely if not entirely eliminated. This invention also includes means for varying or regulating the strength or volume of the sounds produced whereby an adjustment may be secured to adapt the reproduction to the ear of any particular listener.

Reference is hereby made to the accompanying drawing of which Figure 1 is a side elevation, partly in axial section, of a phonograph reproducer with one form of invention applied thereto; Fig. 2 is a side elevation, partly in section, of a modification of the invention; Fig. 3 is a side elevation showing in dotted lines a phonograph of the Edison Commercial type with the device of Fig. 1 applied thereto and provided with a flexible ear tube.

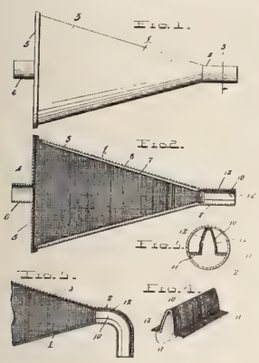
PHONOGRAPH HORN. George W. Duncan, Chicago, Ill. Patent No. 914,934.

This invention relates to acoustics, and is particularly directed to the improvement in the acoustic products of phonograph or graphophone horns, speaking tubes or megaphones.

The object of the invention is to provide a device of this character which will be efficient in operation and cheap to manufacture; which will have its tone properly modulated to eliminate all harsh, squeaky and unpleasant noises so that the pure mellow notes of the voice or instrument are reproduced approximately in the form and tone of their original production.

Heretofore this inventor claims there has been no horn produced which does not at some time give forth blares which usually spoil the whole rendition.

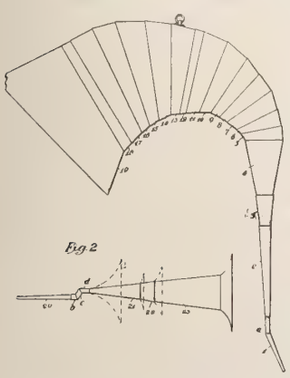
It is the object of the invention to obviate this difficulty and others inherent in the present type of graphophone horns, and broadly speaking consists in applying to the horn a dampening device and an accentuator or tone producer in the form of a rib or partition placed in the horn in the form of the human vocal chords.



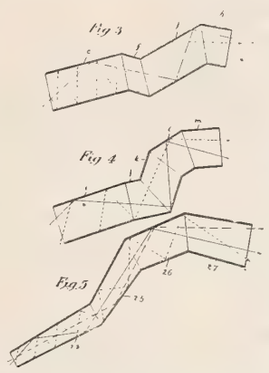
In the accompanying drawing, Fig. 1 is a side elevation, Fig. 2 is a longitudinal section therethrough, Fig. 3 is a transverse section on the line 3—3 of Fig. 1, Fig. 4 is a detail perspective view of the vocal piece removed from the horn, and Fig. 5 is a fragmentary section showing the modification.

PHONOGRAPH-HORN. Adelbert Theo. Edward Wangemann, West Orange, N. J., assignor to the New Jersey Patent Co., same place. Patent No. 913,930.

The present invention has for its object the production of a horn for use with phonographs and similar instruments which will produce a more perfect combination of tones and overtones than horns previously made, so that when used for recording purposes, the elevations and depressions constituting the sound record will correspond more accurately to the actual tones and overtones given out by the instruments or voice producing the sounds, and when used for reproducing will produce such tones and overtones in more accurate proportions than horns previously known. It is well known that in order to produce pleasing sounds practically all the sound-waves produced at a given time should reach the ear at the same instant. Now in the case of phonographic reproduction, it is believed,

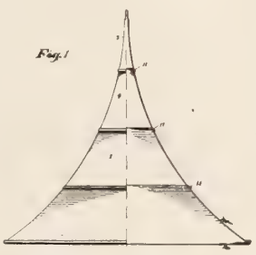


that the reproducer diaphragm sets up in the sound-box waves traveling in almost every direction, so that two principal classes of waves issue therefrom into the resonating horn, namely those which travel in a direction parallel or slightly inclined to the axis of the horn, and which may be called direct waves and those whose direction of travel is considerably inclined to said axis, and which are termed "cross vibrations." It is obvious that since the path of travel of the cross vibration is longer than that of the direct vibrations, they will reach the listener later than the direct and thereby produce an unpleasant effect of rumbling sound; they will cover up and destroy and counteract a number of the direct waves. This invention has for its further object the elimination of all or a large part of said cross vibrations, or the conversion thereof into direct waves.



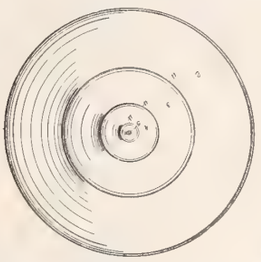
Reference is hereby made to the accompanying drawing in which Figure 1 illustrates one form of horn constructed in accordance with the invention. Fig. 2 illustrates a modification. Figs. 3, 4 and 5 are sectional detail views.

AMPLIFYING HORN. John H. B. Conger, Newark, N. J., assignor to the Tea Tray Co., same place. Patent No. 917,252.



The objects of this invention are to provide an amplifying horn flaring upon curved lines which shall be composed of transverse sections, each comprising a seamless or circumferentially integral band; to thus reduce the number of parts or pieces in such a horn and secure fewer seams; to enable a horn flaring on curved lines to be made collapsible; to provide interchangeable sections for the small end of the horn so that the main body of the horn can be used for different talking machines, and to secure other advantages and results as may be brought out in the following description.

Referring to the accompanying drawings, in which like numerals of reference indicate corresponding parts in each of the several figures,



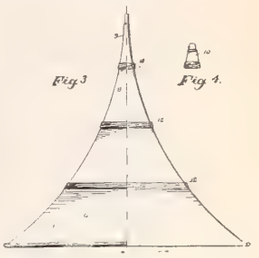


Figure 1 is a side elevation, partly in central vertical section, of a horn of improved construction; Fig. 2 is a plan of the same; Fig. 3 is a view similar to Fig. 1 except that the horn sections are shown detachably united, and Fig. 4 shows a small end section adapted to replace the one shown in Fig. 3 for certain kinds of talking machines.

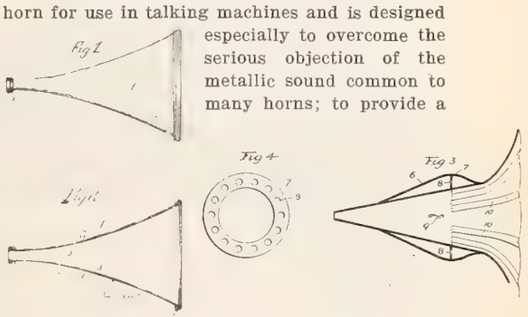
PHONOGRAPH HORN. George Benjamin, Philadelphia, Pa., and William Handley, Camden, N. J. Patent No. 917,404.

This invention relates to the production of a horn for use in talking machines and is designed especially to overcome the serious objection of the metallic sound common to many horns; to provide a horn very light in weight and at the same time very durable.



In the accompanying drawing is shown in Figure 1 a side view, and in Fig. 2 a sectional view of a horn made in accordance with this invention. Fig. 3 represents a sectional view of a horn having a sound-box. Fig. 4 is a detail view of the bridge.

SOUND-BOX FOR TALKING MACHINES. Henri Jarde, New York. Patent No. 917,076.

The object of this invention is the devising of

WOOD DIAPHRAGMS

For cylinder records; every detail reproduced; nothing missed.
For the four-minute records they are a revelation.
PRICE, (including cross head and link) $1.00 each.

MASTER RECORD MOULDS

Absolutely perfect copper matrices from cylinder masters furnished at short notice. By our new process we produce a matchless surface, even improving that of the master. Prices furnished on application.

SLOT PHONOGRAPHS

Large and small lots of slot phonographs to rent for parlors and summer resorts at nominal prices.

NORCROSS PHONOGRAPH COMPANY

NEW YORK CITY

MUSIC-MASTER

Wood Horns (NOT VENEERED)

One of the Many Unsolicited Endorsements of the Music Master Wood Horns

607 Broad St. Station, Philadelphia, Pa., April 1, 1909.

SHEIP & VANDEGRIFT, Inc., Philadelphia, Pa., Gentlemen:

This is to acquaint you with the fact that I have this day made a careful and thorough test of the Music Master horn, and have found it everything to be desired. The tone is wonderfully mellow and rich, and records which were not entirely satisfying when reproduced through horns of a different material, became clear and sweet when heard through the Music Master. Allow me to congratulate you upon your really successful horn, and to wish you every possible share of good fortune.

Yours cordially,

Howard Taylor Middleton

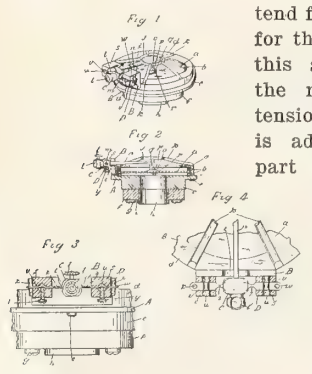
BERLINER GRAMOPHONE CO., Montreal, Canadian Distributors.

COLUMBIA PHONOGRAPH CO., exclusive distributors for Music Master Horns to fit Graphophones.

suitable mechanism for retaining the needle arm in a sound-box of a talking machine whereby it is feasible to employ a diaphragm for the sound-box made from suitable cardboard in place of the more expensive mica diaphragm commonly used. While the inventor's endeavors have been directed with this end in view, the construction employed, however, is capable of operating the needle-arm in conjunction with a mica diaphragm also, but better results are obtainable with an inexpensive disc of card-board. In like manner the mechanisms employed in the several sound-boxes in common use may be used in conjunction with card-board diaphragms, but not with the good results realized when they are used with mica diaphragms.

The distinguishing novel feature in this reproducer or sound-box is in the employment of a thin strip of metal preferably of steel and in the manner of securing it to posts or lugs that extend from the sound-box for that purpose. Upon this strip is mounted the needle arm. The tension of the steel strip is adjustable and the part of the strip on either side of the needle arm and between the posts is reduced in cross-section. The needle arm is snugly fitted upon the strip, and the contracted portion of the strip each side of the arm act as resilient pivotal connections for the needle arm.

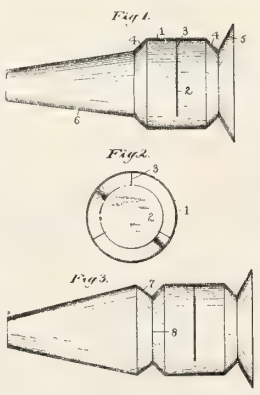


Referring to the drawings: Figure 1 is a perspective view of the complete sound-box. Fig. 2 is a vertical sectional view; Fig. 3 is a broken front view partly a sectional view. Fig. 4 is a broken plan view partly a sectional view.

SOUND-REPRODUCING INSTRUMENT. Overend G. Rose, Camo Meeker, Cal. Patent No. 916,603.

In an application for Letters Patent of the United States of recent date there was described a focusing and analyzing device for sound waves comprising a box or chamber having therein a focusing and analyzing disc arranged at right angles to the course of the sound waves, and having the function of focusing the sound waves and analyzing and splitting them up so that, as reproduced, the sounds will occupy the same relative positions which they occupied when originally played or otherwise produced when making the original record.

The present invention relates particularly to the combination of the focusing and analyzing device of the character just mentioned with a hollow or tubular extension whereby the device may be directly associated with the reproducing instrument without the intervention of a horn. This connecting member, with the analyzing device, may be attached to either a disc or a cylinder talking machine. They will take the place of the horn and analyze, focus, and augment the sounds from the reproducer.



In the accompanying drawings—Figure 1 is a longitudinal sectional view through one embodiment of the invention; Fig. 2 is a cross-sectional view through the device of Fig. 1; and Fig. 3 is a modified form of the apparatus.

In these drawings 1 indicates the sound-box or chamber in which is arranged the focusing and analyzing disc or diaphragm 2 which is held by hair-like wires 3 which are taut and hold the disc in a manner to be sensitive to the finest sound waves. The box at each end is of conical form, as at 4, and at the end from which the sounds are emitted the conical portion 4 connects with a flaring truncated conical extension 5, which is of larger diameter than the box and serves as a reflector for the sound waves. At the other end the box is provided with a hollow extension 6 of preferably conical form tapering outwardly so that its smaller end is of such a diameter as will enable it to be attached to the reproducing instrument. The larger end of this conical extension coincides in diameter with the opening of the truncated end of the box, and forms with it an annular diaphragm or opening for the sound waves to enter, as in the device described in the application above referred to.

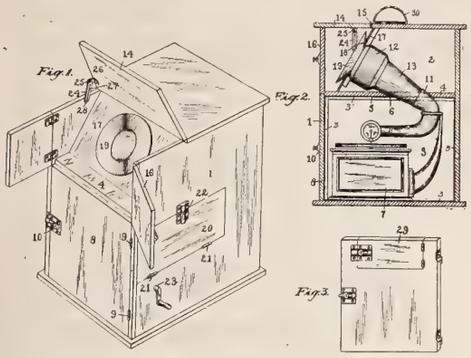
Instead of the form shown in Fig. 1, is provided intermediate the sound-box and the conical extension or connecting tube, an inverted truncated conical portion 7 Fig. 3. This also provides an opening or air diaphragm at 8 through which the sound waves pass before striding the analyzing disc. It is preferred, however, the form shown in Fig. 1, as the sound waves will be conducted by the tubular extension 6 directly to the sound-box. The tubular extension 6 is designed for direct attachment to the reproducing machine, and, as a result of this use the reproduced sounds are as loud as when the sound-box is used with the ordinary horn. The additional advantage of compactness and simplicity is secured, it being possible to pack the device within a small compass.

CABINET FOR SOUND-REPRODUCING APPARATUS. Overend G. Rose, Camp Meeker, Cal. Patent No. 916,604.

This invention relates to appliances for use with sound-reproducing apparatus, and concerns particularly a cabinet or casing for containing the sound-reproducing apparatus and the parts associated therewith whereby the horn, sound-box or equivalent device may be properly arranged in relation to the sound-reproducing machine, and whereby also the sound-reproducing machine may be completely inclosed, together with its associated delivering device, one object which is attained by this invention being that the scratching noise of the needle and the operation of the machinery will be eliminated from

the sound as delivered from the horn or sound-box, and another object attained is the facility with which the horn, sound-box, analyzer, or focusing device may be associated with the reproducing instrument.

By the use of the cabinet of the present invention the inventor is enabled to quickly convert any tapering tone arm disc machine or a machine known as the new Columbia tapering tone arm cylinder machine into a so-called horn-

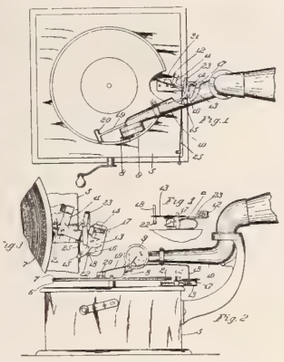


less talking machine, and yet this invention can, if desired, be used with an ordinary horn with or without sound-box attachment, or the sound-box attachment can be used without a horn of ordinary form.

In the drawings—Figure 1 is a perspective view of a cabinet built according to the invention, the parts being adjusted for use; Fig. 2 is a vertical sectional view of the cabinet with the reproducing machine and sound-box in place therein and in elevation; and Fig. 3 is a detail view of a modified form of front door for the cabinet.

GRAMOPHONE. Henry F. Pektier, Columbus, O. Patent No. 917,790.

The chief objects of this invention are first to provide an improved brake for stopping the record upon the completion of the reproduction and second to provide means for automatically cleaning the record during the reproducing operation.

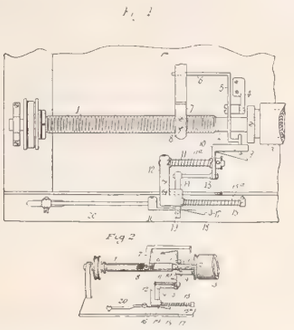


In the accompanying drawings—Fig. 1 is a plan view with parts broken out; Fig. 2 is a side elevation; Fig. 3 is a detail in plan of the braking mechanism on a larger scale than exhibited in Fig. 1; Fig. 4 is a detail in elevation looking to the left Fig. 3.

STOP FOR PHONOGRAPHS. Paul Bastian, Stuttgart, Germany, assignor to Wilhelm Reclam, same place. Patent No. 916,973.

The object of the invention is to provide a reliable stop for automatically arresting the rotation of the phonograph cylinder at the end of each tune and thus prevent over-running or damage to the reproducing mechanism thereof.

The annexed drawings illustrate the invention as applied to a phonograph of which are shown only the parts immediately connected with the automatic stop-mechanism, viz.: a portion of the record cylinder, mandrel, operating screw shaft and pulley and a portion of the arm on the screw shaft for working the sound-box. Figure 1 is a



plan; and Fig. 2 is a perspective view of the parts mentioned.

May 1 Joseph Landay, father of James B. and Max Landay, of Landay Bros., New York, accompanied by his wife, sailed for Europe on the American liner "St. Louis." Mrs. Landay is going to Scotland to visit her daughter.

T. K. Henderson, on the wholesale selling staff of the Columbia Phonograph Co., General, returned from his New England trip Monday.

VALUE OF MIXABLE MEN.

A Good Mixer Is Always Warmly Welcomed—He Radiates Sunshine and Helps Trade.

If there is any one class of men in the world noted for charity, good fellowship and sound judgment, that class is the traveling man. Ask any person who has traveled over the country a lot who he would rather go to for advice or for help in time of trouble, and with a very few exceptions he will say "a salesman" without an instant's hesitation.

Many people, undoubtedly, wonder why the average traveling man has this sort of a disposition, but if they stop to think the answer will come. Undoubtedly it takes this kind of a man to be successful in this particular line of business. He has to be a mixer, one who has the power and is inclined to sympathize with all classes of men, and it is the mixing quality that gives him the reputation for good that he is.

Welton S. Stilwell in writing on the subject of a mixer without doubt describes the greater number of traveling men. He says in part:

"According to Webster, a mixer is one who mixes, and to mix is to blend into a mass. There are mixed marriages, mixed trains, mixed brains, and the individual who helps involve the latter by mixed drinks.

"Have none of them.

"The kind of a mixer we are after is the man who can properly mix with his fellows, for his name spells success in any walk of life.

"You have met the mixer and have been charmed by his personality. You perhaps noticed his sympathy in mirth and in sorrow, in gladness and in regret, that was as naturally tender and inspiring as a mother's caress. You thought, as potentate or peasant might think, that he was one of your exact class and kind. The mixer is a living inspiration—an example of unwarped mentality. He is armed with the candor of his honesty to himself and is invulnerable to all the shafts of malice. He fears no harm, for he knows it not. There lives no man with the temerity to affront him, for he is covered with chain mail of good fellowship. He rides on the tide of popular approval, for he is a man.

"The mixer is an accomplished listener. The subject of your tale of woe loses its sting and presents a brighter face in his reflected sympathy. Your little joke finds happier expression, flows smoother from your lips, abounds in heartier humor and finds its climax whetted to a keener point when he is there to hear.

"In every walk of life the mixer is the leaven of the masses. Without him humanity wouldn't fit and would pull itself askew. He is the whole set of tools—the plumb, the level and the square—that keeps the fabric of society from collapsing by its own horrid incongruity.

"An odd fact about the mixer is expressed in the varying opinions of various people. To his intimates he is a chameleon, for he wraps the hue of his environment about him and fits the exact time and place. The priest finds him sedate and contemplative; the merchant recognizes his innate selling force; the actor wonders what freak of circumstance deprived the stage of its own; the inventor discovers his latent talent which might yet startle a world; the little child knows not that he is matured, and old age accepts him as its staff.

"He is cosmopolitan.

"The mixer's capital is tact, and it should be ours. From its acquirement comes the attainment of life's dream. It is the meter of sympathy and the thermostat of his heart. Tact is the sensitive mental finger which finds the pulse of the moment and lets our own throb in perfect unison."

MOTION PICTURES IN NEW ROLE.

Aid Father in Tracing His Runaway Daughter—Reconciliation Effected.

The moving-picture film has been discovered in a new role, that of restoring his lost daughter to an Up-State business man. The father had come to New York on a buying trip and to kill some spare time visited a moving-picture show.

He had sat listless and indifferent while several motion pictures had been projected upon the screen, but as a new subject was started he half rose to his feet and watched the action intently. He felt there could be no mistake. The girl playing the maid part in the picture could not possibly resemble his own lost daughter so closely without being she. To reassure himself, however, he stayed to see the film exhibited again and to make certain of its manufacture. The manager of the theater gave him the address of the company that manufactured the pictures and he called upon the proprietors in New York. He was given an opportunity to see the performers engaged in their work of producing pictures and in that way came face to face with his daughter.

She recognized her father, and when taxed admitted her identity. She said she had tired of her work in the small town, and with another girl ran away to New York, where they became affiliated with the stage. After a more or less successful career in minor parts with various dramatic companies, the girl accepted steady employment with the picture concerns, and is at present earning good pay. She assured her father that she will return home for a vacation this summer, her only reason for not doing so before being through fear that she might not be permitted to return to her work.

The father is overjoyed to know that his daughter is well and happy, and is willing that she shall continue her present employment as long as he knows her whereabouts.

Gattegno, Raphael & Co., of 141 Park Row, are certainly making a name for themselves in turning out postal cards at remarkably interesting prices. They make a specialty of handsome embossed cards in sceneries, comiques, floral designs, landscapes, birthday greeting, which are skilfully and artistically finished in Bromide hand colored. Besides the above lines this concern carry a complete assortment of imported stock of velvet and celluloid finished cards which sell at retail from 5c. up to $1 each. Samples and quotations will be cheerfully furnished on application.

BUSINESS HELD UP.

The Tariff Discussion Is Holding Up Trade in Every Section of the Country—Delay Still Looked For—What Causes the Trouble.

The chances that the tariff bill will be given to the country by June 1 are now, in the opinion of several members of the Senate's Finance Committee, decidedly few and, in fact, any encouragement to that end has been practically given up this week. In the opinion of Senate leaders, the issues that are to be raised in regard to numerous important items of the bill, taken in connection with the controversy being waged over the revenue producing capacity of the proposed measure, and also the discussion over the income tax, will tend to keep the bill before the Senate during, at least, the entire month of May. Hence, with about two weeks given in consideration by the House and in "conference," it is not considered probable that the bill can become a law much before July 1 next.

The lines are now seen to be quite clearly drawn and defined and a glance makes apparent the difficulties with which the Senate administration forces will be confronted in their endeavors to crowd the bill through at the earlier date.

Practically these lines are drawn upon two issues: (a) That the bill as now written will not supply sufficient revenue; (b) that it does not make for a genuine downward revision of the existing rates.

The issue raised regarding the necessity for more revenue is supported by the movement now in full swing among a number of Republicans to bring about reductions in the Aldrich schedules upon some of the most important items such as cotton and woolen manufactures, etc.

Senator Dolliver, of Iowa, and Senator Nelson, of Minnesota, two leading Republicans, are at present perhaps the most prominent members of their party in opposition to the pending bill. Other Senators on the Republican side who might be named as in revolt against the Aldrich measure are Senators Cummins, Dixon, Brown, Bristow, Crawford, La Follette and Beveridge. All these Senators are insisting on a downward revision, and pointing out that the pending bill does not, in respect to important schedules, accomplish this revision downward.

This disposition of men like Dolliver and Nelson to revolt against the bill, taken in connection with the income tax movement, seems likely to portend the warmest kind of a controversy in the Senate before the bill is "put through," and it certainly looks as if important changes will be made in the rates now scheduled in the Aldrich measure.

Senator Aldrich, however, be it remembered, is regarded as a shrewd, far-seeing and astute leader and it is therefore expected that he will find some way to make concessions here and there which will have a tendency to quiet those Senators who are insistent that the bill is unsatisfactory, and in this way considerably smooth out the road for the passage of the bill.

Just now, however as indicated, the outlook is for a rather stormy time until the clashing interests come to an understanding.

KEEP EVERLASTINGLY AT IT.

One Stroke May Not be Felt But Steady Pounding Will Win.

"One stroke of a bell in a thick fog gives no lasting impression of its location, but when followed by repeated strokes at regular intervals the darkest night cannot conceal its whereabouts." It is the continuous work that brings success in everything. It is ill advised to change salesmen unless the change must, perforce, be an unquestioned improvement and the business unequivocally improved thereby. It is the continuous growth, following and development that makes a sales force valuable to the firm; it is the "continuous stroke of the bell" that draws people back to the salesman who executed his part of the work to a satisfactory and profitable finish.

Often when a customer visits a store for an article which he is accustomed to find in a certain space and he finds the whole department has been moved to another section of the building, he loses his interest and drifts out of the store; he is rarely in a mood or has the time to explore unknown regions. This condition doesn't hold in the case of a new customer; he isn't familiar with the place and there is no disappointment.

"The continuous stroke of the bell" is important in advertising—in either the wholesale or retail trade—and when a man is sure he has the correct medium for his business his regular announcements to his customers should be considered as necessary as the appropriation for the rent, and they should be classed as an imperative expense, not as a luxury that might be cut out when the exchequer is at a low ebb. The smaller the bank balance the larger the advertising appropriation. It is the insistent, tireless, regular work in any department that counts.

On the road it is the regular visitor who has the advantage; the trade expects the man who calls regularly and the buyers are glad to save business for him. The momentum of a business often keeps it producing dividends long after the genius that inspired it has withdrawn its support. Continuous industry wins. Don't forget it when discouraged.

STAND BY GOOD MEN.

Encourage the Loyal—Put Blame Where It Belongs—Stimulate Good Work on the Part of the Salesmen.

All too often the merchant burdened with his particular cares grumbles about the difficulty of securing competent help. All too seldom does he stop long enough to bring to his mind the loyalty some of his force manifest. And he lets his mind brood over the shortcomings of the one or the other who has not "made good." Truth is, that brainy, able men are always scarce. That is to say, they are seldom "looking for a job." And only in rare cases can such be had cheaply. The man who is extraordinarily capable learns his worth and exacts good pay, else starts out for himself and perhaps becomes your competitor.

Before you grumble about this, that or the other member of your organization, consider whether you had a right to expect better work from the clerk at the salary paid him.

Think also whether you saw to it that the incentive of probable substantial advancement was there to spur on the "best work" you had expected. Also consider whether your leadership affords opportunity for learning how to grasp and appreciate the business situations you expect your clerks to master.

Remember that if you "jump on" a man for having in a certain case taken the initiative you must not expect him to attempt it again in a hurry. Men with initiative are even scarcer than brainy men. They are to be cultivated, and if at their first attempt an error in judgment appear, let them down easy. Show them where their mistake comes in; but be careful not to discourage the now riper use of the rare and desirable quality. For by too severe a reprimand you may choke the ambition and then you will have just cause to grumble—perhaps for a long while to come.

ARE TIPS GRAFT?

One Writer Says the Custom Should be Abolished and Presents Arguments in Support of His Theory—The World Does Not Agree With the Writer.

Let us abolish tips. It is a disgusting, degrading, demoralizing habit. Those who receive tips are cheapened in the eyes of the tip giver. They are looked down upon and are regarded, in Kiplingesque, as belonging to "the lesser breeds without the law." It is seldom that tips are given willingly, unless, perhaps, it is by salesmen whose expenses are charged to the house. When tipping a railway porter, for instance, one instinctively feels that the octopus management has "put one over us." We feel that the railway company charges us full price for service to begin with and then places us at the mercy of a blackmailing blackman who must be placated with a bit o' siller. It is the same in hotels and restaurants. One does not have to give a tip if one never intends to visit that restaurant again. But woe unto the patron who neglects to give a tip and asks for service a second time. We do not object so much to indirect taxation. Most of us would rather pay the restaurant or hotel management the full price for service and let the waiter be given honest wages. We cannot help but look down upon tip-taking porters, waiters, barbers and the rest. Real quality waiters and barbers scorn tips. They realize that to accept them is contrary to man-building laws. The tip taker always has a cringing, supplicating, whining air. The tip taker is not a real man. Oftentimes he is but a poor imitation of the real thing. And don't forget this: The tip giver is as bad as the tip taker, just as the bribe giver is as bad as the bribe taker. And what is tipping but a species of bribery? The patron who gives the biggest tips gets the best service in a hotel, just as the corporation that pays the most graft money gets the greatest privileges in a city whose aldermen are of the tip-taking kind. This tipping habit runs all through our business life. It ought to be stamped out. The movement should be started by the railroads and hotels and restaurants voluntarily. These places would then get more efficient helpers. And, although I am no believer in legislation as a cure-all for social diseases, I do believe that a national anti-tipping law would prove of much value, writes Thomas Dreier in The Traveling Man. Now Mr. Dreier may have a lot of supporters but the man at the World wheel is not among them. He believes in tipping, that when a man has rendered a special service he is entitled to some recompense for it, but the habit is carried to an extreme point in many cases.

WORRY THE DESTROYER—CUT IT OUT.

As not a few ailments complained of can be traced to worry, it behooves us to guard ourselves against this enemy—the destroyer of health. Worry injures sometimes beyond repair certain cells of the brain; and the brain being the nutriment center of the body, it naturally follows that other organs become affected. Like a thief in the night who so treacherously disregards the occupant of the house he intends to pilfer, so does worry creep into the bodily structure and does its terrible work of destroying it.

The very fact that worry can destroy the brain cells, which are, so to speak, the commanding officers of mental power, health and motion, should be a sufficient ground for us to try our utmost not to permit ourselves to be connected in any way with this health destroyer. We like to add here that when worry manifests itself at intervals, the brain may cope with it; but the perpetual kind we should guard against, for this is the destroyer of health.

BUSINESS TROUBLES.

A petition in bankruptcy has been filed against the American Art Metal Novelty Co., of 304 East Twenty-third street, New York City. It is alleged that the company is insolvent and made preferential payments. The liabilities are not given but the assets are estimated at $5,000.

A petition in bankruptcy has been filed against the National Materials Co., dealers in cameras, photo supplies, etc., at 49 West Twenty-eighth street, New York City. The liabilities are estimated at $4,500, with no assets given.

A petition in bankruptcy has been filed against the Burham Safety Razor Co., manufacturers of safety razors, of No. 64 Murray street, by Carell & Henkel, attorneys for Edward Connors, a creditor, for $561 for money loaned. It is alleged that the company is insolvent and made preferential payments of $206. Judge Holt appointed Henry B. Barnes, Jr., receiver, with a bond of $500. It was stated that there is a stock of razors on hand worth about $1,000 and some outstanding accounts. The company was incorporated Feb. 28, 1908, with capital stock $50,000, and it was said that $6,000 cash was invested in the business, which did not prove profitable. The company was organized by a number of well-known men who had been in the liquor line. Lawrence Mulligan, half brother of Senator Timothy D. Sullivan, became president; Daniel Mulcahy, vice-president, and Edward Connors, treasurer, who resigned some time ago. One cause of the bankruptcy was that the company could not make the razor blades sharp enough and had to buy them from another concern, which absorbed all the profit.

Schedules in bankruptcy of the Vitak Company, manufacturer of moving picture machines at 180 Lafayette street, show liabilities of $13,647 and nominal assets of $7,120, consisting of stock, $3,285; machinery, dies and office furniture, $3,452; accounts, $358, and a note for $25. Among the creditors are C. A. Hayden, president, $2,152; J. H. Hayden, $2,278; W. E. Waddell, $2,663; T. M. Hardesty, $2,056, all for services; D. G. Plumb, Newark, $1,295, merchandise; Mrs. C. A. Vilas, Chicago, $1,500, money advanced, secured by 1,500 machines, and William B. Hayden, Catskill, N. Y., $800, money loaned, secured by 500 machines.

ORDERS THAT PAY.

Some salesmen take orders every day—they are natural salesmen—have a winning personality and so they get along after a fashion, until they learn that the percentage of profit they are making is not a paying one; or, until so-called hard times come, which is the unhealthy or abnormal condition of business. Then they learn that the orders that come easiest pay the least percentage of profit; that the lines that pay require the greatest effort, and that they know very little about real salesmanship.—Rahming.

DON'T LOSE YOUR TEMPER.

"Remember that when you're right you can afford to keep your temper, and that when you're wrong you can't afford to lose it."

"The greatest specialty ever carried by a retail store"—is the verdict of thousands of dealers—concerning the New Pocket Edition Gillette Safety Razor.

The demand is astonishing. Sales over the retail counter are breaking all records. Every old Gillette user wants the Pocket Edition and it makes new friends at sight.

The set consists of handle and blade box, either triple silver-plated or 14k. gold-plated.

The Pocket case is of gold, silver or gun metal, plain polished or richly engraved in Floral or Empire designs. It is so neat and compact that it will slip into the side of a travelling bag—***the blades are fine.*** Prices, $5.00 to $7.50.

Aside from the sales of the razor, the business in blades is a steady income for a store.

Two additions to the Gillette line this season are the Gillette Shaving Brush—a Brush of Gillette quality, bristles gripped in hard rubber; and the Gillette Shaving Stick—a soap worthy of the Gillette Safety Razor. The stick is enclosed in a sanitary nickel box; both soap and brush are packed in attractive cartons. They will be welcomed by Gillette users everywhere.

Special showcase supplied with initial order for a hundred dollars' worth of goods. Write us for full information. Get our suggestions on popular assortment. Talk to your jobber about it.

HOW INITIATIVE PAYS.

Don't Wait to be Told What to Do but Use Brains—The Valuable Employe Does Not Confine Himself to Routine but Hustles on His Own Account.

The clerk or other employe who does nothing until he is told to do it, is not living up to either the letter or the spirit of his contract with his employer.

"Initiative," says an old merchant, "is simply the willingness and ability on the part of an employe to do things that are not simply routine, to do things he is not told to do, to look for opportunities to help the boss or to improve the business wherever possible.

"The employe who has no initiative in his make-up is going around a circle, and when you go around a circle you don't go forward. There is no one thing outside of honesty, ability and hard work that will help the employe to go forward like initiative. In every great business there are many opportunities for an employe to do things he is not told to do, and when an employe gets the initiative habit he is not long in attracting the attention of the boss.

"Look over the work you are doing, study the matter carefully, figure out some plan whereby the value of the work you are doing will be increased. Find a chance to lessen the expense in your department. Put into practice some idea that will increase the receipts. Acquaint yourself with the operations of other employes in similar work. Wherever you find a plan better than yours, take advantage of it. Keep your eyes wide open and you will find many opportunities for doing things you are not told to do. Every employe should carry out to the letter the directions given him by the boss, and in addition to this he should have initiative, which is doing things the boss did not tell him."

CHEERFUL STATISTICS.

Some Reasons Why the Pessimist Should Take to Cover Now That Spring Is Here.

If any doubter still lives who thinks there is any reason why improved business conditions should not come with leaps and bounds, let him refresh his soul by perusal of the following paragraphs:

The United States annually produces more corn than all other countries of the world combined—2,927,000,000 out of 3,888,000,000 bushels.

The United States annually produces more wheat than any other country in the world—634,000,000 out of 3,108,000,000 bushels.

The United States annually exports more wheat flour than all the other countries of the world combined—15,000,000 out of 26,000,000 bushels.

The United States annually exports more wheat including wheat flour, than any other country in the world—146,000,000 out of 646,000,000 bushels.

The United States annually produces more oats than any other country in the world—754,000,000 out of 3,582,000,000 bushels.

The United States annually produces more cotton than all the other countries of the world—13,000,000 out of 20,000,000 bales, and also exports more cotton than does all the rest of the world—9,000,000 out of 13,000,000 bales.

The United States annually exports more cottonseed oil than all the other countries of the world combined—42,000,000 out of 52,000,000 gallons.

The United States annually produces more tobacco than any other country in the world—690,000,000 out of 2,201,000,000 pounds.

The United States annually produces more flaxseed than any other country in the world—25,000,000 out of 87,000,000 bushels.

The United States annually produces more hops than any other country in the world—57,000,000 out of 211,000,000 pounds.

The United States annually exports more oilcake and oilcake meal than any other country in the world—2,063,000,000 out of 4,913,000,000 pounds.

The United States annually exports more rosin than all the other countries of the world—717,000,000 out of 846,000,000 pounds.

The United States annually exports more spirits of turpentine than all the other countries of the world—16,000,000 out of 24,000,000 gallons.

The United States has more (22,244,446) dairy cows than any other country in the world; more horses, 23,000,532; more mules, 4,056,399; more swine, 57,976,361 and (except British India) more cattle, 73,246,573.—New York Sun.

"LIFE'S WORTH LIVING"

Says the Detroit Poet—So Say We All of Us.

The music trade men are going to hold an annual convention in Detroit next month.

The sessions will practically cover two weeks, as the Piano Manufacturers' National Association will have one week, which will be followed by meetings of the Piano Dealers' National Association.

Early in June the music trade men from all over America will be pointed towards the City by the Straits.

There is an active committee in Detroit planning entertainments which will delight the visiting hosts.

The following poem, by Edgar A. Guest, poet laureate of Detroit, is a sample of some very clever work sent out by the entertainment committee:

In Detroit, Life's Worth Living
Every day;
In Detroit, we are giving
Joys away.
In Detroit, it is true
That our skies are always blue,
There's a smile for me and you,
Blithe and gay.

In Detroit, life is cheerful
All the while,
For our people soothe the tearful
With a smile.
To a stranger, foe or friend,
We've a helping hand to lend
And our resting time we spend
On Belle Isle.

In Detroit, we have pleasures
By the score;
And the rarest of our treasures,
Yes, and more,
Is our river, Oh! so bright,
Cool and restful, day and night,
Source of infinite delight,
O'er and o'er

In Detroit, life's worth living
Every day;
Folks are gentle and forgiving,
If you stray.
In Detroit may I be,
When God's angel beckons me,
O'er the silent, unknown sea,
Far away.

PUSH.

That is the word on the door leading to the Hall of Achievement.

The door opens to the man who is going forward, the man who is advancing with force, the man who is pressing on, says the Shoe Trade Journal.

It is closed for the man who waits for the door to open itself, the man who waits for someone to open it for him—the man who waits for anyone or anything to do his work for him.

On the door's other side is the word Pull.

It is only used by the man who is coming back.

Apply the pressure. Go forward.

Push!

SENECA CAMERAS
As A Side Line

THE Talking Machine Dealer is in a splendid position to sell cameras.

The same class of people who buy Talking Machines buy Cameras.

SENECA CAMERAS are the best Cameras made—they have to be for they stand on their own merits against the trade restriction of the Camera combine.

It takes a little knowledge of the subject to sell Cameras successfully, just as it does to sell Talking Machines but we are willing to help you get going. The profit will be worth the work.

Write to-day for information.

ROCHESTER, N. Y.

"GREYHOUND" FIRE FIGHTER.

Motorcycle First Aid Machine in Use in the Buffalo Fire Department.

The Auto-Bi Co., of Buffalo, N. Y., makers of the Greyhound motorcycle, are developing the possibilities of the motorcycle along various lines, one of the most interesting of which is the adaptation of its use as a means of delivering efficient apparatus and a skilled operator at a fire in a hurry.

A very large proportion of fires originate in very small ways, and of course it is obvious that the time to kill them is before they grow up. As a matter of fact, statistics show that from 80

THE "GREYHOUND."

to 90 per cent. of alarms turned in are for what the firemen call "Lace curtain fires."

Now, it will be seen with half an eye that it is of great value to have a trained fireman on the spot at the earliest possible moment—would be, even though he had with him none of the tools of his trade, as, by exactly locating the fire and deciding at a glance the best manner of attack, he could save a lot of time. If, in addition to this, he can arrive with such apparatus as a couple of Ever Ready Extinguishers, which are said to be about six times as efficient as the ordinary chemical, and twenty times as efficient as water, the value of the service is almost incalculable.

The problem has been solved by W. C. Chadeayne, of the Auto-Bi Co., who immediately set about adapting a stock machine, "A Greyhound," to carry a fire laddie and a brace of Ever Ready Extinguishers from a fire house to a fire on the keen jump.

As shown by the illustration, the extinguishers are mounted in spring brackets on each side of the rear wheel in such a way as to be instantly released by throwing a cam lever, enabling the operator to snatch them out in no time at all.

The machine is equipped with an automatic stand which takes care of itself when the machine is pushed off, and with a loud voiced alarm bell for the purpose of warning traffic.

For several weeks past the man and the machine have been stationed at Chemical No. 5 house in Cleveland avenue, Buffalo, responding not only to alarms from the district covered by Chemical No. 5, but to nearly all other alarms in the city.

In the most of cases, irrespective of distance, the Greyhound machine has arrived before the department apparatus, and in several cases Chadeayne has killed the fire before the regular department could get into action. As a case in point, on April 25, there came an alarm from Bird avenue and Hoyt street in response to which the Greyhound machine traveled 6,580 feet, about a mile and a quarter, and Chadeayne put out the fire while the crew of engine No. 19, which had to travel only 1,800 feet, were coming up the stairs.

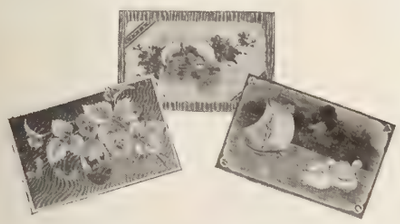
In another case, the little two-wheeler ran 7,400 feet and had first water on the fire, arriving about the same time as truck No. 4, which traveled 3,000 feet. The distances above quoted are from the official city maps.

The Auto-Bi people are naturally enthusiastic over such a showing. In view of the fact that the extra weight carried is very considerable, and the use about as hard as could be devised, it would seem a sure thing that the regular Greyhound construction is more than equal to all legitimate requirements.

Incidentally it may be said, that a large measure of credit is due to the Greyhound shock absorber, which, by its cushioning action, saves both rider and machine from the effect of all the shocks and bumps of the road.

The Old Reliable Post-Card House

GATTEGNO, RAPHAEL & CO.



We offer a full and complete line of attractive Art-Finish Post Cards of every description.

Another brand new novelty in full celluloid, also in full plush with embossed silk designs. A card never offered to the American Public before.

We also offer the most complete line of cards embracing "Birthdays," "Love Scenes," "Comics," "Animals," "Flowers," etc., etc.

Our prices are the lowest to Jobbers and Dealers—while our goods retail at the highest prices.

Write to-day for samples and send $3 to $4. We don't keep catalogue as we receive every week new novelties.

If cash does not accompany order please furnish first class New York references.

LET THE PEOPLE KNOW.

Do Not Hide Your Business Light, but Have It Shine so That Even He Who Runs May Read.

John Wanamaker is perhaps the largest advertiser in the New York daily papers, and it is advertising which has built the Wanamaker business.

It was said of Wanamaker when he began in Philadelphia in a humble way years ago that he spent more than half his meager capital in advertising.

Certainly, the growth of the Wanamaker business is a credit to the power of advertising.

The old Stewart building, which Wanamaker occupies in New York, was built by A. T. Stewart, whose name is kept alive by a one line notice in the Wanamaker advertisements, and yet Stewart was the greatest merchant of his time.

His fame and merchandise spread to every corner of the United States.

Few merchants since have even approached his pre-eminence. He bought better and sold cheaper than any merchant of his period.

He bought the entire product of many mills. He originated and established the one-price system of doing business—marked goods in plain figures—a colossal achievement in those days of many prices and much bargaining.

He had the biggest and most profitable business in the world—and he did not advertise—neither did his competitors.

One day a friend of his said to him: "You ought to announce in newspapers what you have for sale. You ought to advertise."

"Everybody knows," Stewart replied, "that I carry the most complete line of dry goods in the United States. Everybody knows that I sell only good goods and at lower prices than others. Everybody knows where my store is. Why should I pay money to newspapers to tell people what they already know? I will not advertise."

His friend replied: "They know it when they think of it, but you must remind them even of that which they already know. Yours is the greatest store in the world, and yet you ought to advertise."

"I can't see it," said Stewart, "but you may insert one advertisement in the papers, because you believe in it."

So the next day an advertisement appeared, stating merely regular prices of regular goods in one of the departments, calling the people's attention to them.

Stewart was a busy, active man. Yet he stayed around that department all that day, and at night the figures showed double the normal business.

Stewart then said: "My friend, you are right. The greatest store in the world must not only have the goods the people want, but must also let the people know about the goods and where they can be had."

WM. G. FRAZER'S GOOD TRIP.

Wm. G. Frazer, manager of the post-card department of the American News Co., returned on May 3 from an extended business trip as far West as Denver, Col., visiting the various branch depots of the company en route. Mr. Frazer stated that he found business in their particular line satisfactory in all sections and there was every prospect that 1909 would prove a record year for the American News Co.

If silence is golden, where can it be cashed, please?

If you expect nothing, all you get is so much velvet.

NO DISCOUNT ALLOWED.

The Plan of Granting Special Discounts Is Now Being Rapidly Abandoned by Business Establishments in All Trades.

Some of The World readers will learn with interest that the dry goods merchants and dealers in women's furnishings of Canton, O., recently issued a signed statement, notifying the public of their intention to abolish special discounts and to make no exception whatever to this new rule. In the notice in question these merchants say they find that the growth of the "one-price" system has made imperative a change from the discount-giving method, and that, in justice to the majority of their public—who are entitled to the best cash price given to anyone—the abolition of discounts has become essential. They add that in place of giving discounts for charitable purposes, as has been done in certain cases in the past, they will hereafter make individual cash donations.

This action will generally be regarded as a gratifying sign of progress. It is obvious that the modern method of treating all customers alike does not exist in stores where discounts are given. Of necessity, the discount must be added to the selling price of the merchandise. Thus, the largest and most loyal customers pay 5 or 10 per cent. more for their goods than do the members of those favored classes to whom custom has accorded the special privilege.

Who can doubt that if the public generally were familiar with the extent to which discounts are given by certain stores the effect of such knowledge upon the trade of those concerns would be very severe? As to what that extent may be, we will here merely mention that some time ago a high functionary in a large store in Buffalo furnished us with a list of twenty-six classes to whom discounts were at that time given by stores in his city.

The discount-giving evil has been considerably reduced within the last few years. It would have been done away with ere this in many more communities than is now the case were it not for the difficulty which merchants experience in getting together and taking united action upon what each of them individually feels to be a serious trade evil. But even where merchants cannot get together on this important matter, merchants have in many instances "gone it alone" and discontinued the giving of discounts. That such individual action has brought ill consequences in any case we have let to learn. On the contrary, many satisfactory experiences could be cited on the part of merchants who have hewn to the line on this discount-giving matter, even though their competitors clung—and still cling—to the old and disingeneous plan of marking up their goods all round in order to make possible the concessions they afford to certain classes.

BE UP AND DOING, STOP DREAMING

Stop that dreaming!

Stop that unprofitable thinking that doesn't help you sell the goods.

Thoughts of Home Sweet Home must be reserved for the proper time.

The day is meant for that eager hunt for business that pays a profit.

Don't just look on the game and let the other fellow capture the prizes. Get into it and give him a contest.

Don't allow any feeling to creep in that you would rather do something else than sell the line you have.

It is much better for you to get another job than to continue to wish you had one.

It is the getting what you want that counts, and the way to get it is to have a determination instead of just inclination.

Inclination is desire in the bud. The way to make it bloom is to act—DO the thing that you desire. Sell the man the goods. If you don't succeed the first time, enjoy going after him until you do.

You must enjoy your business if you expect to succeed in it.

A salesman must not deceive himself with the idea that his buyers do not know whether or not he enjoys his business.

A salesman conveys to his buyer just what he feels and believes himself.

Be a good lover of your business and woo your buyers in that spirit, and they will want to see you just the same as your best girl does when she knows you love to be where she is and talk about things of mutual interest.

Good salesmanship consists very largely in the cultivation of the right feeling and concentrating upon the work in hand.

MR. DEALER

MORE DEPLORABLE.

After the cold snap of ten days ago a group of salesmen were discussing the question of which town in the State had the coldest hotel. The last man to speak named a town in the northern part of the State, told his experience there in the late cold spell and received the prize. At night he had gone to bed with all his clothes on and his overcoat over his feet. It was no use. He shivered sleepless till morning, then went down to the office where a fire had been started. A farmer in from the country with a milk wagon, his face a mass of frozen breath from whiskers to eyebrows, came in to thaw himself out. In a minute a second drummer came down stairs blue with cold and wild with disgust. "I bet a million dollars I had the coldest room this side of the Arctic circle," he exclaimed. He would have said more but he spied the congealed face of the milkman behind the stove. His own slight woes were instantly forgot. "My God, pardner," he gasped, "what room did you have?"

It may be possible to succeed without a press agent. We are open to conviction on this point.

RECENT INCORPORATIONS.

The Mechanical Rifle Fire Control Co., of Paterson, N. J., have been organized under the laws of the State of New Jersey to manufacture guns, rifles, etc., with a capital of $250,000. Incorporators: Edwin S. Hooley and Frank W. Thompson, North Plainfield, N. J.; John W. Griggs, Paterson.

The Mansfield Manufacturing Co., Stock Exchange Building, Chicago, has been incorporated under the laws of the State of Illinois with a capital of $2,500, to manufacture novelties. Incorporators: George W. Killelia, A. H. Wilson, Henry Horner.

The Keystone Novelty Co., of Wilmington, has been incorporated under the laws of the State of Delaware with a capital of $5,000. Incorporators: William J. Jackson, H. S. Cornell, R. A. Whiteside, Beaver Falls, Pa.

The Holman Novelty Co., of Buffalo, has been incorporated recently under the laws of the State of New York to manufacture novelties with a capital of $5,000. S. N. Holman, F. J. O'Brien and G. W. Quinlin are the incorporators.

The Amusement Device Co., of New York, has been incorporated with the Secretary of State of New York to manufacture and deal in amusement devices, with a capital of $30,000. Incorporators: Lloyd Collis, Theodore Hanse, Wales R. Stockbridge, all of New York.

The United Art Novelty Co., New York, has been incorporated under the laws of the State of New York, with a capital of $1,600. Incorporators: Edward Denivelle, Mt. Vernon, N. Y.; William Trojar, Joseph S. Engel and Louis T. Fassum, New York.

A recent incorporation in the State of New York is the Truitt Safety Razor Co., of New York, organized to manufacture safety razors, etc., with a capital of $20,000. Incorporators: George R. Chesbrough, New Rochelle; Stephen Lounsberry, W. F. Thornton, both of New York.

The Lenox Novelty Co., 414 Greenwich street, New York, has been incorporated with the Secretary of State of New York, with a capital of $10,000. Incorporators: Frank W. Peterson, Peter Licari and Mattie Licari, Emma Peterson, all of Brooklyn.

A recent moving picture concern incorporated is the William H. Seanson Co., of Portland, organized under the laws of Maine with a capital of $100,000. President, A. F. Jones; treasurer, T. L. Croteau; clerk, J. E. Manter, all of Portland.

The Halleet Sales Co., of Kittery, Me., has been incorporated to manufacture novelties of all kinds; capital, $50,000. President, G. E. Burnham; treasurer, A. H. Peavey; clerk, E. J. Burnham, all of Kittery.

The Princess Leather Novelty Co., of New York, has been incorporated at Albany to manufacture novelties in leather, with a capital of $2,000. Incorporators: Arthur Jacobwitz, Brooklyn; Isaiah Siglen, Ray Feller, Brooklyn.

Among the recent incorporations in the State of New Jersey is the Philadelphia Sanitary Vending Co., of Camden, organized with a capital of $50,000, to operate vending machines. Incorporators: William Wunder, M. B. Marsh, George D. Porter, Charles Orcutt, George H. B. Martin, as above.

The Ripley Sales Co., of New York, has been incorporated at Albany recently to deal in novelties, with a capital of $5,000. Incorporators: E. J. Forhan, J. J. Harper, H. M. Browne, 154 Nassau street, New York.

The Walter Wellman Co., Inc., of New York City, manufacturers and publishers of souvenir post cards, are among the late incorporations in the State of New York. Walter Wellman, Matilda Wellman and James J. Maddox, are the incorporators. The capital stock is $10,000.

BETTER WEATHER HELPS BUSINESS.

Chicago Sporting Goods Co. Feel the Impetus in the Demand for Their Products—Talking Machine Dealers Should Look Up Their Catalog—Sporting Goods Profitable.

(Special to The Talking Machine World.)

Chicago, Ill., May 7, 1909.

The long-looked-for pleasant weather arrived three days ago, and it is sincerely hoped that it will stay long enough to acquire the habit. It has certainly stimulated the baseball fever, and it is being predicted that this year will be a record-breaking one among the manufacturers of the equipment for the national game.

The plant of the Chicago Sporting Goods Co. is working overtime to supply the prodigious demand for their product. Quality has always been the hobby of this popular company, and the fact that the "White Sox" have been a large customer for so long have put them in the very front rank of sporting goods houses.

Talking machine dealers will find in the company's offer of placing a complete line of baseball goods an excellent opportunity for adding a side line that is the main line of a large number of dealers, and one that will prove the livest kind of a trade wire. A postcard will bring the information that may mark an epoch in the dealer's business.

From present indications the motorcycle bids fair to exceed the bicycle in popularity, even when the latter vehicle was in its glory. While numbers are to be seen in the crowded city streets it is on the fine park and country roads that these machines hold sway. Flying up and down hills and through valleys, with no effort on the part of the rider, the motorcycle is destined to be the pleasure vehicle of the masses—those who like fast and easy traveling and who do not care to or are not able to buy and maintain an automobile.

TALKATIVE SALESMEN.

Some, Like the Unfortunate Parrot, Talk Too Blamed Much.

Some salesmen never seem to realize that salesmen, as salesmen, can talk too much. Many a customer has been talked into a sale and out of it again. Some salesmen have talked clear up to the mountain top, and instead of closing up the sale when they get to the crest they talked over the peak and down the other side, and then could not understand why they didn't sell their goods.

A big buyer in a certain line of goods has been quoted as saying that on one occasion he was ready to sign a contract, and actually had a pen in his fingers, but was prevented by the endless argument of the salesman, who did not perceive that his point was won and that action and silence, not talk, was his duty.

Having one's appetite spoiled by a trifle is possible, with the food untouched before us. The salesman had talked too long.

BE IN HARMONY, DO NOT BE IMPATIENT.

No man is more constantly unhappy, or makes others more so, than the impatient man. He is out of harmony with things; and all things fight and worry and wound him. He feels himself dishonored, too, by his impatience; and he does lose, so far as he indulges it, the true dignity of life. He is not cast, indeed, like the victim of, sensual vice, into the slough or hishonor; his garment perhaps is not soiled; but it is burned through in a thousand spots, by the ever-dropping little sparks of petulance; and it is in tatters and disorder with the ever-crossing flurries of angry passion; and he seems to himself and to others as one who scrambles through life, rather than as one who walks in the calm and dignified robe of conscious self-possession. Constant fretting and fault-finding and breaking out into sarcasms and anger may bereave a house of all honor, peace, and comfort, almost as effectually as gluttony and drunkenness. Or suppose that the fretful temper be hidden and smothered in the heart; then it wastes and consumes the springs of the inmost life.

THE MASTER-MAN.

Elbert Hubbard always says things in a memorable way. You don't forget what he says or how he says it. He is not so very original, but he is very engaging and you simply cannot ignore what he writes. Take this little philosophy from the Cosmopolitan. It is the quadruple extract of truth and ought to be learned by heart:

"The master-man is simply a man who is master of one person—himself.

"When you have mastered yourself you are fit to take charge of other people.

"The master-man is a person who has evolved intelligent industry, concentration and self-confidence until these things have become the habit of his life.

"Industry in its highest sense means conscious, useful and intelligent effort. Carried to a certain point, industry is healthful stimulation—it means active circulation, good digestion, sound sleep.

"Industry is a matter of habit.

"We are controlled by our habits. At first we manage them, but later they manage us. Habits young are like lion cubs—so fluffy and funny! Have a care what kind of habits you are evolving; soon you will be in their power.

"It is habit that chains us to the treadmill and makes us subject to the will of others. And it is habit that gives mastership—of yourself and others.

"The highest reward that God gives us for good work is the ability to do better work. Rest means rust.

"So we get the formula: Acquire and evolve physical and mental industry by doing certain things at certain hours.

"The joy and satisfaction of successful effort—overcoming obstacles, getting lessons, mastering details which we once thought difficult—evolve into a habit and give concentration.

"Industry and concentration fixed in character as habits means self-confidence.

"Industry, concentration and self-confidence spell mastership.

"So from the man we get the master-man."

PIANOS FOR PERRY B. WHITSIT CO.

A Great Shipment of Winter and Rudolf Pianos for the Columbus Dealers.

(Special to The Talking Machine World.)

Columbus, O., May 1, 1909.

The Perry B. Whitsit Co. furnished an unique parade on the streets Saturday when the company received at their stores on South High street some $60,000 worth of pianos, piano playing instruments and other goods, which was delivered to them by one transfer company. All of the wagons of the company were called out and loaded up.

When the procession was formed and the trip was made to the store, where the goods were received in the immense warehouse of the firm, they were immediately placed on exhibition. Hundreds of people attracted by the parade entered the store and were treated to a rare entertainment from expert pianists as well as listening to the latest talking machine records. No such a procession of music has paraded through High street for many a day.

The Perry B. Whitsit Co. are large jobbers of talking machines, Mr. Whitsit being secretary of the National Association of Talking Machine Jobbers, and they have only recently added pianos to their business. The photoograph herewith shows the delivery of the shipment of Winter and Rudolf pianos and players above referred to and received by the Whitsit Co. last week, consisting of thirty-six pianos in all. The Whitsit Co. are an enterprising concern and intend to play a prominent part in the piano trade field in this city and vicinity. They speak very highly of the Winter line of pianos, which they handle, and find them to be quick sellers and satisfaction givers.

DELIVERY OF WINTER & CO. PIANOS TO PERRY B. WHITSIT CO.

The Congress Post Card Co., of 41 Warren street, New York, have a new feature of supplying the retail trade with an attractive assortment of 1,000 exclusive designs in fine post cards, no two alike, put up in a very substantial display album, thus furnishing the dealer with an assortment of designs unequaled in even the largest stores, as well as the vehicle to properly display them to his trade without soiling, and without the inevitable "dead stock" feature of the business.

If you probe deep enough into the lives of men who suddenly spring into the limelight you will find that years were given to unremitting toil in preparation for the day of their phenomenal success. One properly trained through hard work and self denial will never ruin a brilliant future. If you are trained you will be ready for the opportunity when it comes.

MR. DEALER!

When you add musical instruments to your stock you use excellent judgment as no line fits in more appropriately with talking machines.

NOW

let us give you a little pointer that many dealers have learned in the hard school of experience,

THAT IS

HARMONY INSTRUMENTS

are the quality goods and consequently the line that holds the trade.

MANDOLINS, GUITARS, DRUMS

And all styles Wood Violin Cases. **Send for Catalogue.**

THE HARMONY COMPANY, 947 N. Lawndale Avenue, CHICAGO

SOME MOVING-PICTURE TRICKS.

Amusing Incidents Often Occur in Creating "Magical" Illusions That Confuse, Interest and Delight.

The old saw that things are seldom what they seem is nowhere more true than with the moving-picture. This does not merely mean that the "Great Train Robbery" really happened near Paterson, N. J., or that the scene of "The Storming of San Juan Hill" was in the Orange mountains. It applies to the dancing Teddy bears and the whirling detached letters slipping into a continuous sentence, as well as to many other tricks of the moving-picture studio.

Once these tricks were closely guarded secrets; now the makers of moving-pictures realize that their success depends upon the cleverness of their ideas rather than on the tricks themselves, and they talk freely of them.

Most of the tricks depend on the fact that a moving picture is, in reality, a series of photographs on a gelatine film, each showing a slight variation in movement and reflected on a screen in such rapid succession that the changes in the picture are merged, or blended, so that the objects photographed seem to move. How delicate are these slight variations in the pictures may be suggested by the fact that a moving-picture requiring fifteen minutes to show comprises from 14,000 to 16,000 photographs an inch long and seven-eighths of an inch wide on a film 1,000 feet long. They pass through the lantern at an average speed of from 60 to 75 pictures a second.

While preparing the photographs it is a simple matter to stop the film in the camera and make changes in a group. Thus a dummy is substituted for an actor just before a train is supposed to strike him. A doll or Teddy bear may seem to move on a lantern screen by taking each photograph separately and changing the poses very slightly between times. Such substitutions also explain the so-called "magical pictures," originated by Malies, a magician in Paris, in which objects disappear or characters are "materialized" in an instant, seemingly from nowhere.

Such tricks, though, sometimes miscarry. There was, for instance, a set of moving-pictures showing a photographer hit by an express train. An actor, impersonating the photographer, was rehearsed to select a pretty rural view from a railroad track in New Jersey. As he was focusing his camera the train was to come along and strike him. It was to be a real express train at full speed. At the critical moment the moving-picture camera was to be stopped and a dummy substituted for the supposed photographer.

The man sent out to tell the engineer of the express train about the plan failed to reach him. The engineer, running his train at full speed, saw what he belived to be a man on the track. He blew his whistle. The man paid no attention. The engineer put on his emergency brakes. The engine came to a standstill just as it struck the photographer. Climbing out over his engine the engineer snatched up the body and found it to be a dummy.

While making the pictures for "The Great Train Robbery" there was another incident not in the bill. One of the "bandits" was supposed to attack the fireman of the train on the locomotive tender, beat him on the head with a piece of coal, and throw him overboard. It was another case of the moving picture camera being stopped and a dummy being substituted for a living man.

To make the scene more effective the train was stopped on a bridge crossing the Passaic river. The pictures were taken on a Sunday afternoon, and just as the "assault" occurred a trolley car passed crowded with passengers.

The passengers were horrified to see what seemed to be a bandit murdering a railway fireman and casting his body from the bridge to the ground beneath. The trolley car was stopped; the excited passengers rushed back to assist the wounded man—to find the dummy.

The moving Teddy bears—dancing, making love, and doing tricks—were no more than toys put through successive poses in an infinite gradation of movements, so that when the pictures of them were taken separately and pieced together the animals seemed to move. Some idea of the labor involved in making such a series of pictures may be gained from the fact that it took five days to pose the bears for the 16,000 odd pictures in the series.

By the same methods the effect is produced of dozens of letters whirling in circles and moving in zigzags in bewildering confusion until each drops into place and form part of a sentence. Separate pictures were taken of each combination of the letters placed on a tilted screen of black cloth.

SIDE LINE TRADE IN MILWAUKEE.

McGreal Finds the Piano a Valuable Accessory to His Business While a Number of Dealers Outside of the City Handle Post Cards, Athletic Goods and Other Specialties.

(Special to The Talking Machine World.)

Milwaukee, Wis., May 9, 1909.

Milwaukee talking machine dealers are waking up to the fact that a few good side lines in their business are becoming more than profitable. Lawrence McGreal, leading talking machine jobber and retailer, took the initiative and embarked in the piano business upon a small scale, more as an experiment at first, but finally with the realization that with very little pushing pianos could be sold to his established trade. The Smith, Barnes & Strohber pianos were taken up, and Mr. McGreal is more than satisfied with results. A side line of sheet music installed by Mr. McGreal proved not quite so successful, because of the fact that the sheet music business is already overworked in Milwaukee.

Several dealers located outside of the business center of the city are beginning to dabble in several lines. One dealer has put in a fine display of souvenir postals, a phase of the business that brings him no little revenue. This business is proving to be more profitable to Milwaukee dealers because of the fact that the E. C. Kropp Co., one of the most extensive manufacturing postal card concerns in the country, is located in the city.

Two dealers of Milwaukee located in a section of the city near the baseball parks have taken advantage of baseball enthusiasm in the neighborhood by installing side lines of athletic goods, especially in the baseball field. Sales have been more than satisfactory since the opening of the baseball season. The general opinion seems to be that the new side line is also increasing interest in the talking machine end of the business, especially in records. One dealer reports a big sale of new records which he says would never have been made had it not been for the fact that the customer heard the new pieces played while selecting some baseball "togs."

NOVEL PUBLICITY METHODS.

Unique moving-picture shows throughout its territory are being given by the Morning Leader of London, Eng. Starting with a view of a news event of the day, the films show the news coming into the Morning Leader office on the "taper"; the editor putting it in shape; operators setting up the copy; stereotypers casting plates; 3 a.m., the prospective reader sleeping at his home; the presses hard at work; the autos starting with their loads of papers; the paper at the breakfast table. To stimulate interest the Leader offers $250 (and a like amount in consolation prizes of $5 each) for the best name for its advertising venture.

A "water mark" is not a "design" when taking the form of a firm's name and address. The board of appraisers have so admitted, in the case of the protest by W. Schade, of St. Louis. Writing paper, thus marked, is not, therefore, subject to additional ten per cent. duty. This decision is of great interest and importance to the paper trade.

Industry is the watchdog that keeps the wolf from the door.

CHARACTER AND SUCCESS.

The Elements Which Enable a Man Starting With Little Capitol to Build Up a Successful Enterprise the Subject of an Interesting Chat by Alexander H. Revell.

Chatting about "a plain business man," Alexander H. Revell recently said in the Saturday Evening Post:

"The elements of character which enable a man, starting with little or no capital, to build up a great fortune are of that practical and sturdy sort that are fostered and developed by hard knocks and grave obstacles until, by the time the man has achieved wealth, he has also attained an intellectual masterfulness which enables him to swing men and events to his purposes.

"Many think the city man who makes a large fortune—say of a half million dollars or more—must possess a superlative genius for business, that his talent for money-getting is as much greater than that of his country cousin as the city aristocrat's wealth is greater than the modest competency of the village nabob. This is a decided mistake. Probably it requires more of a gift for a business man to amass $50,000 in a village than to make a million in a big city. Hence my advice. Strike out for the centers of population. If failure must come it will not fall with much greater bitterness or hardship in the metropolis than in the hamlet. And success comes in packages so much larger in the city that the greater chance certainly makes the venture worth the while.

"Next in importance, in counseling the youth with an ambition to join the ranks of the plain business men of to-day and to share their power, is the advice. Select one distinct and substantial line and stick to it through thick and thin. Let this be the thing for which there is the strongest natural inclination. Some men are born for trade, others for manufacture, and still others for executive affairs. If a boy is unable, when he arrives at his majority, or nearly approaches it, to tell which of these lines has the greatest attraction for him, he hasn't much individuality, but he had better venture out anyway and take anything that offers until he is more certain about his natural drift. Any bright boy should know the general drift of his own nature and gifts, and can tell if his talents are of a commercial, a constructive or an administrative order.

DEVELOPMENT OF CHARACTER.

"Emphasis should be placed on this point: Make the most of a dominant gift. I would rather have one talent securely in my possession than an uncertain grasp upon a dozen flattering endowments. The man with the one talent will deal with it seriously and profitably, both to himself and to those about him. He will seldom fail if he stays by the main chance and risks his all upon it. But those who attempt to keep up five or ten talents are so many houses divided against themselves, and must fall.

"It would be easy to distort this advice, however. Every man must have recreation, and the development of his minor gifts, purely as a matter of diversion, is the best possible method of relaxation. Let him play with his nine lesser talents as much as he likes, and if he fails with any or all of them the mistake will be overlooked and criticism smothered under the mantle of his success with his one main gift. This may seem a somewhat narrow view, but before condemning it consider your own experience or that of your friends. Some persons are inclined to bewail the fact that this is a period of specialties; but it should be remembered that there is no specialty, in the modern application of the term, which will fail, if thoroughly mastered, to make the narrowest man broad and the broad man broader.

"Living for to-day and letting the future take care of itself is one of the most common causes of failure in commercial life. The prodigality with which the average young man of salary wastes both his time and money is little less than appalling. Lack of attention to vital details and a neglect to build, piece by piece, and with thoughtful appreciation and patience, the structure of a sound reputation—always the biggest item in the man's working capital—are, next in order, the most persistently besetting sins of the youth who is pushing ahead for an honored place in the ranks of plain business men."

TAFT IN ACTION.

To be Caught by Norwegian Moving Picture Men.

(Special to The Talking Machine World.)

Washington, D. C., April 27, 1909.

President Taft and Senator Nelson, of Minnesota, will soon be exhibited in motion in moving picture shows in all the large cities of Norway. Two Norwegian moving-pictures men arrived in Washington to-day for the purpose of transferring Mr. Taft and Mr. Nelson to moving picture films, for exhibition across the water. Mr. Nelson is the only native Norwegian ever elected a member of the United States Senate. Norway is almost as proud of him as Minnesota and a few years ago when he went back to the land of his birth, he received a great reception from the Norwegian nobility.

The Norwegian moving-picture men had no sooner reached Washington than they sought out Senator Nelson and apprised him of their purpose in coming here. Mr. Nelson consented to pose, and to-morrow a camera will be set up on the east plaza of the Capitol and Mr. Nelson will be put through his paces. On Thursday it is the hope of the moving-picture men that President Taft will consent to pose. The visitors want to picture the President and Norwegian Senator together, but they are not very hopeful of getting such a negative.

TO CELEBRATE PILGRIMS' LANDING.

World's Fair Planned for Boston in 1920 to Celebrate Tri-Centennial of the Event.

Plans are already on foot for a mammoth world's fair to be held in Boston in 1920 to celebrate the tri-centennial of the landing of the Pilgrims. The Boston Herald appears to be the chief advocate of the project, and in a recent article on the subject it said:

"New England alone, of all the sections of the United States, has had no great exposition. Philadelphia had the Centennial, Chicago the Columbian, Buffalo the Pan-American, St. Louis the Louisiana Purchase. San Francisco, Atlanta, New Orleans, Jamestown, have had expositions on a smaller scale and more local in character. It is now New England's turn to have one of the first magnitude, one that will attract not only the nation, but the world, for New England's history is not only the common heritage of the nation, it is part of the heritage of modern civilization, of the progress of mankind.

"A World's Fair, worthy of the name, in her Capitol City, should arouse interest everywhere. From the West and South vast throngs will come to the land of their forefathers; from Canada, Mexico, Central and South America thousands will make pilgrimage to the birthplace of American liberty; from Europe, Asia, Australia, New Zealand, Africa, great numbers will come, attracted by the traditions of this old part of the New World, its natural attractions, and its teeming, prosperous contemporary life.

"In 1920 sixteen years will have passed since the preceding great exposition in this country, that of St. Louis, which commemorated the Louisiana Purchase; twenty years will have passed since the preceding great exposition in Europe, that of Paris in 1900. The interval is, therefore, not too short, nor is the announcement too far in advance. An enterprise of such magnitude requires years of forethought and expert preparation. Japan is devoting ten years to preparation for the Tokio Exposition, which will open in 1918. It is none too soon, therefore, to serve notice to the world if a World's Fair is to be held in Boston in 1920."

According to all reports business men of New England agree that such an exposition should prove a good thing and a successful financial venture, but Bostonians fear the reaction on general business that is likely to follow the closing of the exposition. Still there are several years in which to consider the matter before a definite decision may be arrived at.

RULING ON COLORED POST CARDS.

On a protest made by the American Jobbing Co., Chicago, Ill., in regard to hand colored post cards, which were classified as printed matter under paragraph 403, tariff act of 1907, and which were claimed to be dutiable as paintings, General Appraiser Fischer handed down the following decision recently: " * * * The cards are printed, some by the gelatine process and others by the ordinary photographic process. They are also hand colored. Printed souvenir post cards of this kind are not paintings, and the claim that they are is hereby overruled."

Dail's Display Music Cabinets

WILL DOUBLE YOUR SALE OF SHEET MUSIC

(Patent Pending)

No. 73. Music Cabinet

THE sale of sheet music depends on the display you can give it. Our cabinets give the finest display ever devised. Built in round revolving and flat styles, to suit the conditions of your store. We furnish Steel Pockets for filling up blank wall space. A post card will bring you suggestions that may be worth dollars to you.

THE GIER & DAIL MFG. CO.

206 Grand Street

LANSING, MICH.

SLOT MACHINES ARE RISKY.

Fake Coins and Actual Burglaries Reduce Profits Through Them.

Of the various slot machines which are put forth for the public patronage the chewing gum and weighing machines are the most profitable. It is even said that these two are the only paying machines which are legal, although the new drinking fountains are making a good showing and have satisfied the health authorities that everything is being done to keep them in a sanitary condition.

There does not seem to be any way to prevent the loading of slot machines with slugs, foreign coins and other objects which give the young American so much of the vender's material as to do away with profits. In some cities it is a practice to break open the machines and to take both goods and money.

In New York so many of the machines are in protected places that it is possible for their owners to make a good profit. It is contended that less than 50 per cent. of the slot machines are money makers, however.

Gambling machines are the biggest money makers, but owing to the chances of their being confiscated by the police this branch of the business cannot be handled with any guarantee of a sum return.

THE QUALITY MAN IN BUSINESS.

The hardest thing that I know of in selling is to show a customer that first cost is not last cost; to make him understand that while the price of some goods may be much lower in the beginning, they are almost invariably dearer in the end; to show him that almost always an article is worth just about what it costs; in short, to impress him with the meaning of "quality."

No word in the vocabulary of business is more pregnant with significance than that one word "quality," says Edwin W. Moore, president, The Electric Cable Company. You may apply it to goods, to service, to ability; this one truth is universally the same—no extravagant assertion of present advantage, no false logic of economy, can long make headway against downright merit in merchandise or men.

Who are the biggest men in the world to-day?

They are the men who have recognized the value of reaching the highest standard of efficiency, whether it be in the manufacture of a commodity or the rendering of a professional service. They may call themselves bankers, lawyers, engineers or ministers. As a matter of fact they are selling for themselves or someone else and the best salesman gets the highest price. They have stepped beyond the dividing line of quality that marks off the great from the mediocre. They know that the great salesman sells his commodity at his own price; the "medium good" man sells his at the customer's price.

True it is that the great are few, the mediocre many, but the few who have scored highest in the business game are the men who have built on "quality."

THE GILLETTE POCKET EDITION.

The Gillette Sales Co., of Boston and New York, report an increasing demand for their specialties. This is due to their constant enterprise in producing new and better values, and in advertising so liberally that he who runs must buy. One of the quick sellers in the Gillette line these days is the pocket edition of their well known razor. This new combination comprises a metal case, velvet lined, together with either a gold or silver plated razor, blades and blade case. The case comes either triple silver plated, gun metal or gold plated. The outside of case comes in several styles, basket, shell, flower or empire patterns, the most popular being the latter. The razor and blade box matches the metal case pattern, making very attractive sets. The sets are unique by reason of their compactness, while retaining the features of the standard sets. The "Gillette" shaving brushes and shaving soaps are other additions to their line. Talking machine dealers desiring side lines would do well to take the Gillette proposition into consideration. It is one of the great, big successes of the day.

AN ENTERPRISING BARBER.

Some years ago there was a colored barber in New Haven who was largely patronized by the boys from Yale College. He was one of the best specimens of politeness that walked the earth. His courtesy, kindness, and good manners were jarred by nothing, and never misplaced. A young merchant who was once being shaved by him, said, "See here, Joe, you ought to make your politeness your trade mark."

"Yes, sir," said Joe. "Would you be good enough to tell me how?"

"Adopt a motto, Joe. Something that will let the people know you have politeness and courtesy always on tap. Let's see. How will this do: 'Urbanity is our Prime Factor.'"

The barber stopped shaving. "Say, boss," he said, "that seems to tickle me. Please say it again."

"Urbanity is our Prime Factor."

"That shorely does hit the right spot. I likes the sound of them words. Would you be good enough to write them down?"

The customer wrote them down. When he left the shop, Joe was still studying them, and laughing happily to himself.

From that time on Joe's motto was always on his cards; on his sign; in his advertisements in the college paper. He made the most of it, it gave him distinction, and the more the college boys quizzed him about it, the happier he was. It lifted him above the horizon, and made him conspicuous; and, above all, it brought him business.

"Urbanity is our Prime Factor." How many stores there are that could add to their success if they could truthfully adopt this motto, and as truly live up to it, says the Hardware Dealers' Magazine.

There's money in it. No patent rights to be paid for. Free to all. What store will be the next to try it?

LATEST CUSTOMS RULINGS.

An Appeal Ordered in the Cinematograph Films Controversy.

Notice was received by Collector Loeb from the Treasury Department ordering that an appeal be taken to the Federal courts from a recent decision made by the Board of United States General Appraisers affecting the classification of cinematograph films.

The collector had assessed duty on the films at 65 cents per pound and 25 per cent. ad valorem as articles of which collodion or any compound of pyroxylin is the component material of chief value. The importers, headed by J. A. Berst, appealed to the Board of Appraisers, alleging that either the films should be classified as "photographic dry plates or films" or else as "photographs," with the rate of duty in either case 25 per cent. The board reversed the collector and held the films to be "photographs."

James B. Reynolds, Assistant Secretary of the Treasury, says he directs the appeal to the courts in view of the importance of the issue. The importers intend to put up a strong fight when the issue is heard in the courts.

ACCOMPLISH GOOD RESULTS.

How the Motion Picture Patents Co. Have Helped the Interests of Moving Picture Men.

Last week the Motion Picture Patents Co. accomplished a very important work for both exhibitor, exchange and the picture loving public, when it succeeded in killing a bill introduced in the Senate by Senator Cullen, which, if passed, would have closed every picture theater in New York State. The bill made it a misdemeanor to use celluloid films in any moving picture machine, apparatus or device.

Now comes the announcement from the same concern that it has brought about the death of a bill in the New Jersey Legislature which would have made it a misdemeanor for an exhibitor to admit girls under 16 between the hours of 6 p.m. and 8 a.m., and girls under 14 at any time of the day unless accompanied by parent or guardian.

The Patents Co. contend that, under the reforms which it is bringing about, such as the "censored" films, clean, well-ventilated theaters, and lights on during the shows, the motion picture offers advantages of education and entertainment, especially desirable for children, and believes this principle should be encouraged.

If a pleasant incident occurs in the store, one that has a news value or in which there is human interest, do not hesitate to "give it to the papers." It will pay you.

MOVING PICTURE MEN.

Supreme Court Justice Grants an Injunction Restraining Mayor McClellan from Interfering With the Operation of Moving-Picture Shows in Brooklyn on the Sabbath—Declares in Long Opinion That It Is Duty of Mayor to "Turn Down Absolutely" an Application for a Moving-Picture Show License or Else Issue It Without Restrictions.

Supreme Court Justice Wiliam J. Carr, of Brooklyn, has granted an injunction restraining the Mayor of New York from interfering with the operation of a moving picture show on Sunday at 889 Broadway, Williamsburg, by the William Fox Amusement Co. This case has been pending several weeks, and the decision, it is said, establishes a precedent which will affect the 350 picture shows in Greater New York. Under the ruling, seven of the largest of these popular price shows in the borough will be immune from police interference on Sundays, although the licenses under which they are at present operating stipulate that no exhibitions shall be given on Sundays.

Justice Carr, in his opinion, which covers seven typewritten pages, says that it is the duty of the mayor to "turn down absolutely" an application for a moving picture show license or else issue it without any restrictions. The mayor has no power, the court says, to issue a license with a string tied to it. If the owner of the license violates the criminal law, Justice Carr adds, then it is the duty of the police to step in and make an arrest.

Justice Carr's decision is a signal victory for the moving picture show proprietors, and they are greatly elated over it.

On March 23 last Justice Edward B. Thomas handed down a decision in the moving picture show case upholding the mayor and refusing to issue a mandamus that had been asked for. He said he believed that the mayor was well within his powers in issuing six-day licenses.

By the decision of Justice Carr, the following places will be permitted to do business until restrained by judicial action: Harry A. Samwick, 1703 Pitkin avenue; Gustave Konigswald, 4715 Fifth avenue; Econopuly Company, 837 Broadway; Fox Amusement Company, 889 Broadway and 1493 Third avenue, and Robert J. Clause, 361 Arlington avenue.

The managers of these places contended that they had the right to operate on Sunday, although the licenses which they allege they were forced to take under duress, permitted business on only six days, because many others conducting similar shows enjoyed the right to do business on Sunday without molestation of any kind.

INDIVIDUALITY AS AN ASSET.

Personality of Merchant Reflected in Publicity —Every Employe Made to Feel That He Is an Important Factor in the Business—Importance of Proper Methods in Perfecting a Business Organization.

Every merchant is anxious not only that his store shall progress and develop, but that it shall become an enduring and impregnable institution—as strong as the rock of Gibraltar, to paraphrase a familiar phrase. To this end he strives continually in one way or another to place his establishment before the public in such light as to distinguish it in every one's eye and mind from the other stores of his city and vicinity. There are two methods pursued in this direction which may be cited as fairly typical.

In the one case the personality of the owner, or owners, is frequently, or regularly it may be, played up in the ads and in various other forms of publicity, especially the "write-ups" obtained from the local newspapers. Considerable space is devoted to the doings of the merchant, or firm members, and of the members of their respective families, etc.

In the other case it is the store's organization and policy that are brought to the front. The idea that the establishment is a "one-man concern" is less emphasized, and one learns not alone of the concern itself, of the public-spirited or philanthropic citizens at its head, of its tremendous buying power, etc., but also of the organization, its straightforward methods, its desire to satisfy each customer, the ability of its buyers, and the fact that its highly desirable and commendable policy actuates the entire establishment, down to the smallest messenger.

It cannot be denied that the former method bring results, and good results. But is it preferable? Is it not the latter method which makes for permanent success and which, if adopted and adhered to, will not only win the lead, but maintain it?

To speak more specifically, the store which fosters the elements of permanency is the one in which every employe is made to feel that he is an important factor in giving individuality to the establishment. Step by step, from the head down, a knowledge of the store's policy is passed along. Each one having any vestige of authority is at all times alive to the importance of having his subordinates realize that "the store" "wants this done" thus and so, that it will not tolerate any deviation from its general rules, that even the store must not profit at the expense of its clientele, that it will consistently reward faithful service and emphatically punish those who transgress, etc., etc. And how essential it is that such an understanding exists, seeing that it is through even the lowliest among their employes that retailers come into daily touch with the public.

Moreover, the establishment of such a policy and the imprinting of its features on the mind of every one connected with the store not only means better treatment of the public, but also more desirable conditions for the employes. Also it means the avoidance of unseemly disputes and controversies, says the Drygoods Economist. For example, suppose a floorman complains to one in higher authority of misconduct on the part of another employe. The delinquent employe started an argument, we will say, in the presence of a customer! He broke a rule that was known to be inviolable; hence argument is not even suggested.

In stores where a different spirit prevails the complainant might have to spend much time in outlining the affair in all its details and might finally have the whole thing pooh-poohed. Were the complainant thus deterred from reporting other infractions one effect on the store's atmosphere can readily be imagined.

The direct results of proper methods? Well, for one thing, in a store where they prevail, as in all others, it is the business of the salespeople to sell goods. But each salesperson is strongly impressed not merely to work for a "big book," but to have every customer satisfied—so well pleased with her purchase that she will be again and again attracted to the store.

By pursuing such methods the store can not only attract the "best trade in town," but also can draw to itself and build up a staff of managers and employes that can always be relied upon to carry out its wise and progressive policy. Thus will its individuality grow more distinct and impressive as the years flit by, and thus will its influence and its prestige be continually enlarged and extended.

THE POWER OF MIND.

If we believe that the mind is simply a finer part of the body, and that the mind acts upon the body, in the same way the body must act upon the mind. If the body is sick, the mind becomes sick also. If the body is healthy, the mind remains healthy and strong. When one is angry, the mind becomes disturbed; at the same time, when the mind is disturbed, the body also becomes disturbed. With the majority of mankind, the mind is entirely under the control of the body; the mind is very little developed. The vast mass of humanity, if you will excuse the saying, is very little removed from the animals. To bring the control about, we must take certain physical helps, and, when the body is sufficiently controlled, we can attempt the manipulation of the mind. By manipulation of the mind we shall then be able to bring it (as well as the body) under our control, make it work as we like, and compel it to concentrate its powers as we desire.

INSPECTION OF ALL PICTURE SHOWS.

Acting Police Commissioner Baker two weeks ago summoned all of the police inspectors of Greater New York before him and instructed them to make a careful examination of all the music halls and other places of amusement and report the condition of the places inspected.

The acting commissioner told the inspectors that he had before him a large number of applications for renewals of licenses for these places. Mr. Baker declared it to be his intention to refuse license to all places where violations of law are discovered.

This Will Interest You

Some talking machine dealers have taken on pianos recently, and they have been more than pleased with the results obtained.

Now, we manufacture the pianos that have the right kind of drawing power.

The cases are most attractively designed.

They will interest people of artistic taste wherever placed.

They are made in a variety of woods, and the exterior beauty is supplemented by a wealth of tone that captivates people who know true musical value.

We have one of the largest piano producing establishments in the country, and if our instruments had not been splendid sellers our business would not have developed in such a phenomenal manner.

Now, you can increase your trade very materially if you enter into a business arrangement with us.

We can supply the pianos which will help you to make a larger profit in your business enterprise.

Do not fail to take this matter up with us, because the longer you delay, the farther you are putting larger profits behind you.

Those dealers who have already taken our earlier suggestions are on the high road to greater business success.

Why do you not get on the same path?

Cable-Nelson Piano Co.

The TALKING MACHINE WORLD

AND NOVELTY NEWS

Published Each Month by Edward Lyman Bill at 1 Madison Avenue, New York, June 15, 1909

The best-known trade mark in the world

"The Victor talking machine's design, 'His Master's Voice,' has become a household word, and the quaint little fox terrier at attention before the horn is familiar to more Americans than any of the world's great masterpieces."—COLLIER'S, May 22, 1909.

Entered as second-class matter May 2, 1905, at the post office at New York, N. Y., under the act of Congress of March 3, 1879.

THE PLEASURE DOUBLED

THE COST REDUCED

ZON-O-PHONE

The Pleasure Doubled

The Talking Machine you select determines the pleasure you will have. The Zon-o-phone is the oldest of all disk machines, the most highly developed in smooth running, durability and mechanical conveniences. It has a remarkably clearer and more natural tone.

The Cost Reduced

Take the trouble to hear the Zon-o-phone before you buy. After you are satisfied with its superiority you will also find it lower in price, model for model.

Zon-o-phone Double Record Disks

The highest type of record ever sold for 65c.

Hebrew Supplement, just issued; the finest Hebrew records ever made. Songs by Mme. Regina Prager, Mr. Kalman Juvelier and other well known artists.

TO CALL TRAINS BY PHONOGRAPH.

Canadian Pacific Railroad to Substitute Talking Machines Instead of the Human Train Announcers in All Its Stations.

Many years ago Thomas A. Edison calculated that the phonograph might be used to great advantage in making announcements regarding the starting of trains and other data which is given out by the sturdy-lunged announcers in human shape at the leading railroad stations.

The talking machine at the time, however, was not sufficiently developed in tone volume and the matter fell through. It was also planned to use talking machines, automatically controlled, in the trains to announce the stopping places, as well as other essential items of interest to passengers.

We now read that the Canadian Pacific Railroad has arranged to dispense with the megaphones in the hands of the railroad train announcer, and replace it by the useful and tireless phonograph record. The human worker may, and usually does, mumble and roar inarticulately while the well-selected record goes on forever talking intelligibly and correctly.

Speaking of this subject recently, "Railway and Locomotive Engineering" said:

"The fact that a man possesses a powerful voice is no guaranty that what he says will be understood in a big building. This fact is often painfully brought home to the traveling public in the waiting-room of almost any large railway station. There is a great difference between mere loudness and distinctness. This fact has led G. J. Bury, general manager of lines West, on the Canadian Pacific, to introduce what is probably a most welcome innovation in the matter of announcing the arrival or departure of passenger trains.

"Ordinarily a man with a loud voice calls out something and the public is made aware of the fact that something is happening, but what it is nobody seems to know. Mr. Bury has substituted a phonograph for the loud man in the Winnipeg station of the Canadian Pacific Railroad, and records have been prepared where distinct enunciation has been substituted for the usual jumble of sounds and where a clear, steady voice supersedes a roar. The new arrangement, if satisfactory, will be repeated in the Montreal station. Mr. Bury believes that to make the traveler understand what is said is the main thing, and if this is not done, Stentor himself would be a useless railroad employe in the matter of train announcement."

Automatic announcers (not talking machines) were tried for a time in the Grand Central Station in New York City, but were found to be indistinct and were soon abandoned for the old-fashioned human larynx.

PHOTOGRAPHING SOUND.

Prof. Miller's Device Distinguishes Human Voice from Instrumental Notes.

(Special to The Talking Machine World.)
Cleveland, O., May 29, 1909.

Prof. Dayton C. Miller, of the Case School of Applied Science here, says he has discovered a means of photographing sound. By the use of his newly perfected device he believes it will be possible to distinguish on films the difference between the tones of a human voice and the tones of a musical instrument.

The nearest that scientists have come to reproducing sound waves heretofore has been to make them visible on smoked paper. Several photographs have been made on the regular print paper, but they have been small and imperfect. The invention of Professor Miller directly photographs the sound waves, magnifying them 2,000 times and recording them on films.

In his investigation Professor Miller has used an harmonic analyzer, an instrument made in Switzerland, which separates sound waves into their component parts, determining whether a certain photographed sound wave was made by a flute, a bell, a violin, or other musical instrument. It is his purpose to tabulate the results of his experiments for the use of other investigators, a labor that will require several years.

THE "TALKER" AS AN EDUCATOR.

Still a Few Old-Fashioned Music Teachers Who Cannot See That the Talking Machine Is One of the Greatest Aids in Augmenting Musical Taste and Musical Knowledge.

It is an old topic for discussion—whether the talking machine has been a benefit or an injury to the music teacher. Some of the old-fashioned teachers believe that the talking machine has exercised a most injurious influence on musical taste generally. But this narrow-minded view of the situation is entirely offset by the opinions of the majority of teachers—men of wide learning and intellect—who look upon the talking machine as a great educator—a great blessing, in fact, as it has brought to thousands of people, impoverished musically, the works of the great masters as sung by the noted artists of the world, or played by leading bands and orchestras. Were it not for the talking machine those benighted people would never have known what classical music is, nor would they have heard any of the great operatic singers. It would be far beyond them financially; yet for a small sum of money they are to-day enabled to hear the best in music. And thus the musical taste of the masses is increased and stimulated. People who formerly looked upon music as a waste of time are now eager that their children should learn to read music—to play the leading musical instruments—and this is where the influence of the talking machine is most potent.

There is another phase to this matter which has been pointed out so very aptly by Harry Wheeler in a recent issue of The Etude, when he says: "The sound-reproducing machine, as an adjunct to the singing teacher, is highly commendable, and its musical benefit to the vocal student is almost inestimable. By its records one may gain the style, expressions and phrasing of the recitatives and arias of the leading operas, oratorios, and other vocal compositions as rendered by the greatest vocal artists of the day. For instance, suppose one wished to study the aria 'Celeste Aïda,' what better example of style could be found than that rendered by Caruso, by means of the sound-reproducing machine, or 'Ah! Forsèe Lui,' by Sembrich, etc. One may also hear a perfect pronunciation of the different languages in which arias are sung. While these invaluable benefits may be derived from the sound-reproducing machine, still it would not be safe for the student to imitate the tone quality, as that must be left to the teacher. It might be feared that arias studied by means of the sound-reproducing machine would tend to imitation, thus retarding the development of temperamental individuality. There need be no fear of this. The fact of the student being sufficiently interested to make a study of an aria as sung by different artists would prove that instead of retarding, would greatly stimulate his musical temperament."

CARUSO'S VOICE SAVED.

So Says Prof. Vedova After Operation—Was in Danger of Being Lost.

Prof. Vedova, of Rome, who recently operated on Caruso's tonsils at Milan, states that the operation was a complete success and that Caruso will be able to sing in another week.

The professor is sure that his voice was not affected by the operation and believes that his voice will be even better than ever in consequence of it. But he says that had Caruso neglected to have the operation performed for a few months longer he certainly would have lost his voice.

MUSIC BY WIRELESS.

Germans Have Perfected a New Wireless System Which It Is Claimed Will Obviate the Uncertainties With Which Other Systems Have Had to Contend.

"Singing sparks" is the expressive name given to an improved wireless system just perfected by the German Telefunken Wireless Telegraphy Co., of Berlin. Messrs. Slaby & Arco, the chief engineers of the company, after whom the German system is generally called, have invented a device, which, it is claimed, will entirely obviate the uncertainties with which other wireless systems hitherto have had to contend.

The new method consists in sending out the vibrations which form the messages as pure musical tones, which are capable of being heard by the receiver, no matter how softly they may be attuned.

It is declared by the inventors that by means of this device it will be possible for the first time since the wireless telegraphy was established to maintain communication by this means, in spite of the most violent atmospheric disturbances. Another advantage claimed is that it will be possible to work with much smaller antennæ for the aerial wires by which the energy is absorbed.

In their passage through the air the singing sparks will be entirely noiseless.

Prof. M. I. Pupin, of Columbia University, in speaking of the foregoing achievement to a reporter of the New York Times, said, that the production of continuous electrical waves has been one of the principal problems of wireless telegraphy. Musical—that is, continuous—electrical waves have already been produced by the so-called electrical arc, but these, up to the present announcement, have not been very rapid or very powerful. If it is found that there has been a great increase in their rapidity an important discovery has been made.

One great advantage, he said, in increasing the number and power of the oscillations of the current sent out by wireless methods will be an addition to the sensitiveness of the receivers. Moreover, there will be a much greater possibility of attuning the wireless receivers. One of the great difficulties with which wireless operators have had to contend has been interference from other instruments. But if it is really practicable to send forth rapid oscillations smoothly without a break in their series every receiver may be attuned, so that it will register only those oscillations which are intended for it.

The professor also pointed out that the new invention should have a beneficial effect on the progress of wireless telephony. Until now twelve miles have been the limit for talking without wires, and it is evident that if this could be extended to 200 miles, for example, the value of the system would be immensely increased. There is hope that a device by which continuous waves of great rapidity can be transmitted would greatly extend the radius of wireless telephony. It would at once increase the power of the waves and make the instruments far more sensitive for their reception.

The Houston Phonograph Co., of Houston, Tex., are carrying a very large supply of Victor and Edison machines and records in their warehouse, at 709-711 Louisiana street. In addition to their warehouse they maintain attractive parlors at 919 Capital avenue, where a full line of machines are displayed in attractive environment. J. N. Swanson is general manager of this business.

THE ONE PRICE SELLING SYSTEM

As Applied to the Talking Machine Trade a Success—Price Cutters Few—Pointers Worth Noting by Dealers Who Wish to Retire—Prices Must be Upheld by the Trade.

In view of the fact that occasionally a jobber or dealer, but especially the latter, have a mistaken conception regarding the judicial enforcement of the contract or agreement between the manufacturer of machines, records, etc., as it pertains to prices, this subjoined general statement from the Edison Phonograph Monthly may be illuminating and possibly instructive:

"Nothing could demonstrate the success of our uniform one price selling system more conclusively than the fact that notwithstanding Edison goods are handled by more than thirteen thousand dealers, the number of cases of price cutting is so small that the percentage is an almost entirely negligible fraction. The price cutters that we wish to talk about in this issue are dealers who, because of peculiar local conditions, or because they have failed to apply the necessary push to make the business a success, have decided to discontinue the business of selling Edison goods. We venture the assertion that if the facts and the policy of the National Phonograph Co. with regard to such sales were fully understood by all dealers, there would be no cases of price cutting of this sort. This is the most objectionable class of price cutting which is met with, for it is the height of unfairness for a man to sell Edison goods for years, during all of which time he is dependent for his entire success on the strict carrying out of the one price selling system, and then the moment he decides to go out of business himself, to begin cutting prices and to disrupt the trade of all dealers in his vicinity, merely to get rid of a small stock of records and other goods he may have on hand. Such price cutters as these would be the very first to object, had they still been in the business if the price cutting was done by some one else in the neighborhood.

"There seems to be an impression abroad in some quarters that when a dealer has ceased to buy new records and other goods each month, he is no longer bound by his contract, but is free to go ahead and sell out his stock at such prices as he may see fit. Nothing can be further from the truth, for he is bound by his contract and by the notices secured to the goods as long as he has any Edison goods in his possession, and he never can acquire the right to sell them to the public at any other prices than those prescribed by the National Phonograph Co. Again, parties who are going out of business, sometimes write to the company notifying it of this fact and requesting it to take back the stock on hand at the prices paid and threatening, if this is not done, that the goods will be sold at cut prices. In this too, a very great mistake is made, for the company does not put out its goods on consignment and will not take them back merely because a dealer, for reasons of his own, has decided to go out of business; and the jobber cannot take them back as this is specifically prohibited by his contract.

"The only proper way for a dealer who has decided to go out of business to sell his goods is to continue selling them to the public at the prices prescribed by the National Phonograph Co., or else make arrangement with some other dealer, either by selling the goods to the latter or by putting them in his hands for sale at full prices. If a dealer proposing to go out of business will make such an arrangement as this with another dealer who is in good standing, and will apply to the National Phonograph Co. in advance, giving the details of the transaction, and they are found to be satisfactory, the National Phonograph Co. will approve such an application and will permit the transaction, and the dealer who is retiring will be able to dispose of his goods at a fair price and there will be no disturbance of neighboring dealers by cut price sales; and last, and best of all for the retiring dealer, he will not be subject to the necessity of defending an equity suit in the federal courts for an injunction and accounting, which will certainly be brought against him if he persists in putting the goods on the market at cut prices.

"Henry Spahr, who was a dealer in Jersey City, N. J., decided to go out of the business of selling Edison goods, and he began advertising and selling his goods at cut prices. A representative of the National Phonograph Co. called upon him and notified him that if he did not discontinue the sale at once, the company would proceed against him; but he scoffed the idea and said that he was convinced that as soon as his sales became known the National Phonograph Co. would be over there with a truck for his goods, and would take them back and pay the prices he had paid for them as if he had taken them on consignment, but instead of being visited by a truck he received a visit from the marshal of the United States Circuit Court with a preliminary injunction, and the sale was stopped, but the records remained in the store.

"A final decree has now been obtained against Spahr, and instead of making money by his cut price sale, he has enjoyed the pleasant (?) sensation of being a defendant in a suit in the United States Circuit Court, and has been put to considerable expense. The moral is plain—if you are bound to go out of business, or if circumstances force you to do so, do not begin cutting prices right and left, for not only have you no right to disrupt the business of your fellow dealers, in common with whom you have shared in the past the benefits of the one price selling system, and to which your past success in the business was due, but you will have the same experience as Mr. Spahr, of Jersey City, and others who have tried the same thing have had, and you will find too late that it is unlawful, troublesome and expensive."

When the final decree against Spahr was recently entered in the Circuit Court of the United States for the district of New Jersey, and the perpetual injunction issued, it was specified in addition "that the complainants do recover of the defendant their costs and disbursements of this suit, to be termed by the clerk." The foregoing admonition applies with equal force and effect to dealers who are handling the patent protected goods of other companies with whom they may have signed.

THERE IS NO QUESTION ABOUT THE DEMAND FOR VICTOR and EDISON MACHINES and RECORDS

IF we could take you into our confidence and show you how much more profitable our business has been than those carrying only one line, you would at once conclude that both lines are necessary for a dealer to carry, in order that he get all he should out of the Talking Machine business.

THE demand for both lines has been created and the manufacturers are spending enormous sums of money each month to create a greater demand in their respective lines. But are you in a position to supply the demand of the public? If you would be fair to yourself you would carry both lines. If you are not at present carrying these two lines we would consider it a pleasure to talk it over with you.

NO other jobber has as many advantages to offer you as we have in the way of satisfaction and service. Read the few suggestions in black face type. **Complete Stocks of Victor and Edison Records, Machines and Supplies. One Express Charge for Two Lines. Figure This Item at the End of a Year. Every Article Sold by Us Reaches You in Factory Condition. Fifteen Years an Exclusive Talking Machine House and the Experience Gained During That Time is Yours. Original Distributers of Victors in New England

NEW COPYRIGHT LAW

Attacked in Berlin—Termed the "Craziest Potpourri of Modern Ideas and Peanut Protectionism That Can be Imagined."

The Berne copyright treaty, as revised by the Berlin conference last November, has been before the German Reichstag for consideration. In the discussion the copyright legislation of the United States was savagely attacked.

Dr. Heinrich Muller (Radical) called the new American copyright law the "craziest potpourri of modern ideas and petty peanut protectionism that can be imagined, a regular caricature of complexities and obscurities and a contradiction of the words Mr. Roosevelt uttered when proposing it."

Herr Muller asked the Ministry if the treaty of 1892 between Germany and the United States provides for enforcing the new American law without further action by the governments concerned. He then said that America's new legal position is untenable, and that other civilized countries must not rest until America abandons these petty and miserable principles. He explained that the United States probably will have to join the international convention before long.

Heinrich Dove (Radical) declared that the United States, Holland and Russia attended the Berlin conference merely as camp followers.

Foreign Secretary Von Schoen described the recent American law as a modification of existing conditions.

SUIT TO COMPEL AN ACCOUNTING.

(Special to The Talking Machine World.)
San Francisco, Cal., May 30, 1909.

The suit filed by the California Cameraphone Co. against W. H. Leahy, Ed. Ackerman, E. C. Leffingwell and others to compel an accounting, has brought out the counter claim that the proceeding is inspired by Francis Fitch, son of the "silver-tongued orator," Thom Fitch. Mr. Leffingwell said they "paid $5,000 cash to a brother of Francis Fitch for the cameraphone rights in this State. After that they financed the company to the extent that their judgment showed them was proper, the films furnished by Mr. Fitch's New York house became very poor and they lost money rapidly, although the enterprise at its inception netted good returns. Mr. Fitch himself then stepped in with the assurance that he could make the various houses pay, and bought from us a control of stock, uttering promissory notes for the same. These notes, which aggregate $3,000, fell due May 1." Hence his counter suit to hold back execution on the notes. Mr. Leffingwell said the notes will be collected at all hazards.

Victrola

Victrola XVI, Circassian Walnut, $250

WHAT does the widespread Victrola magazine advertising mean to you? You can make it work overtime and produce big profits if you will. But there must be co-operation on your part.

Here are some suggestions which will help you pile up big profits on selling Victrolas. Make a list of all the people in your town who can afford a Victrola. Arrange for a Victrola concert at their homes. Select a pleasing program from the instrumental, comic and operatic Victor Records, remembering that rich people enjoy fun as well as grand opera. Explain the various records as you play them, and tell entertainingly about the singers and musicians.

This is possible and reasonable, Mr. Dealer, *and it will bring results.* Why not get one Victrola from your distributor at once, and try this plan? You'll sell that one and probably many more.

And just think of the Victor Records these wealthy people will buy.

MOTION FOR WRIT DENIED

In Application Made in Behalf of the Leeds & Catlin Co. in Suit Won by the American Graphophone Co.—Final Action in Jones Patent Process Litigation.

(Special to The Talking Machine World.)
Washington, D. C., June 7, 1909.

The Supreme Court of the United States made quick work of the application of the Leeds & Catlin Co., New York, for a writ of certiorari to review the decision of the Circuit Court of Appeals, Second Circuit, reversing Judge Hough, rendered in the Jones patent process for duplicating disc records on April 14. The petition of Louis Hicks, their counsel, was peremptorily denied, and the celebrated litigation of the American Graphophone Co. (Columbia Phonograph Co., General) against the Leeds & Catlin Co. was abruptly brought to an end. The action of the Supreme Court is the final adjudication of the case.

By dismissing the application of the Leeds & Catlin Co. and denying their motion for a writ of certiorari, the Supreme Court has ended one of the most bitterly contested patent litigations that has been before the United States courts for years. The question involved was the validity of the patent covering disc sound records as now universally made. The Columbia Phonograph Co. owns this patent and Leeds & Catlin were sued as infringers. This decision gives the Columbia Co. control of the manufacture of disc sound records for many years to come. The Victor Co. is licensed under this patent.

In the opinion handed down April 13, 1909, finally sustaining the Jones patent, the Court of Appeals found that the essential facts upon which the Leeds & Catlin Co. were relying had been just as fully presented two years before, when the patent was sustained in suits brought by the Columbia Phonograph Co. against the Universal Talking Machine Manufacturing Co. and the American Record Co. Speaking of the Jones (Columbia) process the court quoted approvingly from its former opinion (above mentioned) that "the disc produced by the patented process responds to the test of success, where others have failed. But, in addition to this inventive success it is also a commercial success." The court finds that the testimony in the present suit does not disclose any new facts to change this decision.

Of the alleged anticipating patents and articles, said to appear for the first time in the present suit, the court says "they add nothing of importance to the controversy." The chief reliance of the defendants was placed upon two British patents granted in 1888 to Adams-Randall. The Circuit Court of Appeals, contrasting Adams-Randall's patents with the Columbia (Jones) patent, holds that the former patents "abound in tentative, indeterminate and infeasible suggestions, too nebulous to anticipate a patent which has actually shown the art how to make the thing needed."

The court held, finally, that the proofs "amply sustain the charge of infringement," and closed with instructions to enter the usual decree in favor of the complainant—the American Graphophone Co., the Columbia Phonograph Co., sole sales agent.

The decree is for a perpetual injunction, an accounting of the Leeds & Catlin Co.'s profits accruing under their infringement, and also for the damages which the American Graphophone Co. and Columbia Phonograph Co. have sustained thereby. This litigation, now finally ended in favor of the Columbia organization, has been in progress over five and a half years.

HOW TO CHECK "JOY RIDING."

Utilization of Steam Siren and Phonograph in Automobile Will Check Drivers Exceeding the Speed Limit.

The once familiar slapstick comedy devices are at last being paraphrased by the inventors. Theatergoers have not forgotten the "swearing room," where the main farceur retired to relieve himself of his surplus profanity, the density of the sulphurous emanations being regulated by the size of the surplus. They also remember the vociferous and tell-tale gong which rang whenever one of the farce comedians told a particularly robust lie. There were many variations on this form of mechanical devices for the measurement of emotions, but a German inventor has put the idea to practical use by applying it to an automatic enunciator which makes it impossible for a motorist to exceed the speed limit without proclaiming his fracture of the speed laws from the housetops, or, rather, from the center of the road.

If it becomes legally compulsory for each auto to be equipped with this invention, the police authorities may take things easy. The device is a combination of the steam siren and the phonograph. For instance, the moment the lever is touched which screws the speed past the lawful limit, the enunciator emits a piercing shriek and absolutely refuses to be silenced until the speed is reduced to the point authorized by law, when it stops automatically. In the nature of things there are times when a rate of speed contrary to the rules and regulations is necessary, as in the case of ambulance calls, physicians' summonses, etc. To meet this emergency there is a provision specially constructed phonographs, which announce the character of the vehicle and the reason for going faster than the ordinary "glad wagons."

The practical value of this invention is yet to be tested, but it looks promising. The integrity of the device is guaranteed. It cannot be "seen" or "squared" or silenced by anything but implicit compliance with the speed laws, and the exemptions permitted a certain class of riders are the only exceptions to an otherwise inviolable rule. With absolute honesty on the part of the officials issuing the exempting devices, the laws, if there be any, ought to be enforced with a fair degree of rigidness. At least there would be a material decrease in what have been happily called "joy rides," which have for their principal object the separation of the speed limits into the minutest possible fragments.

PUSHING TRADE IN CHINA.

Americans Must Guard Against Strong German and English Competition.

An American resident in the Far East who has been looking into commercial conditions in China furnishes information confirmatory of recommendations frequently made by American consular officers as to the necessity for establishing branch houses in charge of Americans to promote and safeguard American trade with China.

The importation of goods into Hongkong and into South China, Hongkong constituting the market and distributing point for the treaty ports from Pakhoi to Foochow, is controlled by English and German houses. The former are nearly all firms of long standing and wide experience in the trade, having heavy capital at their back. The latter are newer but energetic, and are also backed heavily with home capital. All of these firms have a natural bias toward goods produced in their own home countries, in addition to which must be taken into account the capital invested in these China houses by manufacturers and others in England and Germany, resulting in close affiliations and control. The result of this is that at equal, and oftentimes at a higher price, the English house will push English goods and the German house will push German goods.

A. L. Smith, Snohomish, Wash., a live up-to-date dealer, believing that the people want the goods brought to them, is making a hard fight for the country trade, working all the territory in the vicinity of Snohomish from house to house and reports business much improved in his territory.

It's So Easy

Yes, it is not only easy **to learn** a foreign language by the I. C. S. system—the easiest and most perfect way in the world—but it is also easy **to sell** I. C. S. language outfits. It is easy to sell them to people who are tired of their machines as an amusement device and will be glad to turn them into a source of profit. It is easy to sell them to persons going abroad and who otherwise desire to learn a language for the sake of the knowledge of it alone. It is easy to sell it to men and women who desire to qualify for positions as translators and foreign correspondents. It is easy to sell it to foreigners, in order that they may learn to speak English. In fact there are a great many sound reasons why it is easy to sell the

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

Do **you** sell I. C. S. Language outfits? If not, why are you thus neglecting such an important and profitable field of your work? Why are you thus absolutely throwing away at least one-third of your business? The Phonograph system of language instruction is now recognized as an educational factor of great importance and the demand for this sort of language instruction is growing by leaps and bounds. The I. C. S. system is undoubtedly the one of the greatest merit obtainable today. Write us a postal **now** for further particulars.

TRADE NEWS FROM INDIA.

Business Quiet—Cheap Machines Injure Trade —Demand Now Is for a Better Class—How Talkers Are Displayed in India—Litigation Over Singers—Ramchunder Bros.' Activity.

(Special to The Talking Machine World.)

Bombay, India, April 28, 1909.

Business for the past season has been very quiet in all lines in India, but the prospects are now more hopeful. Early last fall a large influx of cheap European talking machines flooded the market. They sold in big quantities on account of their low price. When the merchants had occasion to test their qualities, however, not only as regards reproduction, but also mechanical construction, they found the machines inadequate and a constant source of annoyance. They were poorly made and were constantly returned by customers, owing to some part of the mechanism being defective.

SELLING TALKING MACHINES TO A DEALER IN INDIA.

This condition has caused a change in the attitude of merchants toward the talking machine. They are now demanding better constructed machines and are willing to pay higher prices for more reliable instruments. It was at this time—the psychological moment—that C. E. Bryant introduced some American machines to the merchants of this city and locality with excellent success. He has succeeded in having his machine quoted in many lists of merchants throughout the country, and its construction and musical qualities appeal to the people of this section.

Your readers will be interested in the photograph sent herewith of a talking machine dealer's store in the Punjab, where a representative of Mr. Bryant is demonstrating his talking machine with a view of establishing an agency. From this picture one can get an idea of the methods employed in the Far East for the selling of talking machines and how it is necessary to bring the talking machine to the native merchant's shop and make a full demonstration of its merits. This covers not only its finish and construction, but also its superiority in a reproducing quality, as compared with other machines, and most important of all to the merchants of India, the price at which they can buy the goods.

When record making was first introduced into India the leading companies and dealers contracted with a number of leading singers to sing for them exclusively for so many years, or a lifetime. Now many of these singers, who have long time contracts, have broken them on the offer of better prices from other concerns, and, as a result, a number of suits have been instituted to test this matter.

A suit has just been decided in a local court in which a noted singer, who is under contract with an important record company, "sold" his voice to another company, the latter, however, being in ignorance of any previous contract. A decision was given in favor of the first named concern, and a fine imposed by the court. Some of the local singers evidently are in ignorance of the most elementary principles of the law of contract. It is not easy to sign an agreement in any country and break it.

One of the largest firms in the Far East in the musical instrument business and who are among the pioneers in introducing the talking machine into India is the firm of T. S. Ramchunder & Bros., composed of Ramchunder Narotumdas, Purshotumdas Narotumdas, Jagjivandas Narotumdas. In the old days the firm dealt principally in harmoniums and band instruments, which were bought by the native states and native princes, and from this extensive trade the present nucleus of the fortune of Messrs T. S. Ramchunder & Bros. was accumulated. When the talking machine was invented Messrs. Ramchunder Bros. at once saw the possibilities of a large business in this line with India and they at once set forth their energies and capital to its development. The first type of machine taken up was the Edison phonograph and for many years they conducted a steady and flourishing trade in Mr. Edison's renowned invention.

In order to supply the demand for the records in the vernacular they set forth to learn the intricacies of recording and their success in this respect has been unparalleled in India. It is said by the authorities in the Indian field that Messrs. T. S. Ramchunder Bros. have the finest selection of native records in the Far East under the distinctive and well known name of "Ramagraph." The senior Mr. Ramchunder, though 63 years old, is still hale and hearty and in conjunction with his two brothers, daily look after the details of this immense trade.

THE SENIOR MR. RAMCHUNDER.

INCORPORATED IN TEXAS.

The Dallas Talking Machine Co., Dallas, was incorporated with the secretary of the State of Texas last week with a capital stock of $15,000. The incorporators are: Ira T. Moore, H. Corder, and W. L. Williams.

The phonograph is suggested by a French photographer as a means of timing when a clock cannot be watched. He has fitted his machine with a cylinder, counting from 1 to 240, with intervals of one second between the numbers.

"There is no limit to the amount of goods a man can sell. What he requires is ambition, push, energy and right goods."

Long Distance Telephones—Numbers 4677 and 4678 Gramercy. Cable Address: "Elbill," New York.

NEW YORK, JUNE 15, 1909.

THAT business is steadily improving is indicated by the numerous cheering reports which we have received from various business centers of the country.

It is quite time; and with an early settlement of the tariff it is believed that the last obstacle to obstruct the passageway to prosperity will have been removed.

The crop reports indicate a splendid yield, and with good prices, which are practically assured, it will mean that we will enter upon the fall trade with conditions most reassuring and satisfying.

It has been rather a hard pull since the fall of 1907, but the worst is over, and certainly the road is going to be illuminated by cheering rays of business sunshine from this time on.

That does not mean, however, that business men can sit down and witness a steady improvement in their affairs without effort.

They cannot, and no man should fool himself with the idea that success is going to be easily won.

Competition in every line is keener to-day than ever before, and the man who succeeds in any business must be up and doing.

He must learn to labor and to wait his chances and be ever ready to improve them.

IT must be a source of satisfaction to talking machine men all over the country to know that their industry has stood up so well under adverse conditions, and it must be conceded that the provisions which have safeguarded the industry in the sale of machines and records have operated to the advantage of those whose interests lie in jobbing and retailing.

We have witnessed no annihilation of prices and no slaughter sales. On the contrary, the industry has stood up nobly, and it has a brilliant future.

There is no doubt that the talking machine men of this country will succeed in accomplishing good business results during the next six months, and the men who make their plans well ahead will be those who will reap the largest benefits.

We have a good many wise, level-headed, progressive men in this industry, and they are the ones who will not wait until the full tide of prosperity has reached us before they are doing things.

They will lay their plans well in advance and they will profit by them.

No doubt of it.

ABOUT commissions. The Victor Talking Machine Co. propose to nip the commission evil in the bud.

In a recent communication addressed to the trade it is strictly forbidden to pay commissions to anyone for the sale of Victor machines, excepting only in the case of clerks or salesmen who are employed entirely on a commission basis in lieu of salary.

In this communication the Victor Co. prohibit salesmen who may carry a number of lines on the side from selling Victor goods on commission, and say that if this loophole were left open for evasion a number of cut-price cases would develop, where commissions should be divided or paid back to the Victor purchasers.

Louis F. Geissler, general manager of the Victor Co., has passed a large portion of his business life in the music trade, where he knows of the prevalence of the commission evil.

So far as he is concerned, he does not propose to have it creep in in an innocent form in the talking machine trade.

The communication sent forth by his company covers the ground completely, and states that any deviation from the principles laid down therein will be construed as a violation of the Victor contract.

It is plain and straight from the shoulder.

BEFORE another issue of The Talking Machine World shall have made its appearance all manufacturers of talking machine records and music rolls will be compelled to pay a royalty of two cents on each roll and record manufactured.

It will be seen by referring to the copyright law, which will go into effect on July 1, that the arrangement of reproduction must be made with the publisher for the composer.

Therefore, as The World views the situation, the music publishers of this country to-day hold the real key to the copyright situation, in so far as it applies to the reproduction of records and music rolls.

There are a number of things, too, that are not quite clear in the new law, one of which is the arrangement of music.

When permission is granted by the publisher to the manufacturer to reproduce for automatic musical purposes will not there have to be a special business agreement covering each special musical arrangement?

Read the copyright law and see.

To our minds the new law will impose a hardship upon manufacturers who will be compelled to pay a royalty of two cents on each record manufactured.

It would be just if this royalty applied to all records sold, but under the exchange system thousands and thousands of records must come back to the manufacturer unsold.

On every one of these, according to the new law, a royalty of two cents must be paid to the publisher. As a result of this less chances will be taken with certain compositions.

In other words, it is probable that the new law, when in operation, will result in decreased monthly bulletins containing new records.

Certainly manufacturers are not going to accumulate vast record stocks on which they will be compelled to pay royalties at the outset, whether or not they are sold.

Then again, there are some men who argue that the constitutionality of the new law will be put to the test.

It may be that shortly after it becomes operative we shall see a test case.

At least that would not be surprising, because this is the first time when the United States surrounded special products with such conditions.

IMMEDIATELY following the Fourth of July the Talking Machine Jobbers' National Association will be convened at Atlantic City.

We are informed that the attendance promises to be an unusually large one, inasmuch as a number of jobbers from the interior of the country have signified their intention of embracing this opportunity to stop a few days on the sea coast.

The list of jobbers who belong to the association is formidable, and, without doubt, it will be further augmented at Atlantic City.

The Jobbers' Association stands for the good of the talking machine trade, and in many ways through co-operation has been instrumental in bringing about excellent results.

One of the leading members, while recently discussing the objects of the association with The World, remarked that there were many things in connection with the talking machine trade which may be best promoted by harmonious co-operation of the jobbing interests, and that it should be understood that the association was not exploiting any particular product.

In other words, that it was purely a jobbers' association, formed for the benefit of the entire trade, and what was good for the jobbers and the dealers must also be beneficial to the manufacturing interests.

In short, that the talking machine business would profit by intelligent co-operation in all the departments of the trade.

THE article from the pen of Eldredge R. Johnson, which appeared in the last issue of The World, has attracted a great deal of attention on both sides of the Atlantic. It is the first time that Mr. Johnson has ever expressed his views on the talking machine situation, and his utterances quite naturally, on account of the important position which he holds, have a great interest for the men who are identified with the talking machine industry.

Mr. Johnson views the situation of the talking machine optimistically, and he supports his faith by making extensive factory additions in order to meet with the demands of the trade in ever way.

We need optimistic men nowadays; men who have confidence in the business future of that with which they may be identified. The attitude of a man who occupies a commanding position has the effect either to inspire confidence or to create mental depression, and the business world has really no use for pessimists.

What One of the Big Talking Machine Companies Thinks

— OF THE —

"B. & H." Fibre Needle

THE COLUMBIA PHONOGRAPH CO.

has decided not only to stock "B. & H." Fibre Needles regularly but also to furnish a special needle arm which can be attached to any Columbia Disc Reproducer.

We quote from the official announcement in the *Columbia Record* for May, 1909.

Fibre Needles

"We are adding to our list of supplies a line of fibre needles.

"Fibre needles are made of Japanese bamboo, a material possessing qualities which, in addition to reproducing disc records in a sweet, clear, natural tone, appear to improve the quality and prolong the life of the record. The oily material with which the needle is treated in process of manufacture acts as a perpetual lubricant, and the needle polishes and smoothes the record grooves instead of wearing them.

"The fibre needle is triangular in shape and requires a special needle arm, which we are in a position to furnish, and which can be attached to any Columbia Disc Reproducer. This needle arm is adaptable to both fibre needles and regular steel needles, and will be known as Fibre Needle Reproducer Arm.

"Fibre needles are especially recommended for use with grand opera records or other high priced records, because of the fact that they do not injure the records and in addition will give a more pleasing reproduction.

"The same needle may be used a number of times from the same point, and each needle may be repointed with a penknife or with a special needle cutter, full particulars of which will be furnished later.

List Prices of Fibre Needles and Needle Holders.

250 needles in box.....$1.00
Needle arm to accommodate either fibre or steel needles..... 1.00

"The above prices are subject to dealers' and jobbers' *regular discounts.*

"Disc Graphophones may be ordered equipped with Fibre Needle Reproducer Arms, and sold at regular catalogued prices."

Samples and details on application

THE "B. & H." FIBRE MFG. CO.

TRADE ON THE PACIFIC COAST.

Business Quiets Down Toward End of May for Summer Season—Downtown Stores Well Satisfied With Conditions—Auxetophone Proves Interesting Attraction—The Curtaz & Son Department—Columbia Co. News—Edison Goods Advancing in Popularity—Talking Machine Men Play Baseball—Other News of the Month.

(Special to The Talking Machine World.)
San Francisco, Cal., May 29, 1909.

The month started in fairly well with the local talking machine dealers, but business has quieted down considerably during the latter part of the month, and the dull summer season has fairly begun. There are some exceptions, and one or two dealers report more business than last month, but the general condition is not very satisfactory. There is, of course, some extra demand for records from people who are starting on their summer outings, but this is not of much consequence this year. Outside wholesale trade is also rather quiet, though this department is in relatively better condition than the city business.

Those who have moved their stores down town in the last month or two are well satisfied with conditions, and are confident that by the opening of the fall season their business will assume larger proportions than for the last two years. Clark Wise & Co., in particular, are making a big thing of their talking machine department. With an entire floor devoted to this line, they are able to give it more attention than in the past, while their location is one of the best in the city. The Auxetophone, which is kept in the second story window, is a daily feature which attracts large crowds of shoppers, including many people from outside the city. While these public concerts are sometimes of a popular nature, the Red Seal records and high-class opera music are the favorites, and the sale of this class of goods has been greatly stimulated. Many people who have judged the talking machine by a little experience with the old fashioned machines and records have changed their opinions after listening to this exhibition for a few minutes.

The talking machine department at Benj. Curtaz & Son's new store is not yet complete, but a fair business has been carried on there for the last two weeks. The department is rather small in size, having only three rooms, will make up for it in style and equipment. One room will be devoted entirely to the demonstration of Red Seal records, with another for more popular lines. Mr. Curtaz expects quite a run of business as soon as he can get the department in final shape.

The San Francisco office of the Columbia Phonograph Co. is closing out all its old wax cylinder records at 15 cents, and as soon as this stock can be disposed of their place will be taken by the new Indestructible records. Coast Manager W. S. Gray will make a short visit to Kirk, Geary & Co., the new wholesale agents at Sacramento, early next week, and will then proceed East for a six-weeks' stay. Before returning to San Francisco he will visit the various offices in the Northwest. The Columbia office has noticed nothing of the prevailing dullness, and, in fact, Mr. Gray states that May has been the best month, with the exception of March, that he has experienced for the last year. The office still remains on Van Ness avenue, and Mr. Gray states that he is in no hurry to move, as he considers the immediate future of the local retail trade as rather uncertain, and prefers to rely on the wholesale trade at outside points. He believes that there will be no difficulty later on in getting a suitable location, possibly at lower rental than is now asked. In the meantime he has been receiving many valuable suggestions as to the method of fitting up a new establishment from the branch managers through the territory, and will make the new place a result of the combined experience of the Columbia men all over the Coast.

While the local music houses are probably paying more attention to the talking machine line than ever before, some of the older dealers remark that conditions have changed since the fire, and it is no longer an easy matter to build up a large business. The amount of competition has increased to a large extent. In addition to the increased departments at several of the piano stores, many small retailers have started up in the outlying districts, and talking machines have become a popular side line with many classes of business. This is all very well for the wholesalers, and most of the new retailers have managed to do fairly well, but to get a large retail trade requires more ability than in former times.

Both the Edison business phonograph and the Commercial graphophone are making rapid advances in this city. Peter Bacigalupi & Sons have been giving a great deal of prominence to the Edison machine for the last few months, and have placed the machines on trial in a number of large local business houses.

P. H. Beck, lately with the business phonograph department of Peter Bacigalupi & Sons, and formerly with the Columbia Phonograph Co., is now associated with the retail department of the Pacific Phonograph Co.

Manager C. M. Jones, of the Pacific Phonograph Co., states that this month has not been as good as April, though he has no ground for complaint. The company have taken orders for over 150 of the new model Edison machines, and there is no doubt that when they arrive next month there will be a big demand for them.

John H. Gill, representing the National Phonograph Co., remained in San Francisco most of the month, but has just left for the East.

Mr. Schramm, of the cabinet house of Schramm Bros., Chicago, was in the city recently.

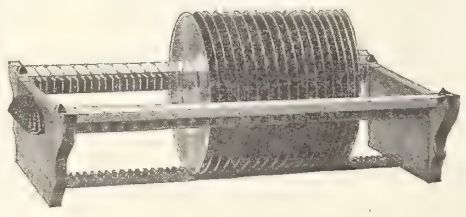
Willis S. Storms, a talking machine man of Baltimore, Md., is visiting the trade in San Francisco.

If Kohler & Chase move down town in July, as they have planned, the Pacific Phonograph Co. will go with them, and will occupy a large part of the building. The deal has not yet been concluded, however, and it is still uncertain whether the move will be made or not.

The new building of the Wiley B. Allen Co. will be ready in about a month, and the talking machine department of this store will be about the largest in the city, occupying the entire Sutter street wing of the store, from basement to mezzanine floor. It will be made as complete as possible, with ten rooms for the demonstration of records alone, and no expense will be spared in fitting it up according to the most approved standards. The company has always kept out of the talking machine business in this city in the past, though departments have been conducted successfully by several of the branches. Now the city store will take a hand at it, and with the standing which this house has gained in other lines its success is assured.

Manager A. G. McCarthy, of the talking machine department of Sherman, Clay & Co., is taking a short vacation.

On Sunday, May 16, the employes of Sherman, Clay & Co. and the Wiley B. Allen Co., talking machine and piano dealers, played a game of baseball, Sherman, Clay & Co. winning the first game by the score of 9 to 4. The following was the line-up: Wiley B. Allen Co.—Felvey, Baker, Shortley, Anrys, Manning, Black, Stahberg, Harris, Smiley and Weldon. Sherman, Clay & Co.—Mack, Rothlin, Dinkel, Lausten, Moore, Skinner, Ringen, O'Connor, Nicholas and Merle. The features of the game were the pitching of both Weldon of W. B. A. Co., and Merle, of S. C. & Co., they striking out a number of the heaviest batters. The batting of Black, of W. B. A. Co., and W. O'Connor, of S. C. & Co., were of big league caliber. The game was remarkably well played, considering the lack of practice the boys had; the entire nine innings being played in one hour and forty minutes.



BREAKING THE RECORD
Is the Aim of the World in General
PRESERVING THE RECORD
Is the Aim of Talking Machine Owners

They can do it at small expense by means of the

Crescent Disc Record Cabinet

Just as Effective for Double as for Single Face Records.

The CRESCENT holds fifty records, holds them securely and SEPARATELY—absolutely no rubbing or scratching as the record comes in contact with no other record or surface.

People already owning cabinets will buy the CRESCENT for the new double face records when its advantages are explained to them.

The CRESCENT is convenient, occupies small space, is attractive in appearance. The selections can be inscribed on the white spaces in full and instantly located, thus doing away with the numbered index.

RETAIL PRICES:

A. E. CROFT & CO.

40 DEARBORN STREET MANUFACTURERS CHICAGO

EASTON LIVES IN HISTORIC SPOT.

His Home at Arcola, One of the Sights of That Section of New Jersey.

Northwestern New Jersey abounds in spots of historic interest—in fact, that section of the State is dotted with fine old stone buildings, which have been in existance since 1700. One of these, the Doremus Homestead, at Arcola, is a fine example of the early architecture of the Colonial days. This little town is proud, by the way, of being the home of Edward D. Easton, president of the Columbia Phonograph Co., who purchased an immense tract of ground and transformed it into a veritable paradise. The natural beauty of the locality has been enhanced rather than cultivated, and the whole forms a park which is a delight to those who pass that way. A tour through this country is always a delight to automobilists, for on every side one sees evidences of the early days of our country's history when the troops of Washington and the British were at various times camped in that locality.

Chas. Lampe, Seattle, Wash., is one of the hustling talking machine dealers of that town. He is going after business hard and says it is improving daily.

LOUIS BUEHN, Treasurer

PERRY B. WHITSIT, Secretary

Lawrence McGreal **W. E. Henry** **Carl N. Droop**
E. H. Uhl **J. Newcomb Blackman**

ARE YOU A MEMBER?

If you are not, but are engaged in the jobbing of standard make machines and records at wholesale, you should become a member. The association is young, but has accomplished a great deal.

The credit system affords a valuable protection in extending credit, and a large membership adds weight to all subjects presented to the manufacturers. The dues are but $15.00 per year, payable semi-annually.

We have most all who do a real jobbing business, but there are still some who should support the cause by joining. You can attend the convention without being a member, but it would be better to join and take an active part in the meetings.

Send in your application now to J. Newcomb Blackman, Chairman Membership Committee, 97 Chambers Street, New York.

RECEPTION COMMITTEE

For Convention, Atlantic City, July 6, 7, 8, 1909

W. D. Andrews	Syracuse, N. Y.
Carl N. Droop (E. F. Droop & Sons Co.)	Washington, D. C.
B. L. Crew (Phillips & Crew Co.)	Atlanta, Ga.
C. H. Roush (Standard Talk. Machine Co.)	Pittsburg, Pa.
J. F. Fintze (Ball, Fintze Co.)	Newark, O.
B. J. Pierce (J. W. Jenkins & Sons' Music Co.)	Kansas City, Mo.
Max Strasberg (Grinnell Bros.)	Detroit, Mich.
Geo. C. Mickel (Nebraska Cycle Co.)	Omaha
H. H. Blish (Harger & Blish)	Dubuque, Ia.
A. J. McCarthy (Sherman, Clay & Co.)	San Francisco, Cal.
W. E. Henry (care Zelda Apartments)	Los Angeles, Cal.
E. F. Taft (Eastern Talk. Machine Co.)	Boston, Mass.
R. H. Wurlitzer (Rudolph Wurlitzer Co.)	Cincinnati, O.
Lawrence Lucker (Minnesota Phonograph Co.)	Minneapolis, Minn.
E. J. Heffelman (Klein & Heffelman)	Canton, O.

THE National Association of Talking Machine Jobbers will hold their second annual convention at Atlantic City, July 6, 7 and 8th, 1909.

The object of the convention will be to bring the manufacturers and jobbers together as a harmonious unit to promote any subject that appears for the improvement of the industry.

It will be an opportunity for jobbers to exchange views, make suggestions, get new ideas, study the ways of the most successful.

Just the time to visit the Talking Machine factories, as they are within a short distance.

For the manufacturers what better chance could be offered to inspire confidence in the future, create optimism and enthusiasm, so that their jobbers will return and spread it among their dealers.

Dealers are also invited to attend, and it would be a good time for a few "live" ones to organize a Dealers' Association.

We want this convention to be the "greatest ever" and all must "pull together." Everybody should come, everybody in the industry is invited and will be benefited.

Send the firm, send your managers, salesmen, and be prepared to do your share in making this convention the signal for the return of prosperity.

Don't forget to bring the ladies; we want them to come and enjoy Atlantic City; we want them at the banquet. Make this your vacation, if necessary. You will have plenty of time for pleasure, for the convention will last three days, and it is our intention to reserve the mornings and evenings for pleasure. Will you be with us? All inquiries will have prompt attention if addressed to J. Newcomb Blackman, 97 Chambers Street, New York.

THE CONVENTION WILL BE HELD AT

THE HOTEL CHALFONTE.

Yours very truly,

COMMITTEE OF ARRANGEMENTS,

J. Newcomb Blackman, Chairman.
Louis Buehn.

HOTEL CHALFONTE CONVENTION RATES:

AMERICAN PLAN (INCLUDING MEALS)

One room, when occupied by one person, $3.50 to $4.50 per day.
One room, when occupied by two persons, $6.00, $7.00 and $8.00 per day.
One room, with bath, occupied by two persons, $10.00 per day.
One extra large room, with bath, for two persons, $12.00 per day.

MILWAUKEE'S BUDGET OF NEWS.

Trade in Wisconsin Rather Quiet—Lawrence McGreal Entertains Merchants and Manufacturers on Trip—Also Tries the Effect of Talking Machine Music on Animals in the Zoo—New Columbia Branch—Other News of the Month.

(Special to The Talking Machine World.)

Milwaukee, Wis., June 8, 1909.

There is no getting around the question that the retail talking machine trade in Milwaukee and about Wisconsin is rather quiet at the present time. General business seems to be dull in the city, and retailers say that they are faring no worse than other lines of business. Plenty of improvement within the next few weeks is expected, however. It will not be long before the summer resort season opens up, and then business will be all that can be asked for. The unusual dulness in the country trade is due to the fact that the remarkably late spring has hindered farm work to such an extent that farmers are busy making up for lost time and have no thoughts of buying talking machines.

The wholesale business is much more satisfactory than the retail, although there is plenty of

MR. McGREAL EXPERIMENTING WITH BUFFALOS.

room for improvement in this field also. Dealers are stocking up carefully, but owing to the fact that stocks are remarkably low all over the State, it is felt that there are good times ahead in the wholesale field.

Lawrence McGreal, the well-known jobber and dealer, was a prominent member of the party of Milwaukee business men who enjoyed the recent annual junket of the Merchants and Manufacturers' Association. The trip was made to Michigan territory this year, and included a journey by boat to Ludington, and thence by rail down the western coast of Michigan. Mr. McGreal took two of his talkers along to amuse the big party, a Victrola and an Edison, and a remarkable collection of records. Last year Mr. McGreal made several substantial sales as a result of a similar trip.

Lawrence McGreal recently worked a novel experiment at the Washington Park Zoo as a result of a wager on the part of Mr. McGreal that animals could appreciate music. Mr. McGreal, a photographer, a newspaper man and a retinue of followers witnessed the effect of the "canned" music upon the animals as a talker from the McGreal establishment was started before various cages. Mr. McGreal won a good dinner on his contention that the animals could distinguish between good and bad music. The "Salome" dance music didn't have much of an effect upon the snakes of the place, but the "Merry Widow Waltz" caused the "Countess Heine," the elephant, to waltz merrily up and down her enclosure. "The Campbells Are Coming" made a big hit with camels, while the buffalos were interested in "Put Me Off at Buffalo." "Honey Boy" worked wonders with the bear family, but a song by Caruso made the inhabitants of the monkey house beat a quick retreat. Altogether, the experiment was a most interesting one and proved to be a great advertisement for Mr. McGreal. "Any animal can appreciate music," said Mr. McGreal; "why, the little monkey that I brought up from Cuba for my boy, Jack, sits up and takes notice every time that we turn loose a record at home."

An improved demand in both the Edison and Victor line is reported by Alfred Hille, manager of the Flanner Music House.

Henry Saak, instalment manager of the Columbia Co., has opened a new retail store at 1602 Vliet street, where the entire Columbia line will be carried. A five-year lease has been taken and an especially large stock has been put into place. Mr. Saak will devote much of his time in outside territory, making long trips in his automobile, while Mrs. Saak will be manager of the establishment much of the time. Mr. Saak has been in the employ of the Columbia company for more than five years, and has been connected with the Milwaukee branch since its establishment.

The Hoeffler Mfg. Co. had one of the finest Memorial Day window displays seen in Milwaukee. Machines, records and supplies were intermingled with a remarkable exhibit of American flags, and the window reflected much credit upon Manager J. H. Becker, Jr.

A. D. Herriman, local Columbia manager, was in Chicago a few days ago, talking over plans for the summer campaign at the Columbia headquarters.

Mrs. G. A. Knapp and Harvey Durand, of Fond du Lac, Wis., have just presented a new talking machine to the Home of the Friendless in that city. The gift was made on the condition that friends of the institution would donate at least $50 worth of records. This was done, and now the machine is whiling away many hours for the inmates.

Lawrence McGreal is already making his plans for attending the coming convention of the National Talking Machine Jobbers' Association at Atlantic City in July. Mr. McGreal believes that several important matters of interest are coming up before the body this year.

George D. Ornstein, manager salesman of the Victor Co., was a recent visitor.

F. K. Dolbeer, general sales manager of the National Phonograph Co., was in town recently while on his way to Winnipeg, Can. Mr. Dolbeer reports that business is steadily improving.

William Schmidt, Wisconsin representative of the Victor Co., has returned from a trip about the State. He reports that the country trade is rather quiet, but that business in the larger towns and cities is more satisfactory.

William P. Hope, Wisconsin and Upper Michigan representative of the National Phonograph Co., has been making a successful business trip to northern and central Wisconsin.

Lawrence McGreal was a prominent member of the Milwaukee reception committee which welcomed the party of 400 members of the Detroit Board of Trade who visited Milwaukee last week. Several leading talking machine jobbers and dealers of Detroit were included in the party.

George Cremer, successor to the former Huseby Co., reports a good trade for the past four weeks. An especially strong line of supplies and records is being carried and the total volume of business received is very satisfactory.

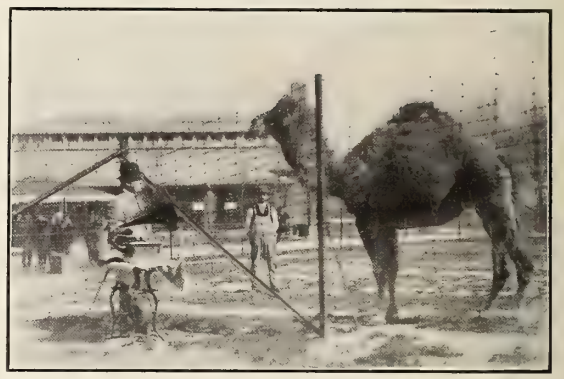
W. Wicks, the enterprising young manager of the automatic piano department at the Hoeffler Co. establishment, reports a big increase in business. The Hoeffler Co. has more automatic pianos in use in Wisconsin than any other concern in the State.

A stock of more than 8,000 wax records were sold by the Columbia store during the last two weeks in May. A special sale was carried on and the records were disposed of at 15 cents as fast as shipments of new stock could be received. Manager Herriman reports a lively business in the Indestructible records. As soon as the wax records are disposed of only the Indestructible records will be carried.

E. R. Austin, manager of the Edison business phonograph line at the Hoeffler Co., has resigned and is now located at Rochester, N. Y. A successor to Mr. Austin has not been chosen as yet.

Roy Keith, of the Talking Machine Co., Chicago, called upon the Milwaukee trade recently.

A big sale of "Yip! I Adee! I Aye" records by Miss Blanche Ring are reported by Manager



MR. McGREAL AND THE CAMEL CLAN.

Becker of the Hoeffler Co. Mr. Becker arranged a catchy window display which brought in a steady run of customers to hear the new records.

A NOVEL LIBRARY FEATURE.

Northampton, Mass., Library to Loan Out Talking Machine Records and Music Rolls —Recitals to be Given.

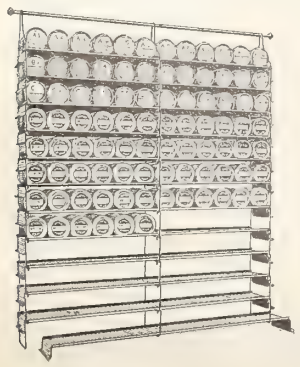
(Special to The Talking Machine World.)

Northampton, Mass., June 5, 1909.

There is a possibility that the work of the Forbes Library in this city may be considerably broadened by the addition of a novel and interesting field. Tuesday evening there gathered in the large room on the second floor of the library building members of the library staff and their friends, and entertainment was furnished by a phonograph, on which a fine series of records was run off. The recital was given so that Librarian W. P. Cutter might test the accoustic properties of the room and determine whether or not it is properly constructed for phonograph and piano-player recitals.

Speaking of the recital and his plans Librarian Cutter stated that for some time he had had in mind adding to the library equipment a collection of records for talking machines and of perforated rolls for piano players. He said: "You know there are large numbers of talking machines in town, and that there are also many automatic piano players. It has seemed to me that the library would be doing a good work if it added to its books and pictures records for home use. As it is possible now to obtain records and perforated rolls from which whole operas may be reproduced, I have given some thought to the feasibility of having recitals given in the large upper room of the library."

Floyd Waggoner, of Milton Center, O., has purchased the talking machine stock of W. A. Longbrake & Co.



Patented July 28, 1908

THE GREAT DEMAND FOR

Schubert Extensible Rack Shelves

Has made it necessary for larger and better manufacturing facilities and reducing the price to

35 CENTS!

Now affords dealers to offer their trade the simplest, convenient and cheapest means for keeping records. Made of sheet steel, nicely enameled, so shaped that racks of any size, ranging from 1 to 20 or more shelves can be formed. Easily put together and taken apart. Rack when once started can be added to as desired, thus building as records accumulate. Dealers need but a few shelves to supply a large trade. Can be had ONLY through your jobbed. Write him for illustrated circular, entitled "*New Prices*," which gives dealer's discounts and special terms. Be sure to mention the June Talking Machine World.

G. H. SCHUBERT, Patentee, 199 W. Madison St., Chicago.

THE TRADE IN INDIANAPOLIS.

Continued Bad Weather Takes Life Out of Business—Advance Orders, However, Please Dealers—Selling Out Columbia Wax Records—Musical Echo Co. Give Victor Recital—New Columbia Manager in Terre Haute—What Various Houses Are Doing to Boom Business—News in the Vaudeville and Moving Picture Shows.

(Special to The Talking Machine World.)

Indianapolis, Ind., June 6, 1909.

Bad weather has interfered considerably with the talking machine business in Indianapolis territory in May. The weather probably has been the chief factor which has militated against the business. Several houses say, however, that their advance orders are very satisfactory and they are expecting this month to make up for the dull business in May. This is encouraging from the fact that June is ordinarily a dead month. However, Charles Craig, an old talking machine dealer, who was formerly proprietor of the Indiana Phonograph Co., says that June of 1905 was one of the best months he ever had.

Advance orders for the coming month which have been booked by the Indiana Phonograph Co., are most encouraging according to the proprietors of that company. The advance orders for records will run far above the average and the number of dealers giving orders is fully one-third greater than the usual number. The Indiana Phonograph Co. handle Edisons.

Among the June records the best sellers of the Indiana Co. are the Semper Fidelis march, a four-minute record by the United States Marine Band, and "He Will Hold Me," a two-minute record.

The sale of XP records at the new price has been a boon to the Columbia business in Indianapolis territory. Many dealers have taken advantage of the selling value of the wax records at the new price as a business getter. They have advertised them on the theory that they would be fully compensated by the number of people who would be drawn to their stores. As for the sale of the records themselves there is not much profit in selling them at 15 cents retail.

The Musical Echo Co. who handle Victor machines, gave a recital recently at Caleb Mills Hall. An auextophone was used, the English Opera House Orchestra playing the accompaniment. The concert was well attended. The Musical Echo Co. are pushing their business among the wealthier classes.

L. A. Mohler, who until a few weeks ago was doing the road work for the Indianapolis store of the Columbia Co., has been placed in charge of the Columbia branch at Terre Haute and is getting along in a very satisfactory way. C. V. Weaver has succeeded Mr. Mohler as the road representative of the Indianapolis store and is meeting with success.

The Crystal Theater Co., which operates a five-cent vaudeville house and moving picture show in North Illinois street, has added to its equipment by buying a Columbia Symphony Graphophone. The company reports that it is a good business getter. Charles Olson, the heavyweight champion, is the main proprietor of the Crystal Co.

Thomas Devine, of the Columbia Co., has hit on a good plan for calling attention to the grand opera records of his company. He has taken a grand opera catalog and has cut out the leaves and arranged them in a large frame so that the pictures and selections of each are shown to all who pass the show windows. The display has attracted considerable attention.

The Columbia Co. report that "Just Someone," by Henry Burr, is proving to be one of the best sellers among the June records. This company is also having a good sale on Constantino, Zenatello and Bispham records.

The Kipp-Link Co. report a fair business. This company, who handle Victors and Edisons, are advertising the June records extensively.

The D. Somers Co., Columbia dealers, are planning to move into a large new building of their own at Capitol avenue and Washington street. The building will be of modern style and it is probable that one floor will be devoted entirely to the talking machine business. The company are at present located in Washington street, between Illinois and Meridian.

The ten-cent vaudeville and moving picture shows have opened up at the English Opera House, which during the winter season is used by the best opera companies. The summer season promises to be successful.

VICTOR ON FREE TRIAL OFFER.

Strawbridge & Clothier, of Philadelphia, Found This an Excellent Means of Developing New Business.

Strawbridge & Clothier, of Philadelphia, Pa., recently disposed of a great number of Victor machines through a free trial offer which they sent out to customers for charge accounts. The circular, which was accompanied by a coupon, is worth quoting, as an example to jobbers and dealers of how this enterprising store in the Quaker City sells Victor machines:

"We know the Victor talking machine to be a great musical instrument and we wish you to know this, too. In order to know the Victor you should hear it in your home; and, if you will permit us, we will send you a Victor and one dozen records on three days' trial, without expense or obligation on your part.

"Victor records include the reproductions of selections by the world's greatest singers, bands, orchestras and soloists, and when records by Tetrazzini, Caruso and the other grand opera artists are played on the Victor, the hearer frequently looks for the singer, thinking these magnificent voices come directly from human throats.

"To know the Victor is, in most cases, to want to own one. If, after you hear the Victor in your home, you wish to buy, instruct us to charge to your account in one sum; or, if you prefer, as little as $4 each month until paid for. If you do not wish to keep the machine and records, ask us to call for them and we will do so. Please understand that this is a free trial offer, without expense to you—simply fill out and mail to us the attached coupon. Very truly yours, Strawbridge & Clothier."

Four big sellers in the June supplement of the Victor Co. in the black label class are: Charlie Case, the monologist; Walter Van Brunt, a new Victor tenor; Mose Tapiero, ocarina soloist, and Ward Barton, yodler.

TO SAIL AIRSHIPS BY MUSIC.

Baconian Cipher Man Plans Flyer With Sound Wave Vibrations as Power—Gravity Law Is Void—Declares Seven Bells Lifted 22 Tons of Steel During Experiments.

(Special to The Talking Machine World.)

Detroit, Mich., May 28, 1909.

A new force, which will overcome the laws of gravitation, is announced here, in the intense vibration caused by the ringing of bells, so attuned as to send forth a tumult of waves.

So enthusiastic are the discoverers of this new force that they will construct a double-deck airship equipped with massive but melodious bells which, when ringing in accord, they say, will not only sustain the ship in mid-air, but will supply the motive force as well.

Dr. Orville W. Owen, scientist investigator and formulator of a Baconian cipher key to Shakespeare's plays, and F. W. Henninger, former football star, and present treasurer and manager of the Sheet Steel Stamping Co., are the chief stockholders in the Standard Aviator Co., incorporated yesterday.

The company proposes to build a mammoth airship as soon as the workshop can be got ready, and with this bell-equipped ship say they will revolutionize the world of aeronautics.

In discussing his new theories Dr. Owen said:

"We have been experimenting for two years and we have a set of seven bells in the Sheet Steel Stamping Co.'s shops from which we have secured vibrations sufficient to lift a mass of steel of twenty-two tons weight from the ground.

"We propose now to build a double-deck airship about 80 feet long and 40 feet wide, to be equipped with bells for lifting and machinery for propelling.

"Did you ever see a meadow lark leave the ground and go up 75 feet in the air in a straight line, and then drop back without moving a wing? The lark does that by vibratory motion of the body. That is just what we expect to do with our bell vibrations."

RAFFLE OFF VICTOR OUTFIT.

The I. T. Y. T. Club, composed chiefly of New York furniture men, held their annual outing on Decoration Day at the Wawayanda Club, in Great South Bay, Long Island. A fine Victor talking machine and 150 records were taken along to enliven the occasion, the outfit being raffled off for a good price when the outing was over.

WOOD DIAPHRAGMS

For cylinder records; every detail reproduced; nothing missed.
For the four-minute records they are a revelation.
PRICE, (including cross head and link) $1.00 each.

MASTER RECORD MOULDS

Absolutely perfect copper matrices from cylinder masters furnished at short notice. By our new process we produce a matchless surface, even improving that of the master. Prices furnished on application.

SLOT PHONOGRAPHS

Large and small lots of slot phonographs to rent for parlors and summer resorts at nominal prices.

NORCROSS PHONOGRAPH COMPANY

New Lang Building, (39th Street) 662 Sixth Avenue
NEW YORK CITY

Wood Horns (NOT VENEERED)

GUARANTEED GOODS

Guarantee satisfied customers, which means a steady income to a dealer.

We guarantee to replace any MUSIC MASTER WOOD HORN that shows any defect of any kind at any time, ***without charge.***

No other horn carries a guarantee—one of the reasons for pushing the sale of the MUSIC MASTER.

THE MUSIC MASTER is the only ***solid*** wood horn on the market.

You could not get a musical tone from a metal or veneered wood piano sounding-board. Tone quality is another reason for handling the MUSIC MASTER WOOD HORN.

Have one sent on approval, choice of Oak, Mahogany or Spruce, ***for any make or style machine.*** If your jobber cannot supply you, write us.

SHEIP & VANDEGRIFT, Inc., Manufacturers and Patentees **Philadelphia, Pa.**

BERLINER GRAMOPHONE CO., Montreal, Canadian Distributors. COLUMBIA PHONOGRAPH CO., exclusive distributors for Music Master Horns to fit Columbia Graphophones.

MAKING RECORDS IN PORTO RICO.

William Friedberg Accompanied by Hugo Emerson Making a Repertoire of Native Masters for the Columbia Co.—Will be Supplied to Local Agent.

William Friedberg, an expert in the recording laboratory of the Columbia Phonograph Co., General, sailed from New York, May 22, on the Ward liner, for San Juan, Porto Rico, W. I., where he will make masters of vocal, instrumental and talking local talent, especially for Gonzalez Padin Hermanus, exclusive Columbia jobber in that city, for the entire island. Hugo Emerson, son of Victor Emerson, general manager of the Columbia laboratory, accompanied Mr. Friedberg, and will assist him in his work, that may keep them in Porto Rico for an indefinite time, or until a sufficient number of satisfactory masters have been obtained. These records will also be listed in the regular export catalog of the company.

The visit of Mr. and Mrs. Friedberg to Porto Rico is thus referred to by our contemporary, the Newark (N. J.) Star:

"In the course of the next three or four months there will be let loose on the blasé American public an assortment of canned music that will be calculated to put life into even the most bored. Love songs in the original Porto Rican language, whatever that may be, will be heard floating from every apartment house window on quiet summer nights, vieing with the industrious mosquito in making sleep a longed-for and unachievable goal. Porto Rican folk dances will assault the ear from every source, while no public place will be completed without a phonograph, including a record imprinted with the Porto Rican equivalent for 'We Won't Go Home Until Morning.'

"The expedition which is to corral these harmonic efforts of the guileless Porto Rican aborigine will leave to-morrow morning and will be headed by William Friedberg and his wife, of 457 Orange street. Like a certain naturalist now on the other side of the world, Mr. Friedberg will not content himself alone with the objects of his hunt, but will secure pictures as well, the photographing to be done by Mrs. Friedberg.

"As on all great expeditions of research special paraphernalia has to be employed, among which is a recording horn, peculiarly adapted to the work in hand, and invented by Mr. Friedberg himself. The utility of this instrument has already been proven by the work it did when Mr. Friedberg took it to China and Japan with him and collected with his machine a few national anthem and topical songs from the inhabitants of those countries. Mr. Friedberg is connected with the Columbia Phonograph Co."

CAN'T OPERATE "TALKERS"

In Front of Moving Picture Shows in Reading, Pa.—Recent Ordinance Basis for This Action.

(Special to The Talking Machine World.)

Reading, Pa., June 1, 1909.

After to-day it will be unlawful for managements of moving picture shows to operate phonographs in front of their places of amusement. Mayor Rick has signed the ordinance placing a ban on all such. The measure had some hard sledding in its passage. In common branch it was defeated, reconsidered and finally passed, after much discussion as to the relative merits of its provisions.

NEW WAY TO FIGHT THE DEVIL.

The New York Evening Post recently published the following letter from a New Yorker, which, besides showing a decided lack of musical appreciation, offers a new means of escape for trembling sinners who fear fire and brimstone: "Sir:—Yesterday I had my first mess of operatic music. I accidentally got into a church intended for people of culture. I had always supposed that operatic music was written just to show the different kinds of sound that can be made with the voice. But now I think that there may be another use for it. I advise the rich men in that church to have the choir sing into a lot of phonographs, and when they die keep the phonographs going day and night in the vaults where they are buried. Satan would never come after them as long as he heard that noise."

VICTOR CO. WIN AGAIN

In Their Suit Against the Duplex Phonograph Co.—Found Guilty of Infringement and Permanent Injunction Issued Subject to Appeal.

(Special to The Talking Machine World.)

Grand Rapids, Mich., May 31, 1909.

The case of the Victor Talking Machine Co., Camden, N. J., against the Duplex Phonograph Co., of this city, which was argued a year ago, was disposed of Thursday last adversely to the defense. Judge Knappen, of the Circuit Court of the United States, eastern district of Michigan, was materially assisted in writing his opinion, covering eight typewritten pages, by the decision of the Supreme Court of the United States in the Leeds & Catlin Co. case, which practically dismissed the majority of the defendants' pleadings, so far as they related to the Berliner patent. The court also found the Duplex Phonograph Co. guilty of infringement, and the injunction was therefore made permanent, subject to an appeal, which will be taken to the Circuit Court of Appeals.

AFTER THE ENCORE.

The bright red phonograph sang long and loud at an east side cafe. When it finished the people clapped. It replied with an encore, and the people clapped again.

"What makes you look at it so hard?" asked the woman's companion, for her eyes were fixed on the phonograph.

"I am just waiting," she said, "to see it get up and bow."

TRADE IN SOUTHERN CALIFORNIA.

Good Summer Weather Agreeable to Trade—Elks Convention in Los Angeles Expected to Stimulate Sales—Sherman, Clay & Co. Receive Big Victor Shipment—Good Demand for Edison Goods—J. H. Andrews With Fitzgerald Music Co.—An Attractive Victor Window Display—Good Columbia Trade—Other News of Interest from Los Angeles.

(Special to The Talking Machine World.)

Los Angeles, Cal., May 29, 1909.

All Southern California is by this time enjoying regular summer weather which is most agreeable to the trade. With the coming of the Elk's Convention, which will be held in Los Angeles during the month of July, business is expected to be very good. Great preparations are being made for this big gathering of "The Best People on Earth." The city is to be beautifully decorated for the event, which promises to be the largest and grandest celebration ever held in this city. Summer vacations are being mapped out by members of the trade when they will spend a while in recuperation.

Sherman, Clay & Co. have received another shipment of Victors and Victrolas, which is good news to the dealers, since there has been a shortage of these goods. Business is good with this house despite the shortage, which did not last long. The new list of double faced Victor records has been received by the trade, as has also the notice of price changes in de Gogorza records.

The Southern California Music Co., Edison jobbers, have received a sample for demonstration of the new style Edison Fireside which they are displaying to the trade. This new model is destined to meet with great success in Southern California and surrounding territory owing to the extremely low price and the fact that it will play the new four-minute Amberol records. Many orders have already been received which are steadily increasing with every mail. A shipment of the new Reginaphones has been received by the same firm and much admiration is expressed for them. They will be carried in stock as a regular line from now on. The business phonograph department has received a great deal of attention within the last few weeks and the results have been very gratifying. A display representing an office room in which a business man was dictating while the stenographer was transcribing from the machine. A similar display was made some time ago which attracted a great deal. The latter was even more attractive being operated by human beings instead of wax figures as in the former. C. D. Helyer, who is now in charge, is meeting with splendid success in this department.

I. H. Andrews, who for a long time has been connected with the George J. Birkel Co., has left that concern to take the management of the Fitzgerald Music Co.'s new talking machine department. Mr. Andrews is one of the oldest men in the trade and is backed by considerable experience in the talking machine business. He has made some changes in the new department which is now complete and reports a good trade.

Hamberger's department store have arranged a most beautiful display in their Broadway windows in the form of a living room with its occupants listing attentively to the Victor. A more impressive display could not be made.

The demand for Victrolas has been very great with the Wiley B. Allen Co., as a result of their continued advertising to sell them at the lowest terms. They have been having splendid success with their new repair department, which is under the direction of an expert.

The Holmes Music Co. are considering the addition of a new room in which to display a complete line of Victor machines. They are much encouraged over trade conditions.

The George J. Birkel Co. are giving Victor recitals weekly as usual. The Auxetophone has been the source of great interest to those who attend these concerts, it being used as a soloist with an orchestra accompaniment.

The Columbia Phonograph Co. report trade very good in both double discs and indestructible records. Charles Kauffman, their traveling representative, has just returned from a trip through Arizona, where conditions are very good he says.

Edward Borgum, of the Southern California Music Co., has returned from a trip through the northern sections of the State, where he was welcomed with a goodly share of business. He is introducing the new Burson brake for all types of disc machines and is meeting success, having taken a number of orders for the same on his trip.

TO MOVE TO PULASKI.

Wooden Phonograph Horn Co., of Syracuse, to Move Plant to That City.

(Special to The Talking Machine World.)

Pulaski, N. Y., June 7, 1909.

Another new industry will soon be brought to Pulaski. It is the Wooden Phonograph Horn Co., of Syracuse, who have been engaged for some time in manufacturing horns for talking machines. C. J. Bortel is the president of the company and his brother, A. B. Bortel, is vice-president.

Richard R. Box, of the Tollner Co., owners of the box works, was recently in Syracuse arranging for the removal of the plant to Pulaski. While the new industry will be operated in the same buildings, the Tollner Co. remains unchanged, although the members of the latter concern as individual members hold the controlling interest in the Syracuse concern, which will soon be in operation here.

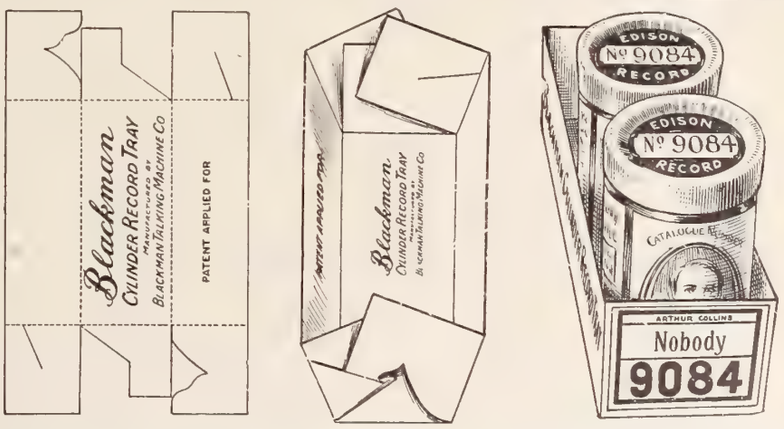
YEAGER CO. HAVE COLUMBIA LINE.

The Yeager Piano Co., at Waterbury, Conn., have bought out the stock of the Columbia Phonograph Co., of that place, merged it with their business and became jobbers of the line for their territory. A. A. McGowan, former manager of the Columbia store, will have charge of the Yeager Co.'s talking machine department. H. A. Yerkes, chief of the Columbia Co.'s wholesale section at headquarters, negotiated the sale.

In order to give proper attention to their steadily growing business, the American Phonograph Co., Detroit, Mich., recently moved from 106 Woodward avenue to 252 Woodward avenue, in that city, where they have larger and handsomer quarters. The company are jobbers of Edison goods and by sticking to their motto of prompt service have built up a decidedly prosperous business among the dealers in Northern Ohio and Indiana and all of Michigan.

IMPROVE YOUR SYSTEM
AND
INCREASE YOUR RECORD SALES
BY USING
THE BLACKMAN CYLINDER RECORD TRAY
(Patent Applied for)

A Record Tray With Record Label for Less Than One Cent



The BLACKMAN Folding Trays for Cylinder Records are shipped FLAT and can be FOLDED into STRONG TRAYS in a few seconds, as shown above. This tray, with Rapke Label, makes a handsome looking record stock and a system you can't beat. The labels act as Silent Record Salesman and the customer can point to the record he wants to hear. Adopt this system and your sales will not only increase but it will never take more than a few minutes to make up a Record order.

THE BLACKMAN FOLDING TRAY USED IN THE SYRACUSE WIRE RACKS
enables you to carry a large stock in a small space, and also use the Rapke Label. We furnish wire racks at regular prices, either wall or revolving style, with opening to accommodate Blackman Trays. See illustration in advertisement of Syracuse Wire Works on page 15 of this issue. Write for prices.

Edison Records
By Victor Herbert

MR. HERBERT is a great believer in sound-reproducing instruments. He believes that in no other way can so many people learn to appreciate and enjoy good music.

Mr. Herbert knows good music—how to compose it and how to produce it. He believes that Phonograph music, as good as it is, can be made better. He is going to act on that belief.

Under an arrangement recently consummated he will assist in the making of Edison Records.

He will not only select the songs and music to be reproduced and the artists best qualified to render them, but will also act as critic of the Records after the masters have been made.

Under this arrangement the Edison Company has not only his exclusive services in this regard, but also the exclusive right to reproduce the selections of his famous orchestra, playing under his leadership.

Under Mr. Herbert's guidance Edison Records will rise to a higher plane than ever in the matter of music offered and with the long-playing Amberol Records at his disposal, practically nothing that he considers good is beyond the mechanical possibilities of the Edison.

Are you equipped to take advantage of this notable advance in Phonographic development?

If not, take the matter up with us at once, or with a nearby jobber who has everything for your needs. See list on page opposite.

National Phonograph Company

59 Lakeside Avenue **ORANGE, N. J.**

Only Edison Phonographs Play Amberol Records

People want Amberol Records because of their long playing time—longer than that of any other records.

Because they play longer they furnish more entertainment with less record changing than other records.

But the great demand for Amberol Records is due to the fact that they offer songs and music that no other records offer.

Most any composition can be crowded on a record or cut to fit, but they lack all the essentials of good reproductions and are unsatisfactory.

These longer selections, some of them the best things that have ever been written, are all possible of reproduction on Amberol Records. There is no cutting and no hurrying—in fact they come from the Edison Phonograph just as they are written and just as their composers intended they should be performed.

Do not overlook this great feature of the Edison Phonograph—exclusive selections; selections that no other instrument does or can offer.

With Records of this kind and the country's greatest musician and composer to direct their making, you have in Edison Phonographs a proposition that is unequalled.

Have you the full line of Edison goods? If not, take the matter up at once with an Edison jobber. The big advertising we will do at once on these new Edison achievements is going to stir things up to your advantage.

TRADE NEWS FROM SAINTLY CITY.

Business Satisfactory—T. B. Anderson to Continue in "Talker" Business—Featuring the Victor Line—News of the Travelers—Columbia Co. in New Quarters—Silverstone Store Rearranged—F. K. Dolbeer a Visitor—Thiebes-Stierlin Music Co. Enlarge Department—Other News of the Month.

(Special to The Talking Machine World.)

St. Louis, Mo., June 6, 1909.

The talking machine business for the month of May is reported to have been quite active in the wholesale branch and fairly good in the retail department. It makes a much better showing than for the same month one year ago.

Manager O. A. Gressing, of the St. Louis Talking Machine Co., returned from a trip to Memphis and Little Rock and reports that F. G. Atwood, of Memphis, has renewed his activities on the Victor and is putting in a complete stock of Victor machines and records. Mr. Atwood is an extensive Edison jobber, but will promote the Victor in the future as vigorously as his other interests.

The Anderson-Reinhardt bankruptcy at Memphis will shortly be wound up, and T. B. Anderson, the senior partner of the old firm, will continue in the talking machine business, handling Victor products only.

Mr. Gressing reports conditions in Tennessee and Arkansas as showing a decided improvement, but just now the country is almost entirely under water from continued rains. The damage is not estimated as serious, and cotton promises a banner crop.

One of the best examples of a show window that is a stimulator and a creator of business is the very beautiful display in the window of the St. Louis Talking Machine Co.'s store on Olive street. The Victrola is featured in particular, showing five different finishes in mahogany, Circassian walnut and oaks. Tastefully arranged about the remainder of the space are a quantity of Red Seal records, framed photographs of prominent artists and a large sign, beautifully framed, bearing the heading: "The most wonderful musical instrument in the world is the human voice, and the most wonderful human voices in the world are at your command and pleasure on the Victor."

L. A. Cummins, traveler for the St. Louis Talking Machine Co., is home from a trip through Illinois and is starting again for points in Missouri. Mr. Gressing is preparing to leave for a trip to Evansville, Ind., and points in Kentucky.

W. W. Fisher, of Murphysboro, Ill., was a trade caller at the St. Louis Talking Machine Co., and says that the mines are getting ready to operate, and that conditions in general are most promising.

S. M. Field & Bros., Little Rock, Ark., are demonstrating the Victor Auxetophone, and the instrument has proven a wonderful attraction. They are arranging for concerts in the lobby of the principal hotels in connection with the hotel orchestras, also open air concerts in the parks, and from the interest already manifested Messrs. Field Bros. are sanguine of splendid results. The talking machine business in Little Rock is good, with the out of town trade showing somewhat dull, due to heavy rains.

On May 31 the Columbia Phonograph Co. moved into their handsome new store at 1008 Olive street, which had been handsomely remodeled. The new store contains four very fine demonstration booths and a specially fine one for grand opera record demonstrations. The new location is a great improvement over the old one, and is much more commodious and better arranged. Manager Walthall reports that their May business was twice as good as for the same month a year ago, but not quite as good as for April of this year.

A. A. Knight, of the Knight Mercantile Co., returned recently from a successful trip through Oklahoma, Texas and Mexico. He found business good throughout the territory he traveled and reported that the talking machine in Mexico is in demand. He reports his firm's general business as being quite good for the past month.

D. K. Myers, the Zonophone jobber, reports that trade with him for the month of May has been good, both on records and machines.

The Silverstone Talking Machine Co. have just made extensive alterations in their store, which included an enlargement of their demonstration booths, and making them much more attractive. They report a good demand for the new Edison Fireside machine. Max Silverstone, of this company, will attend the national convention of talking machine jobbers at Atlantic City, N. J.

F. K. Dolbeer, general manager of sales of the National Phonograph Co., spent two days here recently on his way home from a trip West.

The Thiebes-Stierlin Music Co. have just completed a re-arrangement and enlargement of their talking machine department. They now have seven handsome demonstration booths, all very finely appointed and report trade quite good with them. Miss Margaret L. Owen, formerly a saleslady with the St. Louis Talking Machine Co., has accepted a similar position with this concern.

The Koerber-Brenner Music Co. report business in their talking machine department is moving along in a very seasonable manner.

The other dealers make similar reports, and considering the season of the year, trade is as good as could be expected.

TILT ON MECHANICAL MUSIC.

Question Whether Pianolas and Graphophones Make Fewer Artists Divides Convention.

Mechanical musical instruments caused a division among the delegates of the eleventh annual convention of the Illinois music teachers at the closing session, held in Decatur, Ill., recently.

Harold Maryott, of Chicago, in a paper on music in the public schools, contended that teachers of music in the public schools had within their keeping the music lovers of future generations. He characterized them as apostles. A delegate claimed that pianolas, talking machines, etc., were likewise apostles. This precipitated a long debate in which the delegates were about evenly divided. The opponents of the theory argued that mechanical instruments might make more music-loving people, but they made fewer musicians.

(Special to The Talking Machine World.)

London, England, June 5, 1909.

Summer is now with us and trade conditions are consequently not as bright as the weather. From present indications it would seem that the chief backbone of the trade during the next few months will be centered upon high-class goods, which are already selling in proportionately greater quantity than the cheaper price products. There is evidently plenty of justification for traders to push their best goods, especially in the home markets, since it is only the richer classes apparently who are buying to any extent for outdoor entertainment.

Things are somewhat better in the export field, where there is a steady demand for talking machine articles of various qualities and prices. The business is there for those who set out to reap by judicious advertising.

Travelers' License in Cape Colony.

The Cape Colony officials have now intimated that a commercial traveler must have a license for each separate firm he represents in that market.

Revising French Patent Law.

Following hard upon the new English patent act is the announcement of a coming revision of the French Patent Law, whereby it is intended to allow a period of three years instead of two as at present, in which a patented article must be manufactured to maintain validity. The main cause of all the jealousy and legal troubles which have taken place in England between the Edison, Bell and National phonograph companies, has undoubtedly risen from the fact that the former company had the right to use the name "Edison." Having regard to these circumstances it is a matter of general surprise that when the name "Edison Bell" came into the market very recently, it was not at once bought up by the National Company. The standing and influence of years of advertising which the Edison Bell name carries means a valuable asset to those who have now secured it.

Wax from Sugar Cane.

The very latest is that application has been made for a patent on a process for extracting wax from the rind of sugar canes. This wax is apparently very suitable for talking machine blank masters, and in consequence an unprecedented demand is expected from record makers. The first to use the sugar cane wax may be pardoned if he very justly advertises "Our Records are the Sweetest."

The "Copyright" Inequity.

English traders have evinced keen interest in the opinions expressed by manufacturers in last month's Talking Machine World. I find that in the majority of cases there is a strong determination to resist to the uttermost unjust taxation of records at the instance of publishers. Several manufacturers were examined by the Board of Trade Copyright Committee, which sat in conference last week. The committee will meet again about the middle of June to take further evidence. No definite rulings have yet resulted, but I am in a position to state that from the nature of questions and observations put to the witnesses, matters are not too favorable to the interests of this industry. The question of a retrospective tax was brought up and was the subject of keen discussion. But we are of opinion there is little fear on this head, as the committee's judgment will undoubtedly be influenced by the just example which foreign governments have set in this matter.

A pleasing fact is the unanimity of view taken up by the whole trade in this matter. Interviewed by your correspondent the Gramophone Co. state that they are entirely in accord with the opinions expressed in my last report, and tney have adopted a consistent attitude along those lines.

We have pleasure in submitting the following views from Mr. Louis Sterling and Mr. W. Force, whose very interesting remarks strike an original aspect, and draw aside the veil of magnanimity donned by the music publishers in their fight for the supposed rights of our poor friend the composer.

Mr. Louis Sterling's Views.

Dear Mr. Sturdy:—In answer to your request for my opinion on the present agitation in regard to altering the existing copyright law, I hardly think I can say anything which will place the position more clearly before the trade than Mr. Frank Dorian's letter in the current issue of The Talking Machine World, which seems to put the entire position in a nutshell. But, having been connected with a music publishing business, the following remarks may be of general interest to your army of readers:

Up to a few years ago, all sheet music in this country was listed at 2s. (50 cents each). This extraordinary high price to the public caused an invasion of the publishers' business by pirates who printed cheap editions of the most popular copyright music, and sold them to the public at 2d. (4 cents per copy). After years' of agitation the publishers managed to get a bill passed in Parliament, which practically put a stop to piracy. Before this bill was passed, one of the leading publishers reduced the price of their popular copyright music to 6d. per copy, which was followed by many other publishers. Had the publishers taken this step in the early days of piracy, their losses would have materially lessened, but in their greed for enormous profit the publishers did not make their reductions, until the public had for years become accustomed to paying only 2d. per copy (the pirates' price).

The result was that the public would not even pay 6d., or at least buy sufficient quantities to make the publishing business as profitable as before the invasion of the pirates.

To make up for the loss of profits, the publishers of popular music sought a new field. They made contracts with various weekly newspapers, agreeing to allow them to print each week, a complete copy of music and words of an up-to-date popular song. At the present time, at least ten million newspapers are sold weekly, giving with the general news a complete copyright song for the price of 1d. Thus five million copies of music are given to the public each year, free of charge.

For years the public had been buying the music from pirates at 2d. each, and now they get it for nothing with their weekly paper; they naturally refuse to pay the publishers 6d. or more. Obviously, the publishers suffered, not only on this account, but also since the talking machine has become almost a necessity in the homes of millions, the general public are buying talking machines, instead of, as formerly, pianos and organs.

The publishers are therefore looking around for new methods of making or increasing their dwindling profits, so they turn to mechanical instruments, demanding that record manufacturers should pay them a royalty to make up for the losses sustained in recent years in their legitimate business.

At the first Berne convention, the representatives of the various publishers expressly agreed that mechanical instruments are not an infringement of copyright. This agreement justified the talking machine; record manufacturers, investing millions in factories; recording; advertising, etc., to popularize the use of talking machines

FROM OUR LONDON HEADQUARTERS—(Continued.)

and records. After all this capital has been sunk in the business, it seems absolute robbery on the part of the publishers to endeavor to obtain all the profits of these large investments.

About three or four years ago a new copyright bill was introduced in Parliament, which contained a clause making records an infringement of copyright (this clause was afterwards deleted from the bill). In order to safeguard the interests of the record company, with which I was connected at that time, I made contracts (since expired) with some of the leading publishers, to the effect that, in the event of this bill becoming law, my company was to have the exclusive recording rights of the copyrights owned by the publishers on the payment of a royalty of one farthing for each record sold. But now the publishers generally having a mistaken idea of our profits are expecting all kinds of royalties from 1d. (2 cents) upwards. On the basis of their minimum of 1d. per selection, the position is as follows:

In this country the double-sided record is becoming more popular every day, and before two or three years have elapsed, it is probable that the single-sided record will be a thing of the past (as on the Continent). The largest sales for double-sided records are those listed at 2s. 6d. (in Germany the popular double-sided record for next season will probably be 2s.). After reducting the factors' discount and paying manufacturing, recording, advertising and organization expenses, I don't think the record manufacturers make a net profit of 2d. per record, certainly not more. If we have to pay a royalty of 2d. per double-sided record (1d. for each selection), where is it to come from? It is impossible to increase the price to the public, nor is it possible to reduce the profit to factors and dealers. As on the present basis of profits, the factors have all they can do to make a living.

There is another point, and a very important one, which the publishers seem to overlook. The publishers of high-class music, such as ballads, etc., popularize their selections by paying artists a fee of 10s. 6d. upwards, according to reputation, each time the artist sings one of their songs at a concert. In some instances they even pay a prominent artist a royalty on sales. Again, the publishers of popular songs, which are principally sung at music halls and pantomime shows, offer all kinds of inducements to popular artists to take up these songs, and the competition among publishers to interest the prominent music hall singers in their publications is very keen. In fact, practically the entire basis of the publishers' sales and advertising is made either on the number of artists singing their songs, or the prominence of the one who is singing it.

How about the towns and villages of 50,000 population, and under? How can the publishers get at this population, where a concert is of rare occurrence? The answer is obvious, through the instrumentality of the talking machine, and that explains the reason why the publishers are constantly asking the record companies to record their songs. The record companies are consequently doing as much, and perhaps more than the artists, to popularize their music, and instead of looking at it in the light of infringing their rights, they ought to be thankful to us for assisting them in their publicity. I am absolutely against any alterations in the present copyright law. Because of mistakes made by publishers in the past, or changes in the public taste for sheet music, is no reason why we should be asked to support the publishers.

What Mr. W. Force, Managing Director of the Premier Manufacturing Co., Says on Copyright.

Dear Mr. Sturdy—Although not so well informed as some of my friends in this trade, the mere suggestion of hampering an industry like the talking machine trade by taxation, for no other purpose than to satisfy the vested interests of capitalistic publishers, is a huge mistake and cannot be anything else but ultimately harmful to the very people who are now and have been for some time past endeavoring to bring about this unwarrantable effect.

There are many reasons why the talking machine record should not be made the subject of taxation, but time will not allow me to dwell upon them in their completeness, however. I name here a few points which must be apparent to those who give the matter due thought:

1. The talking machine is an invention the perfection of which has been the outcome of years and years of patient research, hard work and expensive experiments, and some hundreds of thousands of pounds must have been spent in bringing this to its present state of perfection. No help or assistance has been accorded by the publishers of sheet music; as a matter of fact, their bickerings have always been made from the point of view that they were losing something they had at stake. Heaven knows why they think this. Because, without doubt, as our friend, Mr. Balcombe, says (and everyone else thinks who knows anything at all of this trade), they, the publishers, have made a good deal out of the publicity their wares have received from the sales of talking machine records.

Of course, we are told that the authors are the sufferers, but so far as my relationship with this business is concerned, I have never known a

KLINGSOR

THE "WAGNER"
Highly finished solid Oak Cabinet

THE new season is here and you cannot, to your own advantage, do better than to apply to us for our new colored illustrated catalogue of our celebrated ***Klingsor*** Talking Machines and Sundries. We challenge any machine on the market concerning working, tone-quality, finish, etc. We do not claim cheapness, as you are well aware that a good machine cannot be cheap, but we are still cheaper than any other machine for what we give you for your money.

All machines are of the best and solid wood, either in oak, mahogany or walnut, British made throughout, specially adapted for export to stand any change in temperature.

The machines are fitted with the best motor in the market "the well known and famous Excelsior Motor."

single instance where the author of a piece of music or song has objected to the publication of his work through the agency of the talking machine; on the contrary, they have in a large number of instances been only too anxious to have their works popularized by this means. To compare the volume of publishing business of to-day with that prior to the inception of the talking machine tells its own story and easily bears out my contention.

Again, the view hitherto taken by the courts in this country that the talking machine record is not a copy of music within the meaning of the law of copyright is sound common sense, for you cannot play a piece of music or song on a piano by means of a talking machine record. Therefore, the sales of sheet music do not suffer. On the contrary, the chances of sale are generally, if not always, enhanced by reason of the popularity given, and if the purchaser be a musician, which is very often the case, he will buy the printed copy; hence the benefit both to the publisher and author.

In conclusion, I would say that if we are to have a tax or royalty put upon the products of this industry, there must be an equitable and fair means of levying this due. No monopoly should be given to any company, and if the owner of a work is to receive a royalty on each record sold, I do not see why such royalty should not be handed direct to the author. There may be pitfalls here, but I do not see why the publishing interests should be concerned in a matter which obviously does not come within their province.

If the publishers do insist on carrying out this propaganda they will find that the organizations in the talking machine industry will be used to publish their own works and gradually become their competitors. This would not be relished by them.

I repeat that the taxing of records will not only restrict the trade but will ultimately end in doing harm to the very people who are organizing this movement. I am most emphatic in declaring that there should be no alteration to the present copyright legislation.

So far as my house is concerned we are prepared to help defend our interests, which to our minds are vital. Everyone in this trade, manufacturers, factors and dealers, should look upon this as something that concerns them deeply, and I am not so sure that the great British public can be left out of consideration, as they, at some future date, if not at once, will be the bearers of the load. Our ideas are: act, and act in unity, *at once.*

An Unique Gramophone.

A story of a great feat, and what happened to a foot, is told in this month's Gramophone News, just issued. G. E. Hughes, M.A., native commissioner, Madona, N. W. Rhodesia, is a great explorer and big game hunter, rivaling the exploits of President Roosevelt, and his latest victim, a famous African elephant, styled by the natives Wungwa, has been responsible for the make-up of a unique gramophone. It appears Wungwa had become so obstreperous in his old age that Mr. Hughes was despatched to destroy him, which he did, after six weeks of exciting and thrilling adventure. Wungwa was shot close to the spot where Dr. Livingston died. Mr. Hughes presented the Gramophone Co. with one of Wungwa's feet, measuring 60 inches in circumference, which they have converted into the case portion of a senior monarch—an elephant's foot, transformed into a gramophone, and fitted up in this way is a great curiosity. When one thinks of the eventful life of this monarch of the jungle and the strange paths his foot must have traveled it is certainly a quaint, if not glorious, ending. During his life he was often referred to as the Senior Monarch of the forest. In death Wungwa still retains the title, for he is (or part of him) now the Senior Monarch of the civilized world.

The Patents Act—Important Alteration.

The recent case in which a talking machine patent figured has brought to light an important ruling by Judge Parker, which materially alters the generally accepted interpretation of the act which was apparently designed with the idea of forcing foreign manufacturers holding English patents to manufacture for the most part in the United Kingdom. Under the letter of the act anybody could apply for the revocation of a patent, and the onus of the defense was upon the patentee to prove that the patent in question was manufactured here sufficiently to retain validity. And thus, while the applicant was not required to state reasons, or give any evidence in support of his claim, the patentee was forced to give a complete account of his doings and disclose books, etc., all of which was open to the inspection of the applicant. It has been stated that the applications of this character were actually being made by persons in order to get at the books of rival traders. Obviously such a state of affairs was not contemplated by the legislature, and Judge Parker, who is the appeal against decisions of the comptroller, has now ruled that the onus of proof must be with the applicant to make out a prima facie case instead of the patentee. In this way patentees will be protected against undue interference of their rights by overzealous competitors.

But there appears another aspect of the case which, if true, practically makes the law a dead letter. In judging whether an article is made to an adequate extent in the United Kingdom, not only the goods made or the total sales are to be considered, but the whole of the manufacturers and sales of the patent in question anywhere and everywhere. Thus to get at the real meaning of "adequate extent" it would be necessary to know the amount of sales of the article in all other countries, taking into consideration also the size and economical conditions thereby, and institute comparison with the total manufactured and similar condition in England. This new interpretation of the act practically makes it impossible for any bona fide applicant to supply the comptroller with the necessary figures upon which

the revocation of a patent now apparently depends. An "interpretation" of an act is not always sound in law, and we feel convinced that such a ridiculous contention foregoing, even though made by a judge, could easily be upset on appeal to the House of Lords.

Talker Concerts in Public Parks.

The London County Council have exhausted the Gramophone Co. with the giving of no less than forty-five concerts, each of three hours' duration, in various London parks and recreation grounds this summer. The provinces are also to be supplied with Gramophone music, and the many thousands of persons who support these outdoor entertainments by their presence is a fitting tribute to the naturalness of the latest science of so-called talking machine art.

Gramophone as Prize.

One of the most coveted prizes to be shot for at the coming great meeting of the National Rifle Association, Bisley Camp, is a junior Monarch Gramophone, presented by the company.

"Occultos" Occasions Inquiry.

A mechanical man is being exhibited at a London music hall. "Occultos," as the figure is called, has aroused great interest, for he will answer any question put by the audience. One man who asked Occultos if he had a Gramophone in his chest had the answer that no series of records had been invented to answer haphazard questions. After the figure was taken to pieces the audience were still more mystified when they saw that it did not contain the dwarf they had believed was hidden there.

Important Amalgamation.

Great interest has been aroused in trade circles by reason of an important amalgamation of the Favorite record with the old-established firm of Messrs. Lange's, of "Klingsor" machine fame. For the last three years Mr. Vischer has ably guided the progressive sales of the Favorite Co.'s record, and we are pleased to learn that his old love is not to be entirely forsaken, since his invaluable assistance is to be retained by the new incorporated concern of H. Lange's Successors & Co. The amalgamation was formulated and successfully concluded by K. Maurice, managing director, after a special visit to the continental headquarters of the Favorite Co. From this date the Favorite record will be run solely by Messrs. Lange's who have in consequence found it necessary to take larger premises at 58a Wells street, Oxford street, London, W., where handsome showrooms and recording rooms have already been fitted up. The company intend to do all their own recording in London, and with many other new departures, it is certain that the people's "Favorite" will make even stronger progress than in the past. With two such high quality products as this record and the well-known "Klingsor" hornless cabinet machines the future can hold but the brightest prospects for the company whose business foresight merits our hearty congratulation.

"Our Glorious Empire Day."

The Favorite Record Co. have created an achievement in the issue of a record bearing the above title by Hayden Coffin, whose splendid voice has hitherto presented much difficulty in recording. That this issue, however, is a distinct credit to the Favorite Co.'s expert recorder must be admitted by all who hear the even accent and wholly sympathetic rendition by Mr. Coffin. The title, "Our Glorious Empire Day," is self-explanatory, and was written by Arthur Branscombe for the publishers, Messrs. Ascherberg, Hopwood & Crew Co., and while it is appropriate to the celebration of Empire Day the record is so good that it should figure in everybody's collection, as one never tires of playing it over. An excellent selection of British patriotic airs by the band of H. M. King's Colonials is on the reverse side. Thus we have on one record a couple of patriotic pieces which should find a ready sale for Colonial traders.

Sleepy British Traders.

Commercial Intelligence says it is an odd fact that very little advertising is done by British firms in Colonial markets, the best and most promising outlets for our trade. Yes, and just now there is an especially good harvest for talking machine traders enterprising enough to reap by advertising in The World.

A Letter from Albert F. Vischer.

Dear Mr. Sturdy:—As you are no doubt aware, the International Favorite Co. is now amalgamated with the firm of H. Lange's Successors, Ltd. I should like you to particularly note and draw your readers' attention to the fact that I am, as hitherto, the sole agent for Excelsiorwerk, Cologne, in talking machines, motors, etc.; Rene Moat Revigny, in main springs; Traumüller & Raum, Schwabach, in needles. As I intend leaving these premises very shortly, I am on the lookout for suitable showrooms, in which to carry on the above three agencies. Within a week or so I shall be in a position to furnish you with the address of my new premises. Believe me, dear Mr. Sturdy, faithfully yours, Albert F. Vischer.

Barnett Samuels' Hornless Machine.

Barnett Samuels & Sons' Co. have now introduced their hornless machine for outdoor entertainment. It packs into a very neat case, which also holds room for about a dozen D. S. records, thus making a complete outfit easily portable by hand, and always ready for service. The company also inform me that Odeon records will in future be manufactured in England instead of the Continent. This provides possibilities of larger business abroad since Colonial dealers can now obtain the goods—being British made—on the preferential tariff basis.

introduce the Edison phonograph here in the year 1887, has just recovered from a long spell of ill-health due to nervous breakdown consequent upon, we regret to say, the death of his only son and his wife's long illness. Mr. Young would be glad to hear of any American novelties suitable for this market. Address 11 City Road, London.

A Tribute to "World" Advertising.

The Flex diaphragm is now being fitted to sound boxes sent from all parts of the world, which is sufficient evidence of its merit. One enthusiast writing from Broadway, New York, says, that the "Flex" is not only the finest thing he ever used, but the greatest thing in the country!

New Lindstrom Features.

On the new style Lindstrom machines selling in England, a great feature is an improved telescopic tone-arm, adaptable for using either the sapphire or needle sound box, while the machines selling on the Continent are now fitted with the tapered goose-neck tone-arm and exhibition sound box.

New Zonophone Records.

An exceptionally strong bit of zonophone records is that for the month of June, and particularly worthy of mention is "Home to Our Mountains," the famous grand opera duet from the Troubadour (Il Trovatore), by Verdi. Other good titles are "Raymond" overture Part II.; "I Hear Ye Calling Me," sung with much feeling by Ernest Pike; "Mandy Lane"; "Welcoming Him In," an amusing duet by Fred Cooper and Herbert Payne; while Mr. Alexander Prince's concertina record of "Under the Double Eagle" is splendid. There are many other popular titles in the list, which as a whole seems replete with "quick sellers."

Russell-Hunting Co. Affairs.

A complete summary of the statement of affairs of the Russell Hunting Record Co., Ltd. (winding up), as submitted by the managing director and secretary on April 1, 1909, has been issued by the official receiver. This statement traverses a previous report in the World, but the amount available for unsecured creditors (less cost of liquidation) is now estimated at £4,595 14s. 8d. Mr. Sidney Cronk, receiver, has now realized practically all the assets of the company. On April 7 Mr. E. E. Johnson, chartered accountant, 2 Queen Victoria street, London, E. C., was appointed a liquidator, and all communication with reference to claims against the company should be addressed to him.

News from the Gramophone Co.

Notice has been sent to dealers that the extraordinary demand which has followed the introduction of the Pigmy Grand has been so greatly in excess of expectations, that the company are quite unable to draw sufficient supplies from their factory to meet all orders. Everything possible is being done to insure adequate supplies, and it is hoped that all orders will be fulfilled shortly. The leading tenor of the Vienna Opera House and Royal Opera, Covent Garden (Herr Leo Slezak) has made 14 especially good gramophone records, which all dealers should certainly stock. The monthly list for June is replete with the usual good things, of which I would mention the following records: "March Heroique" (Saint-Saens), "Nell Gwynn Dances," Nos. 2 and 5; "Our Miss Gibbs," Sel. I and II, on separate records, all by the Band of H. M. Coldstream Guards; "Isolene," ballet (mazurka), is a sweet record of Spanish music by the Spanish Royal Band of Halbadiers; the Bohemian Orchestra is responsible for two attractive waltz pieces, "Songe d'Automne" and "Vision of Salome" (Joyce). Several fine records are represented under concert music, "Sing Ye Praise and He Counteth All Your Sorrows" (Hymn of Praise, Mendelssohn), by Mr. Evan Williams; "O Flower of All the World," rendered by Mr. Harrison with fervor and good effect; "Was Thou Thy Snowflake" (Ivanhoe), Frederic Austin; "A Chip of the Old Block," Mr. Robert Radford; "Scenes That Are Brightest" (Maritana), is charmingly sung by Miss Perceval Allen; "Through Love to Light," Miss A. Lakin; "Psyche," by Miss Susan Strong; "La Charite," with chorus (Rossini), by Madame de Montaiant, are all splendid records, as also is "When Evening's Twilight" and "In the Merry Spring," by the Sheffield Festival Quartet; "How Do You Do" (No. 15) from the "Dollar Princess," by the Dollar Princess Operatic Party, who also give "Chewska" (No. 11) from the same musical piece. The famous Renard Quartet of Musicians give a beautiful rendering of "The Lark" (Blinka), while Lady Speyer's violin solo, "Hungarian Dance" (Brahms-Joachim) is superb. Miss Blanche Ring, the popular American comedy artiste, is great in "Yip, I Adee, I ay," which is now being sung in "Our Miss Gibbs." Mlle. Alice Verlet's five operatic records are the talk of the trade. She is the prima donna of the Grand Opera, Paris, and the power and charm of her soprano voice has been likened unto that of Madame Melba. Mlle. Verlet made her London debut last March at the Royal Albert Hall, when she scored an enormous success.

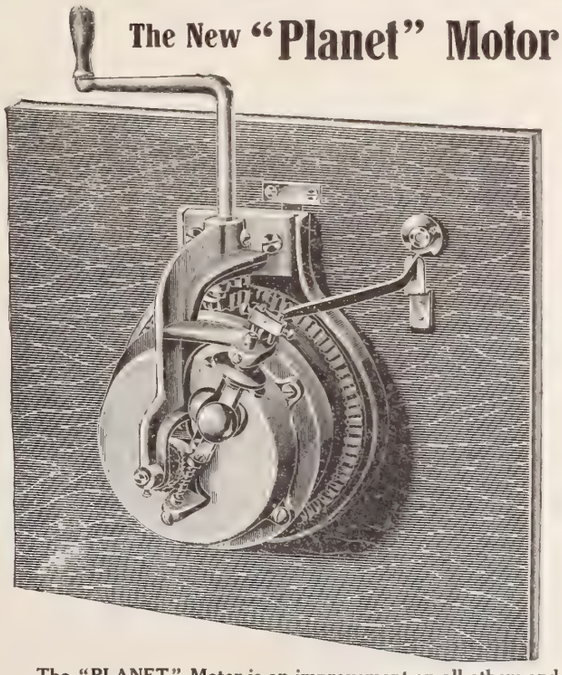
The New "RENA" MACHINES

"RENA" MACHINE, No. 4, £5 10s.

Cabinet: Solid Oak, size 16 in. by 16 in. by 8½ in. Fitted with "PLANET" 16-minute Motor, Self-regulating SPEED INDICATOR. Nickeled Aluminum TAPERED TONE ARM. Improved Sound Box, fitted with Patent Needle Clip.

Prices range from £2 10s. to £11 10s.

The New "Planet" Motor



The "PLANET" Motor is an improvement on all others and embodies an entirely new principle of construction. As may be seen above, the gearing is horizontal, running parallel with the turntable and so minimizing friction. All the gearing is encased and runs in a GREASE BATH. It is DUST-PROOF, therefore always CLEAN and SILENT-RUNNING. It is also CLIMATE-PROOF. So simple that there is nothing to go wrong. All "PLANET" Motors are guaranteed. "PLANET" Motors are fitted to "RENA" Machines from £3 10s. upwards.

The Life of a Talking Machine is its Motor —WE'VE GOT THE MOTOR!

Crop of Financial Troubles.

As foreshadowed in my last report, the effect of the business depression during 1908 is now being exposed by a continual crop of commercial troubles throughout the kingdom. One of our oldest factors—the American Talking Machine Co., Tabernacle street, London—has unfortunately been compelled to place their financial position before their creditors, from which it seems that the total deficiency amounts to about £1,407, largely accounted for by loss on trading of £900 odd (from January, 1908, to April, 1909), and the result of a law action by Mr. Cowan, of Berwick-on-the-Tweed. Among the creditors are: National Phonograph Co., £414 7s. 4d.; Pathé Frères, £223 8s. 3d.; O. Ruhl, £30 1s. 11d.; Industria Co. (E. Oppenheim), £27 7s.; Magazine Holder Co., £25 10s. 6d.; Deutsche Telephonwerke, £17; Fritz Puppell, £11 9s. 2d.; Barnett Samuel & Sons, £10; Sphinx Co., £19 7s. 4d.; R. Prieur, £11 14s. 6d.; Craies & Stravidi, £3 13s.; Francis Wottingham, £250; Frank Wottingham, of Bridlington, £500, and others. The creditors fully discussed the position of affairs and unanimously passed the following resolution: That a deed of assignment to G. E. Corfield as trustee be executed, that the trustee be authorized to dispose of the estate for a sum sufficient to pay preferential claims and costs, and 3s. 6d. in the £ to all the creditors, and that the following committee be appointed to act with the trustee, viz.: Mr. Reid, National Phonograph Co.; S. Turner, Pathé Frères, and O. Ruhl. Many of the creditors expressed sympathy with Mr. Nottingham, who has an honest trading record of over eleven years in this industry, not to speak of his general popularity with all those who have the pleasure of his acquaintance.

Hesse & Co., of Houndsditch, have also gone under the iron heel of trade depression and keen competition. The assets are estimated at £600, against liabilities of £1,228. In the list of creditors appear M. & A. Woolf, £388; O. Ruhl & Beka Record Co., £25; Willibald Tweer & Co., £143; Fritz Puppel, £37; C. Weiss, £15; Edison-Bell Co. (in liquidation), £101, and many others.

Latest Clarion Records.

Of the latest Clarion records the following may be mentioned as being of a quality denoting good sellers: "Funiculi, Funicula," Harry Fay; "I Used to Sigh for the Silvery Moon," Charles Lester; "The Uhlan's Call" (march), Premier Military Band; "Always Add a Little," Miss Cassie Walmer; "The Other Yacht," Herbert Rule; "The Coon's Honeymoon," "Largo" (Handel), and "Egyptian Ballet," all three by the Premier Concert Orchestra; "Because," and "Where the Sunset Turns the Ocean Blue to Gold," both by Thos. Hylton; while the Premier Bijou Orchestra plays two pretty selections—"Christmas Roses" and "Fascination Waltz." These are all well recorded and should be on the shelves of all enterprising colonial and foreign traders.

Straus' Views on Trade.

On behalf of the increasing interests of the Carl Lindstrom Co. in England, Mr. Straus recently paid a visit to this city, and from his report it seems that the talking machine trade is in a much better condition on the continent than here. Touching upon the Lindstrom disc machines, Mr. Straus hinted at some striking new departures now that talking machine patents are a thing of the past in Germany. He also holds strong views upon the copyright question in this country, maintaining that in the event of a bill going through a "no monopoly" clause must be paramount, while in any royalty or subsidy imposed the public would have to pay the piper, as they do in France.

The Rena Disc Machines.

Great interest has been aroused by the new range of disc machines introduced by the Rena Co., the makers of the highly successful Rena double records. Each model from the cheapest upward is fitted with the same type of tone-arm, in two different sized tone-arm brackets and sound box. The tapered tone-arm is of plated aluminum, cast in one piece. The sound box is an unmistakable improvement in tone and volume, and is fitted with a spring needle clamp, instead of a screw. A reliable speed indicator is fitted to all Rena machines.

Now, the life of a machine depends not upon its appearance or upon exterior fittings, but upon the reliability of the internal mechanism, and the Rena disc machines offer something very unusual in this respect. The motors are upon an entirely new principle. In models Nos. 2 and 6 this new motor is an engineering triumph. It may be said that the motor is known as the "Planet" because it embodies the principles upon which the planets revolve in their orbits, and is entirely different to the clockwork motors at present in use. Explanation is simple. Raising the top of the cabinet there comes to sight a large circular metal case fixed horizontally to the cabinet lid. From the center of the base of the metal case projects a small spindle fitted with a cog wheel; this latter works on to a worm on the governor spindle. The upper half of the round case contains the spring, while in the lower runs the train of gearing, the whole of the motor being thus encased. Further, the lower case is so constructed that the motor runs in grease, is hermetically sealed, and therefore dust and dirt cannot reach the working parts. This perpetual lubricant also renders the motor absolutely noiseless. The winding crank works on a toothed plate, situated parallel to and close against the cabinet lid, the spring, or springs, being fitted immediately below the plate, and completely encased in the metal band. The case containing the gear is belted to the base of the spring barrel. The governor bears four weights, and it is claimed that this, in conjunction with the worm drive, insures perfectly even running. The Rena Co. have so much confidence in the reliability of the Planet motor that they guarantee every one for two years. It should be noted that the guarantee does not extend to either the mainspring or the governor blade springs. The Rena disc machines, in oak or mahogany, are made in six distinct models at present, and range in price from £2 10s., No. 1, to £10 10s., No. 6. The tonal quality of the reproduction on every machine leaves nothing to be desired. In general workmanship and finish the Rena machines are excellent, and considering the prices are about half ruling prices, it must be conceded that they will be as successful as Rena records.

TRADE REPORTS FROM THE PROVINCES

MANCHESTER NOTES.

Manchester, June 3, 1909.

Business generally has been very slow in this district for some time past, but we are glad to say that the outlook is brightening, and in many quarters the opinion is freely expressed that the bottom has been reached. It is now hoped that the factories and mills in the north will gradually resume full time and money will then be spent more freely for talking machine goods than it has been for some time past.

Burrows & Co., of High street, have recently had some good sales in expensive machines, and they have also taken up several good side lines, with which they are doing well.

C. Durve, the wholesale factor of Edison's, Zonophones, etc., has been visiting the United States for the past month, and is due home in a week or two.

Messrs. Richardson, of Manchester, Blackburn and Liverpool, have been exceptionally busy with roller skates and cycle goods, but the phonograph and disc business has been recently somewhat slow. Mr. Geddes, the manager, states that they are already booking a considerable number of orders for the new Edison attachment to fit the "Gem" machine, which will be retailed at 15s. The price includes a new Model H reproducer, colored "amberol green." By placing this upon the market the National Co. will create a boom in 200-thread records. By the way, Mr.

FRITZ PUPPEL, G. m. b. H.

BERLIN, S. O.

TELEGRAPHIC ADDRESS: "PUCKAWO"

Our "Elite" 9 Machines One of the Best.

Our Famous "Puck Phonograph."

Richardson is still rusticating on the Mediterranean, enjoying a fine holiday. His latest port of call was Valencia.

Mr. Davies, of the Calmore Depot, Deansgate, is busy at the present time in cycle goods. The disc and phonograph business with them is hanging fire somewhat.

At Brown Bros. roller skates is the principal selling line at present, and the sales have been so great recently as to entirely outpace supplies.

Most of the cycle agents have now relegated to the background their stock of records and machines, and it is becoming almost a rarity to find either disc machines or phonographs or anything connected with the industry shown, cycles predominating and filling up the whole of show windows.

BRADFORD NOTES.

Bradford, June 4, 1909.

In Bradford and district, although trade generally is dull, there are signs of a revival in the near future.

Mr. Appleton, Sr., of this city, is interested in various patents connected with the reproduction of the 200-thread records and he has something good in view which will probably be placed upon the market a little later.

The Parker Phone Co. report good business. Mr. Stoddart anticipates that next year will be an "amberol" year, and that no other records will have a chance whatever against them, now that the new attachment is being placed upon the market.

Messrs. Dyson's are very busy in roller skates, air guns and other side lines, which they handle during the summer months. Mr. Tidswell, the manager of the phono department, expresses his opinion that we have seen the worst and that with September business will resume its normal capacity.

LIVERPOOL NOTES.

Liverpool, June 5, 1909.

In Liverpool generally the trade is at a standstill. All dealers are complaining; machine sales are practically nil, while records in the majority of cases sell in one's and two's instead of half and one dozen lots.

Roller skating, which is now the craze all over the town, is absorbing all the money that would otherwise be spent in machines and records, and although in some cases several rinks are closing down during the summer months others are being built and even at this season of the year are pretty busy and doing well.

The "Pigmy Grand" Gramophone is on view in several of the leading establishments, and is a line specially adaptable for transit purposes and outdoor amusement.

We are glad to report that Mr. Jake Graham's health is steadily improving.

Messrs. Cramer & Co., Van Gruissen, Archer & Co., as well as the leading factors, report all round that business is slow.

LEEDS NOTES.

Leeds, June 5, 1909.

Hilton & Co. and Messrs. Appleton, the wholesale factors, report business as slow, but in some of the special lines they handle business is about normal with that of last year.

Messrs. Scott & Co., of Albion street, and "The Record Phono Co.," are giving up their business. Their reason for so doing is that the net profit is not commensurate with the amount of capital invested, to say nothing of the worry, hard work and poor outlook.

Messrs. Jenkins, of Queen Victoria street, and Messrs. Tilly & Co., with others, are finding business somewhat slack, and in one or two cases holiday making is the order of the day.

SOME RECENT INVENTIONS

Will Soon be Introduced in the North of England—New Types of Machines With Special Features That Will Interest.

The representative of The Talking Machine World has lately had the pleasure of examining some recent inventions relating to the disc record, which, when placed upon the market, may alter some aspects of the business.

For many years past, several experts in the North of England have been quietly investigating not only the mechanical motion as applied to disc motors, but further improvements, as may be applied to discs also, and if these inventions are as stated it will not only revolutionize present methods, but give the public greater value than ever before purchased.

Briefly, the inventors have four new types of machines. Two of these are similar in principle, but distinctly different as regards the design. The other two are upon another principle, also different in design. The two machines constructed upon the first principle, involves standardizing every record to play for (or to run) a certain length of time, as regards the duration of it. For example, if a disc manufacturer makes a record to play for seven, eight, nine or ten minutes, the mechanism must be set to play the record at a stated time, and no other.

Now, the second principle is a machine which will permit the user to play upon it records of any time duration, within reasonable limits (say, seven, eight, nine or ten-minute records). This is accomplished by altering the speed of the governor by a regulator; at the same time, all models are constructed to play any ordinary records, by altering the position of a lever. Therefore, this type of machine not only suits the present-day records, but in addition would not need any change over, or special attachment to play the longer time records.

J. E. HOUGH, Limited

Sole Proprietors and Manufacturers of EDISON-BELL N. P. and E. B. RECORDS, PHONOGRAPHS, DISCAPHONES and DISCS.

ALSO OF

STERLING RECORDS

¶ Having acquired the whole of the plant, machinery, masters, matrices, goodwill, etc., of the Edison-Bell and Sterling Companies, J. E. Hough, Ltd., beg to announce that their July parcel will be issued early in June.

¶ All old or obsolete stocks are destroyed, and all future records will be specially manufactured from selected matrices—only the best and most popular will be used. RECORDS at ONE SHILLING, and at NINEPENCE each, will be manufactured and new catalogues prepared.

DOUBLE-SIDED DISCAPHONE RECORDS

TWO ON ONE 10¼ Bell Discs 2/6 8¼ Phona Discs 1/6 TWO ON ONE

will also form a most important feature of the firm's new products.

¶ The Edisonia Works are now reconstructed and are the most complete in the world—being fully equipped for the manufacture of every kind of Talking Machine and every kind of Record—CYLINDER and DISC.

¶ The Company therefore hopes to secure the favor of the British public—their productions being of GENUINE BRITISH MANUFACTURE THROUGHOUT.

¶ Show and Recording Rooms have been established at 15 City Rd., E. C., where agents and dealers are invited to see and hear samples of Machines and Records. They are also invited to view the works which are undoubtedly the most important in the country.

¶ Up-to-date dealers will be specially communicated with, but all dealers should drop us a post card to ensure the receipt of our circulars, catalogues, terms, etc. Address,

J. E. Hough, Ltd., Edisonia Works, Peck Lane, S. E.

The essence of this improved invention in the movement is a special differential speed gear motor, which is very simple and cheap to produce. Without going into mechanical details, we will endeavor to explain it as follows:

The turntable revolves from the commencement at a constant but slightly increasing speed, absolutely exact, and in accordance with the diameter of the record, as played with the needle or stylus upon it, thereby giving the sound waves an even or equal length, throughout the run of the record. For instance, with an ordinary twelve-inch disc, as sold now, the surface speed at the beginning of the record is approximately 2,900 inches per minute, gradually reducing to about 900 per minute at the finish, thereby reducing the length of the sound waves in proportion, as it travels towards the center of the record. Now, this new motor remains at a constant surface speed, all the time it is running. For example, it may be 900, 1,000, 1,100 or 1,200, as the recorder may wish; this means that disc manufacturers can double or even triple the amount of music as placed at present upon a record; the reproduction, of course, taking a much longer time in proportion. As an experiment, the music upon three 10 in. discs were recorded upon one 12 in. disc, with the new method, and upon reproduction, by setting the reproducing machine to the necessary time, it played right through without any hesitation. In another case, the baritone song, "The Village Blacksmith," and, if we remember rightly, "Asleep in the Deep," were also reproduced upon one side of a 12 in. record (with room to spare for more) both full songs, without any omissions, and lasting nine minutes.

Regarding the cut of the record, the inventors are not concerned as to whether it is a needle or sapphire reproduction, for if any inventor comes along a little later and can record at 150 or 200 to the inch upon discs, and uses this new type of motor, his 12 in. records would run twenty minutes, or more, if desired.

Although shown under disadvantageous conditions, the results were very good.

With the ordinary needle cut record, the volume of sound is entirely dependent upon the surface speed the record is traveling at, decreasing as it gets nearer the center, but, in the case of the new invention, the volume is even all through it, because all sound waves are equal in length, the speed being constant and regular throughout. If necessary, these new types of motors can be made to run fifteen or twenty minutes, or even an hour (but if at a very slow speed, or below certain limits, the reproduction would only be poor). From actual experience, however, it is considered best that a 12 in. record should take about ten minutes to reproduce and a 10 in. about seven minutes to give the best results. The calculations are based upon the needle cut record at 96 to the inch, which is now generally used. It will be seen at once that it is not the cut of the record that is altered, but the principle of application by the aid of differential motion.

There is also another feature of these inventions to be noted; instead of the turntable revolving at 76, 78 or 80, as may be necessary now, it revolves at a much slower speed, 30 or thereabouts. The friction is therefore a little less than a third upon the needle point as against what it is at present; consequently, we understand that one needle may be used upon several records, without any detrimental effect upon them.

Several patents have already been obtained by the inventors (both in England and abroad) in connection with these new mechanisms.

HOUGH, THE UNIVERSAL BUYER!

(Special to The Talking Machine World.)

London, Eng., June 6, 1909.

Not content with securing the valuable factory, plant and other assets of Edisonia, Ltd., Mr. Hough, in his determination to build up the finest and most complete works for the manufacture of phonographs, cylinder records, disc machines and disc records, recently purchased the Edison-Bell name, good-will, patents, trademarks, and et al., besides buying up the Sterling assets, machinery and home and foreign matrices; lock, stock and barrel, by reason of which he is now known and recognized in the trade as the universal buyer!

The result of this vast culmination of interests, covering every branch of the talking machine industry, is inestimable. The establishment and working charges as a consequence are reduced about 50 per cent., while the equipment at Peckham of complete phono and disc plants centralizes an efficient organization capable of almost unlimited production to satisfy the demands of traders everywhere.

The rebuilding of that part of the factory destroyed by fire is now within a few days of completion. Having been taught a bitter lesson, the new buildings are so constructed as to render a similar catastrophe as last absolutely impossible. The molding rooms, wax stores, and matrixing departments are built with steel and iron-lined concrete walls, while the roof is supported by steel girders, thus rendering the place quite fireproof. Manufacturing will commence this month, and it cannot be gainsaid that Messrs. J. E. Hough, Ltd., start operations with every prospect of a bright and successful future.

Our London correspondent advises us that the proposed talking machine exhibition to be held at Crystal Palace, in that city, is not meeting with any considerable support from the trade. The time selected is not an opportune one by any means.

Geo. W. Lyle, manager of the Columbia Phonograph Co., General, returned last week from his European trip, and when seen by The World representative, Tuesday, he said: "I found conditions abroad improving in all lines, including our own, and I confidently look forward to a sharp revival of business in the near future. In short, the situation is pretty much as it is here. I had a pleasant time, and feel in fine trim."

BRINGS SUIT AGAINST MACY & CO.

Victor Co. Allege Infringement of Berliner Patent and Seek Injunction.

The Victor Talking Machine Co. have now entered suit against R. H. Macy & Co., the noted department store proprietors of New York. The latter are signed Victor dealers, having handled this line for several years or more, but also sell other machines and what are known as "Nassau" records, manufactured exclusively for them by the Leeds & Catlin Co. This act the Victor Co. construes as an infringement of the Berliner patent, and the bill of complaint, making this charge, was filed in the Circuit Court of the United States, southern district of New York, May 29.

The complaint, which is a formidable document two inches thick, asks for a preliminary injunction, damages, and accounting, and the destruction of all such goods as may be in the possession of the defendants. It is a case in equity. The hearing on the motion was up June 4, but postponed until June 18. On the day of filing the bill Horace Pettit, counsel for the Victor Co., went before Judge Hand and secured an exparte order restraining Macy & Co. from selling, or in any way disposing of or removing from the premises any of this alleged stock of goods "until the time fixed for the hearing of the motion for preliminary injunction and until the hearing and decision therein." This ties up the "Nassau" records and machines until the court rules otherwise.

A DISTINGUISHED CALLER.

A distinguished caller at the New York office of the National Phonograph Co., recently, was E. Davis, of the E. Davis Co., an Edison jobber of Sydney, N. S. W., who came in to pay his respects to Walter Stevens, manager of the export department, previous to his sailing for Europe. Mr. Davis is also a music publisher. The European companies, explained Mr. Stevens, deal direct with the factory in Orange, but the National Phonograph Co., Ltd., of Australia, with headquarters in Sydney; the Mexican National Phonograph Co., in Mexico City, and the Compania Edison Hispano-Americano, in Buenos Ayres, A. R., have their own list of jobbers, whom they supply with stock direct, but all their orders sent here go through the export department of the home company. Other visitors included: W. O. Crew, of the Elmira (N. Y.) Arms Co.; B. Lee Crew, of the Crew & Phillips Co., Atlanta, Ga., and O. V. Redaelli, Armscliffe, Sydney, Australia.

"DUBBING" SUIT DEVELOPMENTS.

The counsel in the suits of the Columbia Phonograph Co., General, New York, joined with the Fonotipia Co., and the Victor Talking Machine Co., Camden, N. J., against W. V. P. Bradley, Brooklyn, N. Y., sales agent of the Continental Record Co., and others, represented by Waldo G. Morse, recently appeared before Judge Chatfield, Circuit Court of the United States, eastern district of New York, and agreed, at the suggestion of the court, to allow the arguments made, briefs filed and affidavits submitted on March 4 last, on the motion for a preliminary injunction, to stand and to be treated as of the final hearing. Counsel stated they would much prefer the judge to write an authoritative opinion in the case rather than render a hasty and possibly a not fully considered decision. This reflected the views of Judge Chatfield, and he stated he would give the case careful attention and deliver an opinion some time during the summer. The defendants are charged with "dubbing" or making spurious imitations of the records of both of the complainants. The defense had stipulated to cease "dubbing" until the charges are disposed of by the court.

That business which is so "different" that it cannot be helped by advertising—usually remains about the same.

DYER ON NEW COPYRIGHT LAW.

Points Out Several Objectionable Features Which Are Unjust to the Talking Machine Trade, but Which He Holds Will be Remedied in Time—Letter to The World.

The attitude of the National Phonograph Co. on the new copyright act is frankly stated in the appended letter from President Frank L. Dyer, who, writing from Orange, N. J., under date of June 9, says:

"Dear Sir—Regarding the attitude of the National Phonograph Co. on the subject of the new copyright law, which goes into effect July 1, I will say that so long as the law remains on the statute books it will, of course, be observed to the letter.

"There are several features of the law which strike me as being very objectionable, entirely aside from its general provisions: If we manufacture a copyright record and put it in our bins and the bins burn down, we still have to pay the royalty. If we sell ten copyright records to the trade and the records are later returned to us as 'cut-outs' and full credit is allowed for them, we still have to pay the royalty on the records, which were practically never sold. If we manufacture a copyright record and it is shipped to China, we still pay the royalty, although that particular record may never be played in this country and no copyright law exists in the country where it would be used.

"These features of the law are all so very unfair that I have no doubt that eventually they will be remedied; but, as I have said, the law is here and we must observe it. Yours very truly,

"FRANK L. DYER, President."

The Ross P. Curtice Co., Lincoln, Neb., whose main line is pianos, recognizing the importance of their talking machine department, will remove the stock from the basement to the first or main floor of their store, erect demonstrating booths and push the goods as they should be. They handle both the Edison and Victor lines as distributers and dealers.

TIMELY TALKS ON TIMELY TOPICS

During the past few weeks the patent situation has cleared up amazingly. The basic inventions covering the production of disc records especially have been passed upon by the highest court in the land, and therefore they are hereafter unassailable. An effort was made to still further prolong the uncertainty regarding the enforcement of the latest decision on the Jones patent for duplicating disc records, a universally used process, but it failed signally. On May 24 the Supreme Court of the United States denied the application for a review of the opinion, a procedure evidently instituted to "delay the game" only. The average layman could see no reason why the power of the court of last resort should be invoked in this instance, and his judgment was sustained. The claim of the defense that the patent laws were not adequate to prevent the employment of the Jones process by the world at large was declared fallacious. This is the last word.

Another suit that attracted attention at the time, because it attacked the Berliner patent, was that of the Victor Talking Machine Co. against the Duplex Phonograph Co. Counsel for the defendants were confident they had smitten this celebrated invention a fatal blow in a vulnerable part. Argument was heard on the case a year ago, and when Judge Knappen wrote his opinion, which was handed down May 27, the dictum of the Supreme Court applied, and the charge of infringement was upheld. No novel or specially new points were embodied in this litigation, and it is referred to only in connection with its being about the last case of the kind before the Federal courts. The World refers to these matters without bias, and in the spirit of the historian alone.

The stock of Victor Victrolas is now in better supply than ever before. Shipments are being made regularly by the Victor Talking Machine Co., and distributers and dealers who were behind on stock are now catching up on back orders. It is really wonderful what a success the Victrola has met with, and its popularity is increasing rather than diminishing. The Victor Co. have advertised this elegant specialty with no niggardly hand and the reward is commensurate with the outlay. The grade of publicity employed by this company is along refined lines and the entire trade has benefited.

Before Caruso, the world-renowned tenor, sailed for Europe last month, the wildest rumors were given currency by the daily newspapers regarding the permanent impairment of his voice by overuse. He is under contract to sing for the Victor records exclusively for the term of his natural life, and his remuneration is royal, to be sure. It is said that for seven or eight weeks previous to his departure, Caruso had been steadily employed at the Victor laboratory, and this strenuous work had been too much of a strain. The great tenor has never sung so often in public as during the past operatic season, and doubtless he is suffering from over-exertion and fatigue, from which he expects to wholly recover after a long rest. The Caruso records have been the best sellers ever placed on the market, despite the price, and it would be a pity, indeed, were his voice permanently affected. Those in a position to know say these reports are more sensational than truthful.

While the new copyright law becomes effective July 1 it is not likely to cause a ripple of difference in the talking machine trade—at least, for some time. The royalty provision, so far as the use of musical compositions are concerned, apply to new songs or works; that is, those written from that date on. It is not to be expected that composers will work overtime writing music in order to reap the alleged harvest from manufacturers of records. Undoubtedly real merit and demonstrated selling qualities will be the prerequisite for anything the record makers may reproduce; providing, of course, the copyright owner has granted the market privilege, as the act defines. At any rate the accumulation of new acceptable music will be comparatively slow, the record manufacturers aver, so that they will not cut much of a figure in the total output for some time.

Now, a Sousa Phonograph Co. is the latest addition to the list of talking machine dealers; and when John Philip Sousa, the great bandmaster and successful composer, hears of this new concern, he will likely file a vigorous protest against the use of his name. The attitude of this versatile musician, who originated the rather contemptuous epithet, "canned" music in connection with records, is notoriously not the most cordial toward the trade. In this respect he differs materially from Victor Herbert, and to the advantage of the latter's perspicacity of judgment and rare good sense. Perhaps Bandmaster Sousa's feelings might be mollified were he invited to become the musical supervisor of a recording laboratory of repute and standing. But that is mere speculation. The question "before the house" is, will Mr. Sousa consider himself complimented, or otherwise should he learn his name has been taken in vain by a mere talking machine concern? Will there be an explosion of expletives more forcible than elegant, or will this fresh testimony of glory and fame be accepted as a tribute? Shades of "canned" music protect the Sousa Phonograph Co. until this momentous question is settled!

From the number of cases reported it is certain the manufacturing companies who have "signed" jobbers and dealers are determined to compel obedience to their agreements, as regards the stipulated selling price, by judicial procedure. As a rule the jobbers or distributers are familiar with the decisions of the Federal courts on this matter, and instances of infraction on their part are rare, if not comparatively unknown. The dealers, on the contrary, are occasionally inclined to question the equity of declaring a patent a monopoly to the point of regulating the selling price of an article. It is nevertheless a legal fact, and price cutters are soon brought to see the error of their way, if not to grief, where the dispute is carried to the United States courts for adjudication.

LAW PROCEEDINGS COST MONEY.

The decree of the Circuit Court of the United States, New York, in the Jones patent suit of the American Graphophone Co. (Columbia Phonograph Co.) against the Leeds & Catlin Co., was signed by Judge Hough on June 2. This is the case in which the decisions of the lower courts were sustained by the Supreme Court of the United States. The perpetual injunction was issued the succeeding day, and on June 4 a writ of execution for the costs in the Circuit Court of Appeals was secured against the Leeds & Catlin Co. by the United States Marshal, and their certified check for $1,400 was paid over in satisfaction thereof. June 7 the American Graphophone Co. filed an additional bill in the Circuit Court for $800 additional costs in the same suit against the Leeds & Catlin Co.

RECORDS OF AFRICAN TRIBES.

(Special to The Talking Machine World.)

Berlin, Germany, June 3, 1909.

A dispatch from Vienna states that the Vienna Academy of Sciences is forming an extremely valuable and interesting collection of phonographic records, consisting of the speech and music of all the less-known races and tribes in distant parts of the world.

The most interesting of the recent additions to the collection consist of selections of speech, song and music of the Zulus, Nadi, Swazi, Matabele, Baca and other African races. There are war songs, love songs and dance music of most of these famous savage tribes.

There are also songs and music composed by negroes who have been converted to Christianity, and they show in a curious way the influence of civilization upon savages.

CINCINNATI NEWS BRIEFLETS.

Auxetophones in Demand for Cafes—Wurlitzer's Attractive Windows.

(Special to The Talking Machine World.)

Cincinnati, O., June 10, 1909.

The use of the Auxetophones in the cafes and leading restaurants in the city is doing much to educate the prospective talking machine buyer. These instruments hand out a fine brand of music, and being fashionable at the cafe, of course, looks well at home.

The Wurlitzer house has a window trim that is making a hit with thousands that pass this store each day. The window is arranged into a miniature camp, with tent, camp fire, stools, fishing rods, guns, a smoking outfit for the devotees of the pipe and cigarette, and last but not least, the Victor talking machine outfit, which is the center of the display, and serves to while away the evenings of camping. The idea is a splendid one just at this time. This city has hundreds of camping enthusiasts who go up on the banks of the Miami River and spend the summer months under tents. The suggestion of a talking machine to enliven the evening is having a good effect in the way of sales made and the inquiries being made.

The Milner Musical Co. are running a thirty-day free trial of talking machines to prospective customers with good success. Manager Strief says trade with his house has been satisfactory for the past month. The cheaper grade of machines are getting in favor again, due to improving conditions among the workingmen.

The Columbia Phonograph Co. reports a fine May's trade in the wholesale department, the month showing an increase of about 50 per cent. over a year ago the same month. The company are to have a new store front, work on this beginning next week. Plans also include several demonstration booths.

THE NEW FIRESIDE.

The new Fireside machine, the latest product of the National Phonograph Co.'s Edison line, which is so greatly in demand, is of the same general style as the Standard, Home and Triumph, but is not intended to take the place of any one of the Edison machines. On the contrary, it is a brand new type of phonograph, and in a measure is intended to fill the place of the old type Standard which formerly sold at $20. The Fireside will be sold at $22 list, and in Canada at about $28.60, and it will be placed on sale at retail July 1. Shipments to the jobbers have been going on from Orange, N. J., before the middle of May, so that the orders of dealers can be supplied in time. The total of the first orders for Fireside machines were over $25,000.

Several artists from Buenos Ayres, A. R., S. A., are in New York at the present, recording songs and popular music of the Argentines. The instrumental records are also being arranged by this native talent for the same market.

IT JUMPS

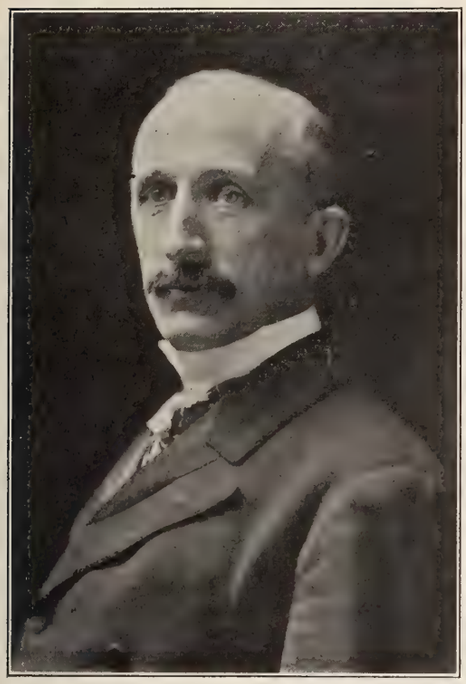
Caused by lack of graphite in springs. You would know this immediately if you had a copy of "How to Repair Talking Machines and Phonographs." Get busy; order a copy now and save time and money. Postpaid on receipt of price, $1.50. Frank E. Drake, 424 Tracy avenue, Kansas City, Mo. Reference, Gate City Bank.

EDWARD D. EASTON DISCUSSES CONDITIONS.

The President of the Columbia Phonograph Co. Gives Reasons Why the Talking Machine Business Should be Exceedingly Active the Coming Fall—Leaves for Europe Next Week.

Edward D. Easton, president of the American Graphophone Co. and the Columbia Phonograph Co., who sails for Europe on June 22, accompanied by his wife, son and two daughters, takes a cheerful and optimistic view of the future of the talking machine industry, and discredits any suggestion that the hard times, which have been felt in all lines since the panic, will have anything but a temporary effect on the sale of talking machines and records. In an interesting chat with a representative of the Talking Machine World the past week he said:

"The clearing up of the financial atmosphere and the restoration of confidence which has followed in the wake of the panic of 1907, and the dull times which succeeded it, gives to the world another splendid illustration of the wonderful recuperative powers of our country. As might have been expected, those concerns dealing in luxuries were among the first to feel the effects of the panic and the talking-machine companies were no exception. There was a falling off in the volume of business done and a general policy of retrenchment naturally accompanied it. The resumption of business by the Knickerbocker Trust Co. did much to give increased confidence, the election of President Taft more, and there is a generally hopeful tone to business, although it may take another year before normal conditions are reached. There is a feeling in all circles that when Congress has passed the new tariff bill there will be a resumption of business in all lines.



EDWARD D. EASTON.

"The year 1909 promises to be a memorable one in the history of the talking machine business in the United States. Three events of extraordinary interest and far-reaching importance have already taken place, all of which will contribute to the promotion of our business, because in each instance an end is reached to a dispute which lasted for many years, and which caused the loss of an immense amount of time and money that would ordinarily have been spent in the development of the business.

"The first was the passage of the Currier copyright bill just before the adjournment of the sixtieth Congress. The fight which has been waged for many years has ended in the passage of a bill that, while it contains certain features that ought to be eliminated (I refer more particularly to the royalties applying to records manufactured instead of on records when sold), has nevertheless been framed up with a view to honestly protecting all who deserve consideration in connection with the matter. We propose to give the new law a fair test, feeling sure that if it proves to work an injustice or is impracticable it will be suitably amended or repealed.

"The decree of the United States Supreme Court, on April 19, unanimously sustaining the Berliner patent, covering disc types of machines in combination with disc records, was fully expected. Here was a valid patent being flagrantly and openly violated and the infringers seeking to evade punishment by legal technicalities while they pursued their unlawful course, defiantly, to the extent even of disobeying the injunctions of our United States courts and boasting that they would proceed. Many years ago the Columbia Co., recognizing the imporance of this patent, secured a license so that we were protected when the patent was sustained.

"The decree of the United States Circuit Court of Appeals for the southern district of New York, April 14, once more unanimously sustaining the validity of the Jones patent, in the action against the Leeds & Catlin Co., put an end to the most important talking machine case that has been before the courts for many years. The United States Supreme Court promptly denied Leeds & Catlin's motion for a writ of certiorari, and the case, that has been noted for the bitterness with which the defendants and their counsel have fought, thus came to an end. This patent covers the well known and universally used process of making disc records and is owned by the American Graphophone Co. It has about ten years to run and will control the art. The Victor Co. is licensed under it.

"The effect of these two important decisions and the punishment of those who have been notoriously infringing the patents will be to encourage inventors, command a greater respect for patents issued by the United States Patent Office and give increased confidence to investors who are solicited to put their savings in industrial companies which make and sell patented articles. From a commercial standpoint these decisions will greatly benefit the industry, for it puts an end to the indiscriminate price cutting on disc records and will quiet the dealers and jobbers who know now that the 'one price policy, which has been a feature of the talking machine business, will be successfully maintained for many years to come.

"The double-disc record is proving to be a great trade bringer. We introduced it and have backed our judgment that it is going to be the disc record of the future by entirely discontinuing the line of single-sided discs. The Columbia disc catalog only contains double-disc records, and the public is rapidly reaching that point where they will take no other. The Columbia Indestructible cylinder record is one of the most attractive propositions which we have ever put out in the cylinder line It requires no argument to convince a customer that these are the only cylinder records he wants after he has once seen and tested them. We look forward to a great business the coming fall and winter and are preparing for it now.

"Is there a decreasing interest in talking machines and records and is the business going to be a permanent one?

"Well, I was asked that question ten years ago, and know of no better answer now than I gave then: 'As long as people are born with ears just so long will they be interested in talking machines and just so long will the business live.'"

While abroad, Mr. Easton, as has been his custom for many years, will inspect the various offices and factories of the Columbia Co. and familiarize himself at first hand with European conditions. His plans include a short sojourn in Switzerland.

It is universally conceded that Mr. Easton has done much to commercially exploit the talking machine and to promote this industry which now circles the globe. He has made the name of the Columbia Phonograph Co. known all over the world and no matter where you go the Graphophone and Columbia records are familiar household words. After establishing the business in the United States, the great European capitals were invaded one by one and in the pioneer work which he organized he has given impetus and courage to others to embark in the talking machine business until it has taken on huge proportions and affords occupation and the means of livelihood for hundreds of thousands, while millions of dollars are invested in factories, stores and goods.

Mr. Easton will return to New York early in August.

FELICITATIONS EXCHANGED.

Thomas A. Edison Writes a Personal Letter to Victor Herbert Expressing Pleasure at His Connection With the Edison Laboratory.

The engagement of Victor Herbert, the eminent composer, musician and orchestra director as musical supervisor of the National Phonograph Co.'s recording laboratory in New York, narrated at length in the May issue of The World, was so pleasing personally to Thomas A. Edison, the famous inventor of the phonograph, that autograph letters of mutual felicitation were exchanged. Mr. Edison rarely writes a letter in his own hand, but the occasion was exceptional, and therefore it is a unique compliment. It will be noted how clear is the chirography of the distinguished savant, no doubt due to the training in his early career as a telegraph operator. Both Mr. Edison's letter and the reply of Mr. Herbert are reprinted in fac-simile, as follows:

THOMAS A. EDISON'S LETTER

My Dear Mr Herbert

I was greatly pleased to learn that our Phonograph people have obtained the services of your great orchestra, and your personal advice and criticism in our record making

From now on we ought to reach a still higher standard in the recording of music

Yours

Thomas A Edison.

May 1 1909.

VICTOR HERBERT'S REPLY.

Victor Herbert
171 West 106th Street
New York City

New York May 3d 1909

Dear Mr. Edison

I thank you for your kind letter of May 1st, and hope that the existence my orchestra and I may lend in making Edison Records, will meet your expectations and further approval.

The capabilities of the Phonograph in spreading culture, instilling a sense of appreciation and discrimination of the best in art, and musically educating the people are beyond exception, and I am eager to do what I can to enlarge the scope of your truly wonderful inventions.

Very sincerely Yours

Victor Herbert

The Salter Mfg. Co., of Chicago, have just issued a complete catalog of their disc and cylinder record cabinets, music cabinets and furniture specialties.

Columbia Grand Opera D
Your Business and
C

Re
an

ıble-Disc Records Broaden Bulge Your Profits

his 76-page catalogue into the hands of the solid people who OUGHT to be your customers—and they ILL be. The only Double-Disc Grand Opera Records are Columbia Records. Every buyer of Grand era Records is your customer just as soon as you can tell him that one fact. The finest Grand Opera ver made are included in the Columbia list—best in the standing of the artists, best in surface, quality ility—and the first minute you demonstrate that to the Grand Opera Record buyers of your district, you will get their music money.

♫

The artists of the Fonotipia Series include no less than four of the great tenors of the world. When you have a customer who appreciates delicacy of shading, brilliancy of tone and intelligence of interpretation, you will find that he needs no reminder of the fact that along these lines BONCI is matchless and supreme. ZENATELLO is equally known for his marvelous tonal beauty, the opulence of his voice and the dramatic fire of his delivery. No better proof of this could be found than in the fact that he supplanted Caruso at Covent Garden last season and also in the spring tour of the Metropolitan Opera Company this year. In ANSELMI, Europe has discovered a second Mario, the greatest tenor of history. In quality, power and volume this magnificent artist towers head and shoulders above all his rivals in European opera—and his career is only commencing. BASSI with his impassioned singing and impressive acting has charmed his tens of thousands and is preferred by many above all of the living tenors. Not an unknown name nor a doubtful selection nor an imperfect record in the whole list—SAMMARCO, RUSS, DIDUR, PACINI, STRACCIARI, PARSI-PETTINELLA, MAGINI-COLETTI, BARRIENTOS, VIGNAS, LUPPI, KRUSCENISKI, DANI, AMATO, GARBIN, CORRADETTI—and KUBELIK, the world's greatest violinist.

♫

CONSTANTINO, the great tenor, is the new star of the Symphony Series—and CAMPANARI has just been signed up exclusively. The complete list of Symphony artists taken in connection with those of the Fonotipia Series, cannot be equalled by any organization in the world: DAVID BISPHAM, VAN ROOY, GILIBERT, BLAUVELT, ARIMONDI, VINCENT, CASTELLANO, TRENTINI, BERTI, LINDE, GRAYVILL, HOLT, BALDASSARE, BELLATTI, PARVIS, CIAPARELLI, DESTINN and LEHMANN.

The prestige these names give your organization cannot be estimated. A line of Columbia Double-Disc Grand Opera Records by the great stars of opera, means a different atmosphere to your entire trade, attracts the solid people of the community to your store and gives you a hold on the patronage of those whose machine and record bills run into money. If you are not giving the attention you might to this most important end of the record business, you couldn't want a better time to start than right now.

IMPROVEMENT IN BOSTON.

Trade Shows General Betterment—Victrola Display at the Eastern Talking Machine Co. —The Victor Line in Brockton—Other Items

(Special to The Talking Machine World.)

Boston, Mass., June 10, 1909.

Anyone conversant with the conditions that have prevailed for the past year would be greatly encouraged to take a trip around the talking machine warerooms in Boston, and note the general air of hustle and bustle and good feeling that exists. The demand for high-priced goods still continues to develop at the expense of the very low-cost goods.

H. L. Royer, the new manager at the talking machine branch of M. Steinert & Sons, reports that business is very satisfactory. A line of Victors has just been put into the Steinert branch at Brockton, Mass.

Manager Winkelman, of the Oliver Ditson Co.'s talking machine department, has been entertaining W. J. Elwell, manager of a similar department for C. J. Heppe & Sons, Philadelphia.

At the Eastern Talking Machine Co. there is on display a full line of Victrolas, in the new gun metal cases, also Circassian walnut—six different style cases in all. Mr. Elwell was also a visitor here and was shown the company's method of keeping track of the stock and the new rack system, with which he was much pleased. W. H. Beck, president of the company, came on this week from Washington, and stated that he is very much pleased with the business outlook for this year.

The association of employes of the Eastern Talking Machine Co. has discontinued its series of monthly meetings until fall. Manager Taft has secured the services of L. W. Ballou, of Burlington, Vt., as special representative of the company in New Hampshire and Vermont. He was formerly with the American Phonograph Co., of Burlington, and later with the Boston Cycle & Sundry Co.

Dan O'Neil, the Victor traveler, was in Boston looking over the field this week.

IMPORTANT COLUMBIA DEAL.

Consummate Arrangements for the Placing of the Columbia Records and Machines in the Siegel Stores in Boston, Chicago and the Fourteenth Street Store in New York.

The wholesale department of the Columbia Phonograph Co., General, on June 7 contracted with the corporation of "Henry Siegel, wholesale," for 65,000 double-face records and 100 machines—an initial order only—of the regular line. These goods are to be distributed among the big department establishment in New York, known as the "14th Street Store"; Henry Siegel Co., Boston, Mass., and Siegel, Cooper & Co., Chicago. The talking machine department in the last-named enterprise is being greatly enlarged, and its facilities vastly improved. In the New York and Boston places the Columbia line will be handled exclusively, and the space assigned this important branch of their business has been trebled, and demonstrating booths of the most approved pattern have been installed. The line formerly handled by the corporation's branches has been declared infringements of basic patents by the United States courts, and therefore they were discontinued. B. Feinberg, who recently joined the selling staff of the Columbia Co., negotiated this important deal and closed the contracts.

HERBERT'S FIRST RECORDS.

Victor Herbert and his orchestra have made their first Edison record, a selection of several airs from "Mlle. Modiste," written by Mr. Herbert for Fritzi Scheff. The airs are "Charity Bazaar," "Ze English Language," "The Time, the Place and the Girl," "I Want What I Want When I Want It," "When the Cat's Away," and "The Mascot of the Troop." The record will appear in the September list of Edison Amberol selections, No. 195. In making this record Mr. Herbert was given the widest scope, and it is remarkable for sweetness, expression and artistic rendition.

STRAUSS TO MAKE EDISON RECORDS.

Will Lead His Own Orchestra and Act in a Supervisory Capacity for Records to be Made by the National Phonograph Co. for Their German Trade—Some Other Notable Additions.

The National Phonograph Co., at its recording plant in Berlin, Germany, has made an arrangement with Johann Strauss, the famous German composer and conductor, to lead his own orchestra in making Edison records and act as a supervisor of the better class of compositions. The arrangement is much the same as that made with Mr. Herbert here. Several records by Mr. Strauss will shortly appear in the German list of Edison records.

The company has also secured Albert Spalding, the young American violinist, whose records will be a feature of the Edison list, beginning with August. His first, Wieniawski's Polonaise in D Major, is pronounced one of the finest reproductions of violin music in the market. Other well-known people who have joined the Edison record makers are Nat M. Wills, the tramp king; Digby Bell, Josie Sadler, Grace Cameron, Ray Cox and Pete Murray. Records by some of these artists are already being issued each month, and others will appear in August, September and October.

KANSAS CITY GETTING GOOD.

Issue Ordinance Controlling Playing of Talking Machines and Electric Pianos in Public Places.

Kansas City, we mean that of Missouri fame, is an orderly place, notwithstanding stories to the contrary. Oftentimes, like in New York, the authorities overlook the serious maladies to which the city is heir, and pay attention to small things. A recent police order in that city refers to the control of talking machines used in advertising some of the popular-priced theaters, and this is how the Kansas City Star describes the proceeding:

"The wailing, rasping, blaring phonographs, which alternate between "Rainbow" and "Flicker, Little Firefly, Flicker," and the unmusical electric pianos, which all day long play "Every Morn I Bring Thee Violets," are to be given an enforced rest downtown in business hours. The order against them was issued this morning after a conference of the chief of police, the judge of the municipal court and the city attorney. Here's the penalty: For the first offense, $25; for the second, $50; for the third, the limit—$500.

"The ruling, as made by Judge Kyle, is that the phonographs above the doorways of nickel theaters and the pianos that lure small boys to the penny picture 'parlors' are violating the city ordinance against 'loud and unusual noises.' Chief Snow told Judge Kyle that the suggestion to suppress them was a welcome one, and that patrolmen would be notified immediately to arrest violators. The order is that the 'loud and unusual noises' shall not be tolerated until after 6 o'clock at night.

"The complaint which resulted in the order was made by tenants of the Commerce building against Ike Sahlank, who has a nickel theater with a loud brazen phonograph at 925 Walnut street.

"It's going all day long so we can't think to do business,'" one tenant testified.

"Mr. Sahlank took the complaint in good spirit.

"Judge Kyle discharged Sahlank with a warning."

The H. E. Sidles Phonograph Co. are making improvements in their department, under the skillful management of L. F. Haffley. They are also doing a great business in automobiles, and are 200 machines behind on orders, which are sold as fast as they arrive in Lincoln, Neb.

HAWTHORNE & SHEBLE CO. PETITIONED IN BANKRUPTCY.

Restraining Order Issued by the U. S. Court at the Instance of the Victor Co. Has Compelled Them to Take This Step.

(Special to The Talking Machine World.)

Philadelphia, Pa., June 11, 1909.

The appended letter, dated June 5, has been sent the creditors of the Hawthorne & Sheble Mfg. Co., of this city:

"We regret exceedingly to advise you that on May 22, 1909, the Hawthorne & Sheble Mfg. Co. was served with a restraining order, issued by the United States Circuit Court, at the instance of the Victor Talking Machine Co., restraining our company from manufacturing or selling disc talking machines. This restraining order necessitates our taking such action as will enable the creditors of the Hawthorne & Sheble Mfg. Co. to place it in bankruptcy, and we believe that this move is for the best interest of its creditors.

"During the past eighteen months, our company has been in litigation with the Victor Talking Machine Co. over patent matters. The Victor Co. have contended that our patents infringe certain of their patents, but the machines that our company were manufacturing and selling were constructed under patents granted to them and which we have considered, on the advice of our attorneys, as being valid and of a non-infringing nature.

"In April, 1908, the Victor Co. made an application for an injunction against our company, which was refused by the court. Since that time the validity of the patent, known as the 'Berliner' patent, under which the Victor Co. operate, was sustained by the Supreme Court of the United States in April, 1909, and in consequence of this fact, on May 21, 1909, they were enabled to obtain the restraining order which practically stops our business. On June 4, 1909, this injunction, after argument, was continued in force by the Court. In view of the above-stated facts, the Hawthorne & Sheble Mfg. Co. have been compelled to take such steps as would best preserve their assets for the benefit of their creditors."

As foreshadowed in the preceding preliminary notice to creditors, the Hawthorne & Sheble Mfg. Co. were petitioned into involuntary bankruptcy on Tuesday in the District Court of the United States, eastern district of Pennsylvania. The receivers were to be appointed to-day.

SCHMELZER CO.'S NEW STORE.

The J. F. Schmelzer Sons Arms Co., Edison and Victor jobbers in a wholesale way only, Kansas City, Mo., have purchased a building in the shopping district of that place, remodeled it for their purposes, and inaugurated a vigorous campaign for retail business.

SUIT AGAIN POSTPONED.

When a motion for a decree in the case of the American Graphophone Co. (Columbia Co.), against the International Record Co., Auburn, N. Y., came up in the Circuit Court of the United States, New York, on June 11, the defense stated their records were duplicated by another process than that covered by the Jones patent. Judge Lacombe gave the International Co. a month to submit proofs.

HECTOR TAKES THE COLUMBIA LINE.

Andre Hector, who recently bought out the Mergott Piano Co., Newark, N. J., has just taken on the full Columbia line, placing a large initiative order. He is fitting up an artistically-designed and furnished department with the usual sound-proof booths and other modern accessories.

The talking machine stock of the J. W. Jenkins' Sons Music Co., Kansas City, Mo., heretofore on the second loft, will be transferred to the first or store floor, the space greatly increased and demonstrating booths installed.

THE NEW COPYRIGHT LAW.

By PAUL H. CROMELIN

President of the American Musical Copyright League.

As has already been announced, the sixtieth Congress passed the Currier copyright bill, H. R. 28,192, under suspension of the rules just before adjournment, and President Roosevelt approved same March 4, 1909. The act goes into effect on July 1, 1909, and takes the place of all copyright enactments now in force. By its passage was ended the fight which has for years engaged the attention of members of Congress and been such a disturbing factor to all engaged in the manufacture of devices which mechanically reproduce music.

While in theory a fight between composers on the one side and manufacturers on the other, it was in reality a battle between certain manufacturers, who saw an opportunity to secure control of the industries for all practical purposes if they could secure the passage of such a law as was originally intended, and those other manufacturers who were fighting to prevent such a thing from happening, to protect their investments, and to save from destruction their life's work as represented in the various industries they had established, nursed and made successful. Lined up with those who were seeking to create the monopoly were most of the great music publishing concerns of the country, represented by the Music Publishers' Association and their allied interests. Behind these were the powerful European publishers of music, who were to richly benefit if success crowned their efforts.

COMPOSERS HAD NOT SOUGHT LEGISLATION.

Until the original bill, H. R., No. 18,853, introduced May 31, 1906, no composer had appeared in the matter. It was evident that composers had not sought nor asked for the legislation, nor had they been consulted in framing the bill, which was the work of the attorneys for those who were scheming to put through the deal. When the public hearings before the Patent Committees of the House of Representatives and the United States Senate took place the disclosures made were of such a startling nature that the members began to sit up and take notice. It appeared that under guise of justice to the "poor composer" was being attempted one of the boldest jobs that has ever come to the attention of the members of Congress.

Evidence was introduced and unrefuted which showed that prior to the introduction of the bill practically every important publisher of music to the United States had entered into a secret contract, by the terms of which a certain manufacturing firm would secure the exclusive right for, a long term of years (35), to cut perforated rolls for mechanical playing devices of all the compositions then owned or afterwards acquired by the various publishers. Nowhere in these contracts did it appear that those who were making such a clamorous effort in behalf of the "poor composer" had remembered to make provision for him. He was not mentioned, and he would not have received one cent on everything previously written had they been successful. The manufacturing concerns and the publishers who were in the game would have been the beneficiaries, the public would have had to foot the bill to the extent of the millions involved, and the "poor composer," in whose behalf all the noise was being made, would have to sit by and see the real profits on his compositions going to those who were not entitled to them.

The evidence indicated that a similar scheme was on foot in the talking machine industry, and it was apparent that the prospective gains were too great and the pickings too choice for those on the inside to have overlooked the opportunity to have their plan ultimately embrace every kind of mechanical player of music.

PROTECTING EXISTING INVESTMENTS.

From that point on the majority of the members of the Patent Committee, gave closest attention to the subject, and while giving a fair hearing to all, it was evident that they were going to protect the public and see to it that no such monopoly would be created with their consent. Witnesses were examined and all the details of the scheme were developed and disclosed.

The matter was carried over from year to year; bill after bill was introduced indicating views of different groups of men seeking to find some equitable way out by which the composer would be recognized, existing investments protected and the rights of the public taken into consideration. When it became evident that without the active personal aid of the composers themselves the plan on foot would be defeated, they were urged to "get busy," and the members of Congress were flooded with letters from composers and would-be composers seeking redress from the manufacturers for their alleged wrongs. The press of the country was enlisted and a tremendous campaign of publicity begun. Most of the writers did not know what the fight was really all about, but still they were for the "poor composer," and some of the recitations of his alleged wrongs would have been pathetic, had they not been so amusing.

Our vocabulary has been enriched by the addition of the term "canned music," which is credited to our distinguished March King, John Philip Sousa; and the public has made the astonishing discovery from Mr. Sousa's testimony before the committee, that he can compose better for one thousand dollars per selection than for five hundred. It also appeared that while Mr. Sousa was indignantly and vehemently denouncing these so-called producers of "canned music" he and his band had been for years and were then busily engaged in filling the "cans" at so much per "can."

Then, too, we owe to another noted composer, Victor Herbert, the symbolic phrase, "mutilated melody." Of all who appeared none were so active, none more vindictive, none more indignant at these machines, which were alleged to be destroying musical art and culture, these producers of "mutilated melody," than Mr. Herbert; and to-day, to our delight, even if it is difficult to repress a smile, we find Mr. Herbert's name prominently linked with one of the big talking machine companies, and from now on he becomes a distinguished and notable convert to the army of those who are making the world resound with what he has chosen to dub "mutilated melody."

Let there be no doubt on this point—that no money consideration could have induced Mr. Herbert to devote his time in the future to such a cause. He is willing not only to have his orchestra make records, but to lead in person and as the article announcing Mr. Herbert's conversion advises that "his chief motive must be an earnest belief in the future of the phonograph and of his own ability to add to its prestige," we welcome him to the brotherhood of distributers of "mutilated melody."

SLIGHT COMFORT TO REPRODUCTIVE AGITATORS.

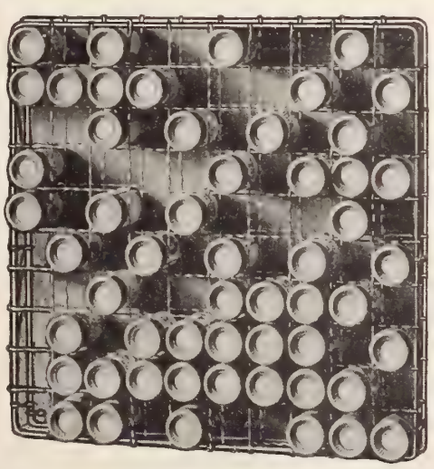
Needless to emphasize that the provisions of the Currier bill will bring but slight comfort to those who were really at the bottom of all the agitation to bring mechanical reproducers within the pale of the copyright law. They started out with the fixed purpose of obtaining absolute control of the various mechanical reproducing industries by reason of contracts which would give them exclusive rights under the law. *The compulsory license clauses which those who opposed the original bill succeeded in having embodied will make this impossible.*

They confidently expected to obtain the passage of a law which would grant such rights as might be given at all, to the owners of all existing copyrights, as well as to those taken out in the future. In some of the various bills proposed and considered prior to the final draft of the bill as passed, their purpose to include existing copyrights was plainly evident. The language was unmistakable. In others, the same result was sought to be accomplished, though through subterfuge, the real intent being hidden behind legal verbiage. In so far as rights are granted as respects mechanical reproduction, the act as passed recites in clearest terms that only compositions published and copyrighted after it goes into effect are included. This, notwithstanding that all other benefits given in the new act, including the increased term for extension of copyright, are granted to the owners of existing copyrights.

They went so far as to even attempt to bring into their projected international monopoly the works of foreign composers. Had they been successful the result would have been to permit the owners of the works of foreign composers to tax the people of the United States whatever they should see fit on all mechanical reproductions of their music, even though their own country granted them no such rights; nor did they grant such rights to Americans. The bill as passed provides that in so far as its provisions

Sell Wire Racks to the Record Buyer

The "Heise System" 100 and 150 Space Racks—Immensely Popular



These small size racks for home use have been selling big. Are you getting your share of this business? The display of them in your salesroom will materially assist you in selling.

These racks are made in the same style as our store racks, which are in use everywhere. Their convenience immediately appeals to record owners. There's a good profit in them and you ought to get busy right away.

Dealers' Printed Matter is Ready

The 100 Space Racks like cut **in half doz. lots, $15**
The 150 Space Racks erated " " " **$20**

Send to your jobber or us for complete Catalog of racks for store use.

SYRACUSE WIRE WORKS, SYRACUSE, N. Y.

Canadian Representatives: THE R. S. WILLIAMS & SONS CO., Toronto and Winnipeg

relate to musical reproductions by mechanical devices, "it shall not include the works of a foreign author or composer unless the foreign State or nation, of which author or composer is a citizen or subject, grants either by treaty, convention, agreement or law, to citizens of the United States similar rights." As no such rights as are given in the Currier bill are recognized or exist in any country to-day, with the possible exception of Italy, the benefit of its provisions as regards the works of foreign composers can only be secured after the various foreign countries having international copyright agreements with the United States revise their laws.

DOUBTS OF LAW'S CONSTITUTIONALITY.

It was evident from the beginning that while grave doubts existed as to the constitutionality of any law which would include within the rights granted by copyright the records for mechanical machines, and the expediency of such legislation was questioned, still the vast majority of the manufacturers were willing to pay the composer something if a law could be framed which would protect existing investments and put all on an equal footing for the future. This the members of Congress sought earnestly to do, and the Currier bill is the result.

So far as can be learned the manufacturers propose to give it a fair test. The principal criticisms which they have made so far are these:

First—That royalties should be on records sold, not as manufactured.

Second—That the royalties should be payable only on records sold within the United States, and not on those exported. All agree that as regards these two points the act should be amended. They have confidence that if it appears to work an injustice or develop defects that could not have been anticipated, it will be suitably amended by Congress.

The paragraphs in the bill which interest all manufacturers of mechanical devices follow:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any person entitled thereto, upon complying with the provisions of this act, shall have the exclusive right:

* * * * * * * * * *

Section 1.

"(*e*) To perform the copyrighted work publicly for profit if it be a musical composition and for the purpose of public performance for profit; and for the purposes set forth in subsection (*a*) hereof, to make any arrangement or setting of it or of the melody of it in any system of notation or any form of record in which the thought of an author may be recorded and from which it may be read or reproduced: Provided, That the provisions of this Act, so far as they secure copyright controlling the parts of instruments serving to reproduce mechanically the musical work, *shall include only compositions published and copyrighted after this Act goes into effect, and shall not include the works of a foreign author or composer unless the foreign state of nation of which such author or composer is a citizen or subject grants either by treaty, convention, agreement, or law, to citizens of the United States similar rights. And provided further, and as a condition of extending the copyright control to such mechanical reproductions, That whenever the owner of a musical copyright has used or permitted or knowingly acquiesced in the use of the copyrighted work upon the parts of instruments serving to reproduce mechanically the musical work, any other person may make similar use of the copyrighted work upon the payment to the copyright proprietor of a royalty of two cents on each such part manufactured, to be paid by the manufacturer thereof;* and the copyright proprietor may require, and if so the manufacturer shall furnish a report under oath on the 20th day of each month on the number of parts of instruments manufactured during the previous month serving to reproduce mechanically said musical work, and royalties shall be due on the parts manufactured during any month upon the 20th of the next succeeding month. The payment of the royalty provided for by this section shall free the articles or devices for which such royalty has been paid from further contribution to the copyright, except in case of public performance for profit: And provided further, *That it shall be the duty of the copyright owner, if he uses the musical composition himself for the manufacture of parts of instruments serving to reproduce mechanically the musical work, or licenses others to do so, to file notice thereof, accompanied by a recording fee, in the copyright office, and any failure to file such notice shall be a complete defense to any suit, action, or proceeding for any infringement of such copyright.*

"In case of the failure of such manufacturer to pay to the copyright proprietor within thirty days after demand in writing the full sum of royalties due at said rate at the date of such demand the court may award taxable costs to the plaintiff and a reasonable counsel fee, and the court may, in its discretion, enter judgment therein for any sum in addition over the amount found to be due as royalty in accordance with the terms of this Act, not exceeding three times such amount.

"The reproduction or rendition of a musical composition by or upon coin-operated machines shall not be deemed a public performance for profit unles a fee is charged for admission to the place where such reproduction or rendition occurs."

SECTION 25.—*Infringement of Mechanical Musical Instruments.*

Par. 4. (*e*) Whenever the owner of a musical copyright has used or permitted the use of the copyrighted work upon the parts of musical instruments serving to reproduce mechanically the musical work, then in case of infringement of such copyright by the unauthorized manufacturer, use, or sale of interchangeable parts, such as disks, rolls, bands, or cylinder fo ruse in mechanical music-producing machines adapted to reproduce the copyrighted music, no criminal action shall be brought, but in a civil action an injunction may be granted upon such terms ts the court may imposed, and the plaintiff shall be entitled to recover in lieu of profits and damages a royalty as provided in Section 1, subsection (*e*), of this Act: Provided also, *That whenever any person in the absence of a license agreement, intends to use a copyrighted musical composition upon the parts of instruments serving to reproduce mechanically the musical work, relying upon the compulsory license provision of this Act, he shall serve notice of such intention, by registered mail, upon the copyright proprietor at his last address disclosed by the records of the copyright office, sending to the copyright office a duplicate of such notice; and in case of his failure so to do the court may in its discretion, in addition to sums hereinabove mentioned, award the complainant a further sum, not to exceed three times the amount provided by Section 1, subsection (e), by way of damages, and not as a penalty and also a temporary injunction until the full award is paid...*

"Rules and regulations for practice and procedure under this section shall be prescribed by the Supreme Court of the United States."

CLEVELAND'S BUDGET OF NEWS.

Trade Conditions Reviewed—Talking Machine Business as Good as Any Other Industry—Victrola Display at Buescher & Sons—The Month's Happenings in Detail.

(Special to The Talking Machine World.)

Cleveland, June 10, 1909.

It is a difficult proposition to state exact conditions in talking machine circles. Dealers generally report a fairly good trade during May, but are careful to explain that it is not up to standard, and decline data regarding a return to normal business conditions. While it is and has been quiet, it is by no means stagnant. Omitting comparison with former "fat" years, this is by no means a "lean" one, as the aggregate volume of business clearly proves. Dealers are ordering more liberally and are now carrying very complete, carefully selected stocks. They quite naturally expect slackness in trade during the warm summer months, but are all confident of a resumption by the time fall sets in. Meanwhile it is expected the summer trade will likely be of the same character as the spring business, marked by slow but certain recovery.

Some dealers have already taken on side lines, others are arranging to do so.

Wm. C. Broadwell, representative of the R. Wurlitzer Co., Cincinnati, who resides in Detroit, was a visitor to the city May 20. His territory covers northern Ohio and Michigan, and he stated that in all the towns on his trip the outlook was excellent. "There is a better feeling in all lines of the music trade," he said, "and business is gradually though surely improving. I look for greatly improved conditions from this time forward."

Hugh Gully, who retired from the talking machine business several months ago, has since been traveling quite extensively in a number of States. Naturally he visited the stores and sized up the business in which he was by long experience most interested. He says: "I found the talking machine business everywhere as good as that in any other line of trade, and while in some localities it seemed a little slow, the dealers I found were generally prosperous. I saw a number of beautifully fitted and artistically arranged stores, but none, in my judgment, that excel in equipment, ornamentation and adaptability to the trade that of W. J. Roberts, Jr.

A prominent feature in the store of W. H. Buescher & Sons is a display of the different styles of Victrolas, for which it is said there is an excellent demand. Mr. Buescher said business was fairly good in May, and that June had started in showing evidence of improvement. He stated that the increasing demand for machines indicated more prosperous conditions generally than had prevailed of late. J. B. Lane, formerly with the J. W. Jenkins & Sons Co., is now holding a position with the firm.

C. H. Denslow, proprietor of the Talking Machine Store, Taylor Arcade, is young in years but old in experience in the talking machine business, and is building up a successful trade. He says business in May was very good, having made sales of several Victrolas and a number of the cheaper machines, and that the sales of records were fine. Altogether, said he, conditions in the talking machine trade are as encouraging as in most other lines of business. He stated the June Victor Red Seal list had started off nicely, and that the selections are very fine.

Miss Emma Roche has succeeded Loretta Byrnes in the management of the talking machine department of the Brown Bros. She stated business was fairly good, but that there was opportunity for large improvement.

"Business within the past two weeks has considerably improved," said Mr. Probeck, of the G. J. Probeck Co. "We have made recent sales of quite a number of the highest-priced machines, as well as many of the cheaper grades. We are rapidly disposing of the wax cylinder records and replacing them with the Indestructible. The double disc records are selling well and giving entire satisfaction. Our cabinet trade is fair. We are going to put in a side line of high-grade cut glassware, and anticipate a good patronage for that specialty."

Phil Dorn, manager of the talking machine department of Collister & Sayle, says that while the volume of business is considerable, it falls short of being satisfactory in either the retail or wholesale departments. He stated the present demand was for the higher class machines, including Victrolas, and for Red Seal and Amberol records.

B. L. Robbins & Co. report business very quiet, so far as relates to machines, but are having good sales of records, especially of the June lists, and always a steady demand for Red Seals. Mr. Robbins met with a serious loss in the sudden death of his wife May 16. She was in the prime of life and a lovable woman.

E. A. Friedlander, manager of the talking machine department of the Bailey Co., stated that they were making daily sales of machines and records, including many Victrolas, and that the outlook for June was good.

The May Co., under the management of H. L. Tinker, report business improving, both in sales of machines and records. "Our May sales," said Mr. Tinker, "were considerably larger than April, and June has started most satisfactorily. We made sales of several Victrolas in the past week, and the call for Amberols and Red Seal records is good and growing. There is also an excellent demand for cabinets."

Mr. Goodman, of the Goodman Piano Co., says the talking machine business, which he is pushing with energy, is opening up very satisfactorily. "We have made sales of a number of Victrolas," he said, "and the different makes of Victor goods, and we are getting a good record trade. Our piano trade has also opened up fine and gives promise of growing to large proportions."

The Eclipse Musical Co. are handling a good volume of business, but Mr. Towell, president, says trade is very dull and he does not anticipate much improvement until fall.

John Reiling, proprietor of the West Side Columbia Phonograph Store, says business is very good. Demand, he said, was increasing and the record trade daily improving.

M. A. Gibson, successor to Hartwell, of the Phonograph Store, 3032 Lorain avenue, stated that business was fair and prospects good. He has a very full line of Edison and Victor goods.

The Gottdiner & Wicht Co., proprietors of the old-established West Side talking machine store, report considerable improvement in trade recently. "Within the past two weeks," said Mr. Gottdiner, "business has materially improved. We made sales of a number of machines, including two Victrolas, and there is a good steady demand for records."

The affairs of the Gaumont Chronograph Co. appear to be in a chaotic condition. About a year ago A. B. Conlon was placed in charge of the business, the plant was moved to a more suitable building, and it was announced the business would be energetically pushed. Now a sign in the window at the plant reads: "No admittance. Apply to C. H. Peckham, 717 Superior avenue." Mr. Peckham stated there was no information to give out.

A. F. Peebles, president of the Akron Graphophone Co., was a visitor in the city May 3. He stated the company were meeting with success and building up a substantial, desirable business. He said they would soon take on one or two side lines which they were now considering.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., June 8, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

MAY 8.

Acapulco, 163 pkgs., $3,885; Amsterdam, 15 pkgs., $428; 5 pkgs., $188; Buenaventura, 7 pkgs., $129; Buenos Ayres 79 pkgs., $906; 32 pkgs., $5,505; Colon, 5 pkgs., $202; Hamburg, 2 pkgs., $170; Havana, 5 pkgs., $228; Havre, 12 pkgs., $250; Liverpool 11 pkgs., $343; London, 52 pkgs., $1,672; 4 pkgs., $1,622; 6 pkgs., $1,120; Maratea, 3 pkgs., $201; Panama, 3 pkgs., $374; Para, 3 pkgs., $190; Rio de Janeiro, 4 pkgs., $199; Trinidad, 23 pkgs., $495; Tampico, 11 pkgs., $258.

MAY 15.

TRADE NOTES FROM BALTIMORE.

Business Getting Down to the Regular Summer Schedule—Victor Victrola in Great Demand—Dealers Now Closing Early.

Baltimore, Md., June 4, 1909.

A strange coincidence in connection with the talking machine business in Baltimore during May was that there was a noticeable decrease in the sales of both records and machines, as compared with conditions during previous months just at the time when the piano trade took a boom, after being decidedly slow for many months. The dealers attribute the poor showing of May to the beginning of the hot weather quiet, which usually sets in in May and continues as a rule until fall. Like the piano dealers the talking machine people, with the exception of the Columbia Phonograph Co. branch, have started the early closing which will prevail during the summer. Manager M. E. Lyle, of the Columbia, said that his neighboring business people have not begun to close their store before 6 o'clock, and that he finds it a benefit to business to keep open house while the people are still on the street. As the Columbia Co.'s store is on West Lexington street, right in the heart of the shopping district, there is considerable logic in Mr. Lyle's decision, as the firm is thus enabled to catch the late buyers. The Columbia people have started the vacations, which will run through until late in August.

Announcement was made at Cohen & Hughes that while the talking machine business was not as lively during May as previously, the Victor-Victrolas were, nevertheless, in good demand and a number of excellent sales were made.

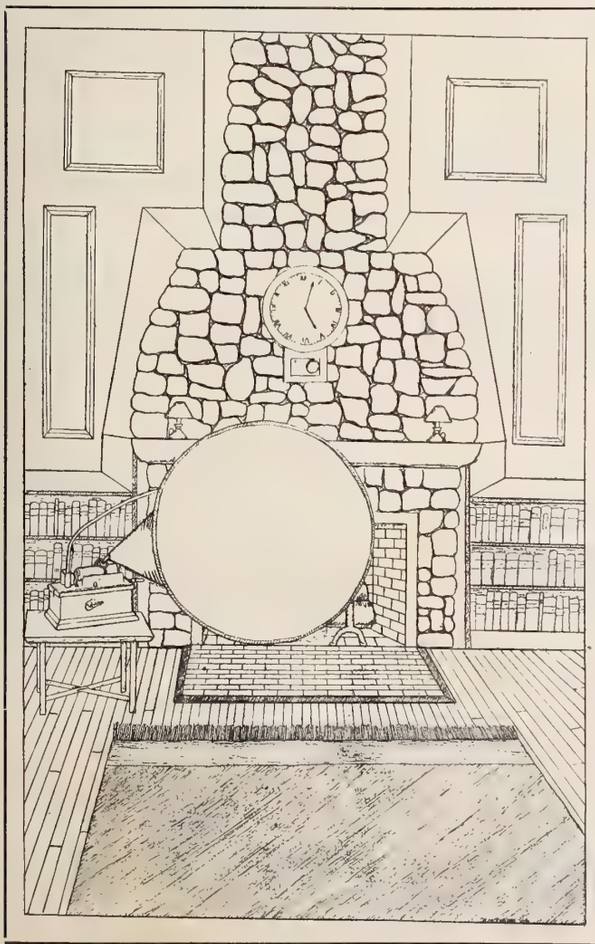
Manager Bowden, of the talking machine department of Sanders & Stayman, said that the medium-priced instruments seemed to be the most popular in the way of May sales. The firm disposed of a number of the $100 styles in both the Columbia and Victor lines. One of the most important sales recorded was that to Francis E. Waters, who will use the instrument for the entertainment of guests aboard his magnificent yacht, Priscilla.

The Star records and machines have been holding their own, according to Fred Schellar, who conducts the agency in Baltimore.

LINDSTROM LINE IN NEW YORK.

P. Kretschmer, agent for Carl Lindstrom Aktiengesellschaft, Inc., Berlin, Germany, has opened an office and warerooms for this celebrated European line of machines, motors, etc., in New York. Mr. Kretschmer, who has been making a trip to the Pacific Coast, calling on the trade in route, is expected to return east about the middle of June. He will later go to Europe for a couple of months.

A corporation has been formed of gramophone jobbers in Germany to open retail stores throughout the empire. Prices will be protected on some articles, but not on the general line.



THE LIN-O-TONE HORN

(FIRESIDE TYPE)

An entirely new horn designed exclusively for the Edison Fireside Phonograph.

¶ It is made of Linenoid, a moulded substance of pure linen, without seam or joint. The nature of the material as well as the fact that it is made **entirely in one piece** is responsible for a reproduction of tone marvellously natural and musical. The peculiar acoustic properties of Linenoid give results unobtainable from metal or any other material.

¶ The finish is exceedingly fine, the colors of a rich character, enhancing the entire appearance of the machine in a marked degree.

¶ It is bound to be a "seller" and dealers can just as well make the additional profit that this horn nets with every Fireside sold.

COLOR SPECIFICATIONS

No. 404
Ivory Black, gold stripe inside and out.

No. 405
A brilliant Vermillion, gold stripe inside and out.

No. 406
A rich Ultramarine Blue, gold stripe inside and out.

Length, 21 inches. Bell, 17 inches.

RETAIL PRICE, $3.00

¶ Order direct from your own jobber or write us for the name of one who can supply you.

The Pardee-Ellenberger Co., New Haven, Conn.

CAMPANARI WITH COLUMBIA CO.

The Great Operatic Baritone Has Arranged to Sing Exclusively for the Columbia Phonograph Co.—A Valuable Accession to Their List of Leading Artists.

The important announcement is made by the Columbia Phonograph Co., General, that Campanari, the famous baritone, is to sing exclusively for them. This move will be received with extraordinary interest by the host of admirers of the great Italian baritone and the discriminating public. In speaking of this arrangement the company say:

"In adding the name of Giuseppe Campanari to the list of great artists, whose records can be obtained only through the Columbia Phonograph Co. and its dealers, another link is forged in the matchless chain of artists of world-wide renown whose work is identified with Columbia grand opera records.

"It was neither accident nor pecuniary consideration that persuaded Campanari to engage to sing only for the Columbia Phonograph Co. He had studied and was familiar with the whole field. He became convinced that only in Columbia grand opera records and by the Columbia process could his superb voice be reproduced with absolute fidelity, and that the music-loving public who so well know and appreciate his work would be able to secure only in the Columbia records the best permanent actual photographs of his voice; hence his decision to sing exclusively for the Columbia Co."

All of the rôles which Campanari has filled in his engagement, covering several years at the Metropolitan Opera House, New York, will be represented. Announcements of the records will appear from time to time on the regular Columbia supplements.

"Since his boyhood Campanari, now universally known as one of the world's greatest baritones, has been before the public as a musician in various capacities. At an early age he was recognized as a pianist of great ability. A little later we find him mastering the violoncello and becoming so proficient as to win for him an engagement as first 'cellist in the orchestra of the great La Scala Theatre, Milan, Italy. But it was in dramatic and operatic work that he was to make his greatest impression on the musical world. When only nineteen years of age he made his début at La Scala in Verdi's 'Masked Ball' with such success as to secure engagements immediately thereafter, covering a period of many years in all the important opera houses of Italy and Spain. Continuous hard work proved too much for him, and for a while he abandoned his operatic career.

"Coming to America in 1893 he was for three years leading 'cellist of the Boston Symphony Orchestra. During all of this time, however, his intense love for the vocal and operatic field still possessed him, and on his reappearance in concert under the direction of Walter Damrosch his great talent and superb voice were at once recognized. He was engaged by Maurice Grau as a regular member of the company at the Metropolitan Opera House, singing the leading baritone rôles, and has been appearing from time to time ever since under the various changes in management. Campanari's fame is world-wide. His repertory comprises about fifty operas, chiefly Italian and French, and as an oratorio and concert singer his services are constantly in demand."

DEATH OF C. L. BUCKINGHAM.

C. L. Buckingham, counsel for the National Phonograph Co., Edison works and others in the famous suit of the New York Phonograph Co., died Monday night at his home in New York from cirrhosis of the liver, aged fifty-six years. Mr. Buckingham was senior counsel in this case, now amicably settled, both in the Federal and State Courts, and it is said his serious illness at the time really was one of the main reasons why the compromise was effected, as Mr. Buckingham was so intimately familiar with the issues involved that no one could take his place. For many years he was also general counsel for the Western Union Telegraph Co., with a yearly retainer of $50,000. He was also one of the earliest men to recognize the importance of the improvements, discoveries and inventions of Thomas A. Edison, backing his opinions with substantial financial support.

Mr. Buckingham was graduated from the University of Michigan, at Ann Arbor, in 1875. He was a member of the American Association for the Advancement of Science, the American Academy of Political and Social Science, the American Institute of Electrical Engineers, the Electric Club, the Union and Metropolitan Clubs of Washington, and the University Club and the Ohio Society of New York.

P. B. WHITSIT CO. INCORPORATED.

(Special to The Talking Machine World.)

Columbus, O., June 7, 1909.

The Perry B. Whitsit Co., with a capitalization of $20,000 of common stock and $30,000 of 6 per cent .preferred stock, was incorporated recently by Frank A. Drake, Perry B. Whitsit, W. F. Davisson, Luna Davisson and Ed. C. Turner. The preferred stock is redeemable from 1914 to 1925. The new company will take over the talking machine and piano business which has been conducted by Mr. Whitsit under the same name in South High street and institute a lively campaign for fall trade.

J. A. SABINE A VISITOR.

J. A. Sabine, who has held for a long time an important position with the London and Continental interests of the Columbia Phonograph Co., reached these shores on the steamship President Lincoln on the 4th inst. After a short tarry in this city, he will journey westward and will visit old friends in North Dakota until the early fall.

400 FIFTH AVENUE, NEW YORK, N. Y.

ATLANTIC CITY CONVENTION WILL BE BIGGER THAN EVER.

Committee of Arrangements Assured of a Large Attendance—Meet on July 6, 7 and 8—Hotel Chalfonte Will be Headquarters—Manufacturers Will be Out in Force.

The following letter has been received from J. Newcomb Blackman, chairman of the Committee on Arrangements:

"To the Talking Machine Trade:

"This year's convention of the National Association of Talking Machine Jobbers promises to be a larger gathering of the trade than ever before. The manufacturers recognize in it an opportunity to spread a feeling of confidence in the future and convince any who are in doubt as to how well prepared they are to not only meet the business advancing, but to always be abreast of the times with improvements. Jobbers are beginning to realize the great value of meeting others in the same line from whom they may obtain new ideas, for by studying the ways of the most successful jobbers great opportunities present themselves.

"Those in the trade who look back upon their business before the depression, when their sales were larger and the profits greater, are sometimes inclined to think that the talking machine business has been affected more than other lines. This feeling has caused some in the trade to neglect their business, lose confidence, and, naturally, opportunities. The future holds forth greater possibilities in the talking machine business than ever, for the depression has caused a weeding out and a system of protection against competition, which was not the case before.

"What better evidence of the bright future could there be than the action of the manufacturers in restricting the number of jobbers and dealers? In refusing to accept qualifying orders which would increase their sales at a time when the business world as a whole feels the necessity of greater sales, is this not an evidence that the factories are prepared for the future, have many new things and are in every way capable of keeping up the demand for their goods?

"When the National Phonograph Co. spends a fortune to settle a suit that has disturbed the trade for years, when there are many ways of continuing the legal contest, is this an evidence of lack of confidence on their part that prosperity is on the way? Do you think the Victor Talking Machine Co. would be enlarging their plant and spending the large sums of money that they did in sustaining the validity of patents if they did not see a great future? Would the American Graphophone Co. enter into the campaign of advertising which they have done lately and also spend large sums of money in sustaining the Jones patent, as well as adopting a more restrictive policy, if they did not see a great future for business?

"The trade should also remember that while prices and policies in other lines of business, almost without exception, have deteriorated because of the business depression, the standard makes of talking machines and records are still sold at full list price. Restrictive prices have been maintained. Those who have attempted to discontinue the business in ways that would injure those who remain were stopped through proper legal action taken by the manufacturers. What does all this mean if it is not an evidence that there is prosperity ahead and big profits for those who stay in the business and conduct it on up-to-date lines?

"Every jobber will be benefited by attending the Atlantic City convention, for he will then realize what a strong organization there is in the talking machine business. There may be less jobbers, but they will be larger, more representative and produce better results for the manufacturer. There will probably be less dealers, but that is because of the protection to those in the business who have invested capital and are carrying representative stocks and to encourage the small dealer to become a larger one. Dealers who want to discontinue the business at the present time are being bought out by those who remain, for dealers cannot be established anywhere and in any number at the present time.

"I present my views as above because I want to impress upon the manufacturer the importance of spreading the real conditions among their jobbers by personal contact, and I want every jobber to realize that if he goes to the convention the money he spends will not be simply for the purpose of a good time, but to make a study of conditions and methods. This will mean that jobbers will return with enthusiasm that will bring them business and profits. They will encourage good representative dealers who lack nothing but confidence, and the expense of attending the convention will be a very profitable investment.

"The greater portion of jobbers are probably aware of the above conditions and have full confidence, and to this class I appeal for their support. The best ideas will come from them, the greatest benefits will be received from any favorable action as the result of subjects treated at the convention. Their support is needed to give strength to matters presented to the manufacturers.

"Just stop and consider what has been done since last year's convention. The entire present system of protection against unlimited competition was agitated at last year's convention and presented to the manufacturers. It was very quickly adopted by them, and every jobber and dealer has benefited who is now in the business. Other things of great importance have been accomplished which have saved the jobbers within the last year a sum that would pay for their attendance at several conventions.

"Our trade is a close organization, and the manufacturer, jobber and dealer must work together to get the best results. You cannot do this by staying home and letting someone else do the work, nor should you feel justified in accepting the benefits of association work when you are not giving your support. I therefore want every jobber who does a real wholesale business to feel the importance of attending this convention and of every manufacturer the necessity of grasping this opportunity of letting the trade know why they should have confidence. Advertisements are good, letters also, but personal contact is the ideal plan.

"The most satisfactory accommodations of last year's convention will be duplicated at the Hotel Chalfonte, and a reception committee has been appointed to give information and work hard to bring out a large attendance in their territory.

"An attractive six-page folder has been issued, giving full particulars regarding the details of the convention, and copies of same can be obtained by addressing J. Newcomb Blackman, 97 Chambers street, New York, or any member of the reception committee. Do not forget that ladies are invited, as was the case last year, and every effort will be made to give them a most pleasant visit. We want everybody to come to this convention who can help improve the talking machine industry. It does not matter whether they are manufacturers of machines or records or supplies. We want every jobber that does a real jobbing business of standard make machines and records, and we will be very glad to have as many dealers turn out as possible.

"Business meetings can, of course, be attended only by those who are members of the association, but there will be plenty of opportunity to become a member before the convention or at that time. Applications for membership can be sent to the reception committee or me. This will be the last opportunity to call your attention through The World to the convention and ask your attendance, and I hope your answer to my request will mean your attendance. Any inquiries addressed to me will receive my most careful attention. J. NEWCOMB BLACKMAN,

"Chairman Committee of Arrangements."

Don't blame your jobber—blame yourself!

You *can* get your goods on time, and you *can* get just what you ask for.

We'll fill your order exactly, *and we guarantee to ship the goods on the very day we get the order.*

We have an enormous and complete stock of all Victor goods—Victors, Victrolas, Victor Records, record cabinets, horns, fibre cases, English needles, and all the different parts and supplies. No matter what you ask for, or in what quantity, we can fill your order on the spot. We don't have to send to the factory. And you pay just the same as to any other distributor.

Don't be afraid to send us your order if it is small, for you'll get the same attention as though you were our biggest customer.

You're certainly foolish if you buy from a jobber who doesn't satisfy you. Don't be in constant fear of losing trade by his slowness. Drop him!

Send us your next order, and let us prove our quickness and accuracy. And write us a postal to-day for our beautiful booklet, "The Cabinet That Matches," and for our catalogues.

New York Talking Machine Co.

Successors to
Victor Distributing and
Export Company

83 Chambers St., New York

The Cabinet That Matches

¶ No machine is complete without a Record Cabinet.

¶ The pleasure of a Talking Machine is doubled if you can put your hand on any Record you want.

¶ Has your difficulty been to find a Cabinet entirely in harmony with your Talking Machine?

¶ In our "Cabinet That Matches," we have given you something that is a component part of the Victor Machine. The living room or parlor table is saved—you have a place to set your Machine.

¶ The Talking Machine becomes, in an outfit, an artistic piece of furniture.

¶ The uniform finish on all four sides makes our Cabinet as desirable in the middle of a room as backed up against the wall.

List Prices:—$11.00, $15.00,
$20.00, $25.00,
$30.00, $40.00.

¶ Your regular discount applies. Send for catalogues.

W. Vaughn Robinson, Victor Distributor for the Trade in China, a Recent Visitor to Chicago, Has Intersting Chat With World Representative—Trade Conditions Improving in Chicago and Throughout the West—All the News of the Month "That's Fit to Print" Herewith Recorded.

(Special to The Talking Machine World.)

Chicago, Ill., June 7, 1909.

W. Vaughn Robinson, the well-known music dealer of Hong Kong, China, with branches at Shanghai and Singapore, arrived in Chicago on Thursday of last week from San Francisco. He was seen by The World representative at Lyon & Healy's and proved himself to be the same fine little man as of yore. Mr. Robinson's mental is out of all proportion with his physical development. He was busy checking over an account, but offered to give the interviewer five minutes of his time at the rate of $5 a minute. As the scribe did not have $5 with him the doughty conquerer of the Orient generously proposed to donate two minutes just for the sake of good fellowship.

When asked concerning business, Mr. Robinson frankly admitted that it "was bad—very bad. We are suffering from the reflex of the American-European slump of the end of 1907," he said. In pianos and small goods Mr. Robinson's sales are mainly confined to European and American residents of the coast, and up to a year ago this was also true of talking machines. Since that time, however, he has been the Victor distributer for China native dealers. The models are, for the most part, special ones, made expressly for the Chinese trade. He handles Victrolas, to a limited extent, and has sold quite a few, which have gone into the palaces of the Mandarin class. He expects a further extension of his Victor trade, as a result of their new Chinese catalog, which will soon appear, and which will be far more extensive than the previous one, and embraces many double-face records. While in Chicago Mr. Robinson placed a large order for Kimball organs. He also is expanding his business on American players and player-pianos. He has long handled the Apollo cabinet players made by the Melville Clark Piano Co., of this city, and while here arranged for a shipment of Apollo player-pianos. This will give him a good line of pneumatically operated instruments, as he put in some of the Autopianos made by the Autopiano Co., of New York, a year ago and is meeting with excellent success with them. Mr. Robinson left Friday afternoon for Philadelphia, after visiting the factory of the Victor Co. at Camden, and will go to New York, from whence he will sail on the Lusitania on June 9 for Europe. After visiting England and the manufacturing centers of Germany he will proceed to China, thus completing the circuit of the globe.

Explosion Damages Wurlitzer.

On Monday night of last week the building at 261 Wabash avenue was partly wrecked by an explosion. The cause of the blow-up is in some doubt, but there is no uncertainty as to the effect on the building of the Rudolph Wurlitzer Co., directly across the street. It shattered the entire glass front of the store and blew the glasses off the spectacled colored night watchman who was in the basement at the time. When the force got down in the morning they were naturally stunned for a moment at the appearance of things, but the exploitive instinct soon got the better of their astonishment. Otto and Cameron immediately got busy and placing a Victor machine in the window with the horn projecting through one of the apertures in the pane, entertained the crowds that thronged the sidewalk with the following appropriate selections: "It's Up to You to Move," record No. 4725; "I'd Rather Be on the Outside Looking In, Than on the Inside Looking Out," No. 4790; "Tremble Ye Tyrants" from Il Trovatore, No. 95006; "As I View These Scenes," 81041; "House Cleaning Time," 5521, and as an optimistic finale the Brindisi "It is Better to Laugh," from Lucrezia Borgia, 85096. Of course, Wurlitzer's didn't move, and new panes of glass were speedily put in place.

Commencing Saturday last the houses in talking machine as well as other musical lines started closing at one o'clock, and will continue the practice throughout the summer.

Another Great Combination.

A. V. Chandler, Illinois representative for the National Phonograph Co., took the World representative confidentially to one side, and in hushed tones told him that he had the biggest item that had struck the trade in a long time. The representative showed the proper amount of interest, and was advised that the National Co. had formed a combination with the United States Mint. This, Chandler said, occurred coincidently with the bringing out of the new Fireside machine, which will not take the place of the old Standard, and which will sell at $22.50. It's a combination type playing both the two-minute and four-minute records, and has various attractive features. It will be on sale July 1, and not only Chandler, but the local jobbers say that it is being ordered most liberally.

Occasionally, when there is a dull moment in the talking machine department at Wurlitzer's, L. Kean Cameron demonstrates a cornet for prospective customers, and the writer wants to

"The Way to Succeed is the Will to Succeed and the Manner of Going About It."

Next in importance to a well assorted stock of Talking Machines and Records is your choice of Needles and Record Cabinets.

THE TUSKO NEEDLE

realizes to the ear the actual tones of the original rendition of the selection recorded on the disc. It abolishes the "scratch" and preserves the record forever.

ECONOMY AND PERFECTION RECORD RACKS

THE ONLY PERFECT WAY TO HANDLE DOUBLE-FACE RECORDS

Handsome and ornamental as well as supremely useful. Retail prices from $1.50 to $3.50. Rack for inserting in regular cabinet $1.50.

R. H. JONES, 5513-25 Monroe Ave., CHICAGO

What WE Are Going to Do to Increase YOUR Sales

¶ There is an immense amount of **Victor** and **Edison** business lying dormant in your city and vicinity that needs awakening.

¶ We are going to help you bring it to life—to make you a proposition that will not only awaken this dormant business, but will keep it alive and profitable at all times.

¶ There is a reason why you have so far failed to secure all the business which you might easily have had.

¶ Is it:

¶ Because you have not advertised in your local papers?

¶ Because you have nothing but sample machines and a few records on hand?

¶ Because you have not given proper attention to window display?

¶ Because you have permitted people to send to out-of-town firms for their outfit—**permitted** them because you have not **prevented** them?

¶ Because you do not carry a complete line and do not **push** what you do carry?

¶ One of these reasons at least accounts for your loss of business.

¶ On the other hand, you may be doing all that you think you possibly can do to get the business and yet not carry an **adequate stock** of machines. Perhaps you do not realize that it is the large stock which usually makes the foundation of every successful business.

¶ Or, perhaps, you have not felt able to carry a larger number of machines on hand.

¶ Now, we want you to get **all** the business there is to be had in your vicinity.

¶ So we are prepared to make you

A PERSONAL PROPOSITION

—a proposition that will give you an adequate stock and a chance to dispose of it quickly and profitably—one that puts the dealer into the business **right.**

¶ We can't tell you about this in an advertisement, but if you will write a letter to our Talking Machine Department, we will gladly write you full particulars.

¶ Our Talking Machine Department is at your service and when we write you about our "Personal Proposition," we will also give you the benefit of our suggestions regarding your efforts to secure more business.

¶ Write us to-day—at once—now. Every day's delay is so much business lost.

Lyon & Healy

CHICAGO

state that it furnishes the most thrilling, heart-touching spectacle that he has ever seen or heard. Perhaps John Otto does it also, and he may, but I haven't seen him.

This Looks Like Business.

Marquette Healy, treasurer of Lyon & Healy, was very much pleased when L. C. Wiswell, manager of the talking machine department, laid a report on his desk showing that the business of Department "H" for May had realized a gain of 33 1-3 per cent. over the same month of last year. "Of course, business is not up to normal as yet," remarked Mr. Healy, "and the May business was somewhat behind April, although this is natural to the season. The advance over last year, however, is indicative of improvement in general trade conditions, which is very encouraging, and I share the general belief that with the fall we shall witness a full return to a normal volume of business."

Ornstein Proved an Alibi.

George Ornstein, the Victor Co.'s general manager of salesmen, was in Chicago last week. He was accused at Wurlitzer's of being the cause of the explosion which blew out the glass front of the store, but as he never was a hot air generator, he succeeded in proving an alibi. His eyes are fixed on an era of talking machine prosperity, commencing with the fall.

Geo. N. Nisbett Happy.

The Mexican climate is evidently agreeing with George M. Nisbett, who is in charge of the Edison interests in the sister Republic. It is actually causing him to invoke the Muses and he has written some of his friends here letters composed entirely of lilting verse, fragrant with the odors of roses, peons and other things. They say that George is happy and doing well. How, oh, how could it be otherwise?

The Library Table Graphophone.

W. C. Fuhri, district manager for the Columbia Phonograph Co., possesses the dual faculty of getting up a good thing and properly exploiting it after it has been brought into existence. His latest is the "library table graphophone." Somebody suggested naming it the Fuhriphone, but the district manager was himself the first to discourage the idea. The library table graphophone, then, is just what the name indicates, a handsome library table of ordinary size containing a $100 graphophone with a concealed horn. This horn is of special construction and is made of spruce, the wood used in the sounding board of the piano. Furthermore, it is made by a piano manufacturer, and the effect on the tone is marked. At one end are the doors which open on the horn. A slide in the top of the other end of the desk gives access to the turntable. What appear to be drawers in the front and at one end open on the record cabinets, furnishing a storage for 200 ten or twelve inch discs. The table comes in either mahogany or quartered oak, highly finished and of beautiful design, the legs being on the art order, gracefully carved and curved. Now for the exploitive end of the deal. E. G. Lewis, president of the Lewis Publishing Co., of St. Louis, publishers of the Woman's National Daily, is the organizer of the American Woman's League, which has already established 700 chapters throughout the country. The intention is to increase this number to 2,000. Probably the majority of these organizations will either build chapter houses or maintain permanent quarters. A number are already being built or established. Mr. Lewis' plan is to have a library table graphophone in each of these gathering places. One will be shipped in a few days for the first chapter house completed, that at Edwardsville, Ill., and which will be opened with appropriate ceremonies in a couple of weeks. The Columbia Graphophone Co. will, of course, put the new instrument on the general market. The retail price will be $225.

Reduces Price.

In order to give his meritorious extensible cylinder record rack the widest possible introduction, G. H. Schubert, the inventor and manufacturer, 197-199 West Madison street, Chicago, has announced a reduction in price to 35 cents per shelf. A description of Mr. Schubert's rack will be found in his advertisement elsewhere in this issue. He developed it during his experience as a talking machine dealer, and it is therefore thoroughly practical.

A. D. Geissler Visits Minneapolis.

A. D. Geissler, general manager of the Talking Machine Co., made a trip to the Twin Cities the latter part of last month and bought the stock of Victor goods of Thomas Hough at trustee's sale. It amounted to about $2,000. Lawrence Lucker, of the Minnesota Phonograph Co., took the Chicago man on a trip in his automobile and showed him the ruins of the St. Paul branch which burned a few days before. Business will be resumed as soon as new quarters can be obtained. Mr. Geissler had another pleasant experience when he dined with Mr. and Mrs. Methias, of the Talking Machine Co., of Minneapolis. Mrs. Methias is a talking machine sales expert and has aided her husband wonderfully in building up a prosperous business. Mr. Geissler left Chicago Saturday for a brief trip to Denver, accompanied by his wife. They will return this week.

Croft Sales O. K.

A. E. Croft & Co. report that their Crescent disc record cabinets are meeting with the most encouraging reception by the dealers throughout the country. Some attractive new features are incorporated in the cabinets now being shipped.

The Credit Man of the Talking Machine Co.

A frequent conception of a credit man is that of a person with the jaw bone of an ass, an eye like forged lightning on a dark night, and a disposition suggestive of sour milk. Fortunately, this idea does not always apply. For instance, take Daniel A. Creed, credit manager and accountant for the Talking Machine Co., of Chicago. He has a countenance that is somewhat suggestive of hyacinths and his habitual expression is like an infant's smile; infinitely calm and sweet.

Dan, as he is familiarly known, has never known but one employer, and that is the Talking Machine Co. When Arthur D. Geissler assumed the general management of the concern nearly four years ago, he found Creed selling goods on the floor. He liked his make-up and was still further pleased when he learned that he was a college man. He offered him a position on the road, but Creed's love for home and Chicago could not be shaken. Then it occurred to Mr. Geissler that a man who knew the dealers so well and was on such good terms with them, ought to make a good credit man, therefore Creed got the job. Four years previous to this, Dan, who had just completed his fourth year at St. Ignatus College, and was looking forward to four years more, found his vacation hanging heavy on his hands. He got a job with the Talking Machine Co., running errands and sweeping the floors. He liked the work and the work liked him, and when the doors of the college opened for the fall term, Creed didn't see them. The errands and the broom soon faded from sight.

DANIEL A. CREED.

The story of the evolution of this credit man is now complete. The next time you get a letter from the Talking Machine Co., signed by the credit department, you'll know what the department looks like.

Roy Keith, sales-manager for the Talking Machine Co., returned the latter part of last month from a successful trip through Kenosha, Racine, Waukegan, Milwaukee and Waukesha. He found

Kreiling & Company
Inventors and Sole Manufacturers
North 40th Ave. and Le Moyne St.
CHICAGO, U. S. A.

the dealers all very much gratified with the Victor company's recent exchange proposition. Harry Krienitz, a prominent talking machine man of Milwaukee, visited Manager Geissler, and also made the round of the large music stores in Chicago with him.

C. F. Baer, Chicago manager of the Chicago Phonograph Co., has received so many responses to his general invitation to his friends to spend the week ends at his new bungalow on Lake Catharine, that he has been compelled to have plans made for a large addition.

Lyon & Healy are not resting on their oars, simply because they are one of the oldest jobbing houses in the West. In their advertisement in this issue they refer to a plan by which they will aid country dealers in pushing their Victor and Edison business. The idea is a practical and very effective one, and the trade would do well to investigate it at once.

The Columbia Phonograph Co. are now ready to receive visitors at their new location, 210 Wabash avenue. Of course, they have been doing business there for a month past, but it has been at a disadvantage, inasmuch as they had to move in quickly and were compelled to perform regular Alpine climbing stunts over heaps of debris and merchandise. Even the saintly Plume has been heard to mutter soft scriptural verses under his breath. Now, however, the quarters are in ship-shape and the sunlight, or, as much of it as can penetrate the smoke of the near-upper atmosphere, filters through the skylights, and rests on the devoted heads of a happy and contented force. A chapel fitted up in the second-story annex in the rear contains, during working hours, District Manager W. C. Fuhri. He gets light from the skylight overhead, an alley in the rear, and a stained-glass partition in the front. All that he needs to complete the illusion is a pipe organ in the corner.

Victrola Sales Opportunities.

Arthur D. Geissler, general manager of the Talking Machine Co., is a strong believer in the opportunity facing even the small country dealers in the sale of Victrolas. He has recently launched a plan by which they aid Victor dealers in selling Victrolas which has proved a whirlwind. It has been necessary for the company to increase their stenographic capacity in order to take care of their part of the campaign. In speaking of the matter Mr. Geissler said:

"A great many sales have resulted and in several instances we have been able to introduce the first Victrola into a town.

"It is a fact where we have been able to sell a dealer one Victrola and he has placed that Victrola with a representative family, that sale has always developed several more sales.

It Absolutely Prevents Rust.

NYOIL

Now Sold Everywhere By All Hardware Men

WILLIAM F. NYE
NEW BEDFORD, MASS.

"If dealers could only realize the great profit there is in the sale of Victrolas, not so much in the profit accruing from the sale of one machine but from the fact that getting the machine into a class of homes which will be interested in large future purchases of records, and records of the better type, it would be greatly to their advantage. It is nothing out of the ordinary for a Victrola owner to be the possessor of $400 or $500 worth of records.

"Another thing which will double the sale of Victor records in any community is the education of customers in the proper cataloging of their records. I believe if he could go into a certain community and call upon a dealer's list of customers, illustrate and describe some simple filing system, the sales in that community would be doubled.

"It is only natural that a man who can put his hand on any record he wants, a man whose record is going to be protected from dust and dirt, is the man who is going to take the greater enjoyment in his machine, greater pride in it and use it for entertaining to a greater extent.

"After all, the advertising which for the most part sells Victor goods, is the demonstration of the machine by a satisfied user."

F. K. Dolbeer, general manager of the National Phonograph Co., was in Chicago the week of May 16 on his way West. He called on the various Edison jobbers, and spent some time in consultation with A. V. Chandler, B. P. P., the company's popular and pious Illinois missionary.

Eastern Factories Busy.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy, returned on May 17th from an eastern trip, during which he visited both the Victor and Edison factories. He said that the cabinet plant of the Victor company presents a spectacle one is not likely soon to forget. It was so crowded with workmen that it was difficult to pass through it. The company is simply crowded to the guards to meet the demand for Victrolas and on regular Victor case work. The great plant at Orange he also found a veritable hive of industry.

Plume Perspired.

E. C. Plume had an exciting time on Monday of last week, the Decoration holiday. In company with his son, his niece, and a number of other young people, he shot every chute, water, aerial and underground at the White City. He used his youthful companions, of course, as a legitimate excuse for indulging his favorite pastime.

If "Izzy the Molasses Kid," a recent introduction by a Chicago publisher, has not been perpetuated a la the talking machine record route it certainly should be.

Saw a Bull Fight.

W. C. Patrick, formerly in charge of the battery department of the Chicago office of the Edison Mfg. Co., is now enjoying the wild, free life of a farmer and rancher, thirty-seven miles north of Brownsville, Texas. A letter received from him by a Chicago friend describes his experience at a bull fight which took place just across the border. Chicagoans will remember Mr. Patrick as a man of sturdy frame, but the scrap between man and Taurus was evidently too much for him. He writes that he does not care to witness another one.

The talking machine business in the outlying districts of the city apparently is neither dead nor sleeping. George D. Williams, wholesale and retail furniture dealer at 1300 Michigan avenue, has just installed a retail Edison phonograph department. William Barriman, 405 Centre street, has added a line of Edison goods as a side line which, of course, will speedily develop into his main line under A. V. C.'s fatherly encouragement.

John Pelzer, who is connected with the Edison Mfg. Co., of Orange, N. J., was a recent caller on George Hardin, the manager of the company's Chicago office.

The B. & H. fiber needle continues its gentle work of winning friends. It is gaining strong adherents the world over. It is undoubtedly an artistic creation in that it achieves artistic results. The manufacturer's advertisement elsewhere in this paper is a very interesting one in that it reproduces an announcement in the Columbia Co.'s own house organ, stating that they have stocked a full line of fiber needles. It also says a few things about the merits of the product.

John A. Dean, of the W. A. Dean Music Co., of Sioux City, Ia., was a Chicago visitor this week. They are large handlers of Columbia goods.

The famous Beka records of Berlin, Germany, have struck Chicago and have struck it hard. Barnett Olshansky, talking machine dealer of 515 South Jefferson street, with two branches, one on Halsted street, a few blocks away, and one on Maxwell street, has imported a number of them, and is having a fine trade on these discs. Mr. Olshansky, by the way, is something of a wonder himself, for in ten years he has built up a really remarkable business in his three stores.

H. B. Gray, who travels for the Chicago house of Wurlitzer, has just returned from a trip through Wisconsin and Minnesota.

The Talking Machine Co. have promulgated a creed which is well worth the reading. It will be found in their advertisement elsewhere in this issue.

Fred Siemon, assistant manager of the Chicago house of Wurlitzer, will attend the talking machine jobbers' convention at Atlantic City next month. He will take his family along and go via Canada and the Hudson.

➳ The New Udell Catalog will surpass anything in the Catalog Line that we have ever before produced.

➳ It will be arranged absolutely for the convenience of the dealer and in such a way as to be a wonderful help in making Catalog Sales.

➳ The Line of Cabinets illustrated we are very proud of, and well we may be, as in every detail they are built to get the consumer's order.

➳ We believe that as a dealer whose store has gained the respect of the buying public that you can ill afford to handle any Cabinets but the best.

➳ Naturally we feel that ours are better than the other fellow's. We arrive at the conclusion for no other reason than because of the orders we receive for the Cabinets.

➳ An initial order is easier to get than a repeat order and when our books show active accounts which we have been selling year after year it means Udell Cabinets are all that The Udell Works claim for them.

➳ One Hundred Snappy New Patterns to select from.

➳ Cabinets for { Sheet Music. Piano-Player Rolls. Disc Records. Cylinder Records.

➳ Obviously Dear Dealer the New Udell Catalog should be written for and carefully perused when received.

➳ Please address

HORN CONCERN IN TROUBLE.

Receiver Appointed for the New Jersey Horn and Sheet Metal Co., of Newark, N. J.

(Special to The Talking Machine World.)

Newark, N. J., May 22, 1909.

W. C. Rezell has been appointed receiver for the business of the New Jersey Horn & Sheet Metal Co., 91 Somerset street, this city. It appears that their troubles were brought about through the filing of a contract for talking machine horns made with E. W. Bliss & Co., of New York. The latter company claimed that they were not the correct size and refused to accept them. When suit in the matter was brought in the district court an attempt was made to fix the blame for the mistake on the Bliss Co., who also manufacture projectiles for the United States government, but the blame was switched about and finally rested upon the bankrupt company. Efforts were made, however, to set the company right, but the creditors were compelled to file a petition in bankruptcy.

VICTROLA FOR BATTLESHIP.

A Style Louis XVI. Presented to the Battleship Mississippi by the Ladies of Natchez—Silver Punch Bowl Also a Gift from That City—The Patriotic South.

(Special to The Talking Machine World.)

Natchez, Miss., May 22, 1909.

One of the several patriotic incidents that occurred when the citizens of this city presented a magnificent silver punch bowl to the battleship "Mississippi," one of the latest and most powerful additions to the fighting force of the United States Navy to-day, was the gift of a Victor Victrola, Louis XVI. style, to the officers. The funds for this splendid instrument, with a complement of records, were raised by the ladies and children of Natchez, the presentation speech, a very happy effort, being made by Judge Thomas Rober, who came to the city on its capture and occupation by the Union Army during the Civil War, and has remained since. The battleship came up the river especially for the occasion.

FEINBERG WITH COLUMBIA CO.

B. Feinberg, who resigned last month as traveler-at-large for the Universal Talking Machine Mfg. Co., Newark, N. J., has joined the selling staff of the Columbia Phonograph Co.'s wholesale department. His territory embraces everything east of Chicago to the Gulf of Mexico, and his engagement dates from June 1. Mr. Feinberg proceeded immediately to close several important deals for the Columbia Co. as soon as he had signed the contract with H. A. Yerkes, manager of the department. Thos. K. Henderson will continue as a special envoy for the department wherever he may be despatched.

A PROGRESSIVE POMEROY DEALER.

C. E. Kuykendall, of Pomeroy, Wash., is one of the hustling dealers of the Inland Empire. Mr. Kuykendall has just remodeled his phonograph department and carries a full line of Edison records; in fact, he claims that anything not in his stock cannot be found in the catalog. In machines he carries from the Gem up to the Idealia. This gentleman has done a large business in Edison goods and takes pride in having everything a customer calls for.

THE LIN-O-TONE, THE LATEST HORN.

The Pardee-Ellenberger Co., of New Haven, Conn., have brought out a new horn, the Lin-o-tone, which was designed especially for the new Edison Fireside Phonograph. The substance is Linenoid, or pure linen fiber, which has remarkable acoustic properties. It is handsomely finished and adds very much to the appearance of the machine. The introduction of a special horn for this new machine is very timely, and it will undoubtedly meet with a ready sale. It will be marketed through the various jobbers, many of whom have already taken it up.

You can make dollars out of the horn trade with such a product as this.

Just glance over a few of the many selling points that are contained in the

MUNSON FOLDING HORN

OFFERS YOU GREATER SALES AND LARGER PROFITS

FOR DISC AND CYLINDER MACHINES is the only one-piece indestructible Folding Horn on the market. Made of the finest quality of selected Leatherette—in plain solid colors—Gold, Black or Red, inside and out.

WHEN FOLDED AND CARTONED it occupies a space only 28 inches long by 3½ inches square—an ideal parcel for carrying or handling, and impervious to damage.

THE MUNSON FOLDING HORN greatly improves the tone of the records and means increased record sales.

Retails $7.00

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

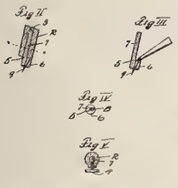
(Specially prepared for The Talking Machine World.)

Washington, D. C., June 8, 1909.

NEEDLE HOLDER FOR TALKING MACHINES. Wilbur B. Claflin, Kansas City, Mo. Patnet No. 917,925.

This invention relates to a needle holder for talking machines and more particularly to a device for holding thorn needles or points for use with such machines. The needle ordinarily used for this purpose is composed of a metal body having a sharp point and a blunt shank, the latter being held in a socket in a bracket carried by the sound-box by means of a set screw, which screw is carried by the bracket and tightened against the needle shank.

While the use of a thorn or wooden needle is well known, it has been found difficult to carry such needles in a manner to secure the best results therefrom, owing to the fact that when attached to the sound-box in the usual manner, the pith in the portion of the thorn against which the set screw impinges, allows the thorn shell to give inwardly when pressed by the set screw, thereby causing the needle to loosen and mar the tone of the machine.



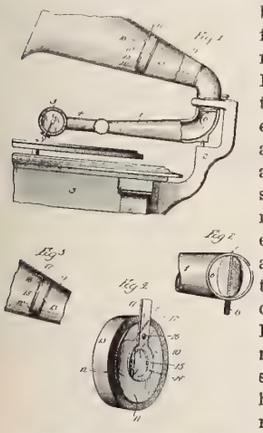
It is the object of this invention to provide a device for holding such needles so as to obviate the loosening noted and thereby secure a full rich tone therefrom.

Figure 1 is a perspective view of an ordinary sound-box equipped with a needle and needle holder constructed according to this invention. Fig. 2 is an enlarged detail view of a portion of the needle bracket, together with the needle holder and point, showing the relative position of the different parts. Fig. 3 is a view of the needle holder showing the manner of inserting the thorn point. Fig. 4 is a top plan view of the holder. Fig. 5 is a transverse sectional view of the holder bracket on the line V—V, Fig. 2.

PHONOGRAPH ATTACHMENT. Harry E. Woods, Chicago, Ill., assignor of one-half to Hallie S. Woods. Patent No. 918,111.

This invention relates to attachments for phonographs, and more particularly to means for regulating the volume and quality of the sound produced.

Figure 1 is a fragmentary view in side elevation of a phonograph provided with the attachment of the invention, parts of the machine being broken away for the sake of clearness of illustration; Fig. 2 is a plan sectional view of the end of the tapering arm, illustrating, in a partially open position, the form of regulator which is employed in said arm in addition to the sound regulator of the invention; Fig. 3 is a fragmentary sectional sectional view of the horn, showing a modified form of attachment fitting therein; and Fig. 4 is a perspective view of the attachment which fits within the horn.

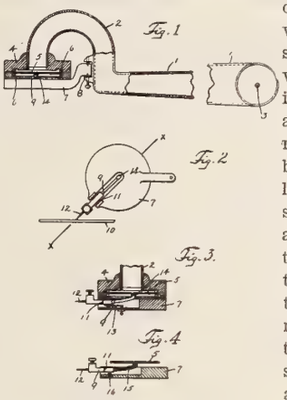


APPARATUS FOR REPRODUCING SOUND. John Noll, Brooklyn, N. Y., assignor by direct and mesne assignments to Empire Talking Machine Co., New York. Patent No. 919,293.

This invention relates to sound reproducers for talking machines.

Briefly stated, the principal object of this invention is to attain a perfectly clear and true reproduction of the original from which the record was made, without having any of the scratch or rubbing sound, due to the movement of the stylus and the record, reach the sound-box and to also insure that the diaphragm in the sound-box will be acted upon by the stylus lever to the exact extent necessary to reproduce perfectly the desired sound as recorded on the record.

To these ends this invention consists first, in a sound-reproducing apparatus consisting of a sound-box and its attendant stylus lever, wherein the stylus lever is mounted on a support independent of the sound-box and adapted to engage the diaphragm in the sound-box. By this construction, the weight of the sound-box is prevented from resting on the stylus and also any direct connection betwen the stylus lever and the sound-box is avoided whereby the scratch due to the travel of the stylus on the record will not be transmitted to the sound-box. Also as there is no fixed connection between the stylus and the sound-box, the sound-box as a whole will not vibrate with the movements of the stylus lever.

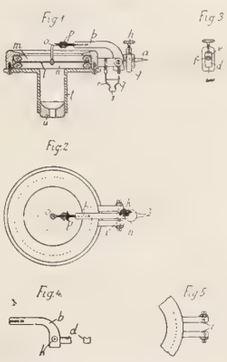


This invention also consists in the employment of a non-sound conducting or sound insulating material between the stylus or the record and the diaphragm, in combination with the independently mounted stylus lever. The object of this construction is to absolutely insulate the sound-box from any scratching sounds due to the travel of the stylus needle on the record.

In the accompanying drawings, Figure 1 is a plan and partial section of a sound-reproducing arm constructed in accordance with this invention. Fig. 2 is a side elevation of the gravity arm viewed from the inside. Fig. 3 is a section taken on the line X X Fig. 2 and also includes a section through the sound-box. Fig. 4 illustrates a modification in the construction of the stylus lever.

SOUND-REPRODUCING BOX FOR DISC TALKING MACHINES. Paul de Beaux, Leipzig, Germany. Patent No. 916,976.

The object of this invention is to do away with the secondary sounds to be found even in talking machines of very perfect make. These sounds are due to the parts neighboring to the sound-plate, *i. e.*, to the vibrations of these parts and the invention therefore consists in improvements in the construction, shape and material of the said parts.



In the accompanying drawing, Figure 1 is a vertical section through improved sound-reproducing box, Fig. 2 is a plan of the same. Fig. 3 shows the means for fastening the stylus *a* to the lever *b*, Fig. 4 is a separate view of the lever *b* and some neighboring parts, and Fig. 5 is a plan of the bearing for said lever.

PHONOGRAPH. Hermann Schroder, New York, Patent No. 919,252.

This invention has for its object an improved construction of graphophone of that type in which the megaphone or horn is dispensed with, and in which the sound reproducing and amplifying means are inclosed within a case or cabinet. And a further object of the invention is a machine of this character which embodies a novel and advantageous construction and arrangement of parts whereby the sound may be intensified and mellowed or sweetened, and characterized by a high degree of resonance, avoiding any of the harsh, metallic effects which are incidental to the ordinary graphophone.

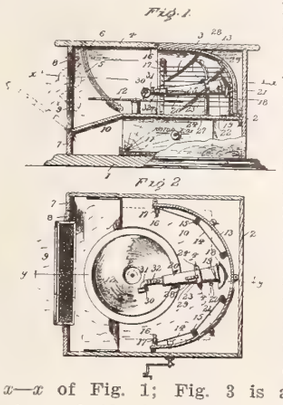


Figure 1 is a longitudinal sectional view on the line *y*—*y* of Fig. 2 of a talking machine embodying the improvements of this invention; Fig. 2 is a horizontal sectional view thereof on the line *x*—*x* of Fig. 1; Fig. 3 is a detail sectional view and side elevation of the sound arm; Fig. 4 is a detail transverse section through the support for the sound arm. Figs. 5 and 6 are detail perspective views of the bars for holding the sympathetic strings. Fig. 7 is a fragmentary sectional view of a modified form of the instrument. Fig. 8 is a detail sectional view on the line 8—8 of Fig. 7, and Fig. 9 is a detail sectional view of a modified form of sound arm.

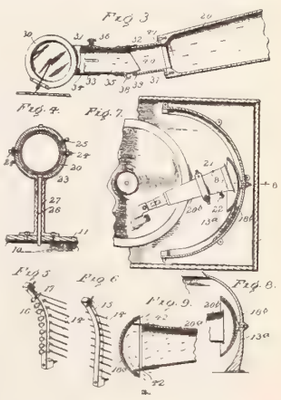
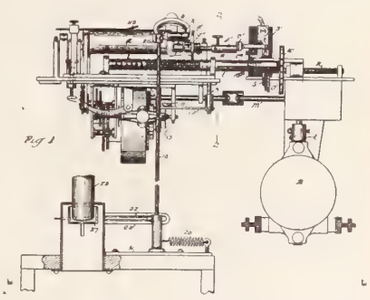
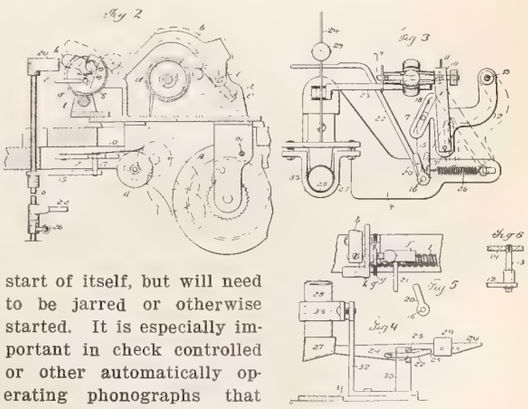


STARTING AND STOPPING DEVICE FOR PHONOGRAPHS. W. W. W. Rosenfield. Patent No. 918,915.

This invention provides means for insuring the starting of the phonograph or other machine when it is desired that it shall start. Especially with spring motors, such as are commonly used for operating phonographs, it has been found that when the starting device is moved to release the operating mechanism and start the motor, it will sometimes happen that the mechanism will not start of itself, but will need to be jarred or otherwise started. It is especially important in check controlled or other automatically operating phonographs that the operating mechanism shall always start when the starting or releasing mechanism is moved.





The certain starting of the operating mechanism of a phonograph or other machine upon

the movement of the starting or releasing device is secured in accordance with the invention by providing means for imparting a starting impulse to a part of the operating mechanism. For this purpose the operation of the phonograph or other machine is preferably controlled by a brake acting on a rotating part of the operating mechanism and which when moved to release said part imparts a starting impulse thereto.

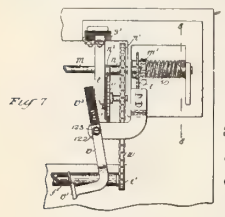


Fig. 7

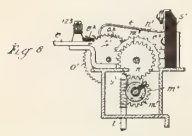

Fig. 8

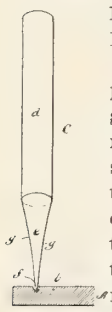
In said drawings: Figure 1 is a front elevation of a phonograph provided with automatic rewinding, return and starting and stopping mechanisms in accordance with the present invention. Fig. 2 is a section on line 2 of Fig. 1. Fig. 3 is a plan view of the starting and stopping mechanism and check actuated mechanism for controlling the starting movement. Fig. 4 is a section taken on line 4 of Fig. 3. Fig. 5 is a partial plan view of parts shown in Fig. 2. Fig. 6 is a detail view. Fig. 7 is a plan view of the mechanism shown at the right in Fig. 1. Fig. 8 is a section on line 8 of Fig. 7.

TALKING MACHINE NEEDLE. John E. Sullivan, Reading, and William B. Sullivan, Philadelphia, Pa. Patent No. 918,389.



This invention relates to an improved form of stylus or needle for engaging the wave-line groove of the record; the main object being to insure a uniformly accurate reproduction of the sounds by which said record was originally produced, while at the same time preventing a deterioration of the record by the action of the needle upon the finely lined groove thereof, such as ordinarily rapidly occurs.

GRAPHOPHONE. John H. J. Haines, New York, assignor to the American Graphophone Co., Bridgeport, Conn. Patent No. 920,324.

This invention relates to graphophones or other talking machines employing a relay device for increasing the volume of sound reproduced, such as set forth in the Higham patents (Nos. 678,566; 712,930, etc.), and Macdonald patents (No. 796,743, etc.).

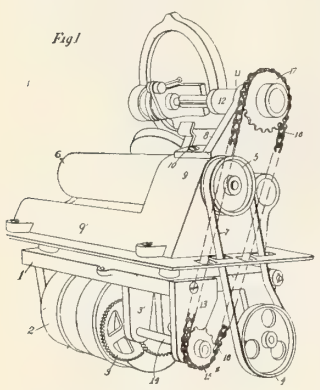


Fig 1

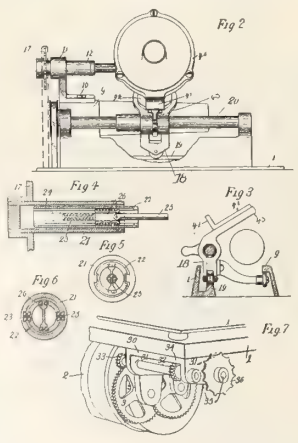

Fig 2

Fig 4

Fig 3

Fig 5

Fig 6

Fig 7

One part of the invention is based upon an observation or discovery that, whereas heretofore the friction pulley or drum constituting a part of said relay device has been driven at a comparatively high rate of speed (about sixty revolutions per minute), the same benefits may be obtained if the said device be driven at a ocmparatively low rate of speed (say about fifteen recvolutions per minute). This discovery or observation is made use of by taking power for revolving the friction pulley from nearer the motor than heretofore, by reason of which the relay device can be applied to talking machines having motors of less power than heretofore believed capable of running the machine itself and also the relay device.

Figure 1 is a perspective view of the rear of a graphophone, with the casing or box therefor removed, showing the relay device proper in outline only; Fig. 2 is a front view of the same graphophone; Figs. 3-6 are sectional views of details; and Fig. 7 is a modification of Fig. 1.

PHONOGRAPH RECORD COMPOSITION. Jonas W. Aylsworth, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 920,245.

This invention relates to an improved composition for duplicate phonograph records comprising a mixture of asphalt, stearate of lead and resin and copal gum, which has durable, smooth and superior wearing qualities.

GRAMOPHONE. Luther T. Haile, Philadelphia, Pa., assigned in part to Maurice N. Weyland, W. A. Mackie, Jos. W. Shannon, Frederick J. Geiger and Logan W. Mulford, same place. Patent No. 923,119.

This invention in sound-reproducing machines of this class relates to means for operatively supporting and propelling the sound-box mechanism relatively to the traveling record, in order that the latter shall no longer perform the function of propelling the sound-box mechanism as commonly done in known machines of this character. It also relates to means, in such machines, for readily bringing the actuating shafts into and out of operative register, more readily remove and replace a record tablet.

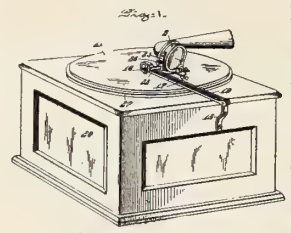

Fig 1.

Fig 2.

Fig 3.

Fig 4.

The primary object of the first part of the invention is as stated above, but its minor objects and the incidental advantages flowing from its principle of construction and operation are threefold; namely, it permits both vertical and lateral play of the directly-actuating connection between the threaded shaft and sound-box mechanism, due to inequalities in the record, automatically adjusting itself, in relation to the sound-box mechanism, hence compensating for the arc-like movements of the latter over the record; it responds and adjusts itself automatically to abnormal movements of the stylus or needle over the record due to inaccuracies in the sound grooves on the face of the record tablet; and finally regulates and controls the depth of engagement of the needle with the record.

In the drawings illustrating the invention: Figure 1 is an elevation, in perspective, of the exterior of a talking machine cabinet, showing the sound-box mechanism, the means for operatively supporting and propelling it over the record, the threaded actuating shaft therefor and its pivoted connection with the cabinet. Figs. 2 and 3 are respectively plan and side elevations of the propelling mechanism and the actuating threaded shaft; and Fig. 4 is an elevation, partly broken away, of the novel means for operatively connecting the pivoted actuating mechanism with the main shaft and with the sound-box and adjunctive parts, to swing them into and out of operative register.

SOUND-REPRODUCING MACHINE. Luther T. Haile, Philadelphia, Pa. Patent No. 919,856.

This invention relates to sound-reproducing machines of the class of gramophones so-called, wherein a grooved disc record rotated in a horizontal plane, and over such record is operatively supported on the end of a pivotally-mounted sound box and its stylus, the diaphragm of the sound-conveying arm a reproducer comprising a reproducer being vibrated by a radially traversing contact of the stylus with the sound grooves of the record. In all such devices the disc is and must be supported for rotation in a horizontal plane, the means for propelling the sound-box over the record being varied in the several types comprising the method described in Berliner's U. S. Patent No. 534,543, wherein the propulsive effect of the grooved surface of the rotating disc is solely relied upon, while in another type a screw-feed or other positively-acting feed device is employed, while in still another type means independent of the record and its actuating shaft are employed to impart a swinging movement to the pivotally-mounted arm itself, which carries the reproducer and its stylus.

The method and means here described for causing the reproducer to be operatively carried over the disc record is radically different in principle from any of the three types of mechanism above referred to, and is distinguished by a novel mode of operation, namely, that the operative movement of the reproducer is effected by its own momentum after a moving impulse is first initiated and then continued by the rotation of the disc, the spiral groove in the disc operating to impart only a restraining effect on such movement in contradistinction to its usual propulsive effect.

Well, It's Surely Over

—NOW PREPARE FOR COMING DEMANDS

¶ The results of that "little financial flurry" of 1907 have surely disappeared.

¶ Folks are coming out of the "storm cellars" and beginning to enjoy life once more.

¶ Stock Up, Stock Up for the coming demands, for they'll come in bunches.

¶ We solicit your orders in the sincere confidence that we can promptly fill every order the day we receive it.

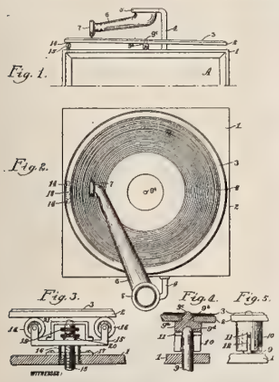
¶ We'll work hard to deserve your business.

American Phonograph Co.

252 Woodward Avenue, Detroit, Mich.

In addition to the general and primary object stated, the purpose of the invention is to effect that object, notwithstanding that the convolutions of the sound groove may not happen to be of uniform depth or of uniform distance apart, also of insuring the full operative tracking of the stylus in the sound groove and particularly against the inner and sensitive wall thereof, the stylus being restrained thereby against too rapid gravital propulsion as before stated.

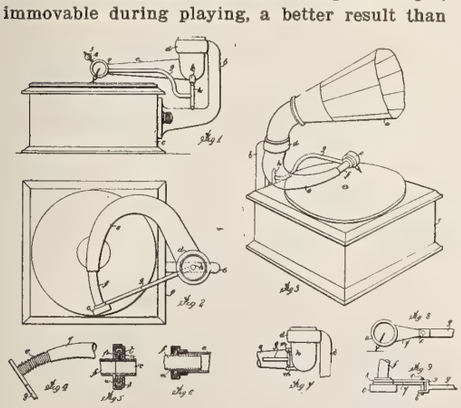
To these ends the invention consists of the combination in a talking machine comprising a spirally-grooved disc record and a supporting turntable therefor, a sound-conveying arm pivotally mounted in a plane above the record, a reproducer carried on the free end of said arm, with its stylus contacting by gravity with the grooves of the record, of means dependent solely on the rotative effect of the record to impart an initial impulse movement to the reproducer and then permit it to continue such movement, by its own momentum, save as restrained by its stylus tracking in the record groove and bearing at all times against the inner wall thereof, said means consisting of axially actuating devices operating primarily to rotate the record, and secondarily to support it operatively in a horizontally inclined plane during such rotation, said actuating and supporting devices being pivotally mounted on the head of a rotable main shaft, the axis of which is perpendicular; and the invention further comprises means coacting therewith, but independent thereof, operating to adjustably regulate the degree of inclination of the record holder or turntable.



In the accompanying drawings illustrating the invention, Figure 1 is a side elevation, with the lower part of the casing or motor box broken away, and Fig. 2 is a plan view thereof; Fig. 3 is a side elevation, partly in section, of the top of the motor casing, the record and record holder, and the device to adjust the degree of inclination of the latter; Fig. 4 is a side elevation, partly in section, of the record, record holder, the divided actuating shaft, and the top of the motor box; and Fig. 5 is a side elevation of a preferred form of universal joint between the divided sections of the actuating shaft.

Talking Machine. Joseph Margulies, London, Upper Norwood, Eng. Patent No. 922,297.

This invention relates to talking machines, and consists firstly in so constructing such machines as to produce, with a single trumpet, immovable during playing, a better result than



has hitherto been attainable with talking machines as at present constructed.

Referring to the first part of the invention, Figure 1 shows side elevation of the machine; Fig. 2 shows plan of same; Fig. 3 shows perspective view of same; Figs. 4 to 9 show details.

Talking Machine. Harry Hinks-Martin, Alexander William Cameron and Percival James Packman, London, Eng. Patent No. 921,835.

This invention relates to improvements in sound conveyors for talking machines, and its object is to provide an attachment for use with the U-tube or goose neck of a gramophone, whereby the position of the sound-box, with relation to the record, may be changed so that the same sound-box may be used, in the most effective playing position, with the "hill and dale" track of a graphophone record, as well as with the "zig-zag" track of a gramophone record.

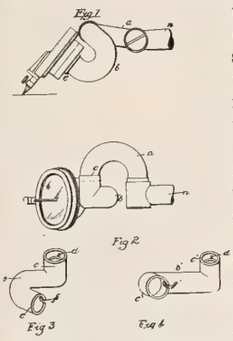


Figure 1 is a view in side elevation, showing the invention associated with the goose neck of a gramophone, with the sound-box in the most effective position for playing a disc record of the "hill and dale" type. Fig. 2 is a plan view of same. Fig. 3 is a perspective view of the improved attachment, and Fig. 4 is a similar view of a modified form of adapter.

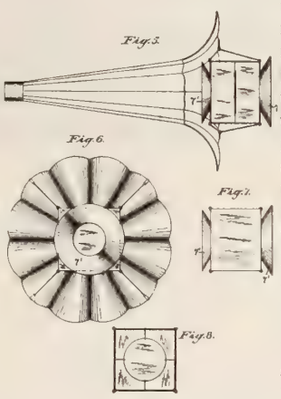
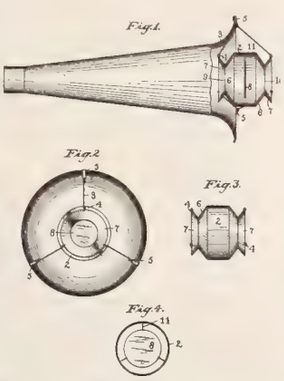
Sound-Reproducing Apparatus. Overend G. Rose, Camp Meeker, Cal. Patent No. 921,465.

This invention is an improvement in sound-reproducing instruments, and relates particularly to an attachment for focusing the sounds and for analyzing them so that, for instance in the case of a reproduction of band music, the volume of tones will be focused and analyzed, the resultant effect being the splitting up of the sound into the tones of the respective instruments and the placing of said tones or sounds in the same relative position or at the same relative distance apart that they occupied when they were played and the record originally produced, that is to say, the trombones will sound as located farthest back, the tubas and altos in front of them, the piccolos and snare drums still farther forward, while the sound of the clarinets proceeds from the focusing device or disc itself.



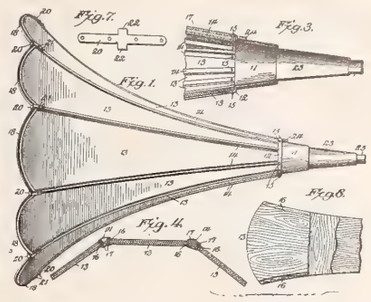
This invention performs an additional function to that of focusing and analyzing sounds in that the device augments considerably the strength of the sound and increases it volume.



In the accompanying drawings—Figure 1 is a side view of a horn of a reproducing instrument with the invention associated therewith; Fig. 2 is an end view of the parts shown in Fig. 1 looking from the right of said figure; Fig. 3 is a detail side view of the sound-box; Fig. 4 is a cross-sectional view of the sound-box; Fig. 5 is a view similar to Fig. 1 of a modified form of sound-box; Fig. 6 is a view looking from the right of Fig. 5; Fig. 7 is a side view of the modified form of sound-box shown in Fig. 5; and Fig. 8 is a cross-sectional view of the box shown in Fig. 7.

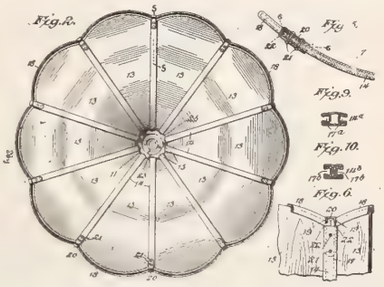
Sound-Augmenting Horn. Alfred R. Cunnius, Brooklyn, N. Y. Patent No. 921,676.

The principal object of the present invention is to provide a horn, particularly useful in connection with talking machines, which is composed of sections made of wood or other suitable material that will eliminate to a very material



degree, harshness of tone, imparting clearness and fulness of tone that is so much desired.

Figure 1 is a side elevation of the horn, showing the reducer in place thereon. Fig. 2 is a front elevation of said horn. Fig. 3 is a detail longitudinal sectional view through the smaller end thereof. Fig. 4 is a detail cross-sectional view therethrough. Fig. 5 is a detail longitu-

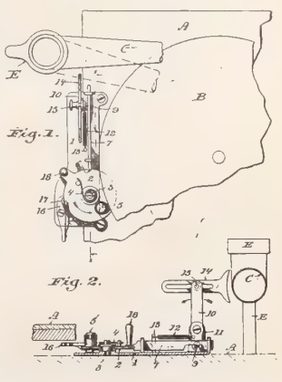


dinal sectional view on the line 5—5 of Fig. 2 Fig. 6 is a sectional view on the line 6—6 of Fig. 5. Fig. 7 is a detail view of one of the clip blanks. Fig. 8 is a detail view of a portion of one of the horn sections, the parts being broken away to illustrate the arrangement of the veneers. Figs. 9 and 10 are cross-sectional views illustrating modifications of the tie strips.

Phonograph. Claude F. Hamilton, Athens, Wis., assignor of one-half to John C. Nuernberg, same place. Patent No. 920,134.

The object of this invention is to provide simple and durable automatic stop-mechanism for disc phonographs or like instruments, the stop-mechanism being controlled by the swinging arm with which said instruments are provided, whereby the disc is checked against rotation when the swinging arm has reached the end of the record upon said disc.

In the drawings: Figure 1 represents a plan view of so much of a disc phonograph as is necessary to illustrate its connection with an automatic stop-mechanism, embodying the features of this invention, which stop-mechanism is shown attached to the box of the phonograph with parts broken away and parts in section, to more clearly define the structural features, and Fig. 2, a sectional elevation of the same, as indicated by line 2—2 of Fig. 1.



REPORT BETTER BUSINESS.

The travelers of the New York Talking Machine Co., 83 Chambers street, New York, are on their respective territories working like beavers. The very complete stock of the company, both in machines and records, and the prompt shipment service inaugurated by General Manager Williams are important factors which dealers are not insensible of in placing orders.

COMMISSIONS ON VICTOR GOODS.

An Illuminative Communication on This Important Subject.

The Victor Talking Machine Co., in a letter to dealers, take the following stand on the "commission question":

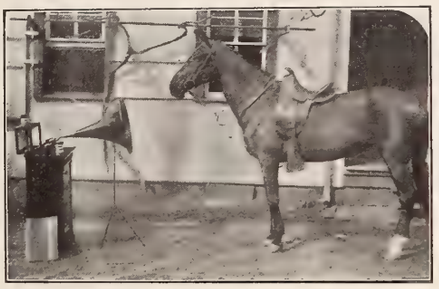
"Those of you who are conversant with the commission evil or 'commission fiend'—so prevalent in the piano and musical instrument field—will no doubt appreciate our efforts to keep this evil from creeping into the talking machine trade. Our attention has just been called to two violations of our rulings on this point on the part of two of our distributers. These distributers were not clear in their understanding of our position in this matter.

"Commissions must not be paid to anyone for the sale of Victor goods excepting only in the case of dealers' own clerks in lieu of, or in addition to their salaries, or where a salesman is employed entirely on a commission basis in lieu of salary. A traveling salesman selling a number of lines on commission, a commission merchant or exporter or people of this class, *are not eligible* to handle Victor goods 'on commission.' It is obvious that if this loophole were left open for evasions a number of cut price cases would develop where commissions would be either divided or paid back to the Victor purchaser. A very strict observance of the above will, we are sure, assist the talking machine trade, and we shall construe any deviation therefrom as a violation of our contract."

If a man were to quit eating because he wasn't hungry, he would be sent to a lunatic asylum. What about the man who quits advertising because he hasn't enough business?

ENJOYED HIS MASTER'S MACHINE.

Considerable attention has recently been directed to ascertaining the effect of talking machine music on various animals. Practically every species of animal in the New York Zoological Gardens was treated to a "talker" concert not long ago to see how they appreciated music. Lawrence McGreal tried the same experiment in Milwaukee, while we present herewith an illustration of how a high-bred horse



accepts a serenade. The animal is the property of Howard Taylor Middleton, Philadelphia correspondent of The World, and judging from the rapt expression of the horse it would seem that it shares its master's appreciation of the talking machine. The Music Master horn was used on the machine and Mr. Middleton believes that the excellent qualities of the horn did much to make the music pleasing to the equine ears.

A PROGRESSIVE MARIETTA STORE.

One of the largest and best equipped talking machine stores in Marietta, Ohio, is that of the Marietta Phonograph Co., who handle complete lines of both Victor and Edison machines and records as well as small goods and post cards. The front portion of the store is given over to the display of a large stock of Victor talking machines, including several Victrolas, small goods are shown in the central section, while the rear is devoted to the display of the Edison line and the extensive record racks. The company have called public attention to their business in a most effective manner recently by sending out a series of handsome post cards showing different views of their store.

SECURE AN INJUNCTION.

A preliminary injunction has been issued by the Circuit Court of the United States, western district of Pennsylvania, against Porch Bros., Inc., music dealers, with stores in Altoona, Greensburg, Harrisburg and Johnstown, enjoining "them from in any way interfering with the selling license system of the National Phonograph Co., Orange, N. J.,' and from violating the terms and conditions of the defendants' license agreements," and of selling Edison goods at less than for the full current prices specified.

The Sonora Phonograph Co. has removed from 5 Cedar street to 78 Reade street, New York. They describe the Sonora as "the instrument of quality." They occupy two lofts at the new address.

F. K. Dolbeer, sales manager of the National Phonograph Co., recently visited the Edison jobbers in several of the large cities of the Middle West and Northwest, and got across the line into Winnipeg, Manitoba, his first call here. He found conditions very much to his satisfaction and was greatly pleased with prospects in general.

Why Not Double Your Profits?

Many dealers in the Talking Machine trade are selling pianos and more than doubling their profits. WHY NOT YOU?

Piano sales come easily for them because the right selling argument is on your side.

You have an established business—a steady income to depend upon—and your cost of securing piano sales is reduced to the minimum.

People seldom buy Talking Machines unless interested in music, consequently pianos are really in your line. No doubt you run across good prospects every little while.

Then why not take the agency for the right piano, on the right terms and at the right price, and secure some extremely profitable business that you must not overlook?

RECEIVING THE TRAVELING MAN.

Dealers Can Forward Their Own Interests in Many Ways by Confiding in the "Knights of the Grip"—A Heart to Heart Talk.

The man who succeeds on the road to-day is the man who "likes his job." One night last week, coming out of Wheeling, I sat in the smoker with a fellow traveling man. He talked rather freely with me of the inconveniences—the poor accommodations of the hotels—the exposure of long drives, and wound up by saying, "It's a dog's life. I have been on the road for 10 years, and all I have ever gotten has been a bare living. I am tired of it all, and this will be my last trip."

"My friend," I said, "it's not a dog's life, but a man's life, and calls into play all the best instincts of a man. The fault lies not with the calling, but with yourself. You have looked at life through smoked glasses, and your vision became blurred. The enthusiasm you should have carried into your work you wasted at the ball game. You awake with a grouch, and wonder why no glad hand is extended to you. You say you have been on the road for 10 years, and all you have received has been a bare living. My friend, I have been on the road twice 10 years, and there has never been a moment during that time when I felt that I wanted to quit. The friendships I have formed during the time I consider of greater value than a fat bank roll."

It is a recognized fact of law that good will forms a real tangible asset to any business, and the friendshps of a salesman are as much an asset and more dependable than the average banking security.

The salesman is vitally interested in your success. His interest does not cease when he has sold you a bill of goods. He has only done half his duty when the sale is made, and his work is not completed until he has helped you, by suggestion and otherwise, to dispose of your stock on hand.

Look back over your career and find how often an idea of his has brought money and trade to you. He is in constant touch with the evolution of trade—he watches the successful methods of others, the selling schemes of some distant city that brought a revenue; this is yours for the asking. Meet him half way—tell him your troubles, the competition you have to meet, your plans for the future.

Depend upon it, your confidence will be respected, and in return you will receive helpful advice, writes a traveling man in an exchange. The advances along this line should, however, come from you. It is the duty of the patient to go to the doctor—not the doctor to seek the patient. If your business is in an unhealthy condition, talk it over with your friend, the salesman. He will give you sound advice, and you will never be troubled with a bill for professional services.

I called on a friend in the downtown district the other day, and on the swinging door leading into his office I noticed a little white enameled sign with black lettering that read: "Push! Don't Knock!"

Gentlemen, I want you to take that as your motto for the current year: "Push! Don't Knock!" Push the town you live in, push forward the clerks who help you in your business—push your fellow tradesmen, and take a vital interest in the affairs of your community. Forget the petty prejudices that cause you to look upon your competitor as an enemy. The man across the street is not a bad fellow when you get to know him. Notwithstanding the old Biblical injunction, "Knock, and it shall be opened unto you," the world to-day has little use for the "knocker.' We are growing broader gauged; a national trade uplift is going on.

When you are in the game, play it, and play it hard—but play it on the level. Let us have no offside plays. The rules of the game are stricter, the rewards greater, but an umpire called Public Opinion will rule you out of the game at the first attempt at tricky play.

With all due reverence for the knights of the road who are dead and gone, I believe that the salesmen of to-day, as a body, are more intelligent, more thorough in their work, more loyal to the best interests of the dealer than were the salesmen of a decade ago. The law of progress calls for a higher standard of business ethics. The practices that were in vogue then would not be tolerated now.

The work so well accomplished in the past five years in eliminating unjust competition has been truly marvelous, but I believe you will agree with me when I say that in all stages it has had the loyal support of the traveling salesman. He is the dealer's friend, loyal and true, not alone for the orders he receives, which are welcome, but because he likes the game, the enthusiasm that goes with conflict, the excitement of the battle, and incidentally because he realizes your success means his success.

IDIOSYNCRASIES OF BENNETT.

Does Not Believe in College Educations—Only Smokes a Cigar Half Up and Then Lights a Fresh One.

George Jean Nathan, writing in the Outing Magazine, tells of the unusual personality of James Gordon Bennett, proprietor of the New York Herald. He says in part:

"James Gordon Bennett was born in New York. He is now 67 years old. In appearance he is tall and slender and gives the impression of a vast amount of nervous energy. He carries himself with military erectness and his steel-gray hair and moustache add to his general soldierly look. For many years he has made his home in Paris, and visits this country only about once in every two years. He literally edits the New York Herald by cable. And the story of the way he does this is almost as unbelievable as it is curious.

"It is the general public opinion that Mr. Bennett lets the Herald run itself, and that, particularly of late years, he has not kept in close touch with its affairs and progress. Nothing could be further from the truth. In fact, it may be stated that he is devoting more time to the interests of his paper at present than ever before.

"Every day there is sent to Mr. Bennett a copy of the Herald, every article in which is marked with the name of the man who wrote it. By this means he keeps in touch with the daily work and progress of every man on his staff. The slightest error will be quickly ferreted by his eagle eye and a warning bulletin is speedily posted by him following his detection in a 'story' of, for instance, the word 'gentleman' instead of 'man,' the use of some such phrase as 'J. Pierpont Morgan, the financier,' instead of 'J. Pierpont Morgan, a financier.'

"Two of Mr. Bennett's idiosyncrasies are his lack of belief in the value of a college education and his aversion toward smoking the last half of his cigars. In relation to the first, it is not uninteresting to note that most of the men who have been given high position by him have been non-university men. Mr. Bennett himself is not a college graduate, and he holds that a collegiate training is not necessary in the making of newspaper men. Those few college men who have won the higher positions in his employ have not held them long.

PIANOS AS A SIDE LINE.

If Talking Machines Sell in a Piano Store Why Not Pianos in a Talking Machine Store?—The Oakland Piano Co.'s Proposition.

For years piano dealers in all sections of the country have handled talking machines as a side line with great profit to themselves, and more recently talking machine dealers have awakened to the fact that "what is sauce for the goose is sauce for the gander," and have realized handsomely on a stock of pianos installed in their stores. Musical instruments are the logical companions for a stock of talking machines, and pianos handled by a talking machine dealer are brought to the attention of dozens of prospects daily, for anyone buying records naturally is musically inclined.

The Oakland Piano Co. have an interesting proposition to offer talking machine dealers seeking to augment their incomes by installing side lines. The pianos made by the Oakland Piano Co. have proven trade getters for many dealers, and it would prove to the dealer's interest if he would investigate the possibilities of those instruments.

NO FIRE DANGER FROM FILMS.

Manager of Underwriters Bureau of New England States That Sprinklers Could Control Average Blaze.

(Special to The Talking Machine World.)

Boston, Mass., June 7, 1909.

Gorham Daha, manager of the Underwriters' Bureau of New England, who testified the hazard of celluloid moving picture films packed in boxes, found that when tightly rolled and packed in pasteboard boxes, they did not ignite at unusually low temperature, and did not burn fiercely. He holds that there is no reason to fear that sprinklers will not control such a stock, except that when a large quantity is burning, enough gas might be generated to cause trouble.

Subscription by the Year $1.00 Domestic; Foreign $1.25

NEW YORK, JUNE 15, 1909

A talking machine dealer located in a nearby city was recently discussing with a World representative the advisability of introducing side lines into an established talking machine business. Before engaging in his present business the dealer referred to had handled bicycles in a fairly large way, and naturally based his argument on that experience:

"Considering conditions, I am doing a very good talking business here," he said. "My trade is well established and I am making a good living. If I took on another line—motorcycles, for instance—I would have to start in again and build up a trade in that line against competition that is already established. I would have to work a good deal harder than I am at present, and maybe at the end of the year I would find that the net profits were not in proportion to the energy expended. My experiences in handling bicycles taught me that considerable time was required to make the venture pay, and I do not care to take the risk of failure now."

"How many talking machine dealers were there in this town when you started?" asked The World Man.

"If I recollect correctly there were nine other dealers at the time."

"Did the fact that they were already established deter you from getting after your share of the business?"

"No, it did not, but it was pretty hard sledding for a while."

"Did you ever stop to think that while the other concerns in this city handling motorcycles were, as a rule, confined to that line alone you have a solid talking machine business back of you to build on?"

"No, I hadn't looked at it in that light," said the dealer.

Other side lines, sporting goods, novelties, pianos, etc., were discussed in the same light, and before The World man had left the dealer had come to the conclusion that while he was making some money now with one line he could materially increase his income with the addition of other goods, and that the extra effort required, often merely the utilization of spare time, would, without a doubt, bring ample reward. It is not a case of creating new opportunities, but merely taking advantage of opportunities that already exist.

The majority of talking machine dealers are located on main thoroughfares, where they are in an excellent position to attract the attention of many people to any new venture. No matter how successful the business there are always periods of quietude which could be more profitably spent in pushing some side line than in standing around watching the street cars go by. Then again there have been occasions when an attractive side line has progressed to the extent of being the main line and has required separate quarters to properly expand.

The question of side lines is one of importance and is worthy of the attention of every talking machine dealer, whether large or small.

THE REASON FOR SOME FAILURES.

How many public men have fallen because they have been discourteous to subordinates, to news gatherers, to voters after election! How many on the other hand, have climbed to great heights of power and reputation because they paid attention to the civilities of life! People have long memories. They never forgive the slightest affront to their sovereignty. The moment a public man so far forgets the source of his power as to treat the humblest individual with scant courtesy, he places in action an engine for his own destruction. Per contra, let an official be thoroughly agreeable in manner, and genuinely interested in the welfare of persons whom he may never have occasion to "use," and he places in unknown hands cymbals to proclaim his merits. Popular favor is swayed as often by the personal manner of a candidate as by the principles he represents. True courtesy, however, springs from the heart, rather than from the head. It takes little account of rank, or circumstance, or benefits to be derived.

HOW TO HANDLE CLERKS.

Employers and Employes Should Form One Large Family—Lack of Harmony Fatal to Business—Suggestions from Clerks Valuable—They Should Read Trade Papers—Some Good Advice.

This subject appeals as a very practical one, and one which in our business experience we often have to solve. In the larger retail stores, the selling end of the business is left chiefly with the clerks, and therefore the success of the business depends largely upon them.

How to get the most out of the employes is the problem that confronts us. It seems to me that the employer and employes form one large family, working in a common cause, the employer being the directing head. No business can succeed as it should unless the employes take an interest in the business, put their shoulder to the wheel and work together in perfect harmony for the advancement of the firm.

During the years I spent as traveling salesman I found many cases where this lack of harmony was fatal to the business. A jealousy among the clerks, a lack of respect for the employer, an indifferent interest in the business—these are all serious handicaps in any business. I believe we don't take our employes enough into our confidence; we are indifferent to their opinion; we are quick to blame them when something goes wrong, but slow to praise when praise is due them. Nothing helps a clerk so much as to receive praise when he has made a good sale or brought a new customer to the store. We are all human and appreciate worthy praise.

I talk over with my clerks the advisability of adding new goods to stock and the general policy of the business, writes M. C. Hale in the Sporting Goods Dealer. Some dealers may think they can't learn anything from a clerk, but this is not so. I have in mind one of the largest wholesale houses of the country, one whose business system is as nearly perfect as brains can make it, and this firm places boxes throughout the house and agrees to reward any employe who drops a suggestion into the box which proves of value to the firm. One suggestion from the elevator boy was put in practice and proved most valuable.

Our employes must be made to feel that they are a part of the firm and that the advancement of the firm will mean their advancement. Poor clerks are dear at any price. I claim that a clerk who can't keep busy all the time is not looking for work, and a good clerk can nearly earn his salary by selling goods the customer does not call for.

I believe it is a good plan to encourage clerks to read trade papers. They can be as much benefited as the dealer by this class of reading.

We should be frank with our clerks. Correct them at once if they do something wrong. Praise them promptly for the good things they do. I believe merchants make a mistake by not teaching their clerks what they see they should know—that which they themselves know.

One drop of rain will not make a deluge, nor will one advertisement bring a flood of business. In both cases power lies in numbers. Persistence is the keynote of advertising.

RECENT INCORPORATIONS.

The Columbia Safety Razor & Strop Co., Brooklyn, has been incorporated at Albany with a capital of $10,000 to manufacture safety razors and strops. Incorporators: John Kopf and Leonard A. Miller, Brooklyn; Simon Hauser, Richmond Hill, N. Y.

Progress Art Co., of New York, has been incorporated to manufacture metal novelties, ornaments and fancy articles with a capital of $10,000. Incorporators: Saul Goldberg, Bayonne, N. J.; S. J. Serwer, Max Kainstein, Brooklyn.

The Long Island Novelty Co., of Brooklyn, has been incorporated under the laws of the State of New York with a capital of $10,000 to manufacture vending machines, automatic devices, etc. Incorporators: Abraham Van Nostrand and Minnie D. Van Nostrand, Sea Cliff, L. I.; Clarence F. Coner, Brooklyn.

The Liberty Film Exchange, Inc., has been incorporated at Wilmington, Del., with a capital of $35,000. Incorporators: W. H. Robinson, Altoona, Pa.; E. A. Laitzell, Philadelphia; W. H. Mair, South Fork, Pa.

The Modern Automatic Razor Sharpener Co., of New York City, is a late incorporation in the State of New York. Incorporators: Isidor Buschler, Irving W. Rosenthal, William Wassertrom, Louis B. Wasserstrom, all of New York. The capital stock is $1,000.

The Colombek Novelty Co., of New York, has been incorporated at Albany to manufacture articles and patented novelties, with a capital of $9,990. Incorporators: Sigmund Colombek, New York; Israel Gavrin, Brooklyn; Benjamin Koenigsberg, New York.

The American Cinephone Co., of Portland, has been incorporated under the laws of Maine, with a capital of $150,000. President, C. E. Eaton; treasurer, T. L. Croteau, Portland.

The Friedman Camera Co., of New York, has been incorporated with a capital of $2,500. Incorporators: Maxwell Freedman, Irwin Kurt and Minnie N. Levy, all of No. 42 Nassau street, New York.

The A. W. Holmes Co., of Augusta, Maine, has been incorporated under the laws of that State to deal in jewelry and novelties, with a capital of $100,000. President and treasurer, J. Berry; clerk, A. Burleigh, both of Augusta.

The Solar Slide Co., of Watertown, N. Y., has been incorporated in that State to manufacture magic lantern slides and moving picture films, with a capital of $1,200. Incorporators: Ned M. Van Buren, Alice M. Van Buren and George Brown, Watertown, N. Y.

Among recent incorporations is the Automatic Amusement Co., of Wilmington, organized with a capital of $50,000. Incorporators: Albert E. Knowlton and Charles C. Smith, Boston; Harold P. Knowlton, Malden, Mass.

The General Device Manufacturing Co., 56 Pine street, New York, has been incorporated at Albany to manufacture appliances and devices of all kinds, with a capital of $25,000. Incorporators: Frank A. Kateley, Mount Vernon; G. Harold Ord, New York; Henry P. Brown, Mount Vernon, N. Y.

The Penn Automatic Machine Co., New York, have incorporated, with capital stock of $60,000, to manufacture musical slot machines and multiphones. Incorporators—A. Simeon, D. H. Singer and A. J. Turner.

Almost all exhibits made to fit some special occasion should be changed promptly after the event has passed.

"The greatest specialty ever carried by a retail store"—is the verdict of thousands of dealers—concerning the New Pocket Edition Gillette Safety Razor.

The demand is astonishing. Sales over the retail counter are breaking all records. Every old Gillette user wants the Pocket Edition and it makes new friends at sight.

The set consists of handle and blade box, either triple silver-plated or 14k. gold-plated.

The Pocket case is of gold, silver or gun metal, plain polished or richly engraved in Floral or Empire designs. It is so neat and compact that it will slip into the side of a travelling bag—***the blades are fine.*** Prices, $5.00 to $7.50.

Aside from the sales of the razor, the business in blades is a steady income for a store.

Two additions to the Gillette line this season are the Gillette Shaving Brush—a Brush of Gillette quality, bristles gripped in hard rubber; and the Gillette Shaving Stick—a soap worthy of the Gillette Safety Razor. The stick is enclosed in a sanitary nickel box; both soap and brush are packed in attractive cartons. They will be welcomed by Gillette users everywhere.

Special showcase supplied with initial order for a hundred dollars' worth of goods. Write us for full information. Get our suggestions on popular assortment. Talk to your jobber about it.

HARMONY CO.'S NEW CATALOG

Should be in the Hands of Dealers Desirous of Handling Paying Side Lines—Something of the Business Done by This Company.

(Special to The Talking Machine World.)
Chicago, Ill., June 2, 1909.

The Harmony Co., whose large plant is situated at 947 N. Lawndale avenue, of this city, have just gotten out for the the benefit of their trade a handsome new catalog showing cuts and prices of their large line of guitars, mandolins and drums, and giving a detailed description of each

ONE OF THE HARMONY CO. SPECIALTIES.

instrument. It is of unusual interest to the talking machine dealer as it points with no uncertain hand to a side line than can be tuned to the dollar key by wide-awake and progressive dealers, and made to play an accompaniment to the air of general prosperity of the store.

To get some idea of the business done annually by this company it may be said that their plant contains over 36,000 square feet of space, employs over 200 men and has a capacity of 100,000 instruments a year. This large business has been built up by conscientious and careful attention to the detail of manufacture and especially the quality of material that goes to make up the company's product as well as a painstaking study of the wants and desires of their trade.

Among the cuts shown in the catalog is that of the single head drum shown herewith. It has proved itself a winner with the bands and orchestras throughout the country, and with the five and ten-cent theaters forming in many instances together with a piano the sole orchestra music of the latter, it has proved itself invaluable in depicting the various sounds that usually accompany hero's experiences in the moving pictures.

W. J. F. Schultz, president of the concern, deserves much credit for the rapid development of the business, as it was not so many years ago that he severed his connection with one of the large local firms and started the nucleus of his present plant.

LATEST CUSTOMS RULINGS.

Government Decides Not to Accept Lower Duty on Cinematograph Films.

The Government has decided not to accept a recent ruling made by the Board of United States General Appraisers regarding the classification for dutiable purposes of cinematograph films. An appeal has been taken to the United States Circuit Court, and it is possible that the issue may be heard by that tribunal before the summer vacation begins in July.

The films in question are a species of pictures made by the action of light in a photographic camera on sheets of sensitized celluloid. The Government has taken the position that the articles are dutiable at 65 cents per pound and 25 per cent. ad valorem as articles of which collodion or any compound of pyroxylin is the component of chief value.

When the case came before the Board of Appraisers last March General Appraiser Fischer wrote a decision for the board sustaining the contention of J. A. Berst and others that the films are entitled to enter this country under the provision in the tariff for "photographs" with a tax of 25 per cent. This rate is unsatisfactory to the Government, and for that reason it has been decided to thrash out the question in the courts.

PEERLESS SUCTION CLEANERS.

Judging from the present and growing popularity of suction cleaners, the time is rapidly approaching when the ordinary dust distributing broom will be in the class with the dodo and extinct. One of the most successful makes of suc-

tion cleaners is the "Peerless," manufactured by the Manufacturers' Outlet Co., 89 Chambers street, New York, one of their leading models, operated by electrical power, being shown herewith. This style is equipped with motors for either direct or alternating current and is light enough to be easily carried about.

MOVING PICTURES BARRED.

Appellate Division Decides That They Cannot be Accepted as Evidence.

The Appellate Division of the Supreme Court in Brooklyn last week denied a motion on behalf of the Coney Island and Brooklyn Railroad to have moving pictures introduced as evidence in the case of Stephen C. McGorty, a ten-year-old boy, who was injured about three years ago by a street car.

The case was tried before Justice Aspinall and a jury in the Supreme Court and the guardians of the boy were awarded $8,500. Moving pictures of the boy, with the brace off his leg, running and jumping, were shown in the court room to offset the parents' contentions that he was permanently injured, but Justice Aspinall, in charging the jury, told them not to consider this evidence, as it might be possible for the operator of the machine to take pictures of the lad and by manipulating the speed gear to have him doing stunts that he never really performed.

"DO IT RIGHT."

If you have a thing to do—
Do it Right;
Stick at it till you're through—
Do it Right;
Give good and honest work,
It pays to never shirk—
Do it Right.

Whether working fast or slow—
Do it Right;
Don't do things just for show—
If things go wrong don't cry,
Just all the harder try—
Do it Right.
Do it Right;

If wealth you would acquire—
Do it Right;
If to fame you would aspire—
Do it Right;
Shun ill gotten gain,
Strive for an honored name—
Do it Right.

—Samuel O. Buckner.

SENECA CAMERAS
As A Side Line

THE Talking Machine Dealer is in a splendid position to sell cameras.

The same class of people who buy Talking Machines buy Cameras.

SENECA CAMERAS are the best Cameras made—they have to be for they stand on their own merits against the trade restriction of the Camera combine.

It takes a little knowledge of the subject to sell Cameras successfully, just as it does to sell Talking Machines but we are willing to help you get going. The profit will be worth the work.

Write to-day for information.

The Largest Independent Camera Makers

ROCHESTER, N. Y.

A SUCCESSFUL SALESMAN

Means One Who Not Only Sells Goods but Discovers New Markets—Natural Gift Necessary—Parts That Go to Make Up a Good Salesman in The "Talker" or Other Fields.

In an old edition of Webster's dictionary the definition of the word "salesman" is given as "one who finds a market for the goods of another man." It might be changed to read: "One who finds a market for goods." There is a sermon in this definition. A salesman in the true sense is not merely "one who sells goods," but "one who finds a market for his goods." In any line which has close and untiring competition, the same requisites are necessary to make a man entirely successful in the fullest sense of the word, and this does not mean successful for one trip only, but continually so, his influence and hold on his trade growing as the time of his service lengthens.

A thoroughly successful salesman must necessarily be born with a natural gift for selling goods. On this foundation he must build for himself, by hard work, close application and earnest thought, the structure he wishes to make perfect, and complete it entirely himself by the beautiful decorative work and the harmonious colorings necessary. The walls should be built by having a thorough knowledge of his goods—not to know as much as his competitors, but more—a knowledge of his business that will shine so brilliantly before his trade that they will come to recognize him as an authority in his line—a knowledge that will soon be known so well by the merchants and the clerks of the merchants that they will use him as their referee and await his arrival for his suggestions to decide this point or that.

The partitions in this interesting structure should be used in establishing storerooms to keep intact the knowledge of side lines his house may be interested in, and to draw from quickly when occasion requires, without being humiliated to the extent of saying, "I don't know."

The roof, the protector in time of storms or uncertainty, should be built of character—a character so forceful, so pronounced, that the trade recognize the fact that what you say is true, that you believe it, that your word is absolutely reliable. Character to a successful salesman is what good credit is to a business man, and should be guarded most zealously. It enables him to hold his business when times are dull, as good credit enables a business man to tide over a financial crisis where others fail.

The windows necessary in this building are the cultivation of tact—the light that permeates the brain and indicates to us when to and when to not—the proper time—the proper place—the words to use—how many are enough—when to stop—who to say this to, and who to say something entirely different to. You would not rent a building without windows, and a man cannot make a success in selling goods without tact, and just as windows have to be cleaned, so tact has to be cultivated continually by thoughtfulness and study, writes Ralph Brown in the Sporting Goods Dealer. Personally, I will say it is the most important requisite in selling goods, and to me has been one that has required the greatest amount of careful thought.

The completion of this superb creation, the decorative work, the harmonious coloring, the finishing touches, are the friendships established, the pleasant smiles, the hearty greetings, the wholesome stories, the ability to make others happy by your daily contact, the enthusiasm displayed always of your goods, your specialties, your house, your president, your manager, your office boys, the enthusiasm that makes the trade feel that you have the best house, the best goods, the best service and the highest standard of any house in the world.

With the above qualities cultivated to the fullest extent, any man will know how to treat each individual case. He will study his customers' wants, their weak points, and he will take orders—large orders, and more orders, as a matter of course. Can you imagine a complete man built along the above lines entering a store and asking a dealer if he wanted anything, or accepting as final the dealer's statement that he would have an order next trip? No, a salesman is a man "who finds a market for goods"—he is continually loading up his head with new ideas, new knowledge, new illustrations for the benefit of himself and his trade. He is constantly devising new methods of selling goods and not spending his evening hours writing the house why trade is dull.

In conclusion, I want to illustrate how we can, in our daily life, absorb new ideas, new knowledge, and improve our methods little by little, by repeating an incident which made a great impression upon me, and the credit of which belongs to the honored president of a house it was my privilege to be connected with: "Noting over the chemist's table a magnet which hung loaded with a collection of various tools and weights, I asked: 'What is the magnet doing?' 'I am loading it up,' the chemist answered; 'it has been lying on the table doing nothing and losing its power, so now I am giving it something to do, a little more every morning, and it is gaining, it is growing, stronger every day,' and he added a small file to the clump attached to the magnet. 'That's the way,' he added, 'God makes magnates and men. If they loaf around and do nothing, they can't do anything—they lose their force—but give them some work, and they will soon be good for more than you ever dreamed they could do. Magnetic power and muscles are developed by something to do—yes, and so are the brains and souls of men.'"

Did you even on a visit away from home stroll along the street and note the many window displays? Which impressed you the most—the good displays or the poor ones? Be sure that yours does not leave the "dark brown taste."

A REVERSAL OF THE OLD STORY.

Case Where the Old-Time Merchant Proved Too Clever for His Up-to-Date and Younger Competitor—An Instance of the Biter Being Bitten.

Stories regarding competition between old-time and newly-established merchants generally end in the triumph of the latter just as novels always end with the hero or heroine on top of the heap. Some business stories are sometimes strongly drawn in order to illustrate a certain point, and it does not hold that even a fair proportion of old-time business men can be beaten out by a youngster. It is therefore pleasing to see the point of the story reversed and the up-to-date merchant outwitted as in the case recently described in The Saturday Evening Post as follows:

In a certain county-seat there were two "racket" stores, dealing in notions and novelties, five and ten cent goods, and so forth. The largest and oldest was owned by a shrewd, veteran merchant, while the other, called the Golden Rule Emporium, was conducted by a young man whose general policy was to do others before they did him, as well as after.

The older merchant had certain leaders that he sold at cost all year round, the line being wisely selected with a view to bringing in different classes of people. A two-piece children's suit, for instance, got the trade of half the mothers in that county. The Golden Rule man had been buying those leaders for nearly a year when the older merchant became aware of it.

One morning the latter advertised a sale of oilcloth. During a single hour only a special "family roll" of oilcloth would be sold for ninety-six cents, but not more than two rolls would be sold to any person.

Now oilcloth, as it is known in that locality, comes in twelve-yard rolls, and retails at twenty to twenty-five cents a yard. When the Golden Rule man heard of the special sale he hurried over to the other store every girl who could be spared, with money to buy two rolls. Hiring some boys in addition, he had about a dozen people on hand when the sale began. The veteran not only sold the goods as fast as it was possible to hand them out, but, if anything, seemed to give these pseudo-shoppers preference. In fact, the scheme worked so well that the Golden Rule man, superintending operations from the outside, sent his people in again, and again. Before the hour ended some of them had bought four times.

Then he went back to the store to look over the purchases. There were eighty rolls of the goods, for which he had spent a little more than seventy-five dollars. Retailed at twenty-two cents a yard, that morning's work would net him a profit of about one hundred and thirty-five dollars.

But hold! What made those rolls of oilcloth look so slender?

The Golden Rule man measured one, and found it contained only six yards instead of twelve. He measured another, and another. They were all the same length—six yards only. That was the meaning of "special family roll." The public had got six yards of good oilcloth at a decent saving over the ordinary price, while he, instead of making money that morning, had been working like a horse to buy oilcloth at a nice margin over his own wholesale price!

"That wasn't all the scheme, though," says the veteran. "I wanted to stick Golden Rule so bad that he'd make a noise about it. And he did make a noise. He hollered, and hollered, and explained the whole thing to everybody, just as I reckoned he would. And everybody gave him the laugh, just as I calculated!"

THE SCHEDULE MAN.

He Places the Ads in Position and Because He Doesn't Please Many Advertisers His Life Is Full of Suffering and His Reward Will be Great in the Next World.

Just at the close of a strenuous day, as St. Peter was preparing to close the Pearly Gates and go to dinner, he saw approaching a white-haired man, bent of form, and with a sad countenance that betokened an intimate acquaintance with deep grief.

"What dost thou here?" he asked in a kindly voice, as the stranger approached.

"Let me step in and rest, and I will my tale unfold," replied the denizen of earth. "And," he added, in a voice which indicated the fear that had taken possession of him, "I will tell you my story, which will enlighten you as to the grounds upon which I seek rest within thy domain. But be quick; danger treads upon my heels."

St. Peter acquiesced. Barely had the old man stepped within the gates, which closed behind him, when a howling mob appeared without, each seeking to outdo the other in his clamor for an opportunity to get a hearing.

"What didst thou to engender this uprising?" asked Peter of the stranger. "And what was thine occupation?"

"These are advertising agents, and I scheduled the position of their ads in the Greatest Paper on Earth," replied the old man sadly.

"That's what he did," spoke one of the mob. "And, once when I sent his paper an ad occupying a whole inch, he had the audacity to put another man's ad on top of mine. And I had requested 'position' at that."

"Worse treatment gave he me," yelled another. "I advertised a cough medicine, and he placed the ad on the 'sport' page, just as if the people who read sporting news ever had colds." And the tinge of sarcasm in the speaker's words fairly froze St. Peter's blood.

"And my ad he put on the second page, when he knows no one ever reads the second page," chimed in another.

"And mine," chirped a grocer, who advertised direct, "He put alongside another grocer who sells cheap stuff—not half so good as mine."

"He gave me always good position," interrupted another. "But that didn't go with me, because once he had the trade mark tipped up to a 134-millionth of an inch. But," and he laughed in ghoulish glee, "I made him run it over."

"That's what I did to him, too," added another. "He transposed two letters in the word 'the,' and that made the ad valueless. And I made him give me another insertion." The memory of how he had "put it over" the old man convulsed the speaker with merriment.

"And he never put my ad at the top of the page, with reading matter underneath," yelled a big burly fellow from the rear. "Just as if anyone would see an add even set in stud-horse type, if it wasn't at the top of the page."

Still another county to be heard from: "He gave me 12 full positions for which I paid nothing, but the 13th was only alongside reading matter, and I cancelled the contract. I wouldn't patronize a paper that treated its patrons like that."

"And I always demanded city page, and just because a hundred other people were demanding the same thing, I never got it. He should have let me have it, and the Devil take the others," spoke a banker in the rabble.

"But is there no one of you who has a good word for this old man?" asked kindly Peter.

A man with a small voice, as though afraid of his life to speak in that throng, managed to say: "Yes, I always left it to him to do the best he could. When I got better than I was paying for, I wrote and told him so, and thanked him for it. When I got only what I was paying for, I knew the acute difficulties of the make-up prevented my getting better. I never wrote him mean letters. I realized the problems with which he had to contend, and I always left myself in his hands. In ten years I got 100 per cent. more than I paid for."

"Say you," cried St. Peter to the last speaker, "come in here. You and I and the old man will go up and take a front seat. The rest of you fellows can all go to 'Hades.'"—G. S. B. in Editor and Publisher.

MR. DEALER!

When you add musical instruments to your stock you use excellent judgment as no line fits in more appropriately with talking machines.

NOW

let us give you a little pointer that many dealers have learned in the hard school of experience,

THAT IS

HARMONY INSTRUMENTS

are the quality goods and consequently the line that holds the trade.

THE HARMONY COMPANY, 947 N. Lawndale Avenue, CHICAGO

SLOT MACHINE'S VARIOUS USES.

The development of the slot machine idea has taken further strides in New York. Many of the big hotels and some of the larger drug stores have now installed slot machine typewriters. For 10 cents and a press of the button you are confronted with a standard typewriter and paper which can be used for half an hour.

WHO IS YOUR HARDEST COMPETITOR?

Your hardest competitor is not the man who undersells you, nor is he the man who underbuys you. But he may do both of these. The competitor you need most to fear is the man who uses brain plus energy plus system to keep things moving all along the line—always. Competition is no longer so much a matter of price as it is a matter of brain.

CATALOG HOUSE COMPETITION.

How to Meet It—Some Views Expressed—A Hardware Man Says They Resort to Seconds—Should Manufacturers Who Sell the Regular Trade Sell to Catalog Houses?

A good many merchants in various parts of the country are complaining of catalog house competition.

It is the truth that the big catalog sent out by the great Chicago houses when placed upon the table of the farmer or the dweller in the small hamlet is thumbed over by every member of the family.

The advertisements are enticing and as a result of the allurements set forth in these offers there is a steady stream of dollars going catalog houseward.

That is demonstrated by the enormous annual business conducted by the great mail order houses of Chicago.

Recently a hardware man while discussing catalog house competition with the World remarked: "We must admit that we now view the situation in regard to mail order houses in a far different way than formerly. We do not consider their prospects cause for alarm. To state the situation frankly, we do not think that they will occasion the annoyance and loss of trade to the dealer that he imagines.

"We realize that this statement will naturally meet opposition among the majority of the trade, but, after the experience of our customers, we find that they cannot trace directly a continued loss of business from the source in question. It is very evident to most of the hardware trade that the class of goods sold by catalog houses is not the standard makes. In fact, to enable them to offer "bargains," they resort to seconds and goods which do not find a ready sale through regular channels.

"The result is certainly apparent in transactions of this kind. The customer is dissatisfied and has no redress. With the protection which the leading manufacturer of to-day offers in the way of not selling catalog houses, we, as jobbers, should be in position to sell the trade on equal brands of goods so that the dealer can readily compete; if he will only do his part in advertising and cultivating the trade within his radius.

"Our experience has been that we cannot obtain satisfactory results without effort, and realize that this applies equally as well to the dealer. The consumer naturally prefers to patronize his home merchant rather than advance money for purchases which may not meet his requirements when delivered.

"With a thorough understanding between dealers, jobbers and manufacturers, the catalog house certainly will have hard competition, even with the parcel post advantage. We do not wish to be misconstrued, and certainly will do all in our power to prevent the missionary work being a success. This possibly would have its reward after a time, and we would advise opposing the measure.

"We suggest that the strongest opposition would be for us to combine and offer inducements, which would more than counteract the enticing propositions of the "bargain" houses. It certainly will be quite expensive for them to further their interest with a large special force which they would naturally require, and it appeals to us that they would not obtain the returns which they anticipate.

"We certainly cannot bar them from soliciting business, and the only way, in our mind, is to confront them with conditions that they will find hard to overcome. We believe fully in united efforts, and feel that with the association, from manufacturer down to the dealer, we have no cause for alarm."

A reader in Texas sends a communication to this publication in which he refers to catalog house competition as follows: "A good way would be for every retailer to send out circular letters to the consumers and by personal conversations with them, explaining what a great expense mail order houses are put to by advertising and sending out such canvassers. Prove to the consumers in such a way that they will understand both sides of this buying proposition. Meet their prices as near as possible, and in order to do this the retailer must buy his goods at the right price."

Another World reader when asked to express his views concerning the mail order situation said: "The mail order house craze has to a very great extent died out in our section; it was at its height about three years ago. Since then it has dwindled, only a few devotees remaining. However, if they flood the country with 'drummers' their business may be partially revived for the reason that the class they play on consider themselves very smart and bomb proof to being 'beat.' They are the easiest victims to a smooth talker—their heads swell up to about twice their normal size when a stranger, one whom they have never seen before, or will never see again, tells them they are paying their local dealer twice as much for goods as they can buy from them, to buy from them and make this great saving. They can give any kind of a bluff for business, where the local man cannot, and it is a fact that if a local dealer "beats" a customer he (the customer) will use every means within his power to hurt the merchant, and it will be the talk for years to come. But, let the same man get burnt by a catalog house, and his lips are sealed as tightly as though they were glued with liquid glue—you never hear a word about it.

"If these houses put on their force of 'drummers' it will add a very heavy item in their expense account which they will have to cover, with increased profits. For instance a Chicago firm had their 'drummers' at work in our county and the way they burnt their victims was wonderful. As to the expense they paid the 'drummer' $5 per day and expenses, and the person hauling him $4 per day and all his expenses which would total $12 to $15 per day.

"I believe the most thorough and effective way to combat the new move is for the merchants to get together and address a circular letter to every person in their community, setting forth the facts and meeting their advances as may be required. All merchants should join in this, as all are affected alike. We would like to see a letter that will meet the issue and that all could use."

PAYS TO TAKE SUGGESTIONS.

The man who doesn't want to be told is a bad piece of the business world. The fellow who has pulled the doing of things down to the perfection notch and is unable to see where somebody on the outside can give him a suggestion worth trying on is in a very bad way. When we occasionally run across him we experience a cross between indignation and amusement. The upishness of the mental workings of a man who feels himself so secure in the regulation of affairs under his control that he is incapable of taking kindly or in the spirit of a willingness to learn any suggestions that may be offered to him simply needs the application of a slipper of commensurate size with his anatomy to bring him to a proper realization of the fact that nobody knows so blamed much that he can't learn something else with profit.

We run across men who have managed business in certain lines for years and who have so conformed themselves to their own cut-and-dried ways of doing that they simply won't listen to anything that is proffered to them by other people. The result is that these men are sooner or later worsted and beaten in their lines by those others who have realized that a reasonable suggestion from anyone is worth trying, or at least worth carefully calculating before it is rejected entirely. The exasperating attitude of a man who intimates that he is so completely perfect and satisfied with his ways that he doesn't care to listen to anything different is no less great than that of the man who listens and deliberately ignores as though he had never heard.

None of us has succeeded in getting so complete a hold on what we are doing that we can't make use of something the brain of someone else may evolve, and the sooner we realize that it is worth while to pick up new ideas and use them wherever possible, the surer will be the business results of the satisfactory kind. It isn't often one can afford to be cocksure.

ATTRACTING NOTICE OF SUPERIORS.

The condition precedent for promotion is that the man must first attract notice, says Andrew Carnegie. He must do something unusual, and especially must this be beyond the strict boundary of his duties. He must suggest, or save, or perform some service for his employer which he could not be censured for not having done. When he has attracted the notice of his immediate superior, whether that be only the foreman of a gang, it matters not; the first great step has been taken, for upon his immediate superior promotion depends. How high he climbs is his own affair.

VALUE OF SELF CONFIDENCE.

If a Merchant Hasn't Canceled All the Bright Business Ideas He Can Succeed Just as Well by Taking Example from His Fellow Dealers.

The man who thinks he isn't much of a dealer because he fails to evolve from his busy brain every day something entirely new in the way of retailing goods and he who mourns because he can't catch on to the ways of others in that they put forth such brilliant advertisements in comparisons with his, are not so very different than a lot of other people in other walks of life. The trouble is that the most of us see in others a degree of brilliancy worth envying and disparage our own abilities to conceive or promulgate anything that is different than that which great bunches of other people are able to get out. But, Lord bless us, there is nothing new under the sun, and the best of us are common thieves in that we are every day stealing an idea from somebody somewhere and molding it over to suit ourselves. The fact is true; brilliancy and originality doesn't consist so much in thinking out something new as in taking the best that can be found and using it for all it is worth.

We who are able to discriminate between the good and the bad, and so select as to get the most out of everything that is now going and has been going heretofore, are the ones that progress the fastest. The retailer who wracks his brains and discommodes his physical makeup in attempting to put out a brilliant advertisement that shall be so different, doesn't begin to get the results; or do it in as little time as he who sticks his nose into a dozen newspapers and gobbles a bit from this one and another bit from that one and patches together an advertisement that is made of the best wood from a dozen men's heads.

The ability to buy and select for any store is not best bound up in the anatomy of one individual, for the stores that have more than one buyer are the stores that really make the best successes, says the Sporting Goods Dealer. Two heads are better than one at any time and there ought to be a maximum of greatness for commercial purposes in any store when the dozen, or score, or more of heads are put together for the purposes of the store, no matter if some of the heads may have given previous evidence of a tendency toward mutton. The best retailer of to-day frankly admits that he could never have been such but for the brains of his helpers; a great publisher frankly states that his success is not because he conceived and carried out so many plans, but that his helpers cooperated with him and enabled him to get the results: Bacon, the philosopher, said in effect that he had no new ideas. Nobody ever does get out anything exactly new, and the bunches of denominated "discoverers" of this and that thing have obtained their inspiration from the combined thoughts and ideas of perhaps thousands of forerunners.

The retailer in the small city who hears about the great success of another retailer somewhere else, expresses the wish that he had brains enough to evolve good ideas and get similar results. Let's be thankful for the full measure of brains and ability to execute with which nature endowed us and proceed right now to absorb and adapt and make use of everything in business that somebody else has done which can be applied to what we are doing or want to do. If we think it is new, then be pleased, but if it is purloined, or gobbled, or kidnapped, or obtained in any other old way, from somebody else and can be made to fetch the results we want it is up to us to use it. Let's do less mourning because we can't "think up" something and more mourning because we can't find something we think somebody else has "thought up." If we use every good idea we run across, we'll be saving more of our own headwork for future possible needs.

EFFECTIVE SPORTING GOODS DISPLAY WINDOW.

Exact Size of Panorama 40 in. Long, 30 in. High, 12 in. Deep.

Chicago Sporting Goods Mfg. Co.

Championship Series 1908, Chicago Cubs vs. Detroit Tigers

(Special to The Talking Machine World.)

Chicago, Ill., June 7, 1909.

The Chicago Sporting Goods Co. not only have a proposition which will enable talking machine dealers to put in a stock of baseball goods at a very small outlay, but will also back them up in every reasonable way and help them in exploiting the line. The cut shown in this connection illustrates a very unique and effective window display, which the company furnishes free of charge to their dealers. It depicts a scene on the grounds of the Chicago White Sox, and shows the famous team in the act of boosting their record another notch. The members are all shown by cut-out figures, and as the originals of these figures wear a Ratch Peerless uniform made by the company, the display is particularly pertinent. One of these scenarios placed in a dealer's window is sure to attract the attention of everyone interested in the slightest degree in the national game, and is bound to pull trade into the store.

THE WAY OF ADVERTISING.

Manufacturer Gets Out Moving Picture Playlets.

A novel method of presenting arguments in favor of his products has just been put into operation by a manufacturer in the Middle West. A motion picture act has been devised with all the care that is given to such performances by the best of the film makers of France and the United States.

The services of a playwright and of actors and actresses were secured, and very soon a playlet was produced with all the dramatic force that has made the motion picture show so popular. Talking machine records were made to accompany these films.

Both these records and the films were sent out to the company's representatives in the various cities, who in turn lent them for gratuitous use to the proprietors of the motion picture theaters, who were glad of the opportunity to save the money usually paid for rentals of such materials.

Thus the need of the company's product was emphasized and a unique but effective selling talk was delivered to the public, who paid for the privilege of hearing it. Films are now being made that will simulate a flying machine trip from New York to the factory, with motion views of the various cities en route taken from above and including a trip through the factory departments and showing as a finale one of the machines assembling itself rapidly and mysteriously without the assistance of human hands.

OCCUPYING NEW QUARTERS.

The post card department of the American News Co. moved to the company's new building at 15-19 Park Place last week, and Manager Wm. S. Frazer is rapidly getting things settled in the new quarters, which are more commodious and much better arranged than in the old building on Chambers street.

A. J. REACH CO. EXPANSION.

The A. J. Reach Co., the well known manufacturers of baseball goods at Tulip and Palmer streets, Philadelphia, Pa., have let contracts for a five-story addition to their already large factory. The addition will be 60 x 80 feet.

The motor-cycle is a great seller.

Harmony in Business Organizations

HARMONY in business there must be in order to win the best results in this modern industrial maelstrom which men and methods have created.

How many men there are who have not grasped fully the true value of a harmonious organization!

Of having men about them who are in perfect accord with their policies, with their methods and with their products!

Talk about lost opportunities—why, there are opportunities lost daily by business men all over this country.

They are losing opportunities by not drawing their men closer to them.

A short-sighted policy has ruined many a business.

Get men together, for many men cannot work when they have no heart for it, even if they are willing to do it.

Frequent conferences for suggestions regarding methods will increase business and will otherwise be helpful.

Most men can produce fair results when trade is prosperous, but when depression sets in, then it is the harmonious organization, which pulls together, that wins.

It helps the business over hard times.

I wonder if the average business man who relies upon others to do his selling for him appreciates the fact that the future prosperity of his store—his success—his future—lies absolutely in the hands of the salesmen. For the dealer can advertise and bring crowds to the store, but disgruntled and incompetent salesmen can turn them away with even greater celerity.

Get together in a harmonious organization, if you desire to achieve the best results.

While it is necessary that every great business have an executive head—a deciding power—a planner and a creator—it is also necessary that he be surrounded by a staff which is in harmony with his views, else success is impossible.

No great battles have ever been won save by the support given by the rank and file composing the army.

A general cannot win on the battlefield save through splendid action on the part of his men.

Neither can any man in modern industrial life win without the support of others.

EDWARD LYMAN BILL.

A "Peerless" Summer Line

Money can be made this summer by live piano dealers if they handle and push the Peerless line of instruments.

They are continuous money makers, and for summer resorts, cafes, ice cream parlors, in fact any business of a semi-public nature, the Peerless creations are indispensable.

They are mechanically perfect and made to wear. Musically they are satisfying to the most critical and form a totality of excellences that is convincing.

STYLE D MISSION PEERLESS COIN-OPERATED PIANO.

One of the best sellers in our line is Style D Mission Peerless coin-operated piano, shown herewith. It can be made with plain panels or colored bull's-eye glass with electric lights showing through. The mechanism is the regular Style D and this instrument has had a big sale with cafes, ice cream parlors, etc. By being arranged on this system the piano can be rendered very remunerative.

Special attention is called to the magazine feature, by which from one to twenty nickels can be inserted in the coin chute, and after the playing of the first selection the following nickel starts the next one, and continues until all the nickels in the chute have been used. Then, again, the instrument can be operated by inserting a single coin.

The Peerless can help you to increase your sales and make business.

Why not take up this matter with us?

Peerless Piano Player Co.

The Talking Machine World

Vol. 5. No. 7. New York, July 15, 1909. Price Ten Cents

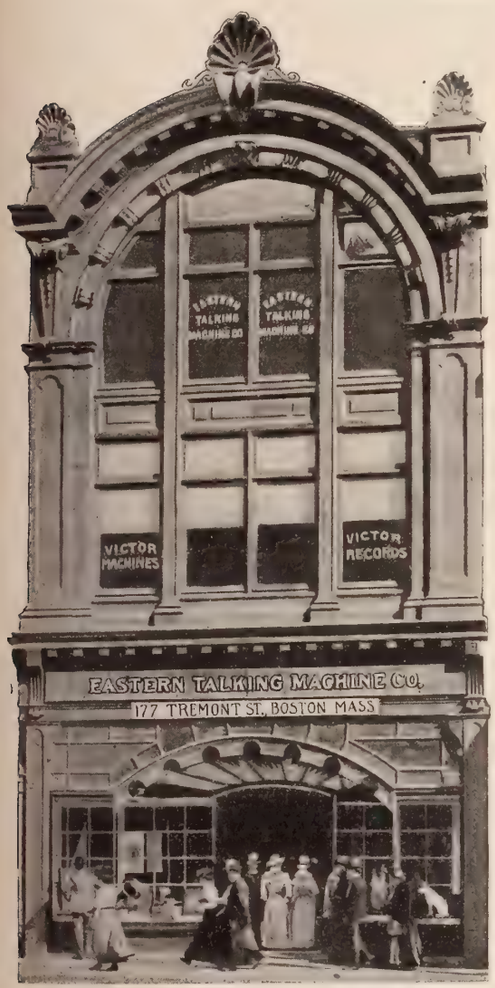
A LIVE BOSTON INSTITUTION

Is the Eastern Talking Machine Co., of Which E. F. Taft Is Secretary and General Manager—Have Prospered Because They Believe in the Future of the Business and Are Planning and Acting Accordingly.

(Special to The Talking Machine World.)
Boston, Mass., July 8, 1909.

The question is frequently asked: Is the talking machine business increasing, or is it falling behind, or is it merely a fad? The best answer to this is that those who are looking on the bright side are making steady headway. In view of this, now is the time to shelve pessimism and haul up the flag of optimism, for it pays best to look on the bright and not the dark side of things.

As evidence of the growth of the talking machine business we can point with pleasure to the accompanying illustration of the handsome four-story building occupied by the Eastern Talking Machine Co., at 177 Tremont street, one of the most prominent thoroughfares in Boston, and devoted exclusively to talking machines and supplies. This firm began business in March, 1894, in a small one-story building, with the nickel-in-the-slot enterprise as the chief source of income. But with constant improvements in their respective lines the nickel-in-the-slot business soon had to give way to the more legitimate line. And year by year the popularity and success of this firm has grown. As a result more room had to be added, greater facilities became necessary to handle the increased business, and the firm then asked themselves this question: "Is this business a fad? And the reply has been in the negative.



They then proceeded to erect a building that would accommodate any increased business that they might reasonably expect within the course of a few years to come. The expenditure and outlay for the construction of a new building was quite a few thousands of dollars, but they willingly spent the money, believing in the business and its future.

The Eastern Talking Machine Co. to-day enjoy a most prosperous business in Victor and Edison machines and records which they handle. In a recent talk with one of the company's managers he expressed himself thoroughly confident that this fall would go down in history as one of the most profitable years in talking machine history, and added: "Dealers and jobbers alike must be alert to the many possibilities and be ready to take advantage of it. They must be ready to put their shoulders to the wheel and co-operate with the manufacturer and help to keep the evils out of the business and must show confidence in the goods they carry. If they do these things they will be called optimists. In no other way can they expect the public to have confidence in them."

"TELEPHONOTYPOGRAPHE"

Is the Name of a New Apparatus Invented by Marconi and Which Is of Great Moment.

According to the Paris papers Marconi has invented an apparatus which he calls the "Telephonotypographe," by means of which words spoken through a wireless telephone are transmitted in writing at the receiving station.

The Parisian scientists are greatly interested in the report of this invention, which not only is regarded as feasible, but has long been expected.

Marconi has made no public statement yet, but is said to have admitted privately that the invention is practically completed and entirely successful. He promises a public announcement in a few weeks.

It is reported that he has been able to transmit spoken words by his invention over a considerable distance. The receiving instrument takes the message without the aid of an operator.

NEW BELLS FOR ST. MARK.

Pope Pius X. Restores the Peal That Hung in the Campanile—"Talker" Records Made.

The bells that used to hang in the Campanile of St. Mark at Venice are being replaced at the personal expense of Pope Pius X, who, it will be remembered, was Patriarch of Venice previous to his election as Pope. Only one of the five bells was unbroken by the fall, and the four that were reduced to fragments have now been recast.

A curious mixture of mediævalism and modernity has marked the completion of the new bells. The bells have been hung temporarily from a scaffolding on the piazza to await the completion of the Campanile, and on Trinity Sunday they were rung for the first time in the presence of Cardinal Cavallari and of the members of the municipality. Their first peal was recorded by a gramophone, which was at once despatched as a gift to the Pope, who has further undertaken to restore the great angel of metal that surmounted the pinnacle of the old tower.

JOHN H. DORIAN IN INDIA.

John H. Dorian, manager of the Columbia Phonograph Co.'s business in the Far East, started from Hong Kong, China, the latter part of June to visit the cities in the Strait Settlements, including Singapore, Malana and other important points there. He will also cover India, his first trip to that interesting portion of the British empire, where the talking machine enjoys such a vogue. Mr. Dorian, whose health has greatly improved, will be gone from his headquarters in Shanghai for some time. His friends in the company were recently the pleased recipients of silks, curios and other gifts from Mr. Dorian, including a lot of talking machines picked up in various Oriental markets of European make. The trade of the Columbia Co. in that part of the world is rapidly expanding, due in great measure to the energy and skill of their capable representative.

TALKING MACHINES FOR TRAINS.

Rock Island Arranges to Equip All Limited Trains With Outfits for the Entertainment of Passengers—One More Step in Fierce Railroad Competition in West.

The very latest in the fierce competition of Western railroads for transcontinental travel is the equipment of trains with phonographs which will furnish grand opera to add to the comfort and pleasure of patrons to and from the Western scenic and health resorts. According to an official announcement of the management of the Rock Island, all limited trains of that road are to be equipped with phonographs. It is said in the announcement that the road has already contracted for the machines and records sufficient to equip its limited trains at a cost of approximately $5,000.

The struggle of the various transcontinental railroads for the Western travel has reached a stage where the roads are furnishing patrons with extras which in many instances are a dead loss. The Burlington began the war by furnishing a table d'hote meal, prefaced with a cocktail and followed by a perfecto cigar, all for $1, when it is said that the whole cost the road about twice that amount. The Northern Pacific followed suit with the announcement that it had purchased and was operating its own stock, chicken and potato farms and dairies, which furnished real milk and provided eggs with the date of laying.

To keep up with the pace the Rock Island installed free stenographic service and baseball scores during the games and announced a clothes-pressing establishment aboard its trains, with no charge made for service. Now comes the installation of musical programs.

S. N. FIELD & BROS.' SUCCESS.

(Special to The Talking Machine World.)
Little Rock, Ark., July 8, 1909.

One of the most enterprising talking machine dealers in this section of the country is S. N. Field & Bros., who occupy an attractively arranged store at 705 Main street, this city. They are handling a full line of Victor and Edison machines and records, and are experiencing a great demand for Victor Victrolas.

Samuel N. Field, of this firm, previous to going into business for himself, had charge of the talking machine department of the O. K. Houck Piano Co., of Little Rock, and his two brothers, Ben J. and Owen W. are associated with him. They are all "live" talking machine men in the fullest sense of the word; they are full of enthusiasm and are branching away from the stereotyped way of doing things. They waste no time in lamenting, but are ever planning for future trade conquests. Is it any wonder they succeed?

In the contest recently conducted by the New York American with trips around the world to the successful juvenile contestants and the adult companions they choose, several hundred consolation prizes have been distributed to the hard workers, including one hundred Columbia phonographs, furnished by the Columbia Phonograph Co. and an equal number of Seneca cameras, supplied by the Seneca Camera Co., Rochester, N. Y.

NEWS FROM THE GOLDEN GATE.

San Francisco Trade Optimistic of Fall Business—Wiley B. Allen's New Department—Victrola XIII Excites Admiration at Sherman Clay's—Clark Wise & Co.'s Handsome Quarters—Sherman, Clay in Oakland—Bacigalupi Pushing Zonophones—Columbia Manager Grey East—Kohler & Chase to Move Downtown in July—Autophone Co. to Reorganize—All the News Worth Printing.

(Special to The Talking Machine World.)

San Francisco, July 3, 1909.

General conditions in the talking machine trade remain about the same as last month, and no great amount of business is reported anywhere. A fair demand has been noted for some of the popular lines of records to be used on outing trips, but the retail business in machines is rather quiet. The local dealers are doing some good work, however, and manage to keep up a fair amount of interest, leaving no reason for dissatisfaction when the usual condition at this time of year is considered. Indeed, the showing of the last month is decidedly good when compared with the volume of business last summer, and many of the dealers are surpassing their records of former years. It is still too early for a large wholesale business, the buying at present being limited to small lots of miscellaneous goods to fill up depleted stocks. The retail trade through the State, however, is beginning to take an interest, and a good inquiry is reported for all the new articles that are appearing on the market. From all indications the wholesalers will have a large business in the next few months. The trade is now sizing up the situation for the fall season and everybody is looking for a big run between September and Christmas. The territory is being more thoroughly covered by both wholesalers and retailers than ever before, the talking machine has been gaining more friends all the time, and the prosperous condition of the entire country will give a far greater purchasing power than has been in evidence for the last two years.

The Wiley B. Allen Co. do not expect to have the talking machine department of their new store in operation much before the end of July owing to the incomplete condition of the building. The finishing work is being rushed, however, and even at the present stage it is apparent that the store will be as attractive as any in the city. It will be about the largest place on the coast devoted exclusively to retail talking machine business, and occupies one of the most advantageous positions in the city. It will include ground floor, with large display windows, and basement, 40 by 62 feet, in addition to a large balcony. The ground floor will be the general salesroom for machines, cabinets, etc. From the preparations it is evident that this company are preparing to give great prominence to the Victrola and high-class goods, as one balcony and the space under both balconies, on either side of the main floor, is set aside for Victrola rooms The basement space is well lighted and ventilated and will be used entirely for the record business. It will afford ample space for the ten demonstration rooms, in addition to large shelves and racks for storage. The company will carry a general line and has already completed its arrangements for stock, which will be arriving in a few weeks.

Clark Wise & Co. state that their talking machine department continues to be one of their most profitable and popular features, and they are getting about as good a run of business as they had earlier in the year. Since moving down town this house has found considerable increase in the sale of Victrolas, and as every one of these machines sold means a lot of business in high-priced records this line is giving great satisfaction. Mr. Wise states that he is keeping his stock of Victor records as complete as he possibly can, and at present he has every record in the Victor catalogue. He makes this a particular feature, as he has found that a complete stock on hand has brought him no small amount of new trade.

Andrew G. McCarthy, treasurer of Sherman, Clay & Co., and manager of the talking machine department, has just received the announcement of the new No. 12 Victrola. He has been an enthusiast on the Victrola ever since it first appeared, and is most favorably impressed with the new machine, which he believes will be one of the biggest sellers ever put on the market. He states that it has been well taken up by all the retailers in the city, and he has taken immense advance orders for it in other parts of the coast. Mr. McCarthy says that while June started rather quietly, the month as a whole has been satisfactory and considerable improvement has been noted in the last week or two. Quite a lot of goods have been received this month and orders as a rule can be filled promptly. Sherman, Clay & Co.'s new store in Oakland will be opened next week. The talking machine department is given considerable prominence and a large retail business is expected there. Mr. McCarthy expresses great regret at being unable to attend the convention.

Peter Bacigalupi & Sons are still pushing out their zonophone records at 25 cents and report quite a large business in this line.

P. H. Beck is now in charge of the outside city business of Kohler & Chase's talking machine department and is certainly stirring things up. He has several men under him, and between them they keep a large delivery wagon busy most of the time. Owing to this policy of hustle the department has made considerable gain this month.

C. M. Jones, manager of the Pacific Phonograph Co., reports a fair wholesale business, with considerable improvement in most parts of the country. The improvement is largely due to the arrival of the Edison fireside machine, the sales of which have been fully up to expectations.

Charles F. Brown, of the Bruce & Brown Co., of Seattle, Wash., was calling on his numerous friends in San Francisco early this month. Mr. Brown has all his old-time enthusiasm, and he certainly seems well satisfied with the way things are going in Seattle.

W. S. Gray, coast manager for the Columbia Phonograph Co., is still in the east and will probably remain two or three weeks longer. In the meantime everything is going smoothly at the Van Ness avenue store, which is getting quite a lot of business for this time of year.

Kohler & Chase will move down town before the middle of July, making their headquarters in the Harry J. Moore building until their own structure is completed. They have provided quarters on the fifth floor of this building for their retail talking machine department, as well as the wholesale business of the Pacific Phonograph Co.

Preparations are being made here for the reorganization of the Autophone Co., which has for some time been manufacturing a talking machine invented by S. H. Paxton. The machine is designed to play a number of records without changing, and has attracted the attention of capitalists, who propo e to exploit it on a large scale.

MUSIC FOR HIS COWS.

Jersey Farmer Gets a Phonograph to Encourage the Milk Industry.

(Special to The Talking Machine World.)

Montclair, N. J., June 30, 1909.

Asserting that the psychic qualities of phonograph music have the effect of persuading his cows to give more milk than they are inclined to give without the aid of soul-stirring harmonies, Steever Smith, a farmer near Great Notch, came here to-day and purchased a dozen new records at a music store for use in his dairy.

Smith said he formerly had in his employ as dairymaid a Swiss girl, whose yodling to the cows had such a soothing effect that the bovines would have made him rich through their efforts if the pleasant conditions could have continued for a few years. The girl, Lena by name, got married, and after her departure the cows moped and refused to give much milk.

The accidental introduction of the phonograph at the farmhouse gave Smith a hint as to its advantages as a substitute for the songs of the tuneful dairy maid, and now the cows are in a fair way to become heavy milk producers as of yore.

COLUMBIA CO.'S JULY FOURTH WINDOW.

The retail headquarters of the Columbia Phonograph Co., 35-37 West Twenty-third street, New York, had a decidedly attractive window display for July 4. A camping scene was reproduced—the tent, the pot hanging over the outdoor fire and the other features of outdoor life.

Cards in the window emphasized the fact that a Columbia graphophone with a stock of records would be found a most valuable companion in the summer camp. A copy of the Talking Machine World showing one of the recent attractive advertisements of the Columbia records also had a prominent place in the display.

Here's a timely hint

Get all the good you can out of your summer business. Tell your people how the Victor can be used during the summer months.

Impress on them that the Victor is the best entertainer for summer homes; that the Victor is just the thing for club houses; and don't forget to drive home the fact that the Victor takes the place of an orchestra for dancing.

Throw out the suggestion to campers and yachtsmen that they should have a Victor on their outings, and see if they don't take to your hint.

Keep right at it and you'll do a hustling business throughout the entire summer—and have a bigger bank account at the end of the season.

F

SOME PLAIN WORDS TO DEALERS

The Good Work of Thomas Edens Osborne, of Belfast, Could be Emulated With Profit by Dealers in This Country With Profit—How He Has Raised the Prestige of the Talking Machine in His Territory—Gives Concerts in the Public Parks as Well as in Public Halls—Talking Machine Men in This Country Should Not Permit the Manufacturers to do All the Work, They Must Help in the Campaign of Publicity.

There is a talking machine jobber in Belfast, Ireland, who, by the utilization of gray matter, has brought the talking machine into a prominence in the Emerald Isle that is worthy of emulation by our talking machine friends on this side of the water—we refer to Thos. Edens Osborne.

It wasn't many years ago when we flattered ourselves that our European cousins were inclined to follow the lead of the Yankee, but in the talking machine field at least, Mr. Osborne has given the Yankee talking machine man some valuable pointers which might be put into practice with great success in all parts of the United States.

First and foremost, he is a persistent advertiser. He recognizes the value of printer's ink, and he is not afraid to spend money for it, because he knows it is money well spent. And in this special field our talking machine dealers can well afford to follow the example of Mr. Osborne. It isn't fair that the manufacturers of talking machines and records should do all the advertising. Their work should be supplemented by well-prepared, aggressive local publicity. In other words, dealers should utilize the valuable data given them by the manufacturers to interest the people of their towns or city, and thus make the talking machine a more potent factor in the community.

Another feature of Mr. Osborne's program which is worthy of consideration is his plan of out-of-door concerts in the summer time. He has so impressed the municipal authorities of Belfast with the dignity and value of the talking machine and the perfection of the talking machine records of to-day that he has been engaged to give public concerts in the parks of that city, with the result that thousands of people are enabled to realize the tremendous advance made in the making of the talking machine and talking machine records. Thus he has put into effect the finest kind of publicity—publicity that enlightens the general public as to the standing and prestige of the talking machine, and which at the same time entertains and instructs.

These reflections have been based on the concert which Mr. Osborne gave on the evening of June 15 in the Botanic Gardens in Belfast, when through the medium of the Auxetophone, or as it is termed over there, the Auxeto-Gramophone, he delighted an enormous and fashionable assemblage. He was so successful that the daily papers of Belfast devoted as much space to the event as they would to an operatic concert or some other great musical event. And very properly, for Mr. Osborne presented the voices of all the famous artists in the world—artists that ordinarily cost $5 each to hear sing for an evening—and he so diversified the program that everyone present expressed their satisfaction and appreciation.

The point is this: What Mr. Osborne has done in Belfast could be done and should be done by the talking machine men of this country. There must be a greater realization of the importance of the business, and a willingness to spend money in supplementing the splendid work of the manufacturers.

The Victor Co., the National Co., the Columbia Co., and the Universal Co. spend thousands of dollars in the magazines and in special literature, which is read by millions of people. And the local dealer or jobber can best secure the exact benefits of this publicity by bringing its salient points to the attention of the people of his locality. Through this educational campaign he will have laid the basis for an appeal to his local town council or aldermanic board and can demonstrate how successfully the talking machine can replace the band on the village green in the public park. Thus instead of listening to players of mediocre ability, records of the very finest bands in the world, organizations that are famous, can be presented, as well as the voices of the great operatic singers of the day.

Just contrast the difference between the local village band and the great bands of the world, supplemented by the voices of the most famous artists! It doesn't take keen business men long to realize what an advantage this would be. It would not only be economical from the money standpoint, but it would be instructive and a novel feature.

The talking machine men of this country, at least a great many of them, are prone to move along stereotyped channels. In other words, if business moves along satisfactorily, they move with it. But they are not working for the future—they are not developers. The time has now arrived when the talking machine business needs being helped along by the wise counsel of bright, progressive and aggressive men in every town and city. They must wake up to the opportunities and possibilities of the business and realize that its success is largely in their hands.

The humblest dealer can do much if he is up and doing, watching opportunities of developing and elevating the industry. And he can feel assured that his efforts will be appreciated by manufacturers who are only too anxious to aid and abet every movement for the advancement of the business.

It's So Easy

Yes, it is not only easy **to learn** a foreign language by the I. C. S. system—the easiest and most perfect way in the world—but it is also easy **to sell** I. C. S. language outfits. It is easy to sell them to people who are tired of their machines as an amusement device and will be glad to turn them into a source of profit. It is easy to sell them to persons going abroad and who otherwise desire to learn a language for the sake of the knowledge of it alone. It is easy to sell it to men and women who desire to qualify for positions as translators and foreign correspondents. It is easy to sell it to foreigners, in order that they may learn to speak English. In fact there are a great many sound reasons why it is easy to sell the

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

Do **you** sell I. C. S. Language outfits? If not, why are you thus neglecting such an important and profitable field of your work? Why are you thus absolutely throwing away at least one-third of your business? The Phonograph system of language instruction is now recognized as an educational factor of great importance and the demand for this sort of language instruction is growing by leaps and bounds. The I. C. S. system is undoubtedly the one of the greatest merit obtainable today. Write us a postal **now** for further particulars.

A PROGRESSIVE JUNKMAN.

A Wonderful Story Out of the West in Which a Talking Machine Figures Prominently.

A story comes out of the West to the effect that a junkman in an Indiana city found the talking machine an excellent business asset until the police interfered. It appears that the junkman had several cats and profited by their "scrapping" propensities to the extent of recording their caterwaulings. He then placed the talker in his back yard and started the record of the cat cries. On the first night he collected nearly a wagon-load of old shoes and boots, kitchen utensils, etc., thrown at the supposed cats by irate neighbors. When his own neighbors got "wise" the schemer placed the machine in the back yards of his friends in various sections of the city. His harvest of "junk" was rich but the local police, receiving many complaints, interfered before he got into the Rockefeller class, and a stiff fine was the result.

THE MISSION OF ADVERTISING.

Advertising introduces the goods and paves the way for the salesman.

Advertising insures for the traveler a respectful hearing when he arrives.

Advertising brings orders when the salesman is not on the ground.

Advertising increases the volume of the order which the salesman can secure in person.

Advertising makes the merchant respect the firm and the salesmen.

Advertising cements the friendship between the house and the merchant.

Advertising tells the merchant what the salesman forgets to mention.

Advertising supports the salesman in his statements to the merchant.

Advertising brings about a better acquaintance and understanding between the merchant and the traveler.

Christ Erb, dealer in Edison phonographs and records, Rochester, N. Y., was a recent visitor to New York, accompanied by his wife. He was on a vacation trip and visited all points of interest in the metropolis, as well as the Edison headquarters in Orange. Mr. Erb informed The World that he looked forward to a very busy fall, and that Edison goods were growing in popularity in the Flour City.

ONE MACHINE and that the VICTOR OUR RALLYING CRY

DEVOTED ALLEGIANCE, SINGLENESS of PURPOSE and HORSE SENSE, have made the

OLIVER DITSON COMPANY

DISTINCTIVE as the only JOBBERS OF VICTOR TALKING MACHINES, and SUPPLIES, whose business has constantly grown, and increased during the depression of business which began with the panic of 1907.

Five years ago the OLIVER DITSON COMPANY, were paying the VICTOR TALKING MACHINE COMPANY, an average of $500 per month. To-day the monthly remittances are nearer $20,000 than any other figure we can name. This very desirable condition for the VICTOR TALKING MACHINE COMPANY, and ourselves, has been brought about by a fixed determination upon our part to devote our entire energy, and the business machinery of our House to the selling and exploiting of one article that stands out foremost in every department. WE determined long ago that the **VICTOR TALKING MACHINE must supersede** every mechanical instrument manufactured, and have been consistent always in our requirements from the VICTOR COMPANY, that they in turn devote more time and more energy from month to month, and year to year, in the manufacture and distribution of the highest and finest class of TALKING MACHINES they could possibly make. To say they have backed up our desires is putting it mildly, and to-day we are **selling more VICTROLAS,** than we are any other grade of **VICTOR TALKING MACHINE,** and the combined sales of machines, which sell for less than the VICTROLAS, will make an average of 80 per cent. to the credit of Machines selling for $50.00 and over.

WE did not permit the **VICTOR TALKING MACHINE COMPANY, to do all the work and expend all the money in our field of operation, necessary to bring about our standing of Leadership. On the contrary our energies, our Advertisements, our devotion to the idea that the VICTOR TALKING MACHINE,** was the **ONLY TALKING MACHINE our customers should own,** has brought to us a clientele in the purchasing world which must of necessity be the envy of competitors.

WE have been FIRST in many suggestions for the betterment of the business.

RECORDS were put into **ENVELOPS** and delivered in a perfect condition by us long before any one else took up the idea.

WE have constantly fought for and advocated the elimination and destruction of price-cutters.

WE have refused long credits and "ON SALE" accounts.

WE have determinedly lived up to the letter of Mr. Johnson's **"Ideals," and never once encouraged imitators,** or those who in any way attempted to steal the brains and the patents of the VICTOR COMPANY.

WE have with care systematized our business so there is seldom a time when we cannot deliver MACHINES and RECORDS the same day we receive orders.

WE refer inquiries from the territory occupied by our Agents and Representatives, to them. AS WE ARE ORIGINATORS we have what Mr. Johnson calls **"Moral Support,"** from every one who does business with us. WE believe with Mr. Johnson, that the TALKING MACHINE BUSINESS will last as long as **"Progress."**

WE believe with Mr. Johnson, that **the** TALKING MACHINE **is an education, and a pleasure,** and the present generation will live to see the day when the **TALKING MACHINE is a necessity in every home,** and with the VICTOR WE BELIEVE when they create we can also create, when they improve, we can also improve, when they **Make Money,** we can also **Make Money,** and we, therefore, offer the full benefits of our **EXPERIENCE, our EQUIPMENT, our COMPLETE STOCKS, and our SERVICES to the ENTIRE TALKING MACHINE TRADE.**

To those who have not signed with us we promise the best of consideration if they will sign. To those who are not interested in the **TALKING MACHINE BUSINESS, we say: "COME IN."** It is the best proposition in the MUSIC BUSINESS to-day. We also say, when you do come in make up your minds to **SELL ONLY** the

VICTOR TALKING MACHINE.

SINGLENESS OF PURPOSE, HEALTHY PROFITS and a GOLDEN FUTURE, the momentum of which has just begun, will be the **REWARD of all DISTRIBUTORS of VICTOR TALKING MACHINES and RECORDS, but**

BUY THEM OF THE DITSON HOUSES.

Long Distance Telephones—Numbers 4677 and 4678 Gramercy. Cable Address: "Elbill," New York.

NEW YORK, JULY 15, 1909.

THE convention of the Talking Machine Jobbers, which was held this month at Atlantic City, is reported fully in another part of this paper. It will be seen by a perusal of the report that many important matters which have a direct bearing upon the talking machine trade and its development were discussed.

The jobbers are drawing closer together all the time, and it would seem that there are a number of points which are being considered by this organization which make for the betterment of the entire trade, and the jobbers are evidently impressed with the fact that the cleaner the lines on which the retail selling end of the business is conducted the better it will be for all, and when they urge a quality business rather than a quantity business they are working along lines of sound business common sense.

It is far better to have the numerical strength of the trade lessened if you will, while its sound business strength is augmented. In other words, in selecting dealers it is well to apply reasonable tests which are used by the most progressive men in other trades.

If a man lives up to his business obligations and proves himself to be a progressive business man in the development of his trade, then his patronage is of the kind that is worth having, but if he is indifferent as to his payments and is lax in his business methods then he is of no particular value to have as a customer or in jobbers' books.

WHAT we want in this trade is men who appreciate the advantages of the talking machine of our times; men who believe in its future; men who will not sit supinely and wait for trade to enter their warerooms; but men who will use modern business methods to bring that trade to them, and are interested in that which they have to offer.

Then, too, wasted territory is something which should be carefully considered.

We made the suggestion some time ago to jobbers to study what we term territorial strength; in other words, to figure whether their territory was developing the absorptive powers that it should for talking machines.

We know of some men who have acted in acordance with our early suggestions, they have carefully investigated the subject of wasted territory and they have found to their surprise when they came to analyze minutely that certain sections were paying them practically nothing when they should produce a rich and prolific trade yield.

Why should there be wasted territory?

A TOWN having a population of 10,000 people should have a talking machine absorptive power to compare favorably with the business towns of similar population. If not, there must be some reason.

Then to get at the reasons.

If one or two dealers are simply holding the business lid down they should be removed.

An agency is worth nothing to a jobber or to a merchant unless it's a live one—unless it pays something.

And how to make it live!

Well one way is to sift matters so thoroughly that responsibility can be located.

If it is a backboneless dealer who is the cause of the trouble then a change should be made, for there is no reason why any man should try to hold back the wheels of business progress.

The more we systematize the talking machine business and get it down to a trade science the better it will be for all, and the more intelligence there is placed upon the business the better the results obtained.

IF it is necessary, we will have to educate business men up to the requirements of the true situation.

Education is important to the individual because it means the development of the brain, development of capacity for production and increased chances of success.

We have got to begin a systematic study of the problems of business and in proportion to our intelligence we will find that progress is possible.

There are a lot of men to-day who are engaged in many business enterprises who have not yet gotten down to the root of business success.

They have only a superficial knowledge and that is the reason why a good deal of wasted territory—by that we mean unworked territory is found in this industry as well as in others.

Men need shaking up a bit; they need competition to stimulate them, and then they will develop not merely their knowledge of better conditions, but their fighting blood when competition waxes warm.

IT will be our aim to impress upon every reader of The World the necessity of making his territory more valuable, productive of better results to him and to those whose interests are associated with his in the fight for trade supremacy.

Some of us have got to get a lot of the old mildewed theories of the past out of our brain lest we be lost in the struggle.

There are new conditions and new forces coming up all the time which must be considered.

It was but a few years ago when John Wanamaker started to sell pianos in New York.

His entré upon the hitherto exclusive domains of the regular piano men was quite naturally resented, and comments were frequently made predicting John Wanamaker's complete failure in this special department, but somehow the looked for failure never occurred.

On the contrary, Mr. Wanamaker's piano business developed and thousands of pianos were sent out from his New York warerooms, to the amazement of those who had made dire predictions concerning his venture.

His work, however, has stimulated other department stores, and as a result many thousands of pianos are sent out annually from department stores in New York, a condition which ten years ago would have been deemed absolutely impossible.

Now the success of the department stores in New York in the piano line shows one thing clearly, and that is that there was wasted territory right here in New York, that the largest city in the world had a piano absorptive power that was not appreciated by men who had lived here all their business lives.

It took an outsider to see it.

IN another part of this publication appears a communication to the trade from the general manager of the Victor Talking Machine Co. It is a communication which should be carefully read and seriously considered, for Manager Geissler sets forth not merely the Victor policy, but he shows court decisions in support of his company's contention, and states that the Victor Co. proposes to defend its legal rights vigorously, and warns all trespassers to keep off the grass.

In this communication it is stated that the Victor Co. own hundreds of other patents which will enable them to control the disc record business for many years to come. It is set forth that the Victor patents cannot and will not be circumvented by the employment of any seeming evasion.

A reproduction of the article written by Eldridge R. Johnson, which appeared in the May issue of The Talking Machine World is enclosed with this circular, and a persual of Mr. Johnson's summing up of the talking machine situation is suggested.

AND right here it might be well to remark that there has been no product from the pen of any one in the talking machine industry which has created such wide spread interest as Mr. Johnson's article, in which the talking machine situation is set forth clearly and succinctly before the trade.

Mr. Johnson has been in receipt of many communications from readers who have been interested in his summing up of the talking machine situation. His reply to one of these communications is typical of the man, and we reproduce an excerpt from it:

"The talking machine business is a very curious one and can only be made a success by controlling a large number of great artists. These great artists can only be controlled by means of a large turn over. At present I believe that the dealers' profits are very good compared with other general lines of business. These profits can only be maintained by holding the business or a very large portion of it in the hands of large concerns who are interested in maintaining living prices and who are sufficiently broad minded to give fair treatment all around. Therefore, when the trade encourages the efforts of the small piratical competitor to enter the

field they are working entirely against their own interests."

With Mr. Johnson rest is rust, for he adds:

"The feature of the talking machine business looks very much greater to me than in the past, but, of course, it is very much like gold mine property. We have to dig it out. If we should rest on our oars at the present I do not believe the future would be particularly different from the past."

Now these are words from the president of a great corporation—great in any line of trade—and it shows conclusively that no poachers will be permitted on the Victor preserves, and that the men behind the Victor guns propose not merely to defend their legal rights but to protect as well the legitimate interests of the trade and safeguard them in every consistent manner.

Will not men who contemplate encroachment upon the rights of others learn something from the legal lessons of the past?

EDISON SUES FOR INFRINGEMENT.

Thomas A. Edison, the famous inventor, through his counsel, Louis Hicks, of New York City, filed on June 18, in the United States Circuit Court at Buffalo, a bill in equity to enjoin the Allis-Chalmers Co., the Empire Limestone Co. and the Casparis Stone Co. from constructing and operating near Pekin, in Niagara county, N. Y., giant rolls for crushing huge masses of rock in infringment of the Edison basic patents covering the apparatus and the process. The Edison giant crushing rolls are of immense weight and are provided on their surfaces with knobs or projections, which, by reason of kinetic energy or momentum acquired by the massive revolving rolls, crush instantaneously huge blocks of rock weighing as much as eight tons each. Mr. Edison has spent several hundred thousand dollars perfecting the giant roll. When Mr. Edison first proposed to crush rocks weighing eight tons each, it was generally thought that this could not be done, but the giant rolls proved to be just what Mr. Edison anticipated, and they are now used on a large commercial scale by the Edison Portland Cement Co. at New Village, N. J., and by quarry men throughout the United States operating under a license from Mr. Edison. The Casparis Stone Co., before entering upon the construction of the giant crushing rolls at Pekin, negotiated for a license under the Edison patents, but the license contract, which required the payment of royalty to Mr. Edison, was never signed, and the construction of the Pekin giant crushing rolls was begun without license. It is said that $200,000 has already been spent on the Pekin giant rolls. Mr. Edison notified the Allis-Chalmers Co. and its co-defendants that suit for infringment would be brought, and as a consequence the bill commencing suit has been filed.

TALKERS AS EDUCATIONAL FACTORS.

(Special to The Talking Machine World.)

St. Paul, Minn., July 3, 1909.

Player-pianos and talking machines have won a high place in the estimation of educational authorities in St. Paul and Minneapolis, Minn., and it is strongly suggested that they be installed in the public schools of the Twin Cities as affording the best means of giving the children proper musical instruction. At present, however, the school authorities are hesitating in the hope that some larger city may take the initiative. It is argued that by means of the instruments referred to, a more accurate interpretation of the classics is obtainable than the average music teacher can offer and the children acquire the musical knowledge more quickly.

The dealers of the Twin Cities are much interested in the proposed innovation and are doing all in their power to further the project.

ATTRACTIVE QUARTERS

Are Those of the St. Louis Talking Machine Co.—Artistically Appointed in very Respect—Victor Goods Shown Exclusively.

(Special to The Talking Machine World.)

St. Louis, Mo., July 9, 1909.

Without any indulgence in egotism, the St. Louis Talking Machine Co. may safely claim that they are the owners and conductors of one of the most attractive talking machine stores in the United States. This establishment is centrally located at 1012 Olive street, the principal business artery of the "Saintly City." The front part of the store is for reception purposes, and there are in addition five glass panel and glass dome sound-proof demonstrating booths.

In the construction of these booths particular attention was given to the ventilation, and besides the electric fans to cool the air they are also equipped with a suction fan system which draws the impure air out of the booths into the alley in the rear. The floor is decorated with handsome imported Turkish and Persian rugs and the color scheme and decorations show the famous English "Coaching Days" with the fixtures in mahogany and marble white. A visitor to these handsome warerooms is impressed with the very tasteful display made of Victor talking machines and records, which they handle exclusively.

Under the management of O. A. Gressing this business has been steadily growing, and the territory which they control is being carefully developed so that the talking machine dealers report trade in a healthy condition. Their policy has been one of buoyancy and ample faith in the future of the business, and along these lines they are working and developing a feeling of optimism which is doing much to give the dealers a broader vision of the possibilities of the business.

ST. LOUIS TALKING MACHINE WAREROOMS, AS SEEN FROM MAIN ENTRANCE.

Stimulants, like bees, won't hurt the man who leavs them alone.

DEALERS

In Michigan
Northern Indiana
Northern Ohio

WE WANT YOUR BUSINESS ON A FAIR, MUTUALLY PROFITABLE BASIS

Because of our location we can serve you with promptness—get goods to you quicker than the other fellows can.

Because of the exceptionally large stock we carry in every line of Machines, Records, and all Accessories, we fill orders the day we receive them—no exasperating delays—no annoying excuses. We always have the goods to fill the order.

Because in anticipating your demands we keep the lines full for this purpose. You realize what this means.

And we are mighty "good people" to do business with. Let us have a sample order by mail, long distance phone, or wire.

American Phonograph Co.

252 Woodward Avenue, Detroit, Mich.

A VISITOR FROM SAN FRANCISCO.

W. S. Gray Chats Interestingly of Conditions on the Pacific Coast, Where He Represents the Columbia Co.—Visiting East for Pointers to Embody in New Store.

One of the main objects of W. S. Gray's visit East last month was to inspect the establishments reported to be the best arranged for the most effective display of talking machine goods, and whose decorations and general embellishment were classed as artistic. It is the intention to lease new quarters for the Columbia Phonograph Co. in San Francisco, where Mr. Gray makes his headquarters of the Pacific Coast territory, hence his seeking for ideas and suggestions in the "effete" East.

The place is to be on Grant avenue, the shopping district of the rebuilt California metropolis; the location has not been decided upon as yet, but with several to select from Mr. Gray will eventually choose the most desirable and have it ready for occupancy and business about October 1.

The territory specifically under the control of Mr. Gray embraces California, Oregon, Nevada, Washington and part of Idaho. Four men tour these States in the interest of the Columbia Co., and report to the San Francisco office, whence come the stock requirements to fill orders. There are seven Columbia Co.'s stores in the territory, besides their accredited jobbers and dealers.

Mr. Gray has been on the Coast fully ten years, and two years he passed in China and Japan, where he represented his company.

Therefore when reporting at the Columbia Co.'s executive offices in New York about the middle of June he had conferences with Edward D. Easton, the president, previous to his sailng for Europe on the 22d following, where he saw the chief off at the pier; and also with General Manager Lyle and H. A. Yerkes, in charge of the wholesale department. Here is where The World ran across Mr. Gray, who spoke of San Francisco and prospective Coast business in sanguine terms, as follows:

W. S. GRAY.

"Really, San Francisco is now the most wonderful city in the world; that is to say, the most up-to-date in every respect. I was familiar with the city before the 'quake and what was tolerated there in the way of tumble-down buildings and squalid sections and other objectionable features because they had been a part of its growth in the early history of the place, have now been swept away entirely.

"The skyscraper, so common here, but rare before the great disaster, may now be found everywhere. The style of architecture has been vastly improved and we are spick, span and new, with a fortune before us in the way of prosperity that will surprise this world.

"Business prospects are excellent for the fall—the best in the country, I am free to say. Columbia goods have always been strong on the Coast, and we have not only maintained this prestige, but added to it. In the past year we have increased our sales 50 per cent. over 1908, but still have not reached our normal status. That mark we expect to pass easily, and make a yet greater expansion.

"I have come East principally to see how the 'show' places are fitted up and get pointers for our new retail establishment, which will be on Grant avenue, the swell district now, and where all the leading and most pretentious concerns may be found. I shall fix this store up finer than any other of its kind anywhere, bar none.

"I shall go to Boston to have a look at the Columbia store, which Mr. Yerkes says is about as swell as they make them. In New York I shall also look around. I believe it is a good thing for outside dealers to visit the handsome stores in the cities. It shows them how to fix up theirs, and is stimulating. Subsequently I will start West (June 28), and am scheduled to be in San Francisco about the middle of July. I shall stop off at Washington, D. C., Pittsburg, Pa., and Chicago, and also visit a number of towns in my territory, going in; that is, in the northern section, Spokane, Tacoma, Portland, Seattle, etc.

"Frankly, I feel positive the Columbia Co. has the best talking machine proposition in the market. That accounts for the splendid condition of our business now. I do not think it is any one particular thing that has brought this about; that is to say, in itself individually, not the double-face disc record, or the Indestructible cylinder, the new selling policy or the exclusive territory for jobbers, but all of them combined are to be credited with our great success."

WHOLESALE

EDISON

¶ An order for the smallest part is given the same careful attention as would an order from a dealer for ten machines and a thousand records. During the seven years of jobbing Talking Machines I have never lost a dealer through poor service. My stocks of Edison and Victor machines, records and supplies are second to none in the country. I want the entire business of every dealer in Wisconsin and Northern Michigan, and I'll make good, when I get it. When you can't get service or the goods elsewhere, try me.

I Sell Nothing But Talking Machines

VICTOR

LAWRENCE McGREAL

MILWAUKEE

THRIVING CONNECTICUT JOBBERS

Are the Pardee-Ellenberger Co., Who Conduct a Large and Well-Equipped Establishment at 96-104 State St., New Haven.

(Special to The Talking Machine World.)
New Haven, Conn., July 9, 1909.

The Pardee-Ellenberger Co., of this city, have been jobbers of talking machine goods since 1898, and at present are the only Edison jobbers in Connecticut, and one of the few in the entire country who are doing a talking machine jobbing business exclusively.

Several years ago they purchased a large building in the wholesale part of the city, giving them ample facilities for all departments of the business. On the first floor are the offices and shipping department. The latter is very spacious and exceedingly convenient. Here it is possible for large drays to load and unload goods under cover. On the second floor is a stock room for records and other goods, the capacity of the record bins alone being close to a quarter of a million of records. Owing to the unlimited room there is no occasion to crowd these goods, and they are kept in a precise and systematic manner, making it possible to fill orders with accuracy and dispatch. The third floor contains the repair department and also storage for heavy stock, such as machines, cabinets, etc. Power elevator connects the several floors.

PARDEE-ELLENBERGER CO.'S HEADQUARTERS.

In addition to the general jobbing business the Pardee-Ellenberger Co. have many specialties which they control, and which they sell direct to the jobbers all over the country. As a matter of fact, this part of the business is an important one and has been growing rapidly of late. At present they are featuring a horn made of linen fiber to be used with the new Fireside machine, which appears to be meeting with general approval if the orders they are receiving is any indication. The officers of the company are W. O. Pardee, president and treasurer, and H. L. Ellenberger, secretary.

SUCCESS THE RULE OF LIFE.

Success is not the exception but the rule in life. A man doesn't have to be a monarch or make a million dollars to be a success. The good mechanic, the good farmer, the good man of any kind, who makes a fair living, educates his children, adds to the comfort and happiness of those around him and lives a clean, decent life, is a success. A good wife and mother who makes her home happy and raises her children well is about as great a success as the world contains, even though the boys do not turn out to be railroad presidents and the girls don't marry dukes.

NEW EDISON ARGENTINE RECORDS.

Another Valuable Addition to the Foreign List Has Been Made by Mr. and Mrs. Gobbi for the National Phonograph Co.—The Repertoire Is a Large and Interesting One and Includes All the Creations Published South, Including Many of the National Hymns.

The National Phonograph Co., Orange, N. J., has made another series of first-class records in the Spanish language, both "Standards" (two-minute) and "Amberol" (four-minute). This series comprises some of the best songs of the Argentine and Uruguay republics. Alfredo Gobbi, baritone, and Mrs. Gobbi, soprano, were brought to New York at large expense for the purpose of recording a number of selections. Mr. and Mrs. Gobbi are acknowledged to be the best singers of popular songs in those countries. The list of records comprises baritone and soprano duets, baritone solos, soprano solos and also national hymns of Argentine and Uruguay sung by a mixed chorus under Mr. Gobbi's direction. These records are to be immediately placed on sale both in this and foreign countries. All the selections are accompanied by an orchestra, with the exception of sixteen baritone solos, which have guitar accompaniment.

The selections recorded are high class in every respect and include the very best of Mr. and Mrs. Gobbi's repertory, which is very large and varied. These artists have sung selections from the latest musical plays of those countries, and also a large number of popular songs typical of a quaint and picturesque type of Argentine and Uruguay—the daring gaucho. The gaucho is very brave, and corresponds with the cowboy of our western country, but is even more picturesque. He is very musical, and no gaucho outfit is complete without a guitar, as this is just as necessary to him as his horse.

Mr. Gobbi is not a gaucho. He is a man of refinement, an intense lover of the customs and traditions of his country, and, owing to this, he has made a specialty of singing the gaucho songs, rendering them in costume. Besides, he takes part as first baritone in the typical zarzuelas (light operas) of Spanish countries. His wife co-operates with him as the first light soprano. They have sung in the principal theaters of Argentine, Uruguay, Spain, Brazil, Paraguay, Chili and also in Paris. They will now go to Italy, under contract to sing in several theaters there. Their last engagement was at the Teatro Nacional (National Theater) of Buenos Ayres, Argentine, at the head of a company of one hundred people. As this is the case with all other Edison foreign records, these are intended for Spanish-speaking countries, but they will shortly be placed on sale in this country.

MR. AND MRS. GOBBI.

REMARKABLE INDUCEMENTS

Being Offered to Visitors at the Seattle Exposition by the Railroads—The Use of Talking Machines the Latest Bid of One Line.

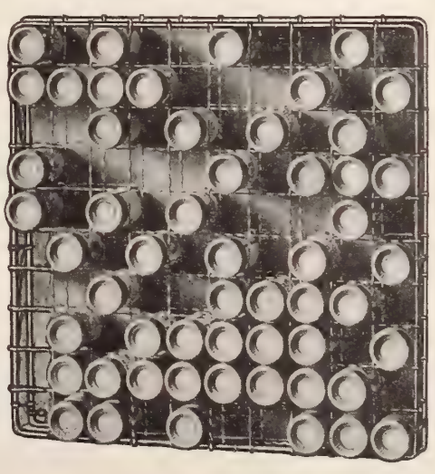
(Special to The Talking Machine World.)
Chicago, Ill., June 23, 1909.

Competition between western railroads for travel to the Alaska-Yukon-Pacific Exposition at Seattle has reached another notch in the announcement of one that all its limited trains will be supplied with phonographs.

Daily programs of grand opera selections and popular music are announced. On the dozen new trains put on by this railroad other bids for patronage have been made.

Extra Profit from Record Sales is Possible

By Selling Record Buyers the HEISE SYSTEM WIRE RACKS



Just the thing for the home. Small Racks for 100 and 150 records made upon the same plan as our store Racks which have proven so popular with dealers.

Compact, convenient and durable. Get in a line in time for fall trade. They mean more record sales, for owners want to see them filled.

Write us for interesting information.

We will supply Convincing Printed Matter for Dealers.

The 100 Space Racks like cut **in half doz. lots, $15**
The 150 Space Racks crated " " " **$20**

Send to your jobber or us for complete Catalog of racks for store use.

Canadian Representatives: The R. S. Williams & Sons Co., Toronto and Winnipeg

3 Big

Edison

Achievements

1 Amberol Records

playing twice as long as the Standard Edison Records and longer than any other record of any kind. Offering, because of their great playing length, songs and music which could not, heretofore, be put upon records without parts being omitted or hurried.

2 Victor Herbert

eminent musician and composer, engaged in an advisory capacity, assisting in the selection of music for Edison Records and the artists to produce it. Also the exclusive services of Mr. Herbert's famous orchestra for making Records.

3 The Fireside Phonograph

to retail at $22.00; a perfect instrument, playing both Edison Standard and Amberol Records; equipped with a long-running Motor, 19-inch horn, nickel-plated horn support, and new model Reproducer with two sapphire points.

A Record offering exclusive selections—a musical expert to choose the music and pass upon its reproduction—an instrument of unusual excellence at a price within easy reach of all.

Do you know of a more inviting proposition?

There is an Edison Jobber near you. Write him or us for full information.

National Phonograph Company

59 Lakeside Avenue ORANGE, N. J.

ALL DEALERS

SHOULD SELL THE

Music Master Wood Horn

Every purchaser of a Phonograph or Talking Machine—***past or present***—is a possible buyer of this wonderful horn. It is an improvement over all metal or veneered wood horns. Constructed of ***solid wood,*** on scientific principles of acoustics, it renders a ***resonant tone*** to the record reproduction; it is as essential to the Musical Expression of any make machine as the sounding board is to the piano.

HAVE ONE SENT ON APPROVAL

Choice of Oak, Mahogany, or Spruce, ***for any make or style machine.***

If your jobber cannot supply you, write us.

INDIANAPOLIS HAPPENINGS.

Ousting of Saloons and Its Influence on the "Talker" Trade—Wulschner-Stewart Now Victor Jobbers—Noted Columbia Purchasers—Mme. Butterfly Records Popular—After the Penny Arcades—Other Items of News.

(Special to The Talking Machine World.)

Indianapolis, Ind., July 6, 1909.

Talking machine men of Indianapolis believe that the ousting of saloons in Indiana under the local option law recently enacted will result in an improvement in the talking machine business. Already business is reported some better. Traveling men have noticed that in the smaller towns of the State where men used to spend their time uptown at nights, particularly on Saturday night, they are now spending their nights at home and a talking machine is not an unusual means of entertainment during the evenings. The absence of saloons probably will help the talking machine business more than some other lines because talking machines are within the reach of laborers who have patronized the saloons and at the same time they offer a substitute entertainment.

The Wulschner-Stewart Music Co. are advertising the line of Victor talking machines very extensively. This company purchased the stock of Victors and the jobbing privilege in Victors from the Kipp-Link Co., who will now handle only the Edison machine. They will quit the retail business and give all their time to the jobbing business. This will make this company one of the biggest wholesalers for Edisons in the middle west. The company will remove from its present quarters in Washington street, where they have been conducting their retail business and will establish offices at the wholesale and jobbing rooms at 445 East Washington street. The second floor location of the company, where their retail business was carried on, was not a good one.

The Wulschner-Stewart Co., it is said, will devote much space in their new building in Pennsylvania street to the talking machine business. They will take possession probably by Sept. 1.

Capt. G. L. Bumbaugh, the well-known balloon man, who acted as aide for Carl Fisher in the balloon races which were conducted from Indianapolis several weeks ago, has just bought a Columbia graphophone for himself and one for his father-in-law, who lives in Virginia. Bumbaugh is an enthusiast in talking machines as well as balloons and may take a talking machine up in the air with him. Bumbaugh made some of the balloons which made the best showing in the Indianapolis race.

The Columbia Co.'s store has just received the first order of Madame Butterfly records, sung in English by the original Savage company. Salesmen are out taking orders for sets of the records and are meeting with great success, in part, probably, because the opera has been heard here several times and is a favorite.

Miss Florence Wiltsie, who has had charge of the talking machine department in Joseph Joiners' store in Massachusetts avenue, is now connected with the Musical Echo Co., in North Pennsylvania street. They handle Victor machines.

Frank Lesley, in Massachusetts avenue, has an unusual advertising device. Three horns extend out of a cabinet and passers-by are led to think that it is some kind of a new talking machine device. Lesley handles Edisons and Victors and sells them on the dollar-down-dollar-a-week plan.

The Indiana Phonograph Co., jobbers in Edisons, report trade quiet over the State. They express the belief, however, that they are getting their share of the business.

The new imperial disc record cabinet devised by the Columbia Co. is popular with users of disc records, and the first cabinet received by the Columbia store here was sold within twenty minutes after it reached the store.

Frank Greene, who runs a moving picture show at Vincennes, Ind., has started a new show at Fountain square, Indianapolis. He calls it the Air Dome and gives a long program. As a barker he uses a Twentieth Century Columbia graphophone. Mr. Greene is the man who, a few years ago, achieved fame by getting Edwin Booth and Modjeska to appear at Vincennes. Other large cities in Indiana, including Indianapolis, were passed up by the famous actor and actress. The actor and actress wished to make a certain trip between two stands and wished to do all of their traveling in the daytime. A friend of Greene's in New York told him of this and Greene at once opened negotiations which brought the pair to Vincennes. They appeared in a little old opera house which had a tin trough along the front of the stage for the electric lights. In front of the trough was a sign which could be seen from the stage and which said, "Please Do Not Spit in the Trough." Booth happened to see this sign in the midst of the play and it was so unusual that he blurted out in the midst of his lines, "Please do not spit in the trough." It was some little time before he could get himself together again and go on with the play; but it was a $3,000 house and people came from many towns in Illinois.

The city authorities have been getting after the penny arcades within the last month. The mayor accompanied by police officers made a personal inspection. After peeping through several machines in one South Illinois street place the mayor ordered three or four of them removed.

MONARCH RACKS IN DEMAND.

The Syracuse Wire Works, Syracuse, N. Y., state the demand for their small-size record racks, especially the Monarch Midget, has kept up in remarkable shape. The small racks hold a surprisingly large number of records when their size is considered, and are both convenient and attractive in appearance. The trade would do well to stock up on these racks in order to be ready for the fall business, which is not very far off.

If some salesmen would sell as many goods in the merchants' stores as they do in the hotel lobby, a great many more would be making $10,000 per year.

TRADE IN SOUTHERN CALIFORNIA.

Summer Weather and Conventions Make Business Slow—C. F. Dorian in Los Angeles—Victor Goods Selling Well—Big Demand for New Edison Fireside Machine—A Handsome Window—Selling Talkers to Camps—Other Interesting News of the Month.

(Special to The Talking Machine World.)
Los Angeles, Cal., July 3, 1909.

Amid the excitement of the coming Elks' convention and the warm weather business has become somewhat slow, although there is no direct complaint from talking machine dealers. A number of the employes of the trade are having their vacations during the quieter season.

C. F. Dorian, of the Columbia Phonograph Co., has been a visitor in this city, where he has been looking into his company's interests. His trip overland has been a pleasant one, so he says, and he is greatly pleased with Southern California.

Sherman, Clay & Co. are busy as usual with Victor goods, a shipment of the second supplement of double-faced records having just been received. The announcement of the new Victor Victrola XII has been warmly received by the trade and its success is already cited.

The Southern California Music Co. have been shipping out the new Edison Fireside machine in great numbers. An increased demand is reported, especially from out-of-town dealers. The retail department has been doing a splendid business in Victrolas and Columbia records. Two very attractive displays have been created by their window trimmer, the first for Columbia records, a life-size statue of Miss Columbia in stars and stripes, attracted much admiration; the latter, for Cal. Stewart and his famous Uncle Josh records, in which was represented Uncle Josh sitting under the trees listening to the Victor. This window was truly a rustic affair, even to the trees and hay. Mr. Stewart, who has been at one of the local theatres for the past week, was greatly pleased with his wax impersonator. While in the city he made a number of souvenir records for different members of the Southern California Music Co., which are all new and original and greatly prized. Frank Bush, one of the Edison artists, who has been in this city, also left several records as souvenirs.

The Geo. J. Birkel Music Co. are busy with their summer trade and have decorated their building in an excellent manner for the Elks celebration.

The Fitzgerald Music Co. suffered some little excitement over a small fire in the basement of their building. No serious damage was done, however. Their talking department is doing nicely.

Sibley Pease, of the Holmes Music Co., is expecting to leave for a short vacation, when he will journey to the Seattle Exposition.

The camps along the Los Angeles Aqueduct, which is in course of construction, have proved a splendid market for talkers. There are over fifty camps along the proposed line of the aqueduct, which will be more than two hundred miles in length; each of these camps employ upward of 150 men. As these camps are not located within easy distance of any city, the men are anxious for amusement and entertainment. This is now being furnished by numerous talking machines and a goodly stock of records. A system similar to that of a library has been arranged for the exchange of records among the different camps. One of the local dealers has a contract to supply a stated amount of records monthly. which are paid for by collections from the different camps.

Among the current events worthy of mention is the marriage of Wm. A. Salsbury, which took place at Santa Barbara, Cal., June 18. Mr. Salsbury has been with the Southern California Music Co., of this city, for several years, and has sold a great many talkers and Regina music boxes. After a short trip he will resume his former position as manager of the Regina department.

John H. Gill, representing the National Phonograph Co., has just departed for Orange, N. J., after a successful trip covering the entire Pacific Coast.

TRADE NEWS FROM THE TWIN CITIES.

Business During the Past Month Proves Fairly Satisfactory—Talkers Well Established in Northwest—Columbia Business Excellent for June—Other Items.

(Special to The Talking Machine World.)
Minneapolis and St. Paul, July 7, 1909.

Talking machine dealers in Minneapolis and St. Paul are highly satisfied with the appearance of their books for the past few weeks, as they filled more pages than they ever had expected.

"June was a specially good month for us," said H. L. Lucker, of the Minnesota Phonograph Co. "We looked to see business slack off a little in June, but the usual trend has been reversed. A great many machines have gone to the lake resorts near the twin cities in particular. This is somewhat unusual, for ordinarily the lake dwellers have taken their instruments with them from the city and we have derived little if any benefit from the annual migration. We have been getting it this year, however.

"Talking machines now are firmly established in the Northwest. Where people formerly hesitated to spend $15 for a machine they now think nothing of spending $100 to $200, while the highest-priced records sell—well just like hot cakes, to use an old expression. We have been very successful with the Victor and the Edison lines."

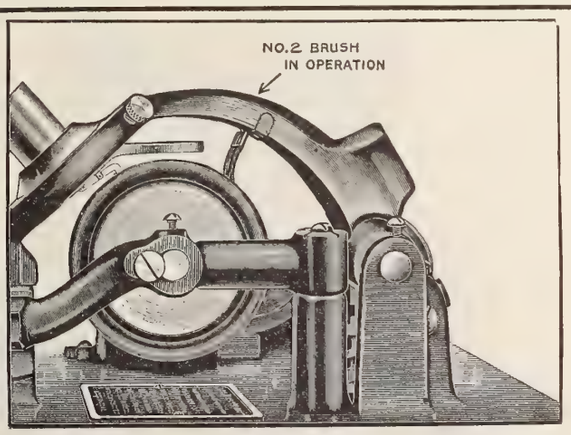
Manager Jay H. Wheeler, of the Columbia Phonograph Co., has had an extremely gratifying experience. His office handles the Columbia jobbing business in Minnesota, North Dakota and South Dakota and northern Wisconsin, as well as retail stores in Minneapolis, St. Paul and elsewhere. "Both our retail and wholesale departments have been doing a very nice line of business," says Mr. Wheeler; "unusually good for June. We are much pleased with the standing that the Columbia is attaining in the Northwest."

SAVE THE LIFE OF YOUR RECORDS

BY USING THE PLACE AUTOMATIC RECORD BRUSH

FOR EDISON PHONOGRAPHS AND VICTOR TALKING MACHINES.

PATENTED { September 25 and October 2, 1906 and September 10, 1907.



PRICE, 15 CENTS

CAN BE USED ON ALL PHONOGRAPHS

Removes lint and dust from record automatically. Saves Sapphire from wearing flat and prevents rasping sound. Insures a perfect playing record. It is equally as efficient when recording. It is too cheap to be without.

No. 1 fits Triumph **No. 2** Standard and Home **No. 3** Gem

THE PLACE No. 10

DISK RECORD BRUSH

MANUFACTURED BY BLACKMAN TALKING MACHINE CO.

97 CHAMBERS STREET, NEW YORK

J. NEWCOMB BLACKMAN President

"The White Blackman"

MR. JOHNSON'S ARTICLE WIDELY DISCUSSED.

The Article from His Pen Which Appeared in The World for May Results in Some Interesting Correspondence, Which With Accompanying Letter from L. F. Geissler, Forms Symposium Full of Information Regarding Legal Conditions in the Talking Machine Trade.

The article written by Eldridge R. Johnson, president of the Victor Talking Machine Co., Camden, N. J., for the May issue of The Talking Machine World, entitled, "The Recent United States Supreme Court Decision; Its Effect, and the Future of the Talking Machine Business," created so much comment in the trade not only in this country but throughout the world that the Victor Co. reprinted it in very handsome form for general circulation. Mr. Johnson's comprehensive statement regarding the patent situation was so lucid, and his predictions regarding the future of the talking machine business so gratifying that many complimentary letters were sent him by distributers and dealers. One of these communications was from W. Berdy, vice-president of the Bronx Airlight Co., New York city, and reads as follows:

"New York, May 17, 1909.

"Eldridge R. Johnson, President Victor Talking Machine Co., Camden, N. J.:

"Dear Sir—We beg that you accept our heartiest thanks for the most excellent article of the "statements of single facts" in The Talking Machine World of the 15th inst. As dealers, we felt right along, as a good many others do, that the litigations about the various patents was a thing that concerns the manufacturers only, and like the rest being indifferent as to the outcome. It's true that the dealers were not personally engaged in the fight, but indirectly it was a fight for life and death to them just as much, it was only then as you presented the facts in the masterly way we realized.

"We humbly suggest that you print the said article in the biggest type and have it circulated to the entire trade, force them, if you can, to read every syllable of it; they will have then a clear conception of the trade they are in, and what they are in for.

"The undersigned has been a visitor to the Victor factory for three days last month, perfecting himself in the mechanical construction of the machine. The friendly spirit shown from the office force, from Mr. Lambert, superintendent of the factory, and all along the line was praiseworthy, and having had the chance of observing the greatness of the Victor factory, then reading the above-mentioned article, one can only see that the talking machine business has not seen its better days; it is yet to come. With best wishes, we beg to remain yours for the good of the trade, BRONX AIRLIGHT CO., INC.,

"W. Berdy."

Of course it was impossible for Mr. Johnson to reply to the numerous letters sent him, but his answer to Mr. Berdy, appended herewith, and which accompanied the four-page folder sent out containing the original article, gives the views of this gentleman so clearly and forcefully that they merit the closest consideration of readers:

"Camden, N. J., May 19, 1909.

"W. Berdy, Vice-President, Bronx Airlight Co., Inc., New York:

"Dear Sir—Your letter of May 17 received. In my article in The Talking Machine World I tried to set the talking machine situation clearly before the trade. I do not know that the Victor Co.'s interests have ever been irreparably injured by the attempts of piratical concerns to copy our goods, but we have certainly been greatly annoyed thereby, and in some instances—a rather small proportion, I am glad to say—we have been further annoyed by the encouragement the trade seemed to offer. If we can get the trade to appreciate what you seem to understand by your letter, we will certainly have accomplished much.

"The talking machine business is a very curious one and can only be made a success by controlling a large number of great artists. These great artists can only be controlled by means of a large turn-over. At present I believe that the dealers profits are very good compared to other general lines of business. These profits can only be maintained by holding the business, or a very large proportion of it, in the hands of large concerns, who are interested in maintaining living prices, and who are sufficiently broad-minded to give fair treatment all around.

"Therefore when the trade encourages the efforts of a small piratical competitor to enter the field, they are working entirely against their own interests. Goods which are bought at a low price cannot always be sold at a high price. The profit is, of course, the difference between what it is bought for and what it is sold for. It is the Victor Co.'s policy to maintain this difference to a satisfactory figure, and we should receive the unanimous and unqualified support of our entire trade. I am pleased to say that in a majority of cases we do receive it.

"I am also pleased to reassure you that the future of the talking machine business looks very much greater to me than the past; but, of course, it is very much like gold mine property, we have to dig it out; if we should rest on our oars at present I do not believe the future would be particularly different from the past. Yours very truly, ELDRIDGE R. JOHNSON, President."

The following letter sent out by Louis F. Geissler, general manager of the Victor Talking Machine Co., in connection with the reprint of Mr. Johnson's article, and his letter to Mr. Berdy, above referred to, emphasizes anew the position of the Victor Co. in regard to infringements of their patents at issue and adjudicated. It will be noted they have taken steps in all parts of the country and abroad to maintain their patent rights in the Berliner invention, which have been sustained by the courts of last resort. Mr. Geissler says:

Edison Fireside

The Best Selling Proposition

YET

An Amberol attachment for the Gem. Better order one and make even the Gem add additional profits by selling four minute records.

List price $4.00

Let Us Fill Your Orders Complete

With the advent of the Edison Fireside, a new Amberol attachment for the Gem, you can turn July and August into two of the busiest months of the year, just a little more energy on your part, a little more "ginger" into your selling force, plenty of Firesides in stock and complete lists of records both Victor and Edison and our filling of the orders will do the rest. You had better send us an order for more Firesides. The demand will be greater than you think.

Victrola The XII A Winner

Mr. Dealer.—We call your attention to the many possibilities you have for increased profits with the introduction of this new Victrola. Do not overlook the fact that many people in your territory have been waiting for this NO HORN MACHINE at a popular price. Now that the Victor Company have made it possible, go after the business. Show your confidence in the goods by having one to show and be ready to clinch the sale without having your customer wait and perhaps lose his enthusiasm before it comes. This machine will be the biggest winner that has ever been offered to the public "besides, regular discounts apply."

EASTERN TALKING MACHINE CO.

177 TREMONT ST., BOSTON, MASS.

"It occurred to the writer that it would be perfectly proper to write such parties who are supposed to be financially interested, directly or indirectly, in the talking machine business, a letter which might set before them the legal as well as the other commercial situations as they now exist in the talking machine industry, in a manner in which they would not be apt to receive it from people perhaps interested on the other side.

"Realizing that such a letter would be considered by most people under the circumstances as a bluff, it is with much trepidation that I endeavor, by any means whatever, to bring the situation as it really exists before your personal attention.

"I enclose herewith a copy of a circular embodying a letter written by our president recently at the earnest solicitation of The Talking Machine World, which, if you will take the pains to read, you will find (perhaps by your own experience or observation) carefully and honestly sets forth the present situation in the talking machine business.

"Since our recent favorable decision in the Supreme Court of the United States we have been successful in further suits, a decision having been rendered on May 27, 1909, by Judge Knappen, in the United States Circuit Court for the State of Michigan, southern division.

"The defendant's machine, the Duplex Phonograph Co., which sought to invade the field covered by the Victor talking machine, had an attachment called 'an elastic mechanical feed, operating by so-called yielding machanical pressure.' The court, however, held that this so-called 'mechanical feed construction' clearly infringes claims 5 and 35 of the Berliner patent No. 534,543, and gives to these claims the broad construction to which they are entitled, in view of the prior art, thus following the decisions of the United States Court of Appeals in our other suits against other defendants.

"A decree was entered on June 4 and a writ of injunction has been served permanently enjoining and restraining the Duplex Phonograph Co. from using or making the apparatus in question.

"Furthermore, on June 4, 1909, in an opinion by Judge Archbald from the bench, upon motion for preliminary injunction and after full argument in this case by counsel for both sides, granted the Victor Co.'s motion and entered an order enjoining the Hawthorne & Sheble Mfg. Co. from manufacturing, selling or using its machines, which the court held to be an infringement of this Berliner patent. This machine also contained a so-called 'mechanical feed device.'

"Pursuant to the rights finally placed in our hands by the courts, and by the lack of the exercise of which, in the past, the Victor Co. has suffered untold losses and damages, both real and consequential, the legal department has now gone vigorously to work to enjoin the sale of the various stocks of the infringing dealers throughout the country, thus far successfully proceeding against the stock in the hands of R. H. Macy Co., New York; Siegel-Cooper Co., Chicago; John R. Smyth Co., Chicago; Aretino Co., Chicago; The Fair, Chicago; James I. Lyons, Chicago; Robert Johns, Chicago; Butler Bros., Chicago; Montgomery Ward & Co., Chicago; Hillman's, Inc., Chicago; The Central Camera Co., Chicago; Dillbahner & Robbins Record Co., Chicago; Leon A. Olmstead, trading as 'The Vim,' Chicago; James O'Neill Co., Chicago. Proceedings have also been commenced against many more of the largest concerns across the continent, and will be vigorously pressed for an accounting and damages.

"Aside from the many victories that we have been able to record in the courts by suits brought under our patents thus far infringed, we believe that we are capable, by virtue of hundreds of other patents that we own, of thoroughly controlling the disc record business for many years to come, and we are thoroughly convinced that our patents cannot and will not be circumvented by the employment of any seeming evasions, such as 'mechanical feeds,' 'up and down cut records,' or other ideas which may not have thus far occurred to some imaginary genius.

"We shall regret, especially in view of the wrecks which strew the paths of the talking machine industry in America, as well as Europe, to see others, by the alluring prospectus offered by some promoter or by those probably already in hot water, lured to the rocks.

"Again we commend your very serious thought to Mr. Johnson's letter."

In the motions for preliminary injunctions against the foregoing mentioned firms, and also the Simpson-Crawford Co. and Butler Bros., New York, the orders have been issued. It is more than likely the suits will not go to trial hearing, but consents will follow to make the injunctions permanent.

SUMMER TRADE IN BALTIMORE.

Vacations Now Under Way—Moving Machines to the Country—Good Record Sales.

(Special to The Talking Machine World.)

Baltimore, Md., July 5, 1909.

Local talking machine dealers are just now either enjoying or preparing to enjoy their annual vacations while the slump in sales, due to the hot weather, is at hand. Those who have returned or have not yet taken their holiday are laying plans for an early and heavy fall trade, which they confidently expect is due to make its debut by the first of September. With this idea in view, the talking machine men, like the piano dealers, have their vacations arranged so that the last persons off will be back by August 15.

While there has been some business in the way of sales of the various priced machines, the best showing during June and the first part of July has been in the shipment of the owners' machines to their summer homes, either in the mountains or at the quiet seashore resorts. Many demands in this line have been received by the various dealers, the owners preferring to have experts do the removing rather than take the risk themselves of breaking the instruments. The moving of many of the residents for the summer has had a very good effect upon the demand for records of the latest song hits, a large assortment being taken along to the seashore and mountains for evening entertainments.

All of the local dealers displayed their patriotism to-day by remaining closed and celebrating the Declaration of Independence.

Manager M. E. Lyle, of the local branch of the Columbia Phonograph Co., will leave this week for a vacation in New York and other northern points. He reports the sales of machines to be a bit slack, although the collections have shown up well, which seems to indicate that the currency is fast getting back into circulation in this section. Mr. Lyle reports, too, that the fall prospects are very encouraging, especially on the Eastern Shore.

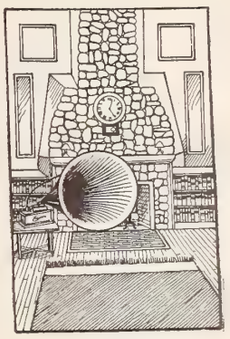
ROBT. BOZON'S GENEROUS OFFER.

Claims to Have Discovered a Material That Gives a Better Result Than Mica.

The following interesting letter has been received by the editor of The Talking Machine World from Robt. Bozon, of 302 Garrett Lane, London, S. W., Eng., in which he says:

"Dear Sir: I am a reader of your valuable journal and have gained much useful information from it. My experiments for some time have been to find a material that gives a better result than mica. As a good many like me, I have tried nearly everything, and at last my labor has been rewarded by my making them of real tortoise shell. The result of the diaphragm being made of this material has a most natural effect with "Amberol" or disc records. I have patented it in England, but as I should not have the means of manufacturing it in the U. S. A. it would be of no use for me patenting in your country. Therefore if anyone would like to make them they are at liberty to do so in the States. Yours faithfully, ROBERT BOZON."

If you are looking for business, put in good displays. If you are not, any old kind of a display will fill the bill.



THE FIRESIDE

SELL A LIN-O-TONE HORN WITH EVERY FIRESIDE

You can do it, Mr. Dealer, if you set out to, and with no great amount of effort either. If you do, you will, accomplish two very important things: you will please your customer and increase his admiration for his machine, and incidentally put an additional profit in your own pocket.

The tonal effects produced by the Lin-o-tone are wonderfully clear and musical; far more natural than can be obtained from horns made of metal or any other material. This is not accidental, but due to the fact that it is made of Linenoid, or pure linen, which has remarkable reproducing properties, and also because it is made in one piece without seam or joint.

These horns are being received with enthusiasm everywhere. Your jobber can probably supply you. If not write us and we will furnish you with the name of one in your vicinity who can.

Specifications:

No. 404—Ivory black with gold stripe.
No. 405—Vermillion with gold stripe.
No. 406—Ultramarine blue with gold stripe.

The colors are rich and brilliant and the entire effect enhances the appearance of the machine in a marked degree.

Length, 21 inches; bell, 17 inches.

RETAIL PRICE, $3.00

The Pardee-Ellenberger Co.

TRADE NEWS FROM SAINTLY CITY.

Business Makes Fair Showing During Month —Columbia Co. in New Store—Personal Items of Interest—Dealers as a Rule Satisfied With Present Conditions—High Class Instruments Have the Call—Vacations Now in Order at All the Leading Stores.

(Special to The Talking Machine World.)
St. Louis, Mo., July 6, 1909.

The talking machine trade for the past month has been seasonable, and while not very active it has made a fair showing. The first six months of the year shows quite an improvement over the same period a year ago.

Manager O. A. Gressing, of the St. Louis Talking Machine Co., reports that their trade for the month of June has been fair. Mr. Gressing left Saturday, July 3, for Chicago, and the National Talking Machine Jobbers' convention at Atlantic City, N. J., accompanied by the firm's salesman, L. A. Cummins, who recently returned from a successful trip through northern Missouri and Illinois.

Manager E. B. Walthall, of the Columbia Phonograph Co., reports that their retail business is holding up better than in 1908. The wholesale trade is good, and prospects favorable for a good summer's trade. This firm are now nicely ensconced in their new store at 1008, and it is very fine in every respect. A feature is their new grand opera sound room, which is fitted up in a most elaborate manner, and it has made a great hit already.

A. W. Roos, chief accountant of the Chicago store of the Columbia Phonograph Co., accompanied by his wife and two children, spent a week here recently visiting Mr. Roos' parents.

Ralph Connor, of the Columbia Co.'s retail sales department here, has gone on a two weeks' vacation, which will be spent at Hot Springs, Ark. Miss L. L. Biest, secretary to E. B. Walthall, manager, is spending two weeks' vacation at Wright City, Mo.

Marks Silverstone, president of the Silverstone Talking Machine Co., reports trade fair. He left on Sunday, July 4, for the National Talking Machine Jobbers' convention at Atlantic City, N. J., and expects to be away ten days.

A. A. Knight, of the Knight Mercantile Co., returned recently from a week's trip to Chicago and other Illinois points. He reports trade moving along pretty fair.

D. K. Myers, the Zonophone jobber, reports trade for June very fair, and that prospects are favorable.

Manager A. J. Robinson, of the talking machine department of the Thiebes-Stierlin Music Co., reports that the demand is good for high-class instruments. He also reports a good trade on instruments for country and summer homes and also for outing parties.

Mr. Victor, of Victor & Wilson, Columbia, Mo., a moving picture concern, was here recently to close a deal with the St. Louis Talking Machine Co. for an auxetophone.

Emile Kaliski, of the Kaliski Music Co., Monroe, La., spent one day here on his way home from the National Piano Dealers' convention at Detroit, Mich.

George Porth, a talking machine dealer of Springfield, Mo., was also a recent visitor here.

VICTOR DEPARTMENTAL CLOSING.

Motor and Pressing Plants Will Have Two Weeks for Cleaning Up—Rush in Cabinet Factory.

The Victor Talking Machine Co., Camden, N. J., will inaugurate its annual two weeks closing down in the motor factory and pressing plant on July 26, and remain closed in these departments, only, the last week in July and the first week in August, enforcing vacations in these factory departments during that time rather than to have their force more or less demoralized by vacations or other lay-offs continuing during the summer months.

These two weeks will be devoted to the general cleaning up, painting and repairing that is always necessary periodically in a large active concern.

None of the other departments are affected, and the cabinet factory cannot close down, as it is working night and day and getting ready for its removal into the mammoth new cabinet factory now in process of construction.

VICTROLA AND PLAYER-PIANO.

Wm. B. White Succeeds in Accompanying Voices of Grand Opera Singers in Difficult Selections With Player-Piano to the Delight of Cultivated Audience—Some of the Problems to be Overcome.

In many of the leading hotels all over the country it is a common sight to see the orchestra accompanying the Victor Auxetophone or Victrola in a very creditable manner and as a rule greatly enhancing the beauty of the local selections by prominent artists.

The player piano demonstrator in one of the large department stores of Greater New York, however, has succeeded in accompanying some very difficult arias and even the famous sextet from "Lucia," that marvel of recording, played by a Victrola, with a player-piano, in a way to bring the audience, consisting of people who were in a position to appreciate true musical quality, to its feet in one great ovation.

The man who accomplished this was William B. White, whose technical discussions on the subjects of piano scale drawing, piano construction, regulating and tuning have appeared in The Music Trade Review for some years, and who is a musician of fine discernment.

In referring to the achievement, Mr. White said: "Whether the idea of accompanying grand selections, rendered by a Victrola or a player-piano has ever been carried out before or not, I am unable to say, but in this instance it was of my own conception. For over a week preceding the recital I practically remained closeted with the Victrola and the player-piano.

"Each record had to be played over innumerable times until the speed of the machine had been so adjusted as to render the pitch exactly that of the player-piano. Then the playing of the music rolls had to be studied until they could be played in exact accordance with the personal delivery of the singer.

"The music rolls could, of course, be so played as to exhibit the individuality of the operator; the records naturally displayed the individuality of the singer or singers. To get these two factors working in complete harmony was far from being an easy task.

"When accompanying a singer in the flesh it is a comparatively simple matter to follow him, for each note can be watched, as it were. Where the tones issued from the depths of the sound-box, from nowhere, so to speak, a most weird impression is forced upon the operator at the player-piano."

COPYRIGHT LAW IN FORCE.

The new copyright law went into effect Thursday. On records using copyright music, etc., the manufacturer is required to "furnish a report under oath" on the 20th of the month. The first royalty payments are therefore due August 20, and not on the first, as has been erroneously stated.

The Talking Machine Co. Film Service, Inc., of Rochester, N. Y., have been incorporated with the Secretary of State at Albany, with a capital of $3,000, for the purpose of manufacturing and dealing in moving picture films, projecting machine apparatus and supplies. The incorporators are Arthur A. Schmidt, Sophie M. Rice and Ethel A. Gardiner, all of Rochester.

Don't become discouraged if your first window displays are not effective; keep trying, but do more thinking; learn to improve by observation and experience.

TRADE HAPPENINGS IN LONDON.

Business Conditions Show Slight but Encouraging Improvement—Better Times Looked for Soon—Offer Space at Canadian Exhibition—Comment Upon the Latest Victor Co. Move—More Opinions Anent the Copyright Question—J. E. Hough's Letter—J. E. Hough, Ltd., Takes Over Assets of Russell Hunting Co.—New Beka Records—New Edison Machines on August 1—July Gramophone Records—New Company in Manchester—Record Prices for Rubber—Other New Records—Plans of the Colmore Depot—Telegraph Rates Reduced—Gramophone on Polar Expedition—New Rena Co.'s Machines.

(Special to The Talking Machine World.)
London, E. C., July 7, 1909.

Business conditions in general trade circles indicate an improvement which, though slight, is happily the forerunner of a steady and gradual return to the normal. Even in the talking machine trade things have brightened up somewhat, and while there is little prospect of a continuance over the summer, it is morally certain that by the end of September at the latest business will be in full swing again. As yet it is rather too early to arrive at any definite conclusion touching upon trade during the whole of next season, but the country is generally fairly quiet, labor troubles are conspicuous by absence, harvest prospects are good, money is freer, and everything seems therefore to point to considerably better times ahead. General exports are fairly good, while some colonies offer an exceptional field just now for talking machine goods. In South Africa, for instance, mining and prospecting are active, and agricultural industries are also growing. This prosperity very quickly repeats itself in the accounts of those traders handling luxuries, and a strong effort should therefore be made by British and other manufacturers of talking machine goods to obtain a share of the trade.

The Canadian National Exhibition.

The manager of the Canadian National Exhibition of Toronto offers in August free space to British Chambers of Commerce for collective exhibits. It presents a good opportunity to talking machine firms, and it is surely possible to get up a representative exhibit of musical merchandise.

The World Covers the World.

Since the favorable decision of the United States Supreme Court finally upholding the Berliner patent in that country against all comers, the Victor Talking Machine Co., of Camden, N. J., have addressed a letter to the English advertisers in The Talking Machine World, wherein they carefully set out in detail a close analysis of conditions as they now exist in the American talking machine trade. Now, as this letter was sent not by request, obviously it had a very pertinent mission to fulfil, and the only interpretation one can place upon it is a request to "keep off the grass." The American market may be the just and legitimate preserves of the Victor Talking Machine Co., and in soliciting advertisements for this paper we have always recognized it. But apart from the patent situation, there is not much opportunity to trade with the States, since the enormous tariff wall precludes English houses from exporting their goods on a profitable basis. It therefore follows that British traders are only represented in The World to appeal to colonial and foreign markets other than America, and consequently neither the Victor nor any other company need alarm themselves with the idea that The World's English advertisers are seeking to sell their wares in the United States.

More Points for Copyright Committee.

It is very gratifying to note that the propaganda started in these columns against any form of tax upon records is meeting with general satisfaction throughout the trade. Important manufacturers have freely expressed their strong reasons for and against any restriction of this industry which would undoubtedly follow the imposition of the music publishers' unjust demands, and it is only fair that these sincere convictions should meet with very weighty consideration at the hands of the Board of Trade committee, whose secretary, in the course of a recent interview, stated that whatever the conclusions arrived at, they would be based upon the fairest and most impartial findings. Up to the time of writing no further meeting of the committee has been held, and several important trade witnesses have not therefore yet had the opportunity of expressing their views. Let it be distinctly understood that the recent meeting of record and perforated music roll makers resulted in a determination to oppose any levying of a tax, but should the committee take an alternative view, then, and then only, it is suggested that the authors' demands will be justly met by a royalty of one farthing on cylinder records, and a penny on double-sided discs; these amounts to be due only on records actually sold.

Mr. Hough's Views on Copyright.

J. E. Hough, whose large interests in this matter entitle his remarks to very secrons consideration, expresses his views as follows in a letter to The World:

"To the Editor Talking Machine World:

"Dear Sir—In response to your request I comply with the desire for my views on the question of the imposition of royalties on the manufacturers of talking machine records. I dislike personal correspondence in the press, but the importance of this subject to our trade causes me to depart from my usual attitude.

"In the first place, having given every consideration to this matter and tried to look through other people's spectacles as well as my own and those of the trade, I can see no real legitimate ground why any burden should be imposed, and I venture to say that there is no copyright owner who would ingenuously refuse the publication of his work on 'sound' records. Of course I am aware that, actuated by spurious feelings of cupidity and jealousy, some authors and copyright owners have professed to make a great noise of the 'injury' done to them. On the other hand, composers who have not become famous frequently appeal to the trade and in many cases offer manuscript copies of their productions, soliciting that they should be popularized in advance of printing, by publication as sound records. This experience has been mine continuously during the last 16 or 18 years.

"While on the subject of 'injury' to artists, let me mention that in England phonograph records are sold retail for 9d. All persons engaged in the business can realize the expense of distribution and leakages to the manufacturers arising from returns, obsolete and unsalable records, and also breakages, hence the profits are already reduced to a very fine point; indeed, if a duty is imposed it will be necessary to raise the price, and that price will be borne in most cases by a very humble section of the population. The cheap phonograph record brings a gleam of sunshine and pleasure into the homes of those who have no other means of musical recreation, such as a piano, and no skilful education to manipulate it even if they had one. How does the copyright owner suffer in this case? Those persons would never require to buy a copy of his music, but indirectly benefit might come to him or the author by inducing the purchaser of the record to visit some concert or other place where the musical selection was being played in its entirety. The fact must also not be overlooked that talking machine records of necessity only contain an excerpt or selection from an ordinary composition or song, its duration being limited to a very short period of time.

"As to injury is inflicted on the author or copyright owner by persons in a higher station of life in consequence of purchasing talking machine records, I have a deep conviction that such persons, possibly admiring the selection they hear on their talking machines, would be more likely to go and buy a complete copy of the music in order that they might have it to produce the whole in their homes than they would have been had they never purchased the record containing

FROM OUR LONDON HEADQUARTERS—(Continued.)

a selection only, and I fail to see that there is any justice whatever in this cry, which I honestly believe to be thoroughly spurious, coming from copyright owners or authors. If, however, the British section of the International Convention should decide to impose a tax, it seems to me the difficulties attending its equitable collection will be enormous, but they present themselves to my mind in such varieties as would more than exhaust the possibility of being included in this letter, and any person who chooses to give close study and who knows anything at all of the incidences of this business can readily enough conceive them for himself.

"One great question will require solution, and that is as to whether a duty shall be retrospective, that is, will be applied to selections which are already in existence, or whether it shall only be applied to products yet to come. The former seems to open a field of great consideration. Copyright owners have purchased these productions, many of them, for a mere bagatelle in the past, without any expectation whatever of remuneration from this source; authors are dead and it would be extremely unfair to impose restrictive duties on this industry for the benefit of making presentations to copyright owners who have neither been authors or composers in the past and who have given no consideration whatever for the privileges now sought to be conferred. It seems only equitable that the past should remain as the past, and if duty is imposed at all it should only apply to the creations of the future.

"The next important consideration is as to whether the copyright owner of the future should be at liberty to enter into the open market to sell his wares; should this be the case it will mean an extinction of the weaker members of the business to the benefit of the stronger. Copyright owners who are already disparaging the cupidity to which I have referred would simply hawk the goods to sell to the highest bidder to the exclusion of others. This appears to contain an element of justice, but it must be remembered that the position is unique, industries have been established under lawful conditions, and the exclusion of a selection which becomes highly popular would inflict a considerable injury to the general trade and to the immense advantage of the longest purse.

"Indeed it would establish a state of competition which is extremely undesirable and would not in the end be beneficial to the holder of the copyright. For example, take an opera—20 to 30 selections may be made from an opera, not in all cases exactly as written by the author, but cut down so as to give the most effective representation of various selections within the compass of a two to three minute reproduction.

"Another important factor which has obtained in the past would be eliminated; the producers of talking machine records have in the past vied with each other in the production of the best parts of the selection and in the mechanical excellence of that production, thus giving an assurance which should be gratifying to the author that his creation is placed before the public in the most excellent manner, mechanically speaking, in which it can be done. This competition leads, and has led in the past, to the improvement in the recording of sound and to the development of this industry. One has only to compare a sound record of a few years ago at a very high price with that which is produced today at less than a quarter of the money to realize the truth of this statement.

Among other matters which also require attention there is one which strikes me very forcibly, though I have not heard it mentioned by any of my confreres; it is as to the duration of the copyright, and as to the ridiculously infinitesimal prices which are paid for it; this matter should receive close attention if it is deemed advisable that fees should be paid as suggested. Compare a patentee with an author—the creations of both are the result of brain effort and may be said of genius; the patentee goes to an enormous expense illustrating and describing his work, necessitating the assistance of a skilful profession, and he has heavy duties to pay which are continuous for 14 years, contributing to the revenue of the country, and at the end of 14 years his invention becomes public. The author or composer pays a paltry registration fee of (I think) 5s., hands in a copy, and without any further trouble whatever on his part his production is protected for over 40 years; this seems absurd, and he ought to be placed more in the position of the patentee. If his composition is worth keeping alive he should pay fees in like manner; if he fails to do so it should become public property, and in any event the duration of that which is now sought to be imposed should be much curtailed, particularly if it be now decided to grant him a royalty without personal responsibility or effort of any kind, simply to fatten on the labor of others, go to sleep (so to speak) periodically, and receive his fees for so long a period. It is a preposterous proposition.

"I am very much afraid copyright owners and authors have not realized the great advantages they have for so many years enjoyed in contradistinction to others equally entitled to protection. This is a many-sided question, but I must ask you to excuse me for discussing it in so lengthy a letter as this, which possibly you may think worthy of taking a part in this controversy."

An Important Move.

As announced in these columns last month, the firm of J. E. Hough, Ltd., have taken over the plant, machinery, matrices and other assets of Russell Hunting & Co. The whole of the Sterling matrices are now in the Peckham works, while most of the machinery was sold by auction, June 28, at the old Russell Hunting Co.'s factory at Cambridge Heath. This is the grand

climax and final exit of the Russell Hunting Record Co., Ltd., from the ranks of the cylinder record makers, which considerably lightens the burden of competition which characterized this branch of the industry during the last few years. In many quarters much regret is felt at the passing of the old Sterling organization, but it is some satisfaction to know that under the able auspices of J. E. Hough, Ltd., the Sterling record will live again to amuse the countless thousands of its admirers throughout the world.

Current Beka Issues.

The current Beka issues include one of the popular 12-inch double-sided Meister records by the Beka Symphony Orchestra. These selections —"Wotan's Farewell and Fire Music" from "The Valkyrie" (Wagner), and "Prize Song and Dance of Apprentices" from "The Meistersinger" (Wagner), present many difficulties in recording by reason of the diverse instruments employed in the original score which are necessary in obtaining an adequate and successful representation of the work. These Beka isues are up to the mark in every respect, while of the other impressions in this list I would mention the following: "Sullivan Memories," part 1 and 2; "The Chancellor" (march), "La Victoire," "Dance of the Kittens," and "The Donkey Laugh" (march) are all good selections by the Beka London Orchestra. Of songs we have "Only An Old-Fashioned Cottage," by James Hudson; "What Might Have Been," "A Sergeant of the Line," "My Old Shako," the last three being sung in fine style by Harry Thornton.

New Edison Machines.

Formal notice has been conveyed to Edison dealers that about August 1 the National Phonograph Co. will place upon the market several new machines, which should have the effect of helping dealers and factors to largely increase their turnover during next season. Particulars as follows: The Edison Fireside phonograph, price 4 guineas, plays both Standard and Amberol records, is equipped with a new reproducer, model K, which will play either record by simply turning a small lever, bringing into use the particular sapphire required. In addition to the regular types of Standard, Home and Triumph machines, there is now three new models to be known as Edison Standard Combination phonograph, the Home Combination phonograph, and the Triumph Combination phonograph at £5 15s., £8 8s., and £13, respectively. These machines will play either record, and are equipped with models "C" and "H" reproducers. On and after August 20 the price of the "Gem" phonograph will be reduced to £2 6s., and the list price of both models "C" and model "H" reproducers to £14 6s. On August 19 the present existing exchange on reproducers will be discontinued. Traders must exchange such repros as they have on hand prior to this date, and place orders for an equal number of model "C," in order that the transaction may be completed before the new prices become effective.

Many Good Things in Gramophone List.

The July Gramophone list contains many good things, and from a recording point of view the following records are excellent: "Festival Overture" (Tschaikowsky); "Rustic Dance II" and "Graceful Dance III," by the band of H. M. Coldstream Guards; "Suspiros de España," Spanish Royal Band of Halbadiers; "Brune ou Blonde," valse (Waldteufel), La Garde Republicaine; "Yankee Shuffle" (Moreland), Pryor's Band; concert music—"Annie Laurie," John Harrison; "Your Tiny Hand is Frozen" (Rudolph's Narrative) ("La Boheme"), sung by Evan Williams; "I Hear You Calling Me," Hirwen Jones; "Arab Love Song" (Hobart-Hein), H. Macdonough; "At the Mid-Hour of Night" (Cowen), Miss Agnes Nicholls; "Dove Sone" (Mozart), by Fri. Signe von Rappe; "Jerusalem" (Mendelssohn), Miss Perceval Allen; "Time's Roses" (Barry), Miss Pelgrave Turner; "Love Is Means to Make Us Glad" (German) Miss Margaret Cooper; "The Lord Is My Shepherd," Mme. Dews; duet, "Marie Magdaleine" (Massenet), Mme. de Montalant and Mons. Beyle; "Hip, Hip, Hurrah!" and "Many a Lover," from Leo Falls' "Dollar Princess," and sung by the Dollar Princess operatic party; "Humoreske" (Dvorak), instrumental, by the Renard Quartet; " Three Studies" (Chopin), piano, by Herr Wilhelm Backhaus; "Bonnie Lezzie Lindsay," humorous record by Harry Lauder; and "Carmena" (Lane Wilson), whistling record by Charles Capper.

Discharge in Bankruptcy.

Jacob Dyon, lately trading as the Universal Talking Machine Provider, at Bishopgate street, applied for his discharge as a bankrupt, but the court refused the application and suspended his discharge for two years.

A New Microphone.

Two Swedish engineers have invented a wonderful new microphone, so sensitive as to enable telephone communication over double the distance now attainable.

Megaphone for Witnesses.

Owing to the bad acoustic properties of the Old Bailey courts, Justice Darling is asking to be supplied with a megaphone for the use of witnesses.

New Company.

Perfectophone, Ltd., capital £10,000 in £ shares; objects, to acquire certain British, American, Canadian, French and other patents relating to the manufacture of railway signals, lamps, talking machines and records, magazine holders, etc., and to develop and turn to account the same. Private company. Registered office, 62 Royal Exchange, Manchester.

Subject for a New Lauder Song.

Mrs. Harry Lauder, wife of the famous comedian, had an exciting experience while taking home a bulldog which her husband had bought in Blackburn and sent to London by train. At Easton the dog broke loose and tasted the calves of two porters. In company with Mr. Vallance,

her brother, Mrs. Lauder drove in a motor-brougham to fetch the dog from Willesden station. On the way home the beast attacked Mrs. Lauder, biting her in the leg. Mr. Vallance tried to save her, only in turn to be viciously attacked himself. Mrs. Lauder fainted as man and dog rolled over in the street, Mr. Vallance struggling to keep the animal's teeth from his throat. Three policemen hurried to the spot, and after a fierce fight the dog was killed. Mrs. Lauder and Mr. Vallance were taken to the hospital, and both were able to return home after having their injuries cauterized and dressed. The next time Mr. Lauder buys a bulldog—well, will he ever?

High Prices for Rubber.

The price of India rubber, which has become one of the necessities of industrial life, touched record figures in London this week. Para rubber sold for 6s. 3½d. a pound, and fine plantation rubber, 6s. 10d. A few years ago rubber of any sort was a drug in the market at 3s. a pound, but the uses to which it is put have increased rapidly of recent years, and prices rule accordingly.

Russia to Fall Into Line.

About to become a signatory to the Berne convention, Russia has a new copyright bill before the Duma which has passed both readings. Rights are limited to thirty years only.

New Tetrazzini Records.

Five new gramophone records by Mme. Tetrazzini have been issued, and they are meeting with a ready demand.

"Twin" List for August

The "Twin" list for August is full of good things, while in the September impressions we are promised selections by the band of the First Life Guards; all for 2s. 6d., double-sided!

Simulated Bechstein Name.

A heavy fine and costs was imposed upon Henry Zender & Co., Ltd., of Cazenove Road, Stoke Newington, for causing to be applied to a piano the false trade description, "C. Eckstein, Berlin." The prosecution was at the instance of the well-known piano manufacturers, Messrs. Bechstein, of Wigmore street. There was no such name as C. Eckstein on the German register of pianoforte manufacturers, and the magistrate said the defendants were guilty of an absolutely fraudulent action.

The New Political Campaign.

Twenty-nine political vans start a summer campaign shortly, each equipped with gramophone and records of speeches by some of the leading statesmen of the day. Other records, comprising band and song selections, will also be carried, presumably to start the ball rolling. The suffragettes have not announced their intention of opposing these political meetings, and it is morally certain they won't ask for the vote here, since the gramophone politicians would not argue if they could.

Colmore Depot's Active Program.

The Colmore Depot (Birmingham and Manchester), through Frank S. Whitworth, writes The World as follows: "Dear Sirs—We have pleasure in advising you that our program for the coming season is now very nearly complete, and we shall be shortly placing same before all Midland dealers. Our campaign will be a very progressive one this season. Not only shall we have the new patterns of Edison phonographs and of Zonophones to place before our customers, but we are introducing into the market for the first time a special line of machines, which will be built for ourselves, and which we shall guarantee as being absolutely tip-top quality. These machines will be suitable for retailing at popular prices. In addition to machines, we have every anticipation of a very successful 1909-1910 season for Amberol records, and for the Zonophone and Twin records, those three being our staple lines, together with the evergreen "Standard" Edison records.

"The enormous demand that we have experienced for Gem attachments has given us good hope for what we shall do later on. We placed one of the biggest orders for these Gem attachments that the Edison Co. received in Great Britain, yet so far we have only just been able to keep pace with the orders we have received, besides which we find that where dealers are buying the Gem attachments they are also buying heavily of the Amberol records, so that by pushing the attachment the dealer is reaping double profits by selling Amberol records in the same quarter. We are emphasizing this point very strongly to all our dealers, and consider that those who have taken our advice have benefited very largely during the last few weeks."

Latest Clarion Records.

Clarion records to hand this month include six 100-thread and six of the new "Ebonoid" 200-thread style. The Standard records are: "You Might Shake Hands," Charles Lester; "For Months, and Months, and Months," Harry Fay; "The Wedding o' Sandy MacNab," Jock Walker; "Stars and Stripes" (march) Premier Military Band; "Vision of Salome," Bijou Orchestra; and "Lucinda's Serenade," Premier Concert Orchestra. The "Ebonoid," which are remarkably good, cover the following titles: Grand march, "La Reine de Saba," Premier Concert Orchestra, which also is responsible for "Sunday with the Troops"; "The Dollar Princess," and "Pot Pourri"; Stanley Kirkby sings "The Bandolero" in fine style, while "A Smoking Concert," by Messrs. Kirkby and Godden is a good selection of a humorous character.

Lower Rates for Telegrams.

At a recent meeting the Postmaster General intimated that in a few months time it would no doubt be possible to send telegrams to every part of the Empire at a shilling for 12 words. He had particulars of an invention by which 60,000 words could be transmitted per hour.

The Gramophone in the Antartic!

About the only deviation from the hardships of Lieut. Shackleton's historic expedition in search of the "Pole" was the joyful gramophone concerts which crowned many a strenuous and exciting day's work. And the famous explorers were not the only ones appreciative of the music, for hundreds of penguins joined the company, and seemed to listen with the greatest interest. "Put Me on an Island Where the Girls Are Few" seemed especially to the liking of the older birds, but the younger generation of these queer creatures hung their heads in sadness. Perhaps next time the gramophone is taken South it will record their sentiments. In the meantime we have to acknowledge that the gramophone has fulfilled yet another mission in life, and next time it goes "farthest South" I hope it may reach the Pole.

Rena Co.'s New Line of Machines.

I have had an opportunity of inspecting the Rena Mfg. Co.'s new line of interior horn cabinet machines, which are put up in oak, mahogany, satin walnut, maple, and other woods, and range in price from £10 up to 27 guineas. In point of value it would be impossible to give the palm to any particular model, since without exception each one represents the finest workmanship and finish which it is possible to obtain at the price. All are fitted with the famous planet motor, while a new feature in this class of construction is the patent mouth-shaped sounding board forming the top of the otherwise square-tapered interior horn. Several records were tested, and even with the cheapest model the reproduction was marked by an absence of the usual muffled-like sound so much associated with this class of machine. The cabinet designs are of an original nature, while at the same time being neat and dignified in appearance. Altogether the "Sonola" cabinet machines, as they are designated, form a splendid selling line for home and colonial traders, to whom the Rena Co. offer most generous terms.

Quicker Time With American Mails.

A saving of several hours in the landing of the American mails is now effected by a new plan of making Holyhead a port of call direct from Queenstown. By this arrangement some eighteen hours are saved, as very often the boats are held up at Liverpool bar by a dead low tide.

A Columbia Move.

The Columbia Co., having decided to do a factors' business only, have located their offices, stock room and staff at their factory. Factors' orders are now being sent direct to the new address, Bendon Valley, Garratt Lane, Wandsworth, S. W., and all shipments are being made from

THE STROH VIOLIN

A Novel Instrument Possessing a

VIOLIN TONE

of Great Beauty and Remarkable Power

INVALUABLE IN SMALL ORCHESTRAS

These instruments are used by all the leading Talking Machine Companies.

The **STROH VIOLIN,** being constructed on scientific lines, will withstand the varied temperature of the tropics, where the ordinary violin is useless.

We have a special proposition to make to Musical Instrument Dealers.

A Descriptive Booklet free on application to the SOLE MAKER

GEO. EVANS, Successor to **CHAS. STROH**
94 Albany St., Regents Park, London, Eng.

there. Much time is saved by this arrangement, as must inevitably follow the concentration at one spot of the manufacturing, order and despatching departments of the business. This move is the logical outcome of the change in business policy inaugurated some time ago by the Columbia managers, when they determined to retire from retail trading and conduct a wholesale business only. The trade was fully advised of this decision at the time, but it was impossible to carry through all the various stages of the new plan without some unavoidable delay. However, all obstacles have now been overcome, and the policy of dealing exclusively through factors is in active operation. Dealers' orders will not be filled direct, but will be referred to the factors.

Zonophone July List.

The Zonophone July list is a good one, and from which I would mention the following: "Austrian March," concertina solo by Alexander Prince; "Juliana March," by Mr. Tapiero on his ocarina; operatic selection, "La Traviata," well sung by E. Pike and Miss A. Yarrow; "Yeomen of the Guard," by the Black Diamond Band; "A Jovial Monk Am I," by Peter Dawson; and "Two Eyes of Gray," by Ernest Pike.

Lower Rates for Cablegrams.

Rates for cablegrams in the European system will be reduced by ½d. per word as from July 1. On which date also the new rule that artificial code words must be pronouncable comes into force.

Here's a State of Things!

At a recent London County Council meeting it was mentioned that music licenses in London are granted under the Disorderly Houses Act of 1751.

Columbia Indestructible Records to be Introduced.

The Columbia Indestructible cylinder record will shortly be placed on the English market by J. G. Murdoch & Co., Ltd., who have secured the sole selling rights for the United Kingdom. There should be a good field for this class of record, but hitherto attempts in this direction have not been good enough for the record buyer. And although this new record appears to be scientifically constructed along lines which will withstand the ordinary fluctuating temperatures of our climate, the success of an indestructible record has yet to be demonstrated on this market. If it fails in this consummation it will not be the fault of Messrs. Murdock & Co., whose organization stands second to none among the factors in this country.

Capital Is 1,250,000 Marks.

Messrs. Linastrom, whose capital was placed at 750,000 marks in this column last month, inform us that it is now 1,250,000 marks.

TRADE REPORTS FROM THE PROVINCES

LIVERPOOL NOTES.

Liverpool, July 3, 1909.

Liverpool traders generally are going through a quiet time. Holidays are now generally in vogue throughout the trade.

Cramer & Co., who have one of the finest window displays in Liverpool, report good sales, especially with the "Pigmy Grand" machines.

Archer & Co. have found their Gramophone salon a decided success. Closed in, away from the noise and bustle of the street, customers are enabled to listen to the records they propose buying under the best possible conditions, and, as a result, their business is increasing.

Mr. Johnson, the wholesale factor in Whitechapel, is most enthusiastic over the Clarion products; also over the new Clarion attachment for the Edison machines, and anticipates doing a large trade in them.

Messrs. Richardson, of Paradise street, look for large sales of Edison goods during next season. Mr. Abbott, the manager, considers that thousands of Amberol records will be sold as soon as the buying public get to know that with the Gem attachment they can obtain equally as good results as with the larger machines.

The Melograph Disc Record Co. have given up their offices at 22 Sir Thomas street and consolidated their business at one address—namely, 26 Jasmine street, Everton Road, Liverpool, which is the recording department.

MANCHESTER.

Manchester, July 4, 1909.

In Manchester business looks much more promising than for some time past. The Lancashire "wakes" or holidays are just commencing, and from now till the end of September this will be the principal thought of most of the people in the district.

Messrs. Richardson, of both Manchester and Blackburn, expressed themselves as well satisfied with business during the past few months. They have already issued circulars to the trade regarding the future prices of Edison goods, which have been considerably reduced. They are making special efforts to push the new Edison attachment for the Gem machine, as well as the larger machines, and anticipate exceedingly large sales to result therefrom. They will, in addition, handle the new Zonophone machines at £2 2s. and £4 4s., respectively; also Zonophone and Twin records, besides which they will have several special models of their own disc machines. Altogether, Messrs. Richardson appear

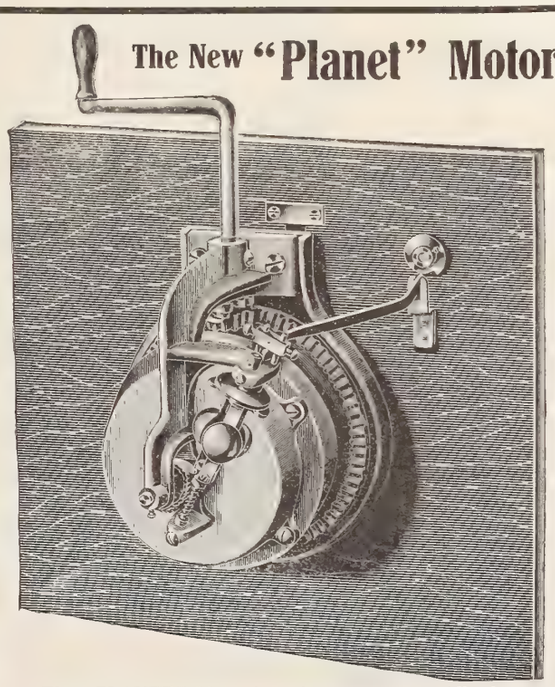
The New "RENA" MACHINES

"RENA" MACHINE, No. 4, £5 10s.

Cabinet: Solid Oak, size 16 in. by 16 in. by 8½ in. Fitted with "PLANET" 16-minute Motor. Self-regulating SPEED INDICATOR. Nickeled Aluminum TAPERED TONE ARM. Improved Sound Box, fitted with Patent Needle Clip.

Prices range from £2 10s. to £11 10s.

The New "Planet" Motor



The "PLANET" Motor is an improvement on all others and embodies an entirely new principle of construction. As may be seen above, the gearing is horizontal, running parallel with the turntable and so minimizing friction. All the gearing is encased and runs in a GREASE BATH. It is DUST-PROOF, therefore always CLEAN and SILENT-RUNNING. It is also CLIMATE-PROOF. So simple that there is nothing to go wrong. All "PLANET" Motors are guaranteed. "PLANET" Motors are fitted to "RENA" Machines from £3 10s. upwards.

The Life of a Talking Machine is its Motor —WE'VE GOT THE MOTOR!

"RENA" MACHINE, No. 5a, £8 8s.

Cabinet: Solid Mahogany, with Inlay, size 16 in by 16 in. by 8½ in. Fitted with "PLANET" 24 minute Motor. Self-regulating SPEED INDICATOR. Nickeled Aluminum TONE ARM. Improved Sound Box, fitted with Patent Needle Clip.

Prices range from £2 10s. to £11 10s.

to be well on with preparations for the next season's requirements.

Mr. Duwe, of High street, considers that we have now reached the bottom of the lengthened depression, and, taking all facts into consideration, trade is slightly better than it has been for some time past.

Mr. Davies, of the Colmore Depot, Deansgate, states that they are experiencing a considerable demand for the new Clarion Ebonoid five-minute attachments, which are now made to suit all types of Edison phonographs. Exceedingly simple in construction, they may be attached by a novice to the existing machines. They also supply a special stylus bar with the sapphire fitted with the outfit, and from what we understand the demand is likely to be exceptionally large.

At Robinson's, Deansgate, where they make a special feature of the export business, some very nice orders have been shipped during the past week or two to various parts of the world, West Indies, etc., etc.

LEEDS.

Leeds, July 4, 1909.

In Leeds normal conditions still exist. Stock-taking and balancing up of the previous year are occupying the attention of some of the dealers here. This and the summer holidays are the most important events at the moment. The traders in this district are very optimistic, believing that business is likely to improve as soon as the holiday season is over.

J. Ribbons, of Hilton & Co., states that he anticipates the next season will be a very good one. They will have several novelties for the market.

The Perfectophone Co., in Kirkstall Road, anticipate that the forthcoming season will be a phenomenal one as regards sales in the specialties which they make.

Scott & Co. have given up their establishment in Albion street and will confine themselves to the wholesale business, with premises in King street.

BRADFORD.

Bradford, July 4, 1909.

In Bradford, like other towns in Lancashire and Yorkshire, traders are looking forward to improved conditions.

Business with the Parker Phone Co. is about normal.

Joshua Marshall & Co., Ltd., 19-21 Bank street, have extended their show rooms right through into Queensgate and have decided to make the Gramophone department a separate adjunct on a lower floor. When completed it will be a distinct advantage, and there is no doubt that a separate salon for the Gramophone and record trade is necessary in a high-class piano and musical instrument business.

Messrs. Appleton, the wholesale dealers, report business as quite satisfactory, both here and in Leeds. Mr. Appleton makes a special feature of handling popular goods at popular prices.

At Dyson's, Ltd., the cylinder trade is quiet, but Mr. Tidswell thinks that there is a slight improvement on the summer trade of last year. Roller skates are occupying the bulk of their attention at the moment. Although we cannot say definitely we believe that next year Edison goods and Zonophone and Twin products will be their special lines.

Mr. Moore, of Manchester Road, is placing a new hornless machine upon the market called the Premier.

Regarding the copyright question, although the factors here received communications upon this subject from the chief manufacturers, in nearly each case, however, they recognize that it is a question that concerns the manufacturers far more than the dealers. The general opinion, as far as we can gather, is that if there is to be a tax upon the records it should be only upon those

JULY 7.

Berlin, 200 pkgs., $1,370; Buenos Ayres, 126 pkgs., $9,005; Capetown, 68 pkgs., $1,925; Guayaquil, 4 pkgs., $209; Hamburg, 1 pkg., $127; Havana, 16 pkgs., $1,126; 7 pkgs., $171; Hong Kong, 30 pkgs., $1,039; London, 476 pkgs., $4,293; 14 pkgs., $569; 9 pkgs., $222; Manila, 10 pkgs., $711; Melbourne, 3 pkgs., $180; 3 pkgs., $306; Milan, 3 pkgs., $100; Para, 10 pkgs., $487; Rio de Janeiro, 7 pkgs., $453; 50 pkgs., $940; Savanilla, 7 pkgs., $198; Singapore, 10 pkgs., $692; Tampico, 29 pkgs., $1,099; Valparaiso, 2 pkgs., $140; Yokohama, 20 pkgs., $1,649.

It pays to advertise when business is good, to let people know what you have, and when business is poor to let them know you are still selling goods.

EDISON'S RECIPE FOR SUCCESS.

Hold on When Others Get Discouraged—Must Toil Unremittingly and Face Many Disagreeable Experiences in Order to Reach the Top—An Inspiring Article.

The question of success and how to attain it is always a familiar topic. It makes good copy, no matter in what calling one may be engaged. Everyone has aspirations and ideals and whatever the station of life may be the American spirit is to look and aim higher up.

Take the career of Thomas A. Edison, the inventor of the phonograph, for instance. Here we have as an example a man who from a newsboy has worked his way up to the very top in the scientific world, and a man, too, who has won a fair share of the world's goods as a reward for his ability and industry. How great men have climbed the ladder of success is always interesting, and it is worth listening to Edison's recipe. He said some time ago: "In scientific work, as in all other work, the chief factor of success is the power of sticking to one thing. I attribute all that I have accomplished to the fact that I hold on where most persons get discouraged."

Stated another way, the reason why most men fall short of success is that they are unwilling to pay the price. They are not willing to toil unremittingly in the face of discouragement. They want the fruits, but are unwilling to plant and tend the tree for years.

One goes to a concert by a famous pianist or violinist or singer. One admires and marvels at the ease with which the artist produces wonderful music. One wonders why the musician should receive a thousand or two thousand dollars for doing such an easy thing.

But one never stops to think that perhaps for twenty years the artist practiced hours every day to learn to do the thing that seems so easy.

No matter what it is in which a man or woman becomes pre-eminent, back of it all lie years of hardest, most discouraging work.

Whether one be a success as a painter, sculptor, toe dancer or an acrobat, there is only one way to reach the top—perseverance, stick-to-it-iveness.

It has been said that when Edison was engaged upon some difficult problem he would lock himself in the laboratory and work day after day without sleep. His meals were handed in to him through a window.

When he was engaged on the problem of making an incandescent electric light he tested and carbonized thousands of fibers brought from all over the world until he found the right one.

EPIGRAMS OF ENERGY.

Utilize every minute.
Systematize your hours.
Don't dodge daily duties.
Change window shows weekly.
Special monthly sale of slow stock.
Endeavor to increase yearly profits.
Be active and accurate always.

Don't put too many signs in your window; one, or possibly two, is plenty. Make them plain and short; the public hasn't time to read a dozen signs; put the goods in; they will take time to look at these.

AROUND THE CINCINNATI TRADE.

Conditions Same as Last Month—Interest in Victrola XII.—Wurlitzer Sale to Standard Oil King—Big Sales of Fireside Phonographs—Larger Display Space for Columbia—Other News Worth Recording.

(Special to The Talking Machine World.)

Cincinnati, O., July 9, 1909.

The conditions in the talking machine trade are practically the same in June as they were in May. Large dealers, who have been forced by their investment and their expenses to continue their efforts, seem to be enjoying a very profitable and satisfactory business.

The sales force of the Rudolph Wurlitzer Co. are awaiting the arrival of the new Victrola No. 12, stock order for which was placed immediately upon receipt of the announcement by the Victor Co. This instrument fills the demand which has always existed for a hornless Victor, more reasonable in price than the Victor-Victrola No. 16. The sample which was received several weeks ago was promptly tested, and its splendid reproducing qualities awakened the greatest enthusiasm among the Victor sales force.

This new style Victor-Victrola will be featured in a number of concerts to be given in representative churches and clubs in Cincinnati, and will undoubtedly be the means of increasing the volume of retail business manyfold.

One of the largest retail sales made in Cincinnati consisted of a Victor-Victrola in white and gold, which was made up especially for Alexander McDonald, the local "Standard Oil King." This instrument was made up by the Rudolph Wurlitzer Co. especially for use in the immense music room of Mr. McDonald's Clifton home. The price of the instrument itself was $500; the large number of records sold to Mr. McDonald will easily make him the largest retail Victor customer in Cincinnati.

The Rudolph Wurlitzer Co. report a heavy demand for their record albums. Practically all of the more enthusiastic Red Seal record buyers are using this system of filing their records, and nothing is more pleasing and satisfactory than to find a collection of records filed away in a bookcase, with other valuable collections of books and pictures.

The new Edison "Fireside" phonograph has had a tremendous sale, which is especially remarkable in view of the fact that trade in cheap instruments has been very light during the season. The sale of this instrument, however, shows the confidence that the dealers have in the phonograph proposition, and that while the little crossroad merchant is temporarily neglecting the talking machine line, there are plenty of up-to-date merchants who are pushing the goods and making sales.

The Columbia Phonograph Co. have changed the front window of their storeroom, giving a larger display space with a better appearance. A fine marble base to the window adds to its attractiveness. A special sale of XP gold mold wax records at 15 cents each is the feature of the month in the record line. The sale of the Indestructible records was larger in June than were the sales of last December, when a record mark was attained. Both local and wholesale the demand for these records has more than pleased Manager Nichols. He said of business with his store: "General business during the past month was away ahead of the same period last year. Cash business is on the pick-up, being much ahead of the instalment trade. The settlement of the tariff question will do much to inspire trade to its old-time vigor. I may add that the work done on the front of our store is but the beginning of improvements that are to be made looking to the handling of a larger trade this fall and next spring. I have every confidence in the future of the business here, and expect improvement right along from now on."

The Milner Musical Co. have stimulated the machine trade this month with an advertisement of the Fireside phonograph, which sells at $22. This brought in the buyers and helped trade to a marked degree since the first of this month. The outlook for this month is, accordingly, encouraging. Cash business is reported good. The workingmen are again getting where they can indulge themselves. This will help trade. This store has a regular trade of well-to-do people of the city in the Red Seal line that is a regular asset each month.

E. D. EASTON SAILS FOR EUROPE.

Many Friends and Business Associates Wish Him Bon Voyage.

On June 22 Edward D. Easton, president of the Columbia Phonograph Co., General, sailed from New York for Europe on the "Noordam," of the Holland-American line. He was accompanied by his wife and two daughters. Mr. Easton will place his family in one of the most picturesque spots in Switzerland, which he will make temporary headquarters, making trips of inspection to the various Columbia offices on the Continent. He will be back about August 1. A large number of personal friends and business associates were at the steamer's side to wish the party bon voyage.

A VISITOR FROM TORONTO.

A. F. Tero, manager of the Columbia Phonograph Co.'s business in Canada, with headquarters in Toronto, who has been visiting the executive offices for several days, left New York June 28, returning home. He is also president of the Toronto Phonograph Co. A. P. Anderson, treasurer of the same company, and at one time private secretary to Edward D. Easton, president of the Columbia Co., General, who came to New York with Mr. Tero, started back next day. The Toronto Phonograph Co. are exclusive Columbia jobbers for the province of Ontario, and are doing a fine business. M. Anderson said the Canadian talking machine outlook was excellent.

Second Annual Convention

of the

National Association of Talking Machine Jobbers

Atlantic City, N. J., July 6, 7, 8, 1909.

The second annual convention of the National Association of Talking Machine Jobbers was held in Atlantic City, N. J., July 6, 7 and 8, and in point of attendance and results accomplished it was a decided success in every sense of the word. Over half of the entire membership of the association was present. Representatives came from as far as Portland, Ore., and Houston, Tex., and when the meetings were over felt that their trip had been well worth while.

With the convention opening on Tuesday, following a practically three-day holiday due to the Fourth of July, many of the members brought their families to Atlantic City, and including the period of the meetings, made the occasion a very enjoyable week's outing. Of course, the majority did not reach town until the morning of the first session, but that in no wise interfered with the entertainment features.

Shortly after breakfast the jobbers and their ladies could be seen separating in all directions, some to the inlet for a sail far out to sea, others to the beach for a dip in the surf; still others for a jaunt along the boardwalk, while those who cared not for any of these pleasures found entertainment on one of the several piers. With no meeting to bother about in the morning, the pleasure was unalloyed, and the wisdom of the plan was proven by the attendance at the meetings when they opened, for everyone seemed to realize that the afternoon should be devoted strictly to business.

James F. Bowers, president of the association, presided at all the business meetings, and to Mr. Bowers' admirable executive ability may be attributed much of the success of the association gathering.

He has devoted a great deal of time and thought to the affairs of the organization, and it must have been with a keen sense of gratification that he witnessed the success of the united efforts of the talking machine men as illustrated by the Atlantic City convention.

Considerable regret was expressed when it was known that Mr. Bowers would not stand for re-election to the presidency, but he said that his own business affairs rendered it imperative that he should cut somewhere.

Never before at a talking machine gathering have so many leading men of the industry been gathered together.

The presence of Thos. A. Edison, considered by many to be the most distinguished American of the century, lent unusual interest to the affair.

Then the men who are at the head of the business departments, directing forces of great organizations, were there. Louis F. Geissler, general manager of the Victor Co.; Geo. W. Lyle, general manager of the Columbia Phonograph Co.; Frank L. Dyer, president of the National Phonograph Co.; R. G. Royal, president Universal Talking Machine Mfg. Co., with important members of their staffs, were strongly in evidence.

The general arrangements of the convention reflected much credit upon J. Newcomb Blackman and Louis Buehn.

JAMES F. BOWERS,
The Retiring President of the National Association of Talking Machine Jobbers.

They received and deserved the hearty congratulations of their confreres upon the result of their work in arranging the convention affairs.

The plan of holding the business meetings in the afternoon worked admirably. This enabled the members to enjoy the mornings along the beach and in various forms of pleasure.

PERRY B. WHITSIT.
The Newly-elected President of The National Association of Talking Machine Jobbers.

The first meeting was called to order at the Chalfonte on Tuesday, the 13th inst. In making his annual report President Bowers said:

President Bowers' Report.

"To the officers and members of the National Association of Talking Machine Jobbers:

"Gentlemen:—On this occasion, the second of our annual gatherings, we are to be congratulated on having reached this stage of our journey, and it is proper before going further on our pilgrimage to come together for instruction, caution and advice concerning our business and its many details and ramifications. The year just closed, while not entirely to our satisfaction, has been something better than its predecessor, and the year opening holds promise of still better things. We have gone through two gruelling years and a better state of affairs will be welcomed by all of us. The law of compensation runs through all things and our recent adversity is not an entirely unmixed evil. The Association has, to an extent, been tried by fire and much of the dross of the business burned away. There is not now, nor has there ever been, any sound and valid reason for the fear of the future of the trade. Let me say to you that its future is all before it. Read carefully and ponder thoughtfully the ringing utterance of the head of the Victor Co., Mr. Johnson, on this very topic. There are, as there always will be, doubting Thomases, but we are made of sterner stuff. He who dallies is a dastard, he who doubts is damned.

"Our membership is growing satisfactorily, both in number and usefulness. We have brought about better conditions for the trade, largely through the kindly, prompt and encouraging acquiescence of the great manufacturers in our recommendations and suggestions, and to those concerns our thanks are due. I am satisfied that the manufacturers are of a mind with us in realizing that our interests are mutual, and I further believe that just as long as we carry our Association work along careful, reasonable and prudent lines, just so long will we have the support and hearty co-operation of the men who head the splendid concerns from which we draw our supplies and much of our inspiration.

"The reports of your secretary, treasurer and the chairman of your various committees will give the vital statistics of the organization and on these I will not intrude. I congratulate you on the possession of such men as your secretary, Mr. Perry B. Whitsit, your treasurer, Mr. Louis Buehn, and the chairman of your press committee, Mr. J. Newcomb Blackman. To the efforts of these men is largely due the position the Association holds to-day and also the high regard in which it is held. I trust the deliberations will be harmonious and satisfactory and result in the still greater good of all concerned. Matters of serious moment will come up for discussion and settlement and these should receive your best attention and most conscientious consideration."

President Bowers' remarks were heartily applauded by the members.

The next report was that of the secretary, Perry B. Whitsit, and was as follows:

DELEGATES TO THE NATIONAL TALKING MACHINE JOBBERS' CONVENTION AND GUESTS PHOTOGRAPHED IN FRONT OF THE CHALFONTE.

Report of Secretary Whitsit.

When the Convention was called at Atlantic City last year, the association numbered 111 members. Since that time there have been added to the membership 19 distributers.

The following firms have been dropped as members of the association for the reason that they are no longer jobbers of talking machines: Pittsburg Phonograph Co., Conroy Piano Co., A. J. Denninger, Texas Phonograph Co., Powers & Henry, W. C. DeForest & Son, J. A. Fetterly Piano Co., Musical Echo Co., A. J. Rummells Arms Co., Zed Co.

The following questions have been taken up with the Victor and Edison companies: The matter of the companies either directly or indirectly selling to dealers or consumers; the matter of the Victor Co. raising the initial quantity purchased by prospective dealers allowing them a discount; asking the manufacturers to limit their catalogs and issue an even exchange on cut-out records; asking the National Phonograph Co. for a special license on all second-hand machines, allowing them to be disposed of at less than the regular price; making a fixed price for second hand or shop worn machines according to the number and age of the machine; asking the Victor Co. for a larger discount on double disc records; asking the Victor Co. to exclude from their qualifying purchase, Victrolas and Auxetophones; asking the Victor Co. to issue their doubled-faced records in smaller quantities instead of 100 or 200 at a time, thereby allowing smaller dealers to stock them gradually.

After taking a vote of the Victor distributers in the United States, whose opinions were unanimous against consignment of records, I forwarded the opinion of these distributers to the Victor Co., and asked them to make it a part of their contract that no records should be sent out on approval.

The companies have received these suggestions in the kindliest manner, and in most cases have complied with the request made by the association. Some of them they are still considering, and no doubt will act favorably upon them. We have always found both companies willing and anxious to receive suggestions which the association felt would be beneficial to the trade, and in all cases where it would work no extraordinary hardship on the companies, more than willing to comply with these requests. Your committee has been received with the kindest of feelings by both the Edison and Victor companies, and been given all the attention which they could expect. The impression left upon me is that both companies felt that their interests are identical with their jobbers, and for that reason, if no other, the opinion of their jobbers is well worthy of consideration.

The reports of the various committees were then called for, and, summarized, were as follows:

Committee on Resolutions Report.

As chairman of the press committee, J. Newcomb Blackman referred to their functions, and that the work was carried on with a view of interesting the members as well as the manufacturers, and to supply the newspapers with proper information for publication, so as to keep the trade at large in touch. He stated their relations with the factories were most amicable.

Also as chairman of the resolutions committee, Mr. Blackman submitted quite a lengthy report, dealing mainly with the suggestions made to the manufacturers on behalf of the association, the greater number of which were favorably acted upon. He stated they had accomplished a good deal, not because it was requested, but because it was asked for in a proper way, and that everything was first carefully considered before submission. The Victor Co. was especially commended for promptly granting the usual discount in double-disc records.

Mr. Blackman then summarized the results gained by the membership committee, and said that they had worked hard to make additions and secure a large and representative attendance at the convention. The program for the different days was explained.

In his committee of arrangements report the

same gentleman expressed much pleasure over the presence of Thomas A. Edison and W. E. Gilmore, former president of the National Phonograph Co., who had been urged to attend in order to meet a host of stanch friends, even if he had retired from the field, and who recognized in him the "man who created the Edison business." The expected coming of President Johnson, of the Victor Co., was likewise mentioned in a similar pleasing vein. The unavoidable absence of Emil Berliner, the inventor, was referred to with regret.

After the reading of the reports of the various officers and committees, various matters were brought up for general discussion under the heading of new business.

Sales on Instalments.

Burton J. Pierce, of the J. W. Jenkins Sons' Music Co., Kansas City, Mo., read an interesting letter regarding the question of increasing the prices of talking machine outfits sold upon the instalment plan. The question involved created considerable discussion among those present and it was the general decision that interest at least should be charged on goods sold on instalments and the matter will be taken up with the manufacturers by the executive committee at an early date.

Record Lists Discussed.

The size of the record lists now issued was

LOUIS BUEHN, TREASURER.

also a subject of discussion, the feeling being that the lists were too large and responsible to a great extent for the increasing surplus stock of both jobbers and dealers.

Clearing House for Surplus Records.

It was also strongly suggested that some plan be devised for providing a clearing house for surplus records by either the manufacturers or the Association. While the members of the Association agree that the manufacturers have been very liberal in their treatment of the jobbers in the past, nevertheless, surplus stock will accumulate through faulty judgment in the election of records. Very often a certain record is expected to prove an instantaneous "hit." Sometimes, however, it proves only a moderate seller and those jobbers who have stocked up strongly on a prophecy find practically dead records on their hands, which sell, however, in just sufficient numbers to prevent the factories from discontinuing them.

The matter was placed in the hands of the executive committee that they may secure data and opinions as to the best solution of the problem.

Louis Jay Gerson's Remarks at Meeting.

The necessity of some action on the part of this association along the lines of securing legislation in our several States covering the protection of talking machines, when leased or hired, is one of importance, and it should be considered, and, if possible, acted on at this time. I refer to the exemption of talking machines, leased or hired, from levy or sale and execution or distress in rent. In every State there is similar legislation that has been enacted to protect pianos and organs, sewing machines and typewriters are also protected in some States.

In 1895, on the 25th day of June, Governor Hastings, of Pennsylvania, signed the following Act of Assembly, exempting sewing machines and typewriters. It reads as follows:

"No. 194. An Act to exempt sewing machines and typewriting machines, leased or hired, from levy or sale on execution or distress for rent.

"Section 1. Be it enacted, etc., that hereafter all sewing machines and typewriting machines, leased or hired by any person or persons residing in this Commonwealth, shall be exempt from levy and sale on execution or distress for rent due by such person or persons so leasing or hiring any such sewing machine or sewing machines, typewriting machine or typewriting machines, in addition to any articles or money now exempt by law. Provided, that the owner or owners of such sewing machine or sewing machines, typewriting or typewriting machines, or his or their agent or the person or persons so leasing or hiring the same, shall give notice to the landlord or his agent that the instrument is leased or hired."

The reasonableness of a like action, protecting talking machines, is obvious; inasmuch as it not only protects those who are engaged in marketing these goods on instalment, but it also affords an opportunity of having the talking machine line placed on a higher level and of having it within legal protection, as well as establishing, through such an act, a ground work for precedent on which court decisions involving ownership and questions of title could better be obtained, and all in the interests of the leasor of the property. In other words, such an act would establish a better relationship between the buyer and seller in an instalment sale of a talking machine, which transaction we generally carefully disguise by legal phraseology, by terming it "a rental proposition."

The business of leasing talking machines has grown so large, and so many business houses have adopted the instalment policy on these goods that the masses are being educated to that method of purchasing, and as this follows so closely in the footsteps of the piano business, in which we all know that the cash business is the exception, it should be readily conceded that the majority of talking machine outfits put out on the regular plan are located in rented homes.

I therefore recommend that this association take up the question of securing a like protection for the talking machine industry with a view of embodying this matter of protection in proper verbiage. Also, that committees be appointed in each State for the purpose of securing the interest and favorable action of legislators, doing it through the co-operation of the members of the local association, or through the dealers resident in that State.

FIVE ASSOCIATION ENTHUSIASTS.

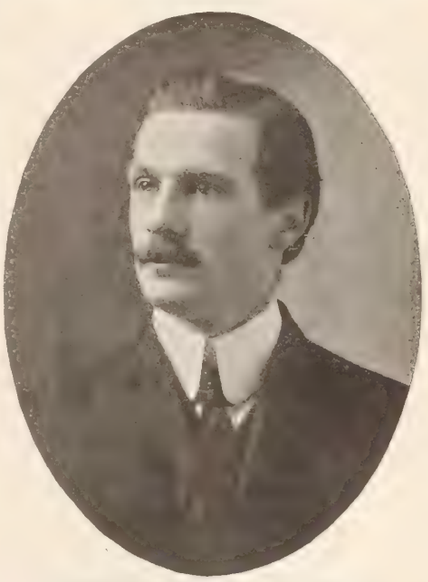
Mr. Gerson Discusses Instalments.

Mr. Gerson then took up the instalment question and proceeded to show where the manufacturer's present policy, as covered by their distributer's and dealer's contracts, work a hardship upon the trade. The injudiciousness of a one-price system is clearly shown in the focus of instalment against spot cash. The option is the customer's. Shall it be $100 cash down, or $1 down and $10 a month, until the $100 is paid?

I call this very important question to the attention of the talking machine trade, and particularly to the thinking members of this Association. The manufacturers have endeavored to quiet our anxieties on this subject by shaking a "bug-a-boo" before our eyes and saying "let it alone, and be satisfied with our iron-clad, nonbreakable contract system of "oneness of price," for if you don't look out, the "price-cutter" will get you."

Tremendous Wane of Profits.

Those in charge of the financial end of talking machine houses doing any instalment business at all cannot help but realize that there is a tremendous wane of profit on this class of business, before you get your money. You figure 83 per cent. or 100 per cent. profit on your investment "on paper." You have not figured



J. NEWCOMB BLACKMAN, VICE-PRESIDENT.

your cost of selling, your expense of collecting and the apportionment of loss derived from repossessions (generally damaged), legal services and "skips."

This loss is directly enhanced by the fact that many "cash sales" are turned into instalment leases, because there is no advantage offered for the immediate money, nor any penalty imposed, nor interest added for accommodation granted. The absence of interest or adequate compensation for the investment of the dealer is contrary to all laws of business or common sense. And, in a like manner, the pendulum swings over to the other side, and the restrictions which forbid discount for cash also seem unreasonable.

The question at issue is one where competition makes it imperative for all active dealers to exploit the instalment game, and advertise "no interest, no bonuses, no extras." "Just one price, and one price only." "Buy from us, and take your time, one day or one year to pay in—now suit yourself." The large department stores of the country render competition very keen through publicity, wherein they offer: "Any talking machine in the house on small weekly payments." Quoting from an advertisement now before me a department store advertisement reads: "This machine and records delivered to your home on free trial; terms—nothing down, and $1 a week." This was a Victor III with one dozen records.

Victrola Proposition Exempt.

While the above illustration may "not" apply

In the chair, Jas. F. Bowers, Retiring President. By his side, Perry B. Whitsit, the man who now heads the organization.

to Victrolas, it may soon come, as it has with pianos. At any rate, Victrolas may be leased almost anywhere at the same price as cash. Terms of $10 down and $10 a month on this $200 machine with records are offered everywhere. What does this year of waiting mean to your investment, and what does the second year of waiting mean to your profits?

What inducement is there to offer a purchaser of a Victrola who understands the advantages of instalment terms, and who "could" pay cash? Any "good" business man who pays spot cash for a several hundred dollar purchase does so for one of two reasons. Either he knows nothing of the instalment terms, or he does not want to be bothered with the custodianship of the money.

There are several reasons that, in my experience, appeal to talking machine purchasers in favor of paying cash, for instance: First, they do not desire to be bothered by collectors. Second, they believe they are getting better goods, new goods, at least. Third, their idea that they are saving money, or their ignorance of the situation. I leave it to any of the gentlemen present, if they would hand out $200 spot cash on receipt of goods, without a discount, in payment of a bill marked "Terms: two years, no discount for cash."

The entire situation is positively wrong, illogical and without precedent in the business world. It makes liars of our salesmen (if they are successful ones), and develops misrepresentation, if not actual dishonesty, which will redound to our discredit, sooner or later. We are all after the cash, and the cash is in sight, but with no inducements to offer, the way is difficult and even impossible. The situation is getting worse and worse, as competition grows more keen.

Development on a Larger Scale.

The instalment end of the talking machine business is now being developed on a larger scale than ever, principally by piano houses and department stores, which extend to the talking machine line the same basis of instalments or easy payments, or so-called "clubs" through which the public is induced to believe it is getting better prices and terms than it individually could control.

If this situation is not soon relieved, the development of the existing conditions will result in great discouragement to the small dealers, if not their entire elimination, for how will they be able to handle the instalment business on small and insufficient capital? There is a remedy!

The manufacturer who will not favor an amendment to the distributer's and dealer's contract, permitting either a discount for cash on talking machines, or the insistence of an interest charge on instalment sales of machines, has not the trade's interest at heart. The whole subject boils down to the reason for "interest and discount." There is a reason! Accommodation must be recompensed. Spot cash must be rewarded. Who is going to pay the bill?

WEDNESDAY'S MEETING.

James F. Bowers has done splendid work for the organization, and that his work was appreciated by the members of the association is evidenced in the fact that had Mr. Bowers desired a re-election his fellow-members would have been delighted.

When the nominations for officers were in order, Mr. Bowers left the chair and in some very eulogistic remarks placed the name of Perry B. Whitsit in nomination, and moved that he be elected by acclamation.

The secretary was instructed to cast one vote for Mr. Whitsit.

New Officers Elected.

At this meeting the following officers were duly elected for the ensuing year:

Perry B. Whitsit, of the Perry B. Whitsit Co., Columbus, O., president.

J. Newcomb Blackman, of the Blackman Talking Machine Co., New York, vice-president.

J. C. Roush, of the Standard Talking Machine Co., Pittsburg, Pa., secretary.

Louis Buehn, of L. Buehn & Bro., Philadelphia, Pa., treasurer.

Executive Committee.—E. F. Taft, of the Eastern Talking Machine Co., Boston, Mass.; J. F. Bowers, of Lyon & Healy, Chicago, Ill.; Lawrence McGreal, Milwaukee, Wis.; Rudolph Wurlitzer, of the Rudolph Wurlitzer Co., Cincinnati, O.; H. H. Blish, of Harger & Blish, Des Moines, Ia.

THURSDAY'S OPEN MEETING.

The final meeting of the convention was held on Thursday afternoon, and was, as scheduled, an open meeting where those in the trade, not jobbers, might bring up matters for consideration and discussion. And be it said, the idea of an open meeting was a decided success in every sense of the word, and the session was attended by over a hundred association members and their friends. The meeting was called to order by President Bowers, who called upon W. D. Andrews to act as chairman. Mr. Andrews stated that first would be heard a number of papers by association members upon various subjects of trade interest, and suggested that the manufacturers give thought to the various suggestions and endeavor to carry them out if possible.

The first subject discussed was "The Value of Records that Educate" in a paper prepared by E. F. Taft, of Boston.

THE VALUE OF RECORDS THAT EDUCATE

E. F. TAFT

I feel that the subject is a broad one, and one that would lend itself to a lengthy and more

BIG ONES OF THE NATIONAL PHONOGRAPH CO.
Front row, from left to right, Frank K. Dolbeer, Frank L. Dyer, C. H. Wilson. Rear: L. C. McChesney, N. C. Durand, C. E. Goodwin.

learned treatment than I am capable of giving it. However, as the paper requested was upon the subjects of records and not my own capabilities, I will from now on confine myself to "The Value of Records That Educate."

Three Classes of Records.

That good records do educate I believe is universally acknowledged, and such records may, I think, be divided into three classes—instrumental, vocal and those prepared for the purpose of teaching foreign languages. Our association cannot take the credit upon itself of being in any way responsible for these records, but must concede to the factories and the experts employed in their recording laboratories all credit. To my mind the uplift given the talking machine business in the past few years is almost directly traceable to the high quality and educational value of the records produced. This class of record has lifted the talking machine of a few years ago into the musical instrument class of to-day.

Due credit must be given the factories for their progressiveness and the enormous expenditure of money made by them to secure the services of talent capable of producing educational records. Credit must be given to those who through their far-sightedness and experience as purveyors of education in connection with the teaching of foreign languages have expended their money to obtain the services of foreign professors to prepare cylinders by the use of which one can readily master French, German, Spanish and Italian. These records are purely and simply educational.

When such men as John Philip Sousa, Arthur Pryor, Victor Herbert and their like lend their names, reputation and talent to the producing of instrumental records, none but those which educate and elevate one's musical tastes result, and we find ourselves drifting away from our ragtime propensities into the realms of the standard and classic music of the masters.

Uplifting the Business a Mission.

Education is the development of the mind. What better education can one find than in the hearing of the works of the greatest composers the world has produced, interpreted by such recognized artists as Caruso, Bonci, Gogorza, Scotti, Daddi, Melba, Eames and countless others with whose records you are familiar. To those classes of records can be traced, I think, the educational value of the talking machine, or, as we are pleased to now call it, our musical instrument.

The uplift given the business through the medium of these high-class educational records has resulted, not only in a favorable recognition of the talking machine by a critically musical public, but in a demand for a higher-priced and better instrument for the reproduction of the records. While all due respect must be accorded our desires to educate the public, close to our hearts is the thought to increase our business and our profits. So I say let the good work go on, and let us by co-operation with those who have fearlessly invaded the "talent" markets of the world and by their reproduction of this "talent" given us the best that is obtainable, continue the uplift of the business, the education of the public and the swelling of our net profits.

The next paper was one prepared by Wm. F. Davison, of the Perry B. Whitsit Co., on "The Value of State Organization of Dealers."

VALUE OF STATE ORGANIZATION OF DEALERS

WM. F. DAVISON.

The value of State organization of dealers in our line is unlimited. Not only is organization valuable to the dealers, but it makes itself felt through the entire trade, including the dealer, the jobber, and the manufacturer. In every instance organization is calculated to do one of two things, either to bring about better conditions, or to make better men. The very fact that practically all lines of business in this progressive age find it advantageous and profitable to maintain associations would seem to indicate that the talking machine dealer would develop much faster had he the opportunity to meet with his fellow dealers. If we are to have better talking machine dealers, we must have more of them who have confidence in the future of the business. This confidence can best be imbued by State associations. Too many talking machine dealers fail to realize the possibilities of their line, or if they do, then there is something lacking about their way of going after the business. In fact, there are numerous ways in which their methods might be faulty. You no doubt have dealers on your books who are doing an enormous business, while you have others in localities just as good who are not doing the business. Apparently, there is nothing the matter with the dealer or his territory, yet the fact remains that he is not getting the business. Is it not reasonable to suppose that by associating with other dealers he would learn something which would make him a bigger and better dealer. Associations are bound to arouse the dealers' enthusiasm. They are bound to increase his business and in turn increase his jobbers' and the manufacturers' business.

LOUIS F. GEISSLER AS HE CAME OUT OF THE CHALFONTE FOR A STROLL ON THE BOARDWALK.

Dealers Should Aid.

It will be well, gentlemen, for you to lend your aid to the promotion of dealers' associations in your various territories. When you are asked to give assistance or advice, do so. Keep in close touch with them. The dealers are liable to make mistakes. They are prone to jump at conclusions quickly. They sometimes get an idea that existing conditions are unjust to them; yet, when these conditions are carefully gone over and the real facts exposed, the very dealers who were loudest in their denunciation are the first to admit they were mistaken. In order to be successful, these associations must not be radical. They must be reasonable. Each important question which arises should be carefully weighed and discussed at length before action is taken. It is at critical moments your advice is most likely to be sought.

What Has Been Done in Ohio.

In connection with this subject, it might be well to refer to the Ohio Association of Talking Machine Dealers. The officers and members of the Ohio Association of Talking Machine Dealers are justly proud of their association. Organizing at a time when conditions in the talking machine business were never worse speaks well for the character and spunk of their members. Like many other good movements, the first few months of this association's life were filled with trials and tribulations. The first meeting was held November last in Columbus, Ohio. The attendance amounted to a meager handful when the number of contracted dealers in Ohio is taken into consideration. At this meeting officers were elected and an active campaign started for members. The second meeting was held at Cincinnati, Ohio, in February. The attendance at this meeting was somewhat better than the Columbus meeting, but there was still room for much improvement. The third meeting was held at Cleveland in May, and was the banner one of all. The untiring efforts of the officers had begun to show results. There were thirty-five of the leading Ohio dealers present. The feature of this meeting was the presence of two expert repair men, one from the Victor factory and one from the Edison factory. Practical demonstrations were given on all kinds of repair work, which were very beneficial to the dealers present. Dealers who were attending a meeting for the first time were warmest in their praise of the association. They were convinced that an association was a good thing for them. Relating experiences, exchanging ideas, and learning the different forms of advertising used are all valuable to them, because these are the things which will help them build up their business.

A NUMBER OF CONVENTIONISTS SNAPPED BY THE WORLD'S PHOTOGRAPHER JUST AFTER A BUSINESS SESSION.

Has Membership of Twenty-Six.

The secretary of the association tells me that its membership at the present time is twenty-six members. He expects to have at least fifteen more before the next meeting, which will be held the first Wednesday in August at Cedar Point, Sandusky, Ohio. Ohio jobbers have assisted the association in every possible way. From three to six jobbers have been represented at each meeting, and have done much to encourage the dealers. Our company has been represented at each meeting, and we consider ourselves well repaid for the time and expense incurred. It has not only been a good way of advertising ourselves, but it has enabled us to become more intimate with the dealers in our State. Dealers' associations will give the dealer a better knowledge of his business. They will give him the ideas of fifty men instead of one, and they will do much to make him see the future of the business in the right light.

H. H. Blish then read his paper on "The Manufacturer, Jobber and Dealer; Why Their Interests are Identical."

THE MANUFACTURER, JOBBER AND DEALER—WHY THEIR INTERESTS ARE IDENTICAL.

H. H. BLISH.

Are the interests of the manufacturer, jobber and dealer identical? To my mind the success or failure of the industry will measure in the ratio of the completeness of this knowledge to the interests of each being understood to be identical. There is no industry where it can be more truthfully said that the interests of the manufacturer, jobber and dealer are more identical than in the talking machine business. The very nature of the industry makes this so. The business being wholly a contract one makes dealer and jobber a part of one of the most perfect industrial machines the commercial world has ever seen. That this is all the more remarkable, it must be remembered, that its growth has been only during half a score of years. And right here I want to pay my tribute to the most extraordinary business sagacity of the men who have had charge of the business end and who outlined its policy during the trying time of its formation period, for to their foresightedness in establishing the policies governing the business at that time is due the wonderful growth and most marvelous success of to-day.

Policy of Publicity Created Business.

One of these early policies which has remained unchanged from the start embodied the marketing of this product, and the jobber or distributer was created and given a share in the profits of the business. At first these distribution centers were few and at widely separated points, but the manufacturers' policy of publicity soon brought such a flood of business, that nearer centers of distribution were found necessary in order to render more prompt freight service and to make the freight cost less burdensome; and to-day I know of no industry whose business wheels move with less friction and steady stride than do the manufacturers and jobbers of phonographs and talking machines.

Ostensibly, it is the manufacturer's province to create the demand with the public for their wares. The nature of these goods being unusual and easily a luxury it requires rare skill and judgment to so create, by advertising, a demand by the public for them. Yet how well the manufacturers have taken care of their end, along this line, I need only say that since I have been east I have been told that the advertising appropriation of the Edison, Victor, Columbia and Zonophone companies for the coming year exceed half a million dollars, and all this for the immediate and direct benefit of the dealer.

In order that the flood of business which I firmly believe will follow in a golden stream this coming fall and winter may not be lessened by the unpreparedness of the dealer who may be caught napping, hard and conscientious work on the part of the jobber will be required to so till his field that when the harvest time comes manufacturer, jobber and dealer may each share in the generous yield.

If there ever was a case of one's reaping, or at least a chance to, where somebody else has sown, I think we have it most strikingly shown in the talking machine industry. A neglect on the part of the dealer, of the jobber, or of the manufacturer to prepare by sufficient stock on hand when the fall season opens, will render this advertising fortune futile.

Plea for Greater Stability.

To my mind, the full measure of the success of the talking machine business will never be reached either by manufacturer, jobber or dealer until the business has been made more stable than it is at the present time. One of the greatest obstacles that the jobber has to contend with is the difficulty in holding the dealer interested after he has been once established. We establish him to-day through the efforts of the diligent salesmen, and next year we are obliged to try again for a new man.

The dealer's stock has run down to one machine and possibly twenty or thirty records, and he refuses to stock up, simply because of his lack of confidence in the business. The advertising of the manufacturer, the labor of the jobber all going for nothing, or nearly so, in that field, simply for the want of that "something" to give stability to the business. There is no reason why this business should not be made just as stable as that of hats and caps or boots and shoes. All of us must admit that the goods are selling, and selling heavily. There is no lack of confidence in the goods on the part of the public. Why, then, this timidity on the part of the dealer to invest and carry a representative stock?

If I might be permitted to offer this suggestion I should say that in forging the chain of their magnificently planned campaign of publicity for the creation of the demand for the goods by the public the manufacturers have left a link in the chain less welded to the whole than it should have been. Direct the same intelligent campaign toward the dealer, conducted with the same energy and earnestness that has characterized that with the public, and the manufacturer will have an ally of unheard of possibility.

Let the manufacturer instil in the dealer that same confidence and faith in the business that they themselves have shown by their recent enormous expenditures in advertising and new buildings, and they will at a single bound have overcome the greatest obstacle now in the way of permanent success.

Patent Situation Touched Upon.

Competition in manufacture is practically eliminated by reason of the exclusive patents held by the three parent companies, and by means of wise policies governing their retail distribution are gradually making the business non-competitive for the dealer, thereby assuring him the practical control of the business in his field.

Similar policies have not as yet been inaugurated for the benefit of the jobber, and thousands of dollars are wasted monthly by competitive salesmen covering the same field for business. Whether territorial restrictions, as in the case of the piano business, would make the business more profitable for the jobber, I am not prepared to say; but it is self-evident that we have a vast useless outlay of the jobber's funds that in some way might be eliminated.

To sum up in a few words why the interests of the manufacturer, jobber and dealer are identical, I would say that while the jobber possibly is not quite so important a factor as the dealer in this business machine, he is none the less indispensable. While it is manifestly the manufacturer's province to manufacture and to create a demand for the product it would be wholly impracticable for them to undertake the merchandising as well and measure the same success. Situated as they are, so far from the source of demand would render satisfactory service impracticable and almost impossible.

COLUMBIA STALWARTS. POSED SPECIALLY FOR THE WORLD.
From left to right: Paul H. Cromelin, T. H. McDonald, George P. Metzger. Rear: H. A. Yerkes, Geo. W. Lyle.

Twenty-nine Millions Invested.

That the jobbers have taken a most important part in the rapid growth of this business none of us will gainsay. You may be interested in knowing that the combined capital represented by the jobbers who are representing the talking machine companies exceeds $29,000,000, and they have with their capital greatly aided the manufacturers in granting credits to the trade, without which the industry never could have attained its present proportions. The details of the contract system have been most satisfactorily handled by them, and among themselves has grown up a reference credit bureau of the utmost importance, the volume of which is increasing every day, and could not have been acquired by any single manufacturer.

This very lack of confidence on the part of the dealer in this line—to carry a representative stock—has led to the practice of living from "hand to mouth," taking an order to-day for to-morrow's delivery for the machine or records that the dealer hadn't the confidence to carry, the jobber being expected to always have on hand an overstock of confidence as well as machines. It will readily be appreciated that while this condition on the part of the dealer continues it becomes practically impossible for the jobber to foresee what his probable business might be three or four months hence, and thereby place his orders that far in advance, or run the chance of not getting deliveries when he needs them.

Once the line is given that stability with the dealer that it deserves he will invest in it to whatever extent may be necessary to ensure its success; and if he does not engage in it exclusively it will at least be prominently featured in his business and pushed. Any unwise policy or rule enforced by the manufacturer restricting the dealer or causing a wavering of his confidence or loyalty will be instantly reflected through the jobber to the manufacturer, their interests being identical.

Interests of All Interwoven.

The interests of the manufacturer, jobber and dealer are so closely interwoven that it would be hard to separate them without impairing the structure. Adverse interests affecting the industry affect us all. *Until the dealer shall have been educated to the possibilities that are in the business for him* it will be necessary for the manufacturers to still continue their campaign of publicity with the public, for with lessened publicity and no counter effort on the part of the dealer to hold up his sales the business mercury will go down with an ominous thud.

That the manufacturers feel and realize that our interests are identical, and that they must share in our weal or woe, is shown in the closing lines of a letter recently sent the jobbers, the truth of which statement I fully concede, namely: "We have a right to expect and demand that our business be pushed. We do our share and have no other way of personally pushing it than through our distributers and the dealers through them, and we must all be very careful that we do not load ourselves down with narrow-minded rules and red tape that will not make for the best interests of all concerned." Educate the dealer, I repeat with redoubled earnestness. Then, and only then, will the talking machine business for manufacturer, jobber and dealer come into its own.

George E. Mickel prepared a paper on "The Best Work of a Factory Salesman." He was, however, obliged to leave, and he requested Mr. Blackman to read his paper for him.

THE BEST WORK OF A FACTORY SALESMAN

GEO. E. MICKEL

The work of any salesman is to get business for the house he represents. The factory salesman's position differs largely and essentially from the ordinary salesman, in that his value must not be measured by the number of orders he takes, but by the business that is developed in his territory. He must be rather a superintendent of agencies, and not allow his efforts to be circumscribed by the mere selling of a few machines and records.

SOME OF THE LADY "DELEGATES" WHO THINK THAT ATLANTIC CITY IS THE BEST PLACE IN THE WORLD FOR A CONVENTION.

Enthusing and Coaching the Dealer.

His success and value to his factory is not in the securing of orders from the dealers, but should be in his ability to enthuse the dealer and in teaching him how to move more goods. He should be thoroughly familiar with the line he represents. But this is not enough. He must know and be an enthusiastic believer in the policy of his company, so that he can instil into the agent's mind that the life of the business, and the opportunity to make money out of it, is based in the contract and the policy under which our leading companies operate. And yet not enough for him to know this, but he must have backbone enough to stand up and not degenerate into a mere order-taker.

Two years ago I traveled 500 miles west and called on a firm that I knew had the opportunity and ample capital to develop a large phonograph business. Our own salesman had called on these people three times before and got practically no business.

I met the general manager and he introduced to me the department manager, under whose direction the talking machine business was placed. I did not attempt to get an order, but interested myself in his department, showed him how the business could be gotten, the profits to be made out of it and awakened his ambition to make the line a success. Since this time their business has grown continually, and I might add the Nebraska Cycle Co. have sold them the goods.

MR. AND MRS. GERSON OUT FOR A MORNING RIDE.

Overanxious Salesmen Rebuked.

We have had factory men in the West (and this particular type is probably found only in the West), who were so anxious to get an order they would extend privileges to the dealer that were clear violations of the factory agreement, and that would entail a loss to the jobber handling it. You have enjoyed the privilege of having a pessimistic traveler come in and sit at your desk and say: "Well, business is dull, and I am sorry that I have only a few small orders for you. What is going to become of the talking machine business anyway? I have worked hard the last few days, but couldn't sell anything."

I once said to a traveler of this kind: "Do you talk to the dealers that way? Why didn't you say that the dealers who had good stocks were having a nice trade? Why didn't you say that the people who had money were buying more and better phonographs to-day than ever before; that the factories were unable to supply the demand for the higher-priced outfits? Your trouble is that you have been trying to work the dealer instead of getting the dealer to work."

Taking Orders Incidental Only.

The business of the factory salesman should be the coaching of the retail dealer in the successful way to market the product. He must be optimistic and an enthusiastic believer in the future of his line and get the dealer aroused to his opportunities. His taking an order should be an incident and not the object of his work. He cannot hope to succeed unless he gets up out of the ranks on a higher plane and gets a broader view.

Once I knew a man who was called a very successful salesman in another line, but to my surprise he said that he seldom made a sale. How did he do it? Why, he had any number of men to whom he furnished the nerve, the enthusiasm and the *how*, and they did the business. And, mind you, the factory salesman will not succeed, nor begin to do his best work, even though he knows his line of goods and is familiar with the policy of the company he represents and the details of the retail business unless he is enthusiastic and has the ability to enthuse the retailer.

OFFICERS, MEMBERS AND GUESTS OF NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS

Posed specially for The World.

The Chairman—The chairman of our Entertainment Committee, after considerable persuasion and a good many threats, had a paper prepared on "The Future of Our Industry," and he prepared it himself. We will listen to that paper read by the author, J. Newcomb Blackman.

THE FUTURE OF OUR INDUSTRY.

By J. NEWCOMB BLACKMAN.

There is a great future for the talking machine industry and no danger of the demand failing, as long as the buying public appreciate music. The life of the talking machine business will, of course, depend upon a continuous new issue of the latest popular selections, both vocal and instrumental.

While our industry has suffered as all others during the recent business depression, it stands out as a wonderful example, for the reason that those who have handled the standard makes of machines and records have suffered only the loss of business. The value of the goods has not deteriorated, for full prices have been obtained, whereas in almost every other line of business to the loss of business must be added the cutting of profit on account of the necessity of selling the goods at great reductions.

This depression has given the manufacturers, jobbers and dealers ample time to consider very critically the many ways in which their methods could be improved.

Value of Protective System and Character.

The manufacturer realizing the importance of retaining among their jobbers and dealers those of standing and ability introduced a protective system. This system guards those in the trade who are satisfactorily representing the manufacturer, from unreasonable competition and removes those who have been handling the goods in an unsatisfactory manner.

This policy is generally conceded to be a most wise one and the jobber and dealer should support the manufacturer by giving a full measure of return for the protection thus afforded.

The success of the talking machine industry will depend very largely on the character of the firms representing the manufacturer as jobbers and dealers, for the organization should be one capable of constantly uplifting the industry and commanding respect in the eyes of the public.

Policies That Ensure Trade Stability.

In treating the future of our industry it is my desire to advocate certain policies which I think will insure a steady and permanent future success.

The manufacturers deserve great credit for establishing and maintaining a one-price system, and especially in keeping the quality of their goods up to a standard that will cause the public to recognize full value at restricted prices. This policy should be continued by all means, for it gives dignity to the merchandise for sale and creates a feeling of respect from the prospective customer.

The business has reached a point where the manufacturer should be very careful in whose hands he places his goods, and the present system of investigating every application for dealers' and jobbers' privileges should be very thorough.

One good jobber in a given territory, who has ample capital, will carry a sufficient stock and be in a position to grant the necessary credit to dealers, will give much better results than several smaller jobbers who probably conduct the talking machine business as a side line. Encourage the jobbers who handle talking machines exclusively, for it is natural that better results will be obtained, as their entire time and energy are given to the line.

Encourage the "Live" Dealer.

Among dealers much more satisfactory results have been obtained, in my experience, by having one live representative dealer, as compared to two or three who handle the goods in

a half-hearted way and have a very poor stock. The business in the town or city will be handled much better if retail customers can patronize a dealer who carries a complete stock. Such dealers have more capital invested and are bound to give more close attention to business.

The factory salesman can be made a very valuable part of the factory force, if given authority to remove or add competition, as the circumstances warrant.

Work for the Factory Salesman.

I would recommend a special representative to be the head of a certain corps of salesmen in a given territory, to whom the regular salesmen can report cases requiring attention. Where a dealer is not measuring up to the required conditions of carrying a sufficient stock and the salesman, or special representative, thinks he is an undesirable dealer, this opportunity should be taken advantage of by removing him.

If sufficient dealers were left, it would encourage them to carry larger stocks by the removal of this petty competition, or should a new dealer be desirable to take the place of the one removed, one should be selected with great care to insure better representation. It is quite difficult for the jobber to handle these cases without considerable feeling among those in the territory to whom he sells.

Planning to Meet Future Requirements.

The action of the leading companies during the last year in requiring that no other goods of the same class as their own be handled by their jobbers at first met with some opposition, but I believe if the factory will give the jobber and dealer proper protection this plan is a good one.

The factory should realize, however, that when the dealer or jobber handles their goods exclusively it obligates them to always be prepared to meet competition and be up-to-date with improvements.

The most successful corporations to day work years ahead, for while business at the present time may be extremely prosperous, and the demand cannot be filled, part of the earnings should be invested in experiments which will produce improvements for the future to stimulate in dull times.

The public no longer considers the talking machine a wonder because of its ability to reproduce sound. The machines and records of to-day are respected because the ability of reproduction is unlimited and almost perfect.

By recording records by the highest-priced grand opera stars and vaudeville artists, the leading companies command respect for their product from the critical public. I think this policy should be continued, for the purpose of the talking machine of to-day is nothing but a musical instrument to bring vocal and instrumental talent in the home.

Let us therefore employ the greatest artists in their class, catering from vaudeville to grand opera. In years to come such records will constitute a library of great value and will insure the future of the talking machine industry for generations to come.

Wherein High-Priced Goods Benefit.

It is a known fact that the masses follow the classes on luxuries. It therefore seems to me most important that all the leading talking machine companies have as a part of their product high-priced instruments and records. We want everybody to buy talking machines and records, from the millionaire to the most humble wage-earner. To insure the permanency of the business as a large industry, it would probably be unwise to make nothing but high-priced goods, or, on the other hand, those at extremely low prices.

The man of money rode a bicycle when they were too expensive for the ordinary wage-earner, but when they were reduced to a price where practically everybody could ride they were discarded by people of means. It should, therefore, always be the aim of the manufacturer to produce high-priced goods, for by this method will the people of means be kept buying and the masses will follow, as far as their pocketbooks will allow.

LAWRENCE McGREAL, Executive Committee.

Selling for Cash and on Instalments.

The time will come when the manufacturer will realize the necessity of making a difference in the price between the talking machine outfit sold for cash and on the instalment plan. At the present time machines are sold on easy payments at the cash price without even interest charged. Are we not impressing the public by this method that our product will not warrant a cash investment?

I could cite cases where a cash buyer, who found his money was not recognized by a difference in the cash and instalment price, refused to buy and spent the amount for some other article of luxury. The patronage of those who require the easy payment privilege should be encouraged, but this is just as true of the cash buyer, and the small dealer needs some cash business to help him carry his instalment accounts.

System for Handling Goods.

The factories would do well to devise a most thorough system for the handling of their goods. Their salesmen, or special representatives, could show good returns if they were authorized to spend the necessary time with jobbers or dealers who show a lack of system in their method of handling the goods.

I refer to methods for carrying stocks of records to insure the least surplus on a satisfactory stock of records, advertising campaigns to work in harmony with that of the manufacturer and a suitable system for handling instalment business to insure the least loss. Here is a field for the special representative of the factory among both jobbers and dealers. The product should be handled by the high-class merchants, for the buying public often judge the merchandise by the merchant who handles it. A little system injected here and there among some of our live jobbers and dealers will do a world of good.

THE GLORIES OF OLD OCEAN, AND NOT A SEASICK MEMBER.

Looking Forward to Good Times.

There is every indication that this fall will start a revival of good times and the entire trade will then expect to get the reward they deserve for sticking to the ship during a business depression. Many jobbers have struggled under the weight of poor sales, bad debts and large outstanding accounts, not for the present, but for the future in which they had confidence.

The jobbers have used their capital to give weak dealers a helping hand and being lenient in the extension of credit where justified have enabled many good dealers to remain in the business. I hope the factories will bear this in mind and give those jobbers the benefit of the business as it improves. It will be very discouraging and probably cause many jobbers to discontinue the business if the return of prosperity is followed by additional competition in their ranks where unwarranted.

Co-operation Between All Most Essential.

The business has made a remarkable showing, and we want that kind of co-operation between the manufacturer, jobber and dealer that will enable all to share in the prosperity which is slowly but surely returning.

The manufacturer should get the opinions of their jobbers and dealers whenever possible, for hasty moves which appear wise from the factory standpoint might be viewed in a different light if the opinion of those in the real selling field among dealers and jobbers were consulted.

The National Association of Talking Machine Jobbers represents almost all of the successful jobbers in the country, and as its object is to promote anything that appears for the improvement of the industry a consensus of opinion from this body should be given careful consideration. Let the future of our industry, therefore, represent the most harmonious co-operation between the manufacturer, the jobber and the dea'er.

HAYNES OF RICHMOND IS A GOOD CARD PLAYER.

The Chairman Asks for Opinions.

The Chairman—Gentlemen, this completes the papers that were prepared to be read at this session, and the subjects, you will agree with me, have been handled very carefully, very conscientiously and very completely. They have suggested a line of thought, doubtless, in the minds of everyone here, and we would like to hear from the members of the association with any additional views or any additional thought that have occurred to them as these papers have been read. After that, we will call on the manufacturers to follow out the line of thought as it has appealed to them. If there are any members of the association who have any remarks to make, do not feel at all backward.

Mr. Blackman—I feel responsible for asking everybody to be present here, and it may be well for me to explain that in discussing this meeting we decided that what we wanted here was not discussion in any sense of the word. We do not expect competing forces to get up and talk shop, but at the same time it seems to me that one of the great objects of this gathering is to create optimism. In fact, it strikes me that nothing but a lack of it is the basis of our suffering during the recent business depression, and the idea, therefore, was to call on the various companies and have some representative talk from an optimistic standpoint. I think most of us are enthusiastic, but for the benefit of those who

are not we want to give the manufacturer a chance at this time to get up and instill in all of us such confidence and enthusiasm.

The Chairman—I will call on some member representing the National Phonograph Co. to start the ball rolling by following out the line of talk suggested in one or more of the papers, and later I will ask for the other companies to also talk.

Frank L. Dyer's Cheery Talk.

Frank L. Dyer—Mr. President and Gentlemen: I had intended to speak to-night at the banquet, but I will do that, too, on matters of interest, so that I hope you will not expect me to say very much this afternoon. I would like, however, to say purely a personal word. It was one year ago to-day that I became president of the National Phonograph Co., succeeding Mr. Gilmore, who is with us to-day, and whose great work in the phonograph business we all appreciate. At that time I was absolutely ignorant of business matters, and did not know the difference between a bill of lading and a bill of complaint, but through the co-operation of all of you gentlemen, my work has been very pleasant, and I have formed a very large list of new friends whom I treasure very highly. Prior to that time I confess that my view of a jobber was a very narrow one. I had always looked upon him as a price killer, as a man who had violated the agreement and whose particular offense had been brought to my attention. I now find that they are really very decent fellows and that the percentage of delinquents is very small. In fact, out of thirteen thousand dealers on our list, I do not think we have hardly one-tenth of one per cent. who are delinquent.

On the subject of optimism I do not think it is necessary for me to say more than a word or two. I have an absolutely unwavering faith in the success of the phonograph business and I know Mr. Edison has. We are going ahead exactly as we always have. We have spent half a million dollars a year in advertising, and we intend to continue spending half a million dollars a year or more from now on. We intend to increase our sales staff at least fifty per cent. I think the optimism that we feel could not be better shown than in the recent settlement which was made by the National Phonograph Co. in the long pending litigation in New York when we went down into our pockets and paid $450,000 for the protection of the New York jobbers when we might very readily have avoided that payment. I thank you. (Applause.)

The Chairman—Will some representative of the Victor Talking Machine Co. take up the same trend of thought?

L. F. Geissler Full of Optimism.

Louis F. Geissler—Mr. President and Gentlemen: I am full of optimism. Good feeling permeates my whole system on account of the particular trend of friendliness I have observed here between the jobbers and dealers and that includes the factories. There absolutely seems to be a certainty that we are getting closer together and will understand one another better than we ever have in the past.

As far as our future is concerned, we have told you in our various circulars what we are doing. I can only go back from the time of the past two years. About two years ago I happened to be in London with Mr. Johnson, from which viewpoint we could see the clouds gathering a little better than we could when we were in America. At that time we had decided on extensions to our factory to the value of about $400,000. It looked blue there, and we resolved to wire our directors here to consider whether they had better do that or not. We did not say, "Don't do it," because the ones who are at home here run the business. They decided to postpone those improvements. We have undertaken those now, and during the next six or eight months we will expend some $600,000 in extensions. We do not need that at present, as you are all aware, but we are going to need it sure as shooting, as the boys say, next year, and we will probably have use for a part of it this fall, and we can build our factories a little cheaper now than we can a year from now, we think. We find it difficult to get material in some branches. The steel industries cannot fill orders in many lines and our factories are delayed, and I am very glad to see it. I think by next year we will be back to the year of 1906 anyway, if not 1907. Our business so far this year has proven—I predicted thirty-three and a third per cent. increase over last year for the summer months, but it is beating that very much. Our business for June was the

AND E. F. TAFT SAYS THAT HE NEVER SAW DOUBLE.

best June we ever had except 1907. That is, it beat 1906, which was an excellent year, as you all know.

I am quite sure we all of us have every reason to go forward expecting to see a full renewal of our past prosperity by next year, at least. We are certainly getting together. You read us the Riot Act once in a while and we get a good deal of good out of it. Some of your views we cannot deal with at once and some of them perhaps we have discounted and digested and intend to deal with as soon as we are able to do so. It looks to me as though your organization has nothing but good in store for itself and for the factory, and I am certainly very happy to have met you all here to-day.

The Chairman—I had a short talk with Mr. Lyle, of the Columbia Phonograph Co., and he is full of enthusiasm. He reports their business is showing enormous gains and perhaps he can say something that will lead us to believe that the business is coming back to its old form, and I will call on Mr. Lyle.

Lyle Talks of Columbia Progress.

George W. Lyle—Mr. Chairman and gentlemen—I am glad to be here to-day to show our

AND THERE IS BUT ONE CARL DROOP SHOWN HERE.

good feeling toward the Jobbers' Association and also to express our wishes for their continued success. We feel optimistic and know that we are warranted in so feeling. It occurred to me that possibly what this association would be most interested in would be something about the company's plans for the coming season. Having reviewed last year's work we are prepared to say that there will be no changes whatever in our policies for the coming year. Our policy is very simple. We have it divided into three headings: One is exclusive sale of goods. By this we mean not compulsory exclusive sale, but we offer to the jobber that exclusive territory, wherein he can handle all the goods of our manufacture exclusively and reap the benefits of whatever comes from that business. We carry that further with an exclusive arrangement which we are only able to offer because of our exclusive jobbing arrangement to the dealer. We feel that any dealer that opens a store and handles our line is entitled to the exclusive privileges and results of such a store, so that we require of our jobbers and dealers, whereby they in handling our goods exclusively shall have the exclusive results of such work.

The next policy has been the question of the elimination of the amount of capital required for the jobber and dealer to handle the business. To do this, after a great deal of study, we decided on the double disc record. There was a good deal of smoke and talk and confusion last fall when that policy was adopted, and we have followed it through and believe to-day that the smoke has cleared away and there is a general feeling that the double disc record has come to stay, and we propose to push the double disc record further than ever and harder than ever.

The third policy is in advertising. We expect to do 50 per cent. more advertising than last year. We want every resident of the United States to know there is a double disc record which can be purchased at a reasonable price.

Those are the three principal policies which we hope to carry out, and we welcome jobbers and dealers interested in that line of thought.

There is one other thought. We believe that this association should take up seriously the question of the continuous issuing of monthly lists with a large number of records. We believe that is wrong, and we are ready to-day to join with the association and with the other manufacturers in eliminating the unnecessary expense of putting out monthly records which have no particular value. One of our vice-presidents is to address the meeting this evening on the business policies of our company, and I feel I have said about all I should try to say this afternoon.

The Chairman—There are representatives here of trades outside of talking machines. One of the accessories which is quite necessary is the cabinet. While one of the companies is making a machine that does not require a cabinet most of them find a cabinet quite convenient, and we would like to hear from Mr. Carpell, of the Herzog Art Furniture Co.

M. A. Carpell Renews His Faith.

M. A. Carpell—Mr. Chairman and gentlemen—Physically we are all not alike. Some people perspire and some do not. Up to the time of the panic I belonged to the class that perspire quite freely. I was porous and optimism just came out of me. I was full of it. During the panic, gentlemen, I am frank to admit that it got me chilly. I never had any chance to perspire at all. I must say that since I have listened to the different speeches this afternoon the optimism I had before the panic has come back to me doubled. I have to-day more faith in the talking machine business than I ever had before, and I assure you that I am in a position to infuse optimism among the members of our firm. I will also say that we will try to do our very best and give you a class of manufacture in our goods that will protect you from the standpoint of the manufacturer, the jobber and dealer.

The Chairman—We have one gentleman with us who is so full of enthusiasm that I am afraid if we call on him we will not adjourn in time for the banquet—Mr. Durand, representative of the Edison Business Phonograph Co. If he will agree to limit his speech to four hours and a half we will give him the floor.

Nelson C. Durand Brief and to the Point.

Nelson C. Durand—Mr. Dyer will talk on our business to-night, and I represent such a small proportion of the trade to-day that it is not worth while putting me down in the minutes. I firmly believe that next year I will be here and our business will be better represented. I thank you very much for considering the subject at all.

The Chairman—The National Phonograph Co. have recently taken on their force a man who is going to have charge of the traveling salesmen—a man whom you all well know—Mr. Goodwin, and while perhaps he has not been long enough in the harness to outline his policy perhaps he

can make some remarks to show us what they intend to do.

Goodwin a Jobbers' Advocate.

C. E. Goodwin—Mr. Chairman and gentlemen—I have not been in my new position long enough to be able to discuss the policies of our company or of my particular work. I have been on the other side of the fence so long, however, that I can assure the jobbers here that in all of my work in connection with the company I will be a sort of advocate of the jobber and always present the jobber's viewpoint. I will have to turn over what is outlined for me to do and what the prospects are to Mr. Dolbeer, who will be my superior. I thank you.

F. K. Dolbeer Discusses Credits.

F. K. Dolbeer was then called upon and said: Mr. Chairman and gentlemen—Speechmaking is not in my line, and when I accepted the invitation to attend this convention it was with the understanding I was not to say anything; but there were one or two things brought up here this afternoon, particularly in relation to the matter of credits, in which I have been vitally interested, and I believe the main object of your association should be co-operation in the line of credits. It occurs to me that the proper thing for your association to do is to plan some way whereby the dead beats in the business should be entirely eliminated. I mean a man who will obtain a line of credit from a certain jobber, and when he has run to that limit switch his business to some other jobber who is not acquainted with his business methods. That is all wrong, and I believe the association can correct that.

There is one other matter which was brought up by a gentleman here this afternoon, and that is on the question of the monthly list of records. I am not familiar enough with some of the jobbing business to know whether or not they would desire that changed, but it is my personal opinion that the elimination of the monthly list of records would be a step backward. I certainly believe that the major portion of your business during the last few months, or perhaps during the past two years, has come from the sale of the new records, and while this matter was taken up some time ago I believe about two years ago the association officers suggested that if the National Phonograph Co. would maintain their list at about fifteen hundred numbers that would be about the proper figure, and so long as we issue monthly lists and issue cut-out lists correspondingly large, there is no reason why the monthly list should not go out. I believe some of the gentlemen here will agree with me on that.

Mr. Blish in his paper spoke of the amount of money to be expended in advertising, or which was spent in advertising by the manufacturers in the last year. His figure was too conservative. I know that the larger manufacturing concerns, the four larger ones, must have expended three times that amount in the last year in advertising, and there is no reason to doubt that they will materially increase that expenditure in the next twelve months. I do not think of anything else I can cay on these subjects.

The Chairman—I would state for the benefit of Mr. Dolbeer and Mr. Lyle, who have both touched on the issuance of monthly lists, that I think we have never held a meeting but what that subject has been discussed, and while we all have different views and perhaps if each of us were running a factory we would have different sized lists the general opinion seems to be that we do not care so much for the size of the monthly list as for the size of the catalogs. If you will keep the catalogs down within our means to carry them, we will leave it to you to issue such monthly lists as you see fit.

H. C. Brown on Salesmanship.

Henry C. Brown, advertising manager for the Victor Talking Machine Co. was next called upon and addressed the gathering as follows:

Mr. Chairman and Gentlemen: Mr. McChesney was not here last year and I was, and I got mine last year, and I think he ought to get his this year. You have had considerable talk about optimism. That is my strong card. I have been living on it for the last thirty years. Optimism

MRS. J. NEWCOMB BLACKMAN, WHOSE HUSBAND WAS BUSY MAKING THE CONVENTION A SUCCESS.

is a strong factor in hope, and if a fellow keeps on hoping he will probably get there some day. But we have got past that in the development of the talking machine industry. As several of the gentlemen have pointed out to-day, we are past the stage of experiment or toy. We can look into almost every refined home throughout the country and find one of the high grade machines, and it has been put there because it represented full value, and it has been pleasing to everyone and everyone has been satisfied with his purchase.

You have a body of men here capable of doing almost anything they set out to do. While my efforts are confined entirely to advertising, it seems to me advertising is nothing more or less than salesmanship on paper, and every man among you is a salesman or should be. Salesmanship is a serious study. Mr. Blish and I were walking out on the boardwalk to-day and spoke of the necessity of educating the man behind the counter to the importance of the line he carries, to the importance of the goods he is offering to the public, and what these goods represent and what they will bring to the home in which they are installed. I do not think too much work can be put behind the efforts of the jobber to educate the retail man to the full value of the talking machine. It is simply a case of presenting the goods properly in order to sell them. We are doing all we possibly can.

MRS. E. F. TAFT, ONE OF THE MANY POPULAR LADIES PRESENT.

We have surrounded our advertising by about as much dignity as it is possible to do. We have created a universal demand, and we have been supported admirably and wonderfully by the distributer and dealer.

We are going to do even more this year. I do not feel free to say just what that is going to be, but we are going to do things that we think will enthuse the trade more than anything we have ever done before, and we are going to continue to manufacture what we think are the best goods, and going to spare no expense towards giving the people what they want. I thank you, gentlemen, for the privilege of saying these few words to you.

The Chairman: Mr. McChesney, will you enlighten us somewhat on your policy of advertising?

L. C. McChesney on Publicity.

L. C. McChesney: Mr. Dyer and Mr. Dolbeer have said about all I could say about advertising. Next year will be the greatest in our history in advertising, in spite of the fact that we do not believe that for the first six months of that time we will get value for our expenditure. The National Phonograph Co. is fortunate in representing a man who is one of the greatest optimists in the world. There is no man in the United States that believes more in the future of the country than does Mr. Edison. With that belief, he is quite willing to see us spend a large amount in advertising.

George P. Metzger Heard From.

The chairman next asked George P. Metzger, advertising manager for the Columbia Phonograph Co., to address the meeting.

Mr. Metzger said: Mr. Chairman and Gentlemen: I am afraid I speak best with a pencil. I would a great deal rather tell you what we are going to do in advertising this year after it is done. I want to say just one word along that line. Keep your eye peeled. Get your dealers to co-operate with the manufacturer in their own local advertising. That is the one best way to get more orders and better remittances.

The Chairman: I think we will all admit that the people connected with the manufacturing end of the talking machine business are good fellows. It has been my fortune to be connected with several different lines of business, and I have never met a better, jollier lot of people than those connected with the talking machine manufacturing end of it. It has also been our good fortune to meet equally as good fellows connected with the accessory end of it. We have with us a prince of good fellows, Mr. Beecroft, of the Tea Tray Co.

Clement Beecroft's Remarks.

Clement Beecroft: Mr. Chairman and Gentlemen, and I may say friends, because I think I know every one here, I have been connected with the horn end of the business for so many years. I have the honor to be with the company that I believe made the first talking machine horn that was ever made, and I just have a telegram from Mr. Martin, our president, who regrets that he is unable to come to-day on account of illness in the family.

As far as the last two years are concerned, we have sold most of our horns direct to the talking machine manufacturer, and a few to the jobbers as I used to sell them years ago. That, of course, was occasioned because of changes in the outfits. We stand to-day ready when there is a demand with horns, of which I have samples, that we think are ahead of anything we have attempted before. So that should there be any change, and the jobbers want to carry any stock of horns for any type of machine, we have them and I shall be very pleased to hear from you.

I have unlimited faith in the future of the talking machine business, because when you discard it what are you going to put in the place of it? It is as up-to-date as the selections, no matter what they are, as they come out.

The Chairman—Gentlemen, I will now call upon Mr. Ornstein for a few remarks which must have been suggested to him by the paper read

by Mr. Mickel. He is now here, and we would be glad to hear from him.

Mr. Ornstein Discusses Salesmanship.

Mr. Ornstein—I listened very attentively to the paper, and believe that the suggestions given are very good; but the question which must remain is whether the program outlined is going to be followed up by the jobber. There are any number of suggestions offered in reference to the manner in which we should guide our traveling force; but the question is, do they receive the hearty support and co-operation of the jobbers? A mere paper is very good, and if every man went back and worked it along those lines as enthusiastically as he receives the paper, I believe very good results could be secured. I have, however, found that the capable salesman, the man that is able to enthuse the trade, also secures orders. It is something like going to the sick and telling them about a very gracious heaven and letting them starve. What is the use of going to a dealer with two machines and fifty records and trying to enthuse him and not trying to increase his stock? The situation at the present time requires that the dealers enlarge their stock, and until such time it does not pay any manufacturer to send their men around and try to enthuse a dealer into putting $500 worth of advertising back of a $50 stock. There will always be some men employed by the manufacturer who do not pan out well. You must not forget that the very best men the Victor Co. has had have been engaged by the distributers. Probably out of five men engaged there are only two that have the necessary ability and qualifications. That accounts for the numerous changes made. I do not pose as a Balzac or a Charles Dickens in being able to decide upon the various abilities and qualities of men. I do not believe any of us can look at a man and say whether he will succeed as a salesman any more than we have been able to decide which men will succeed as jobbers. That will always be a problem we will have to spend a lot of money to solve.

I notice in part of the paper that Mr. Mickel stated that he himself had gone out to visit a dealer and induced that dealer to order a large amount of goods. I would like to ask Mr. Mickel and the rest of you, How often have you done it? A demonstration of it once is not fulfilling that part of the duties. It is just as reasonable that we should ask that you go out and see these dealers. Our men are out on the road to assist you. Our men do not always receive the co-operation that they should. Our salesmen are apt to make mistakes, are apt to jump over the traces occasionally, but the question is, Do you make the reasonable allowance for them? A man going out from the factory has a very hard row to hoe. Not only has he to be very careful to see that his orders are placed impartially, and also to see that he is satisfying the distributers, but he also runs up against the great wall that the jobbers' man is in better position to offer terms and concessions which he is not in a position to offer. I do not believe, with very few exceptions, that there are any Victor salesmen out on the road offering the dealer concessions which the distributer has not permitted him to give.

I have probably gone away from the beaten track here and taken up a paper, instead of merely stating that we will try to co-operate with it. We are anxious to co-operate with it, but it is unreasonable to expect any results from these papers unless you do something more than merely applaud them when they are read and forget them when you go home. If you will put your own sales force out and advise us of our men's mistakes, they will succeed. But in the past we have received more suggestions than co-operation, and that accounts for this great sales force of the Victor Co. and other companies in not being as productive to you as you expect, and probably justifying and bringing forth certain criticisms. You must not ask for that perfection in our sales organization which up to date has not been demonstrated in their sales organizations among the jobbers.

Other Business Transacted.

Before the meeting was adjourned an attempt was made to settle upon the meeting place for next year.

Jas. F. Bowers proposed Atlantic City as being in close proximity to the factories.

Max Strasburg, of Grinnell Bros., Detroit, strongly recommended that city as being centrally located and convenient for western jobbers, while Fred G. Graves, of Portland, Ore., extended a cordial invitation to make that city next convention headquarters.

An amendment was thereupon made and carried to the effect that the secretary be instructed to secure the opinion of members regarding a suitable meeting place within thirty days.

All business being disposed of, the meeting was adjourned, the members and friends preparing for the banquet at the Hotel Shelburne in the evening, preceded by a general reception from 6.30 to 7.30 p. m., with Thomas A. Edison as the man of the hour.

List of Members and Guests.

Louis Buehn and Ed. Buehn, Louis Buehn & Bro., Philadelphia; W. H. Reynolds, Mobile, Ala.; Charles B. Bayley, of John F. Ellis & Co., Washington, D. C.; Lawrence McGreal, Milwaukee, Wis.; I. SOME OF THE EXHIBITS.

Sheip & Vandegrift, Inc., Made a Handsome Showing of Their Music Master Horns—Also Introduce a New Needle Box—M. A. Carpell on the Ground With Herzog Cabinets—L. P. Valiquet Introduces New Form of Resonator—New Tea Tray Horns—E. Schloss & Co.'s Record Cabinets.

There were several exhibits of various characters at the Chalfonte. Sheip & Vandegrift, Inc., of Philadelphia, had a handsome exhibit of the Music Master Horns and a new special needle box, H. N. McMenimen, the general sales manager, being in charge. The Music Master horns have been recognized by the trade as possessing unusual qualities, and the majority of the jobbers took advantage of the opportunity to visit the exhibit, just to shake hands, if for nothing else. Various styles of horns were shown, the king of the line being a handsome solid mahogany horn inlaid with mother-of-pearl and ivory. Another was made entirely of spruce, the same material of which piano sounding boards are constructed. Yet another was in quartered oak, bearing six coats of varnish, and being hand rubbed to an exquisite finish.

There was also shown for the first time the Baby Music Master, a small horn with an eighteen-inch bell at the present time being made only in oak and walnut. The baby horns fit either Victor or Edison machines, while the larger Music Master horns may be fitted to any make of machine. The various sections of the horn were also shown in order to give visitors an idea of their construction.

The patent needle box referred to was of a unique form, permitting only one needle to be extracted at a time. The box was made of wood, cone shaped and was designed to protect the needles from rust and the user's fingers from scratches, as is often the case with the ordinary box.

M. A. Carpell, of the Herzog Art Furniture Co., Saginaw, Mich., was also in evidence and told of the valuable points of his cabinets whenever opportunity afforded.

L. P. Valiquet, of the Complex-Aural Co., Newark, N. J., also attended the convention for the sake of introducing to jobbers and manufacturers an entirely new form of resonator, to take the place of the horn. The resonator is constructed on the principle of the piano sounding board. It occupies very small space, being ten inches high and eight inches wide, and may be constructed after very handsome designs. Though it considerably softens the tone of reproduction in a closed room, at a considerable distance it carries as well, if not better, than a good sized horn. Mr. Valiquet expects to have the new attachment on the market by fall.

Clement Beecroft had a special line of new model tea tray horns which were greatly admired by jobbers. Mr. Beecroft took a number of substantial orders.

E. Schloss & Co., New York, had their line of cabinets on exhibition at the Chalfonte and several representatives were on the ground.

Good displays give any house the reputation of being "up to date." Be "up to date."

Alex. Ducat has opened a talking machine store on North Main street, Bowling Green, O.

The Jobbers' Banquet Was a Distinguished Success

Splendid addresses made by leading men of the industry at the Shelburne—Reception held preceding the banquet—Thoughtful summing up of the talking machine situation by men at the head of great institutions—The World's complete report of the banquet should be closely read by every talking machine man in every land on earth

The banquet which marked the close of the convention was held in the Rose Garden of the Hotel Shelburne on Thursday night. At the speakers' table were seated the leading men of the industry and at the right hand of the toastmaster sat Thomas A. Edison, who arrived at Atlantic City by automobile.

From half past six until seven thirty a reception was held in the parlors of the Shelburne, where the jobbers and their friends were presented to Mr. Edison by F. K. Dolbeer of the National Phonograph Co.

One hundred and twenty-five people were gathered around the banquet board and the affair was voted unanimously as being the most interesting from every viewpoint ever held in the talking machine industry.

President Bowers filled the role of toastmaster with dignity and tact and his introductory remarks were heartily applauded.

When cigars were lighted President James F. Bowers assumed the duties of toastmaster, and proceeded to carry out the program of the evening.

Toastmaster Bowers' Introductory Remarks.

Toastmaster Bowers: If the ladies and gentlemen have any difficulty in seeing the speakers' table and the charming array of talent thereat, they may move their chairs to either side of the columns. If the columns are in the way and interfere, the ladies and gentlemen can move to whichever side they please, we cannot move the columns. (Laughter.)

The National Association of Talking Machine Jobbers, ladies and gentlemen and distinguished guests, we bid you a real, genuine, old-fashioned welcome. We have a most excellent authority in which I think Mr. Dyer will bear me out in saying that

"East is East and West is West, and never the two shall meet,
Till Earth and Sky stand presently at God's great Judgment Seat;
But there is neither East nor West, Border, nor Breed, nor Birth,
When two strong men stand face to face, tho' they come from the ends of the earth."

We have many strong men gathered from the East and the West, and the North and the South of our country here to-night to do justice to that which I hope will prove to be an auspicious occasion. The business labors of this Association have been very onerous and exacting. They are over now and we conclude the national session with what may be called the corona of the affair, to wit, our dinner. This is said to be a holy feast, for are we not dwelling in holy unity in feasting together as brethren? There seems to be no objection, however, of having the sisters to dwell with us at the same time. (Laughter.)

Our energetic chairman of arrangements of this Association, J. Newcomb Blackman to whom great honor is due for the success of this occasion, has handed me his bill of particulars, which I am supposed to enforce, with the aid of this bung-starter. (Laughter.) He has succeeded in a remarkable undertaking and instead of having the discourses delivered at the business session of the Association, he has by some specious scheme interested the heads of the important concerns to the extent that he has induced them to present their views and addresses on this occasion in a series of short addresses in a few well chosen remarks. This occasion is graced, ladies and gentlemen, by the presence of the greatest genius of modern times, and I believe of all times, and I am going to ask you to rise in your places to do him honor and drink with me to the health and long life of Thomas A. Edison. (Great applause.) I dare say that you are aware that Mr. Edison makes but few public appearances and no public speeches. You may appreciate his appearance here and appreciate it fully. Note what I say—he makes few or no public appearances. In his place, however, and for him, appears his next friend, the president of the National Phonograph Co., of Orange, N. J., who will address the gathering on the "Relations of the Factory to the Jobber." I have the pleasure, ladies and gentlemen, in presenting to you Mr. Frank L. Dyer:

Frank L. Dyer's Remarks.

Mr. President and Gentlemen—The subject which has been assigned to me this evening is "The Relations Between the Factory and the Jobber." I presume, of course, that this means the relations which *should* exist between them, and I think, in speaking for the National Phonograph Co. on this subject, that I am justified in saying that those relations *do*, in fact, exist between us. Of course, we have had differences in the past. Some of you have done things that we perhaps have not liked, and I have no doubt that we on our part have done things that some of you have not liked. It is absolutely and humanly impossible for two people or two concerns to agree on all things, whatever may be the relations between them, whether manufacturer and jobber, employer and employe, parent and child, or even husband and wife; but when two people are working together for the common benefit of both, whatever may be the honest differences of opinion between them, it is always possible for them to work hand in hand and shoulder to shoulder in a friendly and loyal spirit of co-operation. If I were asked to define as briefly as possible the ideal relations between a factory and its jobbers, I should describe them by the words "co-operation and mutual dependence." If there be a lack of co-operation or distrust or suspicion between the two interests there can be no lasting success on the part of either. The manufacturer must feel that he cannot succeed unless the jobber succeeds, and, on the other hand, the jobber must have for the manufacturer the same intense feeling of loyalty that he has for his own business. In a certain sense all jobbers of the National Phonograph Co. are stockholders in our concern, because they participate in the profits of our product. In another sense they are employes, because they contribute to our success, and in a larger and finer sense they are our friends, with a friend's privilege to commend when commendation is right and to criticize when criticism is needed. A manufacturer dealing with jobbers must realize that the selling of goods is an expensive thing, and that the jobber must be allowed liberal discounts; that he must be protected, so far as may be reasonably possible; that he must be accommodated and assisted in the handling of his accounts; and, more important than all, that he must be supplied with goods of honest manufacture and readily salable value. All of these things we have done. The discounts which we have allowed to the jobber and to the dealer compare favorably with those offered by any manufacturer of a similar or analogous line, and in the case of Amberol records the discounts are exceptionally liberal, as I think all will admit. In the past we have advertised liberally, our expenditures on this item alone exceeding one-half million dollars per year, and we have no

FRANK L. DYER.

thought of reducing this expense in the future. We have sought at all times to protect the jobber, doing absolutely no retail business and having no direct relations with the dealer, except in a few isolated cases where dealers have refused to deal through jobbers and have sacrificed their profits by doing so, and although we have received numerous applications from large concerns who wished to become jobbers we have in every case rejected the application when to accept it would conflict with the business of one or more of our jobbing friends.

We have improved our lines as rapidly as possible, have made new machines, new horns and new records, and the future holds out much in the way of improvement that we intend as rapidly as possible to put before you. So far as our co-operation with you is concerned, you know what it has been in the past, and I can assure you that there will be no change in our attitude in the future. We have tried to meet you more than half way, and a number of you gentlemen can testify to the fact that we have helped you out in the matter of your accounts by accepting notes, when we might well have pressed for other terms of payment. On this point I wish to make a single suggestion, based on the thought that so long as our goods are sold to you on open account we have a common interest with you in your outstanding accounts receivable, and as you may be weakened by failing to collect these accounts we are necessarily affected. One of the objects of this association, I understand, was to protect your membership from dishonest or incompetent dealers, who, buying goods from one jobber and refusing or being unable to pay,

BANQUET WHICH MARKED THE CLOSE OF THE JOBBERS CONVENTION

Flashlight taken in the corridors of the Shelburne just before the feast of reason and flow of soul began. Thos. A. Edison is shown in the picture, holding in his lap little Jack McGreal.

open successive accounts with other jobbers, treating them all in the same fashion. It is obvious that such a dealer as that is no better than a pirate, and you certainly have the power to protect yourselves from his dishonest methods by keeping each other informed of all delinquents and refusing to take on a dealer until you are satisfied that his relations to his former jobber were straight and honorable. Don't be so eager to get new accounts that you cannot take the trouble to look into the matter carefully, and by co-operation among yourselves this very grave menace ought to be completely removed. I urge upon you most strongly to get together on this line.

It seems to me that no better indication of the friendly feeling which we entertain for you can be found than in the recent settlement of the long-pending litigation in New York, by which we paid $450,000 in cash to protect the business of the jobbers in New York and elsewhere from molestation. All that we ask is the same sort of a square deal from you that we on our part have always endeavored to give. Our agreement system is admitted by all to be one of the most successful features of the business, and if imitation is the sincerest form of flattery I think that we have good reason to feel that we have been flattered. Almost without exception our jobbers realize that in the matter of these agreements we are in deadly earnest, and that a deliberate violation of their conditions means a quick and summary punishment. But these agreements should not be, and I do not think they are, regarded as a sword of Damocles held by a hair over your heads, but rather as a means for protecting the honest and legitimate jobber from the depredations of an unscrupulous competitor. I feel assured that if our policy regarding these agreements were relaxed to the slightest extent the results would be deplorable, and I hope all of you gentlemen will feel that our policies in this respect are dictated primarily for the purpose of protecting our jobbers and dealers, although, of course, we are selfish enough to know that the effect of such protection will necessarily be helpful to our own interests.

No one can disguise the fact that we have passed during the past eighteen months through a period of trial and tribulation, and although the clouds are still hovering in the sky the sun is shining through them here and there with every prospect of their being blown away by the winds of returning prosperity. We must realize that the talking machine business has not been alone in its depression, and we must not be discouraged if it returns more slowly than we might hope. Remember that many workingmen are still only partially employed; that many have no employment; that others are still being inadequately paid, and do not forget that there are grocery bills and doctors' bills and bills for the children's clothing to be paid before a surplus of luxuries is obtained. But there can be no doubt that the pendulum has swung to its farthermost point and is now returning, and as the pendulum swings from a state of rest by gradual accelerations business prosperity will return slowly at first and then with increased rapidity. I have an absolutely unfaltering faith that the talking machine business will not only return to the pinnacle of its highest success, but will go on increasing to unknown heights, because as long as men and women love music and entertainment just so long will they continue to invest their money in the goods that are the basis of the relations between the factory and the jobber.

Toastmaster Bowers—We were given to understand, and were under the full expectancy of having with us on this occasion the president of the Victor Talking Machine Co., Eldridge R. Johnson, but he was unable to come, and his place is ably taken by the gentleman who will address you next on the subject, "What is the Future of the Talking Machine Business?" Louis F. Geissler.

Louis F. Geissler—Ladies and gentlemen, I had personally hoped until to-day that Mr. Johnson might be with us, but a few of you who know Mr. Johnson, know of his diffidence, and the impossibility of getting him out at a large gathering; then, too, he is not well. He has, however, promised that he will be with us on our next visit.

Eldridge R. Johnson's Paper.

There is nothing whatever astonishing in the development of the talking machine business; there is nothing abnormal in its growth so far; and it has not yet reached its maturity. Thirty-two strenuous years have passed since Thomas A. Edison first exhibited the new-born infant, destined to become a new industry; and because of the birth of this great art that period will be a landmark for future historians when they write the marvelous account of the social, political and industrial progress of the age in which we are now living—an age that will shine out in the history of a thousand years as the beginning of the balance of human affairs.

The Talking Machine's Great Future.

Heretofore humanity has been too much engrossed with its more serious affairs, and we are now beginning to learn that we must play as well as work. People are asking themselves, "To what purpose do we live?" The trade union cry of "Eight hours' work, eight hours' play, and eight hours' sleep" is no idle dream; nor is it a

ELDRIDGE R. JOHNSON.

privilege for which people who work with their hands are alone contending. The world is going to work less and play more; this is the tendency of the times. The talking machine, therefore, if it can only help us in our play—and it can really do many other things—has a great future.

It has certainly now reached a stage in its development when it can safely be classed as one of the greatest of intellectual amusements; it now appeals to the intelligence. The talking machine is a part of the affairs of the human race—it has a destiny—it has come to stay. No one can expect unqualified success in any enterprise or undertaking; there will always be ups and downs, but I hope that during my life and business experience no depression in the talking machine business less difficult to explain than the present depression will occur.

The panic of 1907 and its effect on the talking machine trade must be taken as a matter of course. It is nothing but an incident, and is really, when viewed from the proper standpoint, most encouraging, indeed. The Victor Co. has suffered only about as have the well-regulated standard industries, such as steel and the electrical business. This is ample proof without further reasoning that the talking machine is now a standard commodity, because the world makes use of panic periods to rid itself of useless incumbrances. That is what panics are for.

The fact that the reliable talking machine companies all over the world have passed through this panic successfully shows that the talking machine business is not marked for elimination. It proves that talking machines are useful; the world is not tired of them.

Edison's Phonographic Fame Imperishable.

In further support of my assertion that the business has not yet grown up, consider the electrical development during the last forty years. Franklin 135 years ago called the world's attention to the possibility of electrical magnetism, but he gave us far less satisfactory material for the creation of the new industry than Mr. Edison handed us with his first instrument.

Both Franklin and Edison did a great thing, such as does not happen often even when computed in proportion to the history of the human race—they initiated each a new industry and art. Mr. Edison has done many other wonderful things, but as the inventor of the talking machine he will be identified in the long ages to come, and the talking machine will, as will his fame, endure so long as men inhabit the earth. The talking machine is great among the great inventions—it will last. Edison and the talking machine are inseparable in fame.

The world waited longer for the infant industry of electricity to find itself than it has waited for the talking machine business. Electrical development passed through the childhood of toy estate just as the talking machine did. It became a half-grown child, most all play but predisposed to serious affairs, as is the talking machine at this very moment; it passed on and has gradually grown into a husky youth with all the vigor and glorious prospects of youth, exactly as the talking machine busines is going to grow and exactly as the ousiness is now growing.

The novelty and wonder of the talking machine, which has heretofore been an important factor in the matter of selling, has been losing force rapidly for the last five years. This perfectly natural and healthy change has given birth to the question, "Will talking machines go out of use?" All the great arts, when new, have gone through exactly the same process and change. P. T. Barnum, about thirty years ago, billed an electric arc light as one of the chief attractions of his "Greatest Show on Earth." Did the business of electric lighting go out when Barnum found it no longer an attractive novelty? Read the answer in the almost incomprehensible figure of total capitalization of electric light and power companies.

Passing Out of the Stage of Novelty.

The talking machine is passing out of the stage of novelty, and, like the electric and other lines, this will prove a step in advance. They have a use; they fill a long-felt want; and in the place of buying for curiosity the public are now buying for a purpose. This is substantial business. This is where we begin to understand that the business is not a joke. This is where the matter of quality assumes its proper proportion. Don't forget the business is young—very young. It took the world nearly one hundred years to find a practical use for electricity after Franklin discovered the elements of its control.

We are now probably very close to the threshold of important developments in our history, and it is to the development of the art that we must look for our future prsperity; we cannot stand still. There should be no toleration of the degrading practices of price cutting, nor will such practices become more than a passing incident in the history of the art for many years to come. The firm that deals in quality will always find a market for its wares, regardless of the matter of price, providing the price is fair; and the firm that prostitutes its business and sacrifices its future to the enterprise of price cutting will find itself left by the wayside, stranded by its own foolish short-sightedness.

Goods should be sold as low as will yield a profit to a progressive, well-paid organization for manufacturing and selling, wholesale and retail, all the way through until they reach the hands of the customer. A successful enterprise must

BONCI, The World's

In the world of opera one name stands out clean-cut and distinct, above all others in its class, as a synonym for everything that is faultless and exquisite in vocalism—that of Alessandro Bonci.

Bonci's work is the standard in the great operatic tenor roles. Of Bonci, everybody knows. In everything where delicacy of shading, brilliancy of tone and intelligence of interpretation is demanded he is matchless, infallible and supreme.

In the Fonotipia Double-Disc Records of Bonci's voice are shown this great artist's infinite versatility, his never-failing gracefulness of execution and the same charms of expression and technique that have won renown for his stage work.

THE BANQUET AT THE SHELBURNE.

(*Continued from page* 41.)

be a good thing for all who have to do with it. The enterprise that tries to "hog" all the profit is going to be unpopular. Public opinion will turn against them. I believe the improvement in the art will advance too fast for the infamy of price cutting and sweat shop methods to find a lodgment. It is clearly the duty and best policy that the trade turn its face hard against such firms that show the black flag of piracy of patents or the yellow spots of cut prices.

Touching on and Appertaining to Patents.

Patents are a most useful and the most potent means of maintaining prices to a fair and wholesome level. They can never be used to do more unless the holders of the same are short-sighted. The punishment in such cases usually fits the crime, as any attempt to hold prices to an unreasonable level, through the means of a patent, reduces the volume of trade and the enterprise is, therefore, strangled in its infancy.

The world can generally get along without a particular patent; the public are good appraisers; they want the benefit of the new idea, but they must have it at a reasonable price or they will refuse to use it in any great quantity. Necessary commodities can never be controlled by patents, therefore the public are independent of the patent question. While they always welcome an improvement, they are capable of getting along without it as they did before it came, and they certainly will if a "hold-up man" comes around using his patent as a gun.

Fair prices are a necessity to the healthy condition and progress of any line of trade, and the trade should fully co-operate in their maintenance. He who destroys this healthy condition for the sake of temporary gain is an enemy to all who work for the betterment and uplift of mankind, and the time is coming when such selfishness will be recognized as selfishness and when legislation and judicial power will not be in its favor, as it is to some extent at present. It will not always have the sympathy of the courts.

There are merchants who say, "We could make better purchases if there were more manufacturers of talking machine goods; the system of established and maintained prices in the business gives us no chance to reap the benefit of our genius as buyers, it is all cut and dried for us." This is true, but this plan of selling goods is a square deal and the advantages of selling far outweigh the disadvantages of buying. It is certainly true that if there were a larger number of manufacturers there would be a larger number of merchants trying to sell the same kinds of goods. In other words, the goods would be easier to buy but harder to sell and profits much less.

Quality as a Means of Competition.

Patents on talking machines can never be more than a regulator; the talking machine manufacturers should respect each other's patents; there is always more than one way to do the same thing. The manufacturers should try to excel in quality as a means of competition rather than to devote themselves to a war of destructive prices. The man who says, "Give me a license or I will destroy your patent" is a hold-up man just as much as was Jesse James—an enemy to all. When people take this position with the Victor Co. it means a war to the death; there is no other way.

Quite a number of firms have taken this path of commercial suicide within the last four or five years. In the matter of disputes on patents the trade generally know who the infringers are, and if they do not it would pay them to get a good, responsible patent lawyer to point out the truth; it will cost far less than to have their stock of goods enjoined by the courts. The inventor wins out by far the greatest number of times; at least the Victor Co.'s inventors do; and manufacturers who lack the initiative to create and therefore prey upon the works of others are never safe people to tie up to.

The competition between the Edison Co. and the Victor Co. has so far been ideal. It has been a question of quality, commercial organization and fair dealing, and in our efforts to excel each other in this respect I am sure we have done each other much good. We have greatly enlarged the industry; we have improved the quality and demand for the goods and have created a prosperous condition for all interested. Certainly the trade has been more greatly benefited during this period than at any other time, and, to a great extent, does the prosperity of the trade as it is now composed, depend upon the maintenance of this wholesome and commendable relation as between the two companies.

Victor and Edison Companies Genuine Rivals.

There is no vital question of disc versus cylinder. Let the Victor Co. keep to the disc and the Edison keep to the cylinder; one side of the question is enough for one manufacturer; there is an inexhaustible opportunity to improve both, such as will absorb the energy of the respective organizations so long as a single present member shall live, no matter if all of us live to far exceed the records of human longevity. The little ads. in the daily papers, which offer both the Victor and the Edison goods by the same firm, strike me as being potent winners of business. The Victor and Edison companies have no commercial understanding; they have no contract of alliance, but they are natural allies.

The disc and cylinder trade forces can be made to balance each other in the long run by independent and liberal management on both sides. It is not unlikely that the scales of the situation may from time to time show an advantage in favor of one or the other; but so long as the organizations retain their respective independence, ability and fairness, the advantage to either one or the other will be but temporary and only serve as a spur to cause the losing one to make a greater effort to regain its lost ground. I am sure that the Victor Co. will always be satisfied with the portion of the disc; we shall never sell so many, but as they bring more, perhaps it will average up to a satisfactory figure in the end.

I do not consider that either the double-sided disc record or the doubling of the thread of the cylinder record will increase the sale of talking machine goods. No doubt there is a certain economic advantage in some instances secured by the use of the above devices, but the articles will not prove themselves as contributing to the progress of the art, according to my opinion. The improvements, if they can be classed as such, are purely economic, and whatever advantage they hold, if any, will be absorbed by the public eventually, with small thanks, and the talking machine manufacturers will be no better off than they were before their introduction; but there will be a huge bill for the cost of the change to pay.

The Victor's Opinion of Double Discs.

These improvements have, of course, the advantage of giving the public twice as much of the same thing for a very little more money, but I really believe that the public would much prefer to have the same quantity as they had before and pay the same price if they could get it of a higher quality. You cannot increase the attendance at the theater simply by lengthening the time of the play; at least you could not increase the attendance permanently in this way. Generally, however, you can depend upon an increase in attendance by increasing the quality of the play staged.

Therefore, I conclude that while the public may to a certain extent take advantage of the bargain of more goods for their money, they will spend no more money than they did in the first place. Should we, however, offer them better goods for the same money or even for more money, they would be far more likely to increase their investments in talking machines.

The ultimate success and advancement of the talking machine trade depends as much upon maintaining a standard of the personnel of the trade to high ideas as it does upon the power of the manufacturers. Do not snap at the first cheap thing that bobs up and down in your range of vision—there is sure to be a hook in it.

I have often heard the question asked and discussed, "Will the talking machine trade meet the fate of the bicycle?" The bicycle business is to-day, I believe, fairly prosperous; but the bicycle did not come into existence as a new art, as did the electrical business and the talking machine business; it grew up slowly from the velocipede of forty or fifty years ago. When ball bearings and pneumatic tires were introduced the bicycle received such a tremendous impetus that it temporarily outgrew itself. There was, I believe, a short period in which it was considered practically dormant. It was far from a dead one, however; it bobbed up again in the form of the automobile. What really happened was that the bicycle evolutionized itself into the automobile. The panic has not yet even checked this youngster; there is a boom in automobiles; the good ones are hard to get.

Not a Fad, But a New Art.

Is it not, therefore, plain to all that the talking machine is not a fad, but a new art, a new industry, just emerging from its childhood? It will eventually take its place among the standard arts and industries, just the same as did the printing press, the flying shuttle, the steam engine and the electric dynamo. Indeed, the talking machine has closely followed the history of many of the industries from their birth all through the comparative stages of their development so far as the talking machine has gone. From the past and its wealth of infallible experience we must judge the future, and because of this, as well as because of the many encouraging signs of the times, the future looks good to me.

The business must grow for many, many years to come. You can pin your faith to it; it will absorb all the lives and energies of the men who are at present engaged in it, and I have not the slightest doubt but that our children's children will be busy at the many problems which must be unraveled before it can be considered as perfect, before it can be called grown up or standardized. A thing is not likely to stop during its natural growing stage.

Prospects for the coming fall look good; but, while I expect a rapid and healthy development, I do not expect a boom, and hope there will be none. It is very evident, owever, that the enterprising jobber or dealer can prepare for the coming fall and winter with confidence that for whatever energy, effort or capital he may invest in his talking machine business he will receive a substantial return. The time has now arrived when the trade can talk "quality" in the matter of talking machine goods. It is so much more potent and satisfactory that the mere matter of price, especially when there is so little difference between the cost of the highest quality goods and the lowest quality.

Public Beginning to Discriminate.

The public are beginning to discriminate, and when they learn their lessons fully, which will be soon, quality will be of more importance in talking machine goods than in any other line. Many people sell pianos at a difference in price of $200 or $300, based entirely on tone quality. There should, therefore, be very little difficulty in selling talking machines for $10, $50 or $100 more, or talking machine records for a few cents more when the difference is based on a tone quality that is far greater than exists as between the best piano made and the poorest one.

My line of reasoning will stand all the tests of cross-examination, and the business is all right, but we can only reach our goal quickly through the energy and co-operation of our jobbers and dealers. Give talking machines more

attention; they will repay all the time devoted to them. Create the business do not wait for it.

Consider the insurance business, see what they have done. There is an example of energy and an example of the fruits of energy. Some of the companies do so much business that they have to be stopped by law. Yet it is possible to sell a talking machine wherever a life or fire insurance policy is sold. Still statistics show that only a small portion of those who should do so carry insurance. Look at the automobile business. They say they are going to sell 200,000 this coming twelve months How many talking machines would that energy sell, and how much more profitable and continuously profitable are talking machines than automobiles.

Mr. Johnson Regrets Being Absent.

I can safely advise the trade. Realize what is before you and take the great opportunity. It pays to work intelligently. Astonishing things are possible. Even the whole world was conquered once. Alexander was history's greatest example of energy and zeal. He even had some hustle left over when his job was finished. There is nothing to worry about. The future is full of cream. Hustle and the world is yours.

In closing, I would express my sincere regrets that circumstances do not permit of my being with you on this occasion, and I would extend you the hand of good-fellowship with my sincere thanks for the parts that you have all played in the pleasant and rapid advancement of our industry.

Toastmaster Bowers—In presenting the next speaker, I am partially reminded of Tommy Atkins, "whoozy and whizzy." The next speaker is a first-class fighting man. I know that he is a first-class fighting man, for I had the pleasure of crossing swords with this distinguished gentleman on the boards of the Congressional floors. In the absence of Edward D. Easton, of the Columbia Co., we are honored with the presence of this first-class fighting man, in the person of Paul H. Cromelin, the vice-president of the Columbia Phonograph Co., who will address you on "Business Policies."

Paul H. Cromelin's Address.

Mr. Toastmaster, Ladies and Gentlemen—I bring you personal greetings from my distinguished chief, Edward D. Easton, who has asked me to extend to the officers and members of the National Association of Talking Machine Jobbers his felicitations and well wishes for a pleasant and profitable convention and for a coming year of prosperity, to the members individually and to your association. It was with great regret that he found his plans for his annual visit to Europe were all completed when your kindly invitation was received, so he can only be with you in spirit to-night, and has asked me to represent him; and, as I consider the personnel of the men who are gathered here in convention assembled, and contemplate the enormous potentiality and power for good of such an association as you have organized, nursed and successfully launched upon the third year of its career, I begin to realize more fully the wisdom of some of those "business policies" which have made possible and even necessary such an association as yours in the year 1909.

The Trade Beyond Its Infancy.

Those of us who are parents know how difficult it is to realize that our babies, when they are grown up, are really able to shift for themselves and perhaps know better than we do what is best suited for them. No matter how big and how strong a man may become, it is hard for the mother to look upon him as anything else than "her big boy," who still requires her affectionate and tender care and solicitude. And so also it is hard to realize that the time is flying and that our baby industry is really getting past the "kinderkrankheiten" age, and having had successively all of the known children's diseases, is emerging into young manhood, so strong, so virile, so active, so determined, so pugnaciously progressive, so confident of the future, so convinced of its proper sphere and position, and so sure of landing there.

It seems but as yesterday when I was called into a little back room in an unimportant office building in the uncommercial City of Washington, D. C., and shown there for the first time the graphophone. The front office was that of Johns & Easton, court stenographers; the rear, the Columbia Phonograph Co., shortly before organized. I shall never forget that demonstration of the little wax-coated, pasteboard record which I was permitted to hear while Mr. Easton operated the treadle of the machine.

It was merely a bit of Irish humor in the best style of my much-beloved brother, the late R. F. Cromelin. How I would prize that record if I had it to-day; but just as surely as this industry of ours is bound to progress and go forward, making permanent impress upon the life, culture and civilization of the age, just so surely do I believe that the influence of the big, broad, progressive men who were associated with Mr. Easton in the successful commercial exploitation of the talking machine in the early days, building upon solid foundations and shaping the business policies upon which the industry stands to-day, lives and will ever be a perpetual inspiration to those who will carry forward the work in the years to come.

Cromelin Compliments Edison Handsomely.

We have with us to-night a man whose name is a household word in every American family, the record of whose achievements have gone forth to the farthest ends of the earth, and added luster to American citizenship. The name of Thomas A. Edison is associated with many of the most important discoveries of the age; inventions which have given birth to industries, calling for other men of imagination, initiative, far-sightedness and capacity for organization, to shape their course and to plan their "business policies" so that the broadest possible success could be achieved in the quickest time, that mankind could be the beneficiary and those to whom personal remuneration was due rewarded in a befitting manner for their discoveries.

It is truly wonderful when we pause to realize how many new industries have been brought into existence, carved out of nothing, so to speak, during our lifetime; but as we are naturally interested in particular in the business policies which are related to the talking machine industry, it may be profitable for a while to-night to consider what it means to build a new industry on a scientific idea, to create something where nothing tangible existed, to do the missionary and pioneer work, and to overcome the obstacles of ignorance and prejudice. And, as the invitation extended by your worthy chairman indicated clearly that I was expected to consider the subject from the standpoint of the Columbia Co., you will pardon, I am sure, the repeated personal references to our company, our men and the graphophone.

Of all the inventions with which humanity has been blessed, few, if any, have seemed to afford such a multiplicity of uses as the graphophone. I use that word in its broadest sense as embracing all practical modern machines which either record or reproduce sound.

Development of the Graphophone.

There were so many suggested uses that no one could predict with any reasonable degree of certainty just which way the industry would shape itself; and, as is usual in such cases, there was lacking in the "business policies" of those who were destined to develop the industry a continuity or permanency of policy, because from the very nature of things such a course would have been impossible. To illustrate, the existence of the graphophone is directly due to the beneficent use which Alexander Graham Bell made of the funds received from the French government for his work in connection with the telephone.

The policy of the men who exploited the telephone was to lease, not to sell the instrument. Many of you will perhaps learn with surprise that this was the plan on which graphophones were first put out. They were leased for business purposes on payment of monthly rentals. Moreover, they were leased for use within a restricted territory and could not be removed without the consent of the company. Experience has proved that the business policy of renting, not selling outright, was the correct one in the case of the telephone, but it did not take very long to find out that such a policy was far from right with the commercial graphophone.

It soon became evident to Mr. Easton and those associated with him in the Columbia Co. that the field which promised the greatest reward and quickest return and disclosed a vista of world-wide opportunities was the use of the graphophone for home entertainment, and especially for the reproduction of musical sounds; and what more natural than to utilize the instrumentality most convenient and nearest to hand? And thus we find the first band records made by the United States Marine Band, of Washington, D. C., which, under the able leadership of John Philip Sousa, was coming into national prominence.

The First Columbia Record Made.

Many of you well remember the first record with the announcement "Made for the Columbia Phonograph Co. of Washington, D. C." Now, there is an illustration of "business policy" which has perhaps been the subject of as much heated debate and adverse criticism as any one thing ever done since the business began. P. T. Barnum is accredited with saying, "Get the people talking about you, better by far if possible to get them to say something good, but if you can't, get them to talk about you even if they say something bad."

Before passing judgment too quickly as to whether the announcement was good or bad business policy, bear in mind these facts:

First—For the first time in the history of the world there had been brought into existence a device which could actually talk and advertise itself.

Second—The records were being made by a small company with limited means, which was feeling its way, groping, so to speak, with no experience and nothing which had ever gone before to guide the men who were directing its affairs.

Third—From all over the United States, and in course of time from distant foreign countries, orders came in with cash remittances to this little unknown company located, as I say, in the uncommercial city of Washington, which orders were only traceable to the fact that each record out was constantly announcing to all who had ears the name of the company and its geographical location. As the business grew you will remember the announcement was changed to the "Columbia Phonograph Co. of New York," then "Columbia Phonograph Co. of New York and Paris," and then the "Columbia Phonograph Co. of New York and London."

It would have cost hundreds of thousands of dollars expended in ordinary publicity channels to have made the name so generally known, and when the business had so developed that we were sufficiently well established in the great commercial cities, and it had outlived the purpose for which it was intended, the announcement, as you all know, was dropped. Many a time have I heard the company damned for that old announcement. Many a man had told me that he would not buy a record with an advertisement on it; but I speak with sincerity to-night when I tell you that for every individual who would refuse to buy because of the announcement, I believe that we sold to at least twenty-five or fifty who bought only because of having heard the announcement.

Introduction of Coin-Operated Machines.

The coin-operated graphophone brought unique business opportunities in the early days. When it was proposed to plunge and to move from a converted residence on a side street to a building on such a great thoroughfare as Pennsylvania avenue, and pay as much as $300 a month rent, the matter was approached with fear and

hesitancy. The idea was to make a handsome display room, containing coin-operated graphophones where the public could for a nickel hear one of these wonderful machines that could sing and play and talk. When Mr. Easton was asked if he would be satisfied if the slot machines paid the rent, so that he would be rent free to sell goods, he indicated that such a result would be highly pleasing, "for what other business was there that could operate rent free?"

Well, the receipts for the first three days more than paid for the first month's rent and the electric light bill, and the latter was no small item, for the Columbia Co. was one of the very first to recognize the value of electric light for advertising purposes and as a means of attracting attention to its business.

In the course of time the Washington equipment was duplicated in city after city until the great commercial centers of this country and Europe were covered. Everywhere, handsome stores and brilliant electric displays, on the most expensive thoroughfares, the slot machines usually paying the rents and light bills, leaving us free to sell goods without these fixed charges. I am safe in saying that this bold policy did more to encourage others to invest in the goods and go into the talking machine business on a broad scale than anything else that was done.

Naturally, as the number of machines sold increased the interest in the slot machines decreased; but we had by that time established a broad selling organization over the world, and thus you have the story of the reason for and the establishment of the Columbia stores. No one thing has gone so far in giving the impression that the business was a big, growing and permanent one, with large possibilities for profit for all who would go into it, than these same Columbia stores scattered over the country.

Where the Music Dealers Were Dense.

It is a rather strange commentary on the judgment of the heads of the leading music houses that they were so long in realizing the importance of the graphophone and that the normal, natural place for a prospective customer to go to buy graphophones and records was a music store. On one of my visits to a western city in the early days I was almost ordered out of the house for even suggesting to the proprietor of one of the city's big music stores that an attractive line of graphophones and records would be a profitable addition to his business.

It was shortly after this that Lyon & Healy became convinced of the future possibilities of the line in connection with the sale of musical instruments and became our valued and important customers. It took some time to bring them around, but gradually one after another the great concerns engaged in the sale of musical instruments have installed talking machine departments, adding dignity and prestige to the business.

From the very beginning a strong policy of fixing a selling price for all goods sold to jobbers and dealers and requiring a strict maintenance of prices established at which goods were to be sold to users was decided upon, and has been continuously adhered to since. Time after time attempts have been made by price cutters to break up this policy, and though they have at times been temporarily successful, we have never been more sure of our position in this regard than we are as we enter upon the campaign for business in the fall of 1909. If there is ever a change in this policy it will be not because we cannot keep the dealers and jobbers in line, nor because such a policy is wrong or not in their interest, but it will be due to the kind of competition which other manufacturers may indulge in.

Why the Protected Policy Should Continue.

There is every possible argument why it should be continued, and we look to such an association as yours to use the influence you may command to see to it that no change takes place in this regard. The policy of a fixed price for all standard goods has become a feature of the business policy of all talking machine manufacturers. It is frequently referred to and pointed out as a policy to be adopted in other lines. Those who are familiar with the affairs of the Piano Manufacturers and Dealers and of the Music Publishers' Associations know how often this business policy of the talking machine companies is referred to with admiration and how unstinted has been the praise given to it.

It is well for the talking machine industry that the men whose task it has been to shape its "business policies" have all had unfailing confidence in its permanency and future greatness. It would be more difficult to criticize than to praise them. In their own way each of the big manufacturing companies has contributed its full quota to the greatness of the industry. We who compete confess that we have a tender spot in our hearts for the Victor dog, and a great deal of admiration for his various masters, although in time we have fought them and will continue in all honorable ways to do so in the future. In a like manner while we have told the trade and the public to disregard the injunction that "none

PAUL H. CROMELIN.

are genuine but those containing the signature of Thomas A. Edison," still we believed in our heart of hearts, and now believe that it is a pretty good name to conjure with.

A Broad View Specifically Applied.

Broadly speaking, the policy of the Columbia Co. is to give to the public what they are looking for to the extent that we are able to do so. If that means that a man wants cylinder machines and records, we have with each advancing year brought to the jobbers and dealers a better product, and the possibility of handling that product as free from unreasonable restraint as was consistent for our mutual good, and with the chance to make such a profit as would make it worth his while to take on the line. And so to-day to cylinder enthusiasts the Columbia slogan is: "Tone-arm cylinder machines, cleverly constructed, compact, convenient, built with care and backed with a Columbia guarantee. Columbia Indestructible cylinder records, the best selling cylinder records ever placed upon the market."

To those who prefer and wish disc goods we stake our faith and reputation on the disc that will eventually supersede all others, the "double-disc record." To those who want grand opera we offer the opportunity to listen to the best that the world affords from such artists as Bonci, Campanari, Zenatello, Sammarco, Constantino, Bispham, and many others, the records of whose voices can only be procured from the Columbia Co.; but because of this we are not unmindful of the fact that the great majority of people prefer vaudeville and rag-time, and we endeavor to give them the best that can be obtained. Our policy is as an open book. We have so often proclaimed it that its repetition here might seem superfluous. We told it to you gentlemen two years ago at Buffalo, and it was repeated to you again here last year. We stand in the same position to-night.

Some things it has never been the policy of the Columbia Co. to do. One of these is to refuse permission to any dealer or jobber who wishes to do so to sell any other goods for which he has a legitimate demand and on the sale of which he can make a profit. If our goods cannot sell in competition on merit they cannot sell at all; and we never seek to tie up the dealers or jobbers so they cannot buy the goods of our competitors if they wish to do so. Nor do we subscribe to such a policy, nor do we believe that it is good for either the manufacturer or the jobber. If a dealer decides that he prefers to handle our line exclusively, well and good, but he is not compelled to do so, nor put to restraint nor punished if he does not do so.

The Columbia Exclusive Contract Defined.

The exclusive contract which the Columbia Co. has to offer is of a different kind. By its terms you can obtain the exclusive sale of Columbia goods in a given territory upon agreeing to purchase goods to an amount commensurate with the importance of that territory. One of the great objects which your association is seeking to accomplish is to prevent losses by your plan for limiting credits to dealers who may be unworthy of same.

As I understand, you are organized in this regard for mutual self-protection. This is fine, but if there was only one jobber for a given line in a given territory he would receive every inquiry that came from that territory, absolutely control the purchases of all the dealers in that territory, and they could not get goods elsewhere; and he would have the matter of extending further credit in his own hands, knowing that if he refused further extensions, no other jobber could offer better terms and thus secure his customers. That is the kind of exclusive contract the Columbia Co. is offering to-day.

The industry has reached that point, and experience has taught us so many lessons regarding it, that the policy determined upon now is destined to remain the permanent fixed policy of our company for many years to come. Many of our stores have been sold to jobbers who have guaranteed to do as much business as we ourselves could expect to do, and we have similar propositions open which we will be glad to consider with persons interested in acquiring exclusive territorial privileges. We have constantly kept before us the desirability of cutting down the amount of stock which a jobber must carry to the very minimum, and we believe that the double-disc record has already accomplished much in this regard.

Indestructible Record Against Wax Cylinder.

In the same manner when we made up our minds that the Indestructible record was to be the cylinder record of the future we cut out the wax record so that the jobbers would not have to carry double stocks. We told you before and we repeat to-night that we believe in the instalment business in connection with the sale of talking machines. We believe in their broadest possible distribution, and that the poor and those in the middle classes, as well as the rich, should be able to enjoy the entertainment which they afford, but the instalment business which we preach and practice and which we have heretofore asked your jobbers' association to indorse, and we ask you again to-night to do so, is a "safe and sane" instalment business with an increased price on all machines and substantial first payment before the outfit is delivered to the customer. That is our policy; that can be your policy. It is up to you.

That such an association as yours exists is the best evidence that the talking machine business is to-day recognized as a permanent, stable industry by men of large mercantile experience, who are in no way related to the manufacturers,

and that the foundation has been completed and the industry well launched upon its destined career.

A Pledge for the Present and Future.

We take pride in the part we have played in the past. We believe in the company, we are convinced of the superiority of the goods, and we have faith in the integrity and the ability of our men. There may be more loyal, more faithful and better men, but we have not found them; and we intend, to the extent that it is in our power, to keep abreast of the times, keenly interested in everything which marks for progress, working always for that which will be for the betterment of the industry in the light that is given us to see it, carrying on in the future, as we have in the past, a vigorous, aggressive advertising campaign which will make Columbia graphophones and records even better known, if possible, all over the country.

With the full knowledge that our policy may not always and perhaps frequently will not be the same as that of our competitors, we want you to believe, realize and understand that we thoroughly approve of the aim of your association, that we rejoice in your successes and want, to the extent that is possible, to co-operate with you in the future in everything where we can meet your wishes and advance your interests. I thank you.

Toastmaster Bowers—Ladies and gentlemen, we have a member of the trade whom we all remember, in the person of Leon F. Douglass, the first vice-president of the Victor Talking Machine Co. Mr. Douglass is not with us this evening in person, but Mr. Blackman has received a communication from him, and we feel that you would like to hear his letter. Mr. Blackman will now read it to us.

Letter from Leon F. Douglass.

Mr. Blackman—Mr. Chairman, ladies and gentlemen, I am very pleased to have the honor of reading this communication from Mr. Douglass: "J. N. Blackman, New York:

"Dear Mr. Blackman—Your kind invitation of June 18 received. While it is true I except to come East in the near future, I do not believe it would be wise for me to come during the hot weather, much as I would love to meet my old friends again. In my twenty-one years' experience as talking machine dealer, jobber and manufacturer I recall the conventions during the early days of the local companies along in 1889 and 1890. At that time I was an officer of the Chicago Central Phonograph Co. The present-day gold mine promoters are no more full of glowing promises than the stockholders of these early companies in the olden days. Their stock phrase was 'As soon as we offer the goods we will be on velvet.' They thought it would be necessary to have policemen to keep their customers in line, but they soon found out that it would be necessary to get a Sherlock Holmes to find their customers. I have been looking for the velvet all these years and, so I believe, we will always find that we will have to work for our trade. As Mr. Johnson says, 'The gold is in the mine, but we will have to dig it out.' The jobbers digging for their customers and the factory for a better product. Each will have all they can attend to in that, so that it is of the greatest importance that in our relations with each other there should be as little friction as possible, so that each can use their energies in their respective work. No doubt each will feel their burdens are the greater; as the old story goes: 'The people in the olden days cried so loud at their heavy burdens that the Lord in His goodness allowed all to lay their own burden down and take up those of others that they believed were so much lighter than their own; they soon found that the new burdens which they were not used to were so much harder than the ones that they knew all about that they cried out more bitterly than before to be allowed to exchange back.' Having been a jobber myself for many years, I can sympathize with their burdens, but I can assure you that those of the factory are many. For this reason there should be perfect confidence and harmony between the jobber and the factory.

"Confidence is the foundation of the talking machine business. In my position at the manufacturing end I have had an opportunity to observe the methods of all jobbers and to note the most successful ones. They are the ones who had perfect confidence in the business, the ones who believed the business would last as long as music hath charms, not the ones who believed it was only a fad to be used as a side line as long as it lasted. There is no doubt that it will last and continue to grow for many, many years. The ones who had confidence have advertised and been successful—the more confidence, the more success.

"With confidence there have been fine displays with complete stocks of machines and records, which have brought success. With enough confidence every talking machine dealer in the United States could now double his business. It has ever been the policy of the Victor Co. to work in perfect harmony with the jobber, and we trust that it always may be so. Of course troubles will come; many of them can only be worked out by time; but, with confidence in each other, we hope to be on velvet some day. With best wishes to all my friends, yours very truly,

"(Signed) LEON F. DOUGLASS,
"Chairman Board of Directors."

Thomas A. Edison Honorary Life Member.

Toastmaster Bowers—For the benefit of the members of this association I want to say that I omitted stating earlier in the proceedings the fact that we to-day made Thomas A. Edison an honorary life member of the Talking Machine Jobbers' Association. (Applause.)

In this flow of intellectual feasting in which we are indulging at the present time, one figure looms high on the horizon. We have always considered it as paradoxical to individually call upon at an occasion of this kind, and introduce men whose names are household words, but I am going to present this gentleman to you as one whom you all know as a man who has blazed away to success, one who for many years was in the talking machine business, a man who is a friend to every man in the business, and who has proven his friendship, a man who is a friend to every right-minded man in the trade, a man who has done much for all of us, a man whose mind and purse have always been open to the needy—that big-bodied, big brained, big hearted man—William E. Gilmore. (Great applause and yells.)

Warm Greeting to Gilmore.

William E. Gilmore—Mr. Toastmaster, ladies and gentlemen, this is somewhat uncalled for I do not know what Mr. Bowers is thinking of throwing all this hot air at me. I some weeks ago was called upon by Mr. Blackman and asked to attend this Convention. I told Mr. Blackman I was about to move to my place for the summer—I have been working very hard—don't I look it? (Laughter.) I did not see how it would be convenient for me to come down here while I was sojourning at my country place in the country, but he insisted that I should come down here, and after making various overtures to me, I concluded I would come down—and I am here. I am rather a has-been of the talking machine business, as I have been out of it so long I hardly know how to go into the subject at this time. I think I will go for people on the outside. I have heard nothing to-night but optimism spelled with a big O. I think that a good deal of optimism wants to be used by the jobbers themselves. When I was in the business, we tried it upon outside people so as to go after the jobber and get him to get after the dealer. I was told some weeks ago by a gentleman that he went into a dealer's place in order to find out how the dealer was running his store. Upon investigation he found an old machine in the back of his place that had not seen oil for a long time. He put on the record of Harlan and he had to reduce the speed as the machine would not operate. What I am leading up to is this: what you want to do is to get your salesmen to go in and demonstrate to the dealer these machines, and not only the dealer himself, but also to his clerk or clerks, for that clerk is the one that is going to sell the machines, and it is policy for that clerk to know how to operate the machine in order to get the best results. Just as the sewing machine needs oiling and cleaning—and every woman here knows that it does need it—so must the talking machine be looked after and oiled. Suppose the salesman does stay a week with a dealer, don't you think that this is going to have a good result? I should think so.

There was a remark made a little while ago about opening up a grand place at 27th street and Broadway, New York. I used to walk up Broadway and look at that place. I was very envious of it. I used to think what a terrible bill they must have for electric light. Well, we got the fever, and Mr. Edison decided that we ought to have a big place, on Broadway, New York, with a lot of electric lights and told me

W. E. GILMORE.

so. I said yes. At that time we had another gentleman in the office and he said that he thought it an excellent idea. The St. James Building had just been completed and he went and found out the rent for a store with a basement, and all that went with it, in that particular building. He had figured out how much money we were going to make—that is, he had figured it that by selling a few machines and a few more records, we would get out easy on expense. He came with that proposition to Mr. Edison and myself. We went into it and examined it and it showed an immense profit on paper and with figures that we were going to make. He said we would have to take a lease for five years. We talked it over with Mr. Edison. The first year it was to cost $25,000, the fourth year $24,000 and the fifth year $28,000. Well, Mr. Edison turned to me and said: "What do you think of it?" I said: "I don't like it." Now, gentlemen, we would have to pay that rent by the month. I could not see it coming in that fast. We talked it over again with Mr. Edison and Mr. Edison said, "We are not sure on that proposition—we will leave it for a while."

About two days after I went up to see Mr. Edison about something or other and he said to me, "Say, Gilmore, that is a fine store over there on Broadway—it's a beautiful store." I said, "Where?" He said, "Why at 26th street and Broadway." I said, "How do you know?" He said, "I went over and looked at it." At that time they had it all lighted. He had been over there the previous night, walked on the Broadway side of 27th street and looked in the win-

dows. I said to him, "Did you go in?" He said to me, "No, I was just on the outside." Well, the optimism was there just the same and between the other fellow I talked about and Mr. Edison I was over-ruled. However, I did succeed in convincing the agent that that place was not going to be big enough for us later on. I stipulated, and he agreed to it, that we put a clause in there stating that at the end of nine months of the first year, if we so wish, we could notify them and could cancel the lease and only stay one year. I took advantage of that clause. (Laughter.) I went up to 27th street quite often thereafter—it was only a block away—and I looked at it and then I went back and looked at our store. We had our store all gilded on the inside and we had it ablaze with electric lights, and we kept open nights, too—for the benefit of the public. (Laughter.) I used to wonder how much of a lease the other company had. Well, gentlemen, we got out of it. That shows that we were satisfied and I am sure we got out of it better than the other company, and I want to say that I was perfectly satisfied to get out when I did.

I did not want to say so much and to take up your time, but I know that you are going to appreciate it, and I hope that your association will continue to increase, be prosperous, and that you will all come out in the same open-faced spirit and get a great many more members. I hope to meet you all here next year—that is, pretty nearly all—I mean those who have not gone broke and cannot pay their expenses to get here again. (Applause.)

Toastmaster Bowers—One of the most vital and important factors in the success of the talking machine business is printer's ink, and one of the most potent and valuable mediums is that of the legitimate trade press, and as a fitting exponent of what is meant by high-class journalism in its best sense I have the honor of presenting the editor of The Talking Machine World and The Music Trade Review, Edward Lyman Bill.

Edward Lyman Bill's Address.

Mr. Bill—Mr. Toastmaster, members of the Talking Machine Jobbers' Association, ladies and gentlemen—In speaking for the press, let me say that the press properly conducted should always be an aid to industry. Years ago, when trade papers were first founded, they were started as house organs, backed by one or two concerns, for the purpose of promoting their individual interests. As industries expanded trade journalism expanded with them, and steadily advancing trade papers reached the position that they were enabled to graduate beyond the influence of individual concerns, throw off the shackles and become a powerful and independent force in the development of all industries.

There were among the papers representing the different trades—a type of journals which adopted methods and forms which were not strictly in harmony with good business principles. Happily, however, such journals have been relegated to oblivion, and the trade press of this country—the American trade press—stands out as an educator in the highest and truest sense, and it is with some degree of pride that I may say that years ago I allied myself with that form of journalism with the object in view not only of winning a livelihood, but assisting in the development of industries. Studying the talking machine business, I saw that there was an opportunity for development, and the more I examined that industry the more I became convinced that the time had arrived when an independent paper would be a necessary and a useful force in helping the expansion of the trade.

I commenced in a modest form by conducting a department in my music trade paper, The Music Trade Review, but I found that that was not sufficient to reach the hearts of the talking machine trade and incidentally its pocketbook. I found that to attain the strength and power which I desired in the development of this trade, it was necessary for me to put forth a paper which would be solely devoted to the exploitation of the talking machine interests. With that object in view I launched five years ago The Talking Machine World. When the paper was first put forth I had the warm support of the manufacturers, jobbers and the dealers, and together we have worked hand in hand for five years in the development of industry, and Mr. Toastmaster, I wish to congratulate you upon the development of the talking machine business and upon the success of your association.

I recollect when the association infant was born in Buffalo that some predictions were made as to its early demise. Those predictions were ill-founded, for this organization has grown and expanded to such an extent that it exercises a strength and power for the promotion of the talking machine business from the Atlantic to the placid Pacific—from the plains of Texas—to the wheat fields of Dakota. Long live the talking machine industry! United you stand together as a symbol of strength and as a power to eliminate evils which unchecked may creep into any industry, and I may say that interested as I am in this trade and bound to it by the closest business and professional ties, it is with much joy that I have witnessed the fairness of your deliberations while here at Atlantic City. It is evident that the true feeling exists between the manufacturers and the jobbers. If you will continue to work together conscientiously and honestly to develop the trade along consistent and logical lines, with that desire to get together and do right, as you see right, it will make the talking machine not merely a greater power, but one that will command a greater respect from each department of trade life. The interests of manufacturers, jobbers and dealers are closely locked; one is dependent upon the other. If goods are manufactured and not sold they stagnate in factories and in warehouses. There should be no stagnation; business policies must be adopted which will cause these special products to move along the easiest lines of resistance until they reach the consumer. Then in order to have every department harmonious there must be good feeling, because good feeling is the basis of good business, and I believe that your association has been an incubator of good feeling, in that it has brought men together who have felt that when they looked into each other's eyes they should be friends and not enemies; that they were good men and true. By friendly intercourse competition has been blunted somewhat. Men may be just as keen in their desire to win, to develop trade, but the sometimes reckless rules have been tempered somewhat by friendly contact with each other. And it is only through such organizations as this, and kindred ones, that men are brought together for trade weal, and they have realized through unity they can obtain far better results. The fundamentals of our life are education. Business education is necessary. Education is the barometer by which we measure the intellectual temperature of our people. If your business education is complete you can cope with competition in a much better way, and it will redound to your benefit in cold dollars and cents. The strength and energy in fighting a keen competitor may better be spent along the line of business development.

This is a business age; we are all struggling for business. It took the inventive genius of an Edison, of a Berliner and of a Jones, to lay the foundation of this industry, but an Edison, a Berliner or a Jones could not have accomplished the results without an Easton, a Gilmore, or a Johnson, whose marvelous business ability turned the inventive genius of others into the coin of the realm. (Great applause.) It is well, therefore, that we should recognize the business spirit in the development of this industry; it is right, too, that we should pay all honor to the glorious inventors, all honor to the men who have added luster to the pages of American history, whose achievements will be remembered as long as time lasts. But, again, let us remember it is the men behind the trade guns who win the battles of commercial life. Let us remember, too, that it is the man who through long days of labor and nights, devoid of ease, plans the campaigns which mean the employment of labor and the distribution of vast sums to the masses. Such men are striving to accomplish certain ideals. We must ever have ideals—business ideals—for idealism will lift us up, and it is business ideals which will bring out the best in us. It is useless to pass resolutions or to write papers advocating certain measures unless behind these resolutions, behind these papers there is a spirit which makes for their adoption. You must have that or your association cannot reach the highest attainment There must be fixed purpose. You must do things; it is the spirit of doing which has made this talking machine industry—young in years, though it is—one of the best known in this country and abroad. To my mind you are working along right lines. In what other industry can an association three years old produce such a gathering of the clans as we have here to-night? We have here men who have traveled long distances to come here to work for the upbuilding of higher and truer business ideals. It is this serious planning, this mingling together, the adjustment of differences of opinions, the discussion of ways and means and methods—which will help your talking machine enterprises on and on and to ever ascend to the highest points.

I am an optimist on the future of the talking machine industry. I believe its future will be brighter than its past. I believe it has the most progressive types of business men who are working for its development. But we cannot sit supinely by and expect to win golden honors. It requires concentrated effort to produce the best results which the honest efforts of men justly entitle them to receive. The full results of the million and a half in money which the manufacturers will expend during the next twelve months will not reach the highest points unless there be supplementary work on the part of jobbers and dealers. I believe that this coming here amounts to a school of harmony, the bringing together of diverse influences, so that one man can see what the other man is doing; it is helpful; it shows that which is right. I believe it will help business, and the effect of this meeting will last long, Mr. Toastmaster; it will permeate this entire trade, and I feel that when these men shall have departed from this city by the sounding sea they will carry with them sweet recollections of this gathering here to-night, as well as of your business sessions. I wish to say that I stand with you, with all the machinery at my disposal, with all the energy I possess for the honest promotion of this industry, and I believe that a journal which disseminates useful information—a journal which is educational in its influence—should act harmoniously with the talking machine industry, and in every way possible aid in its development. Let the influence of this gathering remain with us and let us go to our homes with one thought in view—to work harmoniously together, to confidently face the future, full of generous promise—to look up and not look down. (Much applause.)

Toastmaster Bowers—Mr. Blackman, the chairman of the Committee of Arrangements, has in his possession a number of letters of record from distinguished gentlemen connected with the trade. I will ask Mr. Blackman to rise in his place and read these letters.

Mr. Blackman's Letter to Emile Berliner.

Mr. Blackman—Mr. Toastmaster, ladies and gentlemen—I have the pleasure of reading to you a letter which I wrote to Emile Berliner:

"My dear Mr. Berliner:—I had the pleasure of meeting you at the convention of Talking Machine Jobbers in Atlantic City last year and in the absence of your correct address I am taking the liberty of sending this letter in care of your friend, Mr. Bayly. The members of our Association and those attending the banquet last year greatly appreciated your presence and especially your address of acceptance in response to your election as an honorary member of our body.

"This address is indelibly stamped upon the memory of those present at that time, not only

because of its sincere rendition, but through the kindness of the Victor Talking Machine Co., who presented their Victor distributers with a record, being the true reproduction from your own lips. As the Association has seen fit to honor me with the chairmanship of the committee of arrangements for this year's convention, which will again be held at Atlantic City, it is natural I should like to duplicate, as far as possible, the pleasant features of last year's convention, as well as improving where possible. It therefore gives me great pleasure to invite you to again be our guest at the second annual banquet, which will be held at one of the leading hotels and be a memorable occasion.

"It is with great satisfaction and approval that Victor distributers and dealers received the decision of the highest court sustaining the validity of your patent, for with it comes protection against invasion on the part of those who would seek to tear down the great foundation on which the talking machine industry is built, *i e.*, quality and one price to all. I hope I will have the pleasure of your acceptance of this invitation and that you will not only attend the banquet, but be with us during the convention."

Mr. Berliner's Letter to Mr. Blackman.

(Mr. Blackman continues.) In response to this letter we have the following reply from Mr. Berliner:

"My Dear Mr. Blackman:—Your esteemed letter of the 17th inst. inviting me to again be the guest of the association at their annual banquet in Atlantic City was handed to me by our friend, Mr. Bayly. Needless to say that nothing would prevent me from embracing an opportunity for renewing and extending my acquaintance with the jobbers except for the fact that I shall be in Europe when the association meets. The more than pleasant recollections from last year's convention and banquet are indelibly impressed on my mind and this renewed favor and honor as expressed by your invitation calls for my highest appreciation.

"I rejoice with the association that one of my fundamental patents, sufficient for the protection of the Victor business was sustained by the highest court of the land. It is also a great satisfaction to me personally that I was fortunate in having an early conception of the value which now attaches to the adjudicated claims. With an unchallenged field for commercial exploiting and expansion presented to the trade it seems evident that business should readily respond to efforts unhampered by litigation and to a policy both aggressive and confident of success.

"And I believe that the public will continue to actively appreciate the aim of the manufacturers of furnishing only high grade vocal and instrumental effects based on the untiring endeavors of the various laboratories toward still greater perfection in recording and reproducing the same. Will you kindly present my cordial compliments and good wishes to the president, the officers and the members of the association and I shall be with them in spirit when good fellowship is gathered at the feast and when the reigning sentiment will be: 'Drink to me only with thine eyes!'"

Toastmaster Bowers: We will be pleased to have a few remarks from R. G. Royal, president of the Universal Talking Machine Mfg. Co.:

Mr. Royal's Brief Remarks.

Mr. Royal: Mr. Toastmaster, Ladies and Gentlemen.—The subject I had decided to speak on has been so ably taken care of by the smaller manufacturers (laughter) it will be useless for me to detain you any longer, so that at your next annual meeting I hope to select a subject which your other members will not hit on and will then give you a longer discourse. (Applause.)

Toastmaster Bowers: I have been asked to call upon T. H. Macdonald and ask him the possibilities of the future from an inventor's standpoint.

T. H. Macdonald's Address.

Talking machines have been the aim of numerous inventors at least since, if not before, the year 1779, when the Imperial Academy of St. Petersburg, Russia, offered a prize for the construction of a machine which should be capable of producing the vowel sounds as expressed by the human voice. The prize was awarded to Professor Kratzenstein for his devices and investigations, which resulted in considerably widening the horizon of acoustic science, and presently thereafter the Abbe Mical, in Paris (1783), and Von Krempelen, in Vienna (1788), were working in the same field.

Many ingenious mechanisms were constructed by these workers and improved upon by various successors, of whom Faber, of Vienna, about 1850, produced a very remarkable speech-articulating machine. In 1857, however, the attention of inventors was directed to a more promising field of effort, through the labors of Leon Scott, who patented the sound-recording machine known as the phonautograph, in which the principles of acoustic physics were employed to produce an autographic record of the human voice and of other compound sound vibrations.

First Reproduction of Vocal Sounds.

The optical demonstration of rhythmic sound waves dates back as far as 1787, when Ernst Chladni published at Leipzig his epoch-making discoveries in this field; but, although these developments were amplified by the researches of Strehlke in 1825; of Young and Wheatstone in the following decade and by those of Tyndall, Helmholz, Melde and Lissajoux at subsequent periods, the graphic reproduction of vocal sounds appears to have been first effected by Scott's appliance. In that instrument the sonorous impulses produced by speech and other non-rhythmic tones were graphically recorded through the vibrations of a tympanum consisting of a flexible diaphragm, acting by means of a stylus on a revolving cylinder, and it is this sensitive tympanum and its attached stylus, developed and improved by successive inventors, that form the essential elements in the talking machines of to-day.

The phenomena demonstrated by Scott were analyzed in relation to vocal sounds, and especially with regard to the separate functions of the vocal organs, by the French Linguistic Society in 1875, and these studies, together with Bell's invention of the telephone, in 1876, gave a new impetus to research in the direction of talking machines.

In the spring of 1877 the Paris Academy of Science appears to have received from M. Charles Cros a communication proposing the production of Scott's sound records in the form of tracings on a transparent surface, and the reproduction of these tracings by a photo-chemical etching process in the form of sunken lines on the record plate. In a retracing of the record these lines were to serve as guides to the stylus, and thus the vibrations of the diaphragm, and, coincidently, the corresponding sound waves, were proposed to be reproduced.

A method analogous to this, but avoiding the intervention of photography, and producing the record directly on a plain metallic surface, was subsequently developed in this country (infra), but Cros appears to have gone no further than to make the communication referred to, which was not published in the Comptes Rendus until some six months later, in September, 1877.

Edison's Invention of the Phonograph.

In the same year, however, the actual reproduction of sound tracings back into perceptible sounds was acomplished by Thomas A. Edison, through his invention of the "phonograph." The outcome of this idea was the tin-foil phonograph, with which everyone is familiar, and which in the year 1878 attracted much attention and gave rise to great expectations.

The very property, however, of the tin-foil, or of any similar material that afforded the possibility of its being sufficiently indented through the impulses of sound waves, proved an insurmountable obstacle to its practical application for the purpose in view.

A very few passages of the line of minute indentations in contact with the reproducing stylus sufficed to so far level down the spaces between the indentations as to practically obliterate the record, and though various means of giving permanence to the record were devised and put into

MR. EDISON GRACIOUSLY CONSENTED TO POSE FOR THE WORLD BEFORE THE BANQUET, AND HE IS SHOWN AT THE RIGHT OF THE PICTURE. BY HIS SIDE, FRANK L. DYER, NEXT F. K. DOLBEER AND C. H. WILSON.

practice, such as filling in with wax on the back, to stiffen it, or a reproduction of the surface by electrotyping, the technical difficulties encountered in these processes left the instrument unavailable for practical use.

The failure of the phonograph was so pronounced as to discourage effort in the same direction for a long period of time. From 1879 to 1886 the literature of the art reveals no serious attempt to accomplish the reproductions of sounds, and no advance whatever was made during that period. Those were the seven years of famine in the art. In 1886, however, the efforts of Chichester A. Bell and Sumner Tainter, of Washington D. C., afforded a solution of the problem.

Bell & Tainter Patent Solves the Problem.

These associates had labored earnestly from 1881 to 1885, and as the result of their labors made many valuable contributions to science. Foremost among these was the method of recording and reproducing sounds, now in universal use, by engraving a solid material of amorphous character, such as wax or wax-like compositions. This system as a whole embodied many discoveries and inventions which contributed to the desired end and which cannot be referred to in detail within the limits of our available time.

It will suffice to notice that the engraving method resulted not only in accurate and recognizable records, but in records that could be removed from the machine, handled and transported without detriment, and which could be used scores, indeed hundreds of times. This last-mentioned characteristic of the new graphophonic sound record is of the very first importance from the industrial point of view. Such was the graphophone as patented by Dr. Chichester Bell and Mr. Tainter in 1886.

This historical review of the progress of sound recording and reproducing mechanisms brings us, at this point in chronological order, to the consideration of another device for the same purpose, already alluded to, and which also may be regarded as starting from the phonautograph of 1857, but which, continuing on the lines of that instrument to obtain the record on a plane surface, diverged at this point and wrought this flat record into depressions by chemical means. These depressions, however, recorded the vibrations of the sound-receiving diaphragm in sinuosities of the side walls instead of sinuosities of the huttom of the lines. This was the so-called "gramophone,' invented in 1887 by Emile Berliner, also a resident of Washington, D. C., and which was brought out before the Franklin Institute of Philadelphia, Pa., in May, 1888.

Berliner's Method a New Discovery.

The principle of Berliner's procedure differs radically from those of his predecessors, inasmuch as his record, being effected by a stylus vibrating in a plane parallel with the receiving surface, is free from the disturbances resulting from a varying resistance to its movements. This latter factor enters inevitably into the result when a depression of any surface is effected by indentation or by cutting, the resistance naturally increasing with the depth of the depression to be produced, while the latter is directly related to the amplitude of the vibration which the depression is to record.

Berliner's record was traced in the form of a spiral line on the surface of a disc of polished zinc, through a film of extreme tenuity, composed of a fatty acid obtained from a solution of wax. This film serves as a resistant to an etching mordant, which effects a depression of the traced line by erosion of the bared metallic surface, the etching then being ready for reproduction into sound waves by reversing the procedure.

It may be of interest here to note that these three methods of recording speech or other sounds constitute the basic inventions of the three types of talking machines in common use to-day. They are, in the order of their invention, the phonograph, the graphophone and the gramophone.

The phonograph method consisted in indenting tin-foil, the graphophone method in engraving or cutting in wax or wax-like material, and the gramophone method in tracing a spiral zigzag through a film of wax to the surface of a polished zinc plate and of afterward etching, by means of acid, this spiral into the metal plate.

As is perhaps well known to all of you, the phonograph and gramophone methods of original record making have long since been abandoned, and to-day the entire industry rests upon the basic discovery of Bell and Tainter that the true way to make a record of sound was to cut or engrave it in wax or a wax-like substance.

Spring Motor Marks a New Era.

I think it will be conceded by all that the next most important step in the industry was the invention and adaptation of the spring motor to the talking machine. For this your speaker humbly claims credit. I began work on such a motor in December of 1893, and finished a model in May, 1894. This model was first shown to Mr. Easton and Mr. Cromelin in the Traymore Hotel in this city in the latter part of May, 1894, and to Mr. Hawthorne in Philadelphia the next day.

This model is essentially that in use to-day. The importance, of course, is the method of governing the speed. In 1898 I discovered that there is a critical speed for the surface of a record which must be attained to obtain the best results. This discovery we embodied in the well-known graphophone grand. It was during this same year that I found that a wax record could be molded from hot wax in an electrotype mold. This seemingly simple "find" has become most important in the cylinder development.

The next step was the invention of J. W. Jones, which consisted in adapting the Bell and Tainter cutting or engraving method to the making of a zig-zag record. This discovery, as many of you well know, revolutionized the disc end of the industry. But I must hasten. It is said that the old man always talks of the past, the young man of the future. I have been asked to try my hand at prophecy, to say from an inventive standpoint what the future holds for our business To my mind it is an ever-unfolding, ever-increasing, ever-expanding field that lies before.

Mr. Macdonald Indulges in Prophecy.

The possibilities of the talking machine in its adaptation to human uses has hardly yet been dreamed of. The great struggle of man, through all the ages, has been to devise a means of recording his thoughts and the records of his deeds, that his posterity might know of them. From the wide hieroglyphics of the prehistoric past to the finished literature of the present, through these almost unthinkable ages, the whole struggle of man was to build up a written language that he might learn of the deeds of his fathers and pass on a record of his own to the future. What then shall we say of an invention that at one stroke gives every living human being, from the lowest beggar to the proudest light on the throne an absolutely equal opportunity, and gives to him at one stroke a method of recording his own and of learning the thoughts of others unequaled by anything that man has ever done.

Mr. Bower's Closing Remarks.

Toastmaster Bowers: I find, ladies and gentlemen, since coming to Atlantic City, and upon consulting my watch, that we have now reached that distinct hour of the evening when things begin to be doing, when the ladies and gentlemen would like to go out and spend the evening and enjoy themselves. I will therefore take this opportunity, on behalf of the officers of this Association, to thank this distinguished body for the pleasure you have given us in being our guests this evening and for the honor you have conferred upon us by coming here and giving us the privilege of listening to your brilliant and instructive remarks, and I wish to you, and each of you, a safe journey to your homes, a hearty good-bye and a fervent God bless you.

The meeting stands adjourned.

PRESIDENT WHITSIT'S VIEWS.

The New Executive of the National Association of Talking Machine Jobbers Chats in Optimistic Vein With World Man—Trade in Healthy Shape and Outlook Good.

When Perry B. Whitsit, the newly-elected president of the National Association of Talking Machine Jobbers was seen by The World shortly after his election to the office he stated that his belief in the future of the industry was unfaltering, and that the trade was about to experience wonderful developments.

"In the past," said Mr. Whitsit, "the talking machine business has been conducted by a great many dealers in a sort of hit or miss manner. Very little attention was paid to credits, and all a customer had to do was to come in, put down a dollar or two, take the machine, and the transaction was closed, while generally the dealer got the future instalments; in many cases he didn't.

"The recent depression, however, has had the effect of placing the talking machine business on a more stable basis, and the dealers are making a study of business systems. It would be well for talking machine dealers to emulate the example of the piano man. He watches his credits carefully, puts much effort into making a sale, and considers one piano well sold better than two placed in the hands of doubtful customers.

"The talking machine trade has been one of rapid development, and up to a year or so ago the dealer did not bother a great deal about details. He had the machines and the public wanted them. It was almost a case of simply sitting down and waiting for trade to come in. For some time this plan proved fairly satisfactory, but now to get business salesmanship methods have to be used. One reason is that a high grade of patronage has been secured by the talking machine. People who, while they are in a position to buy the best demand that the value of their purchase be demonstrated. When it comes to dealing with people like this a man has to be a true salesman. He has n many instances to overcome the bad impression created by cheap machines in the neighborhood of the prospect. He has to show that there are talking machines that possess real musical qualities, and the sooner the trade at large learn to give proper and undivided attention to quality rather than to the volume of sales, so soon will marked advance be noted in the business. Already in Columbus talking machines hold a prominent position in educational institutions. They teach languages as no written work can possibly do, and are proving of inestimable value to the vocal teacher, who thus has had under the voices of the world's greatest singers, whose expression can be studied at close range.

"Regarding my policies and my administration, I have nothing to say at the present time. In fact, I have had no opportunity to think about them to any extent. Succeeding, as I do, such an able president, James F. Bowers, I will consider myself fortunate indeed if I succeed in keeping the association to its high standard. However, I shall devote every effort to make my administration a satisfactory one to the association, and know that I will have the hearty cooperation of every member in any work I undertake."

SWANSON OPTIMISTIC.

In a recent letter from J. N. Swanson, of the Houston Phonograph Co., Houston, Tex., he writes: "We are now three months building up this business and can speak with some encouragement that we look for a good fall trade—both from natural business confidence and also from the fact that we are going to reach out for new business."

On page 25 of last month's World the address in the advertisement of J. E. Hough, Ltd., Edisonia Works, "Peckham," S. E., London, through an error read "Peck Lane."

CONVENTION NOTES

A feature of the convention which added much to the social enjoyment was the presence of the wives of many of the jobbers, making the meeting take the form of a real holiday. The majority of the women folk had met at the previous convention and were consequently well acquainted, so the fun started immediately, and it was like a large family reunion instead of a severe business convention, though business was attended to strictly in the afternoon by the men. Of course the sea was the chief attraction, and between surf bathing and yachting the day was pretty well taken up, though the parties still had the energy left for a dance on the "Million Dollar Pier" in the evening. The ladies also graced the banquet board, and their bright presence did much to enhance the pleasure of the occasion. Here's to the ladies; may they all meet again next year.

As a banquet hall the rose garden of the Shelburne was ideal. While being under cover in order to defy the elements, yet the decorations of roses and vines and the handsome fountain in the center gave it a really "old world" appearance that was unique and pleasing. The arrangement of tables also tended to promote sociability.

Jack McGreal, who was elected mascot of the Association last year, was present with his

On the right, Mrs. Lawrence McGreal; the center, Jack McGreal; right hand, Miss Gertrude Gannon.

father and mother, winning friends as usual. No convention is complete without the presence of young Jack McGreal.

M. A. Carpell was in Atlantic City exchanging greetings with his old friends in the talking machine trade. Mr. Carpell took occasion to tell The World that he viewed the future of the talking machine business in an optimistic manner, and that the Herzog specialties would be unusually attractive to the trade. Mr. Carpell enjoyed the outing and was pleased to meet his old friends.

At the request of several of the talking machine men, the Helf & Hager Co., the New York music publishers sent down the orchestration of "Wedding Bells," which has not been officially published as yet. When the piece was played everyone joined in the chorus, having been supplied with the words beforehand.

Remick's "I Wish I Had a Girl" should be given the palm as the official convention song for the season of 1909. Everybody sang it, though the men, especially the bachelors, endeavored to make "I Love, I Love, I Love My Wife, But Oh You Kid!" a very close second.

What cared the talking machine jobbers if the Chalfonte was run under Quaker management and was "dry," was not the Old Vienna, that resort of true Bohemians, within easy walking distance? Every evening the crowd gathered around the tables and there remained joining in song and story until the wee sma' hours.

Saturday last, Frank L. Dyer, president of the National Phonograph Co., Orange, N. J., sailed for Europe via the Cunard line. His family preceded him a couple of days, Mr. Dyer deferring his departure so as to be present at the banquet of the National Association of Talking Machine Jobbers and the reception to the visiting jobbers at Orange, N. J.

J. Newcomb Blackman, chairman of the committee of arrangements, was showered with congratulations upon the success of the convention. Mr. Blackman worked hard and what is more, he won out.

Louis F. Geissler, general manager of the Victor Talking Machine Co., accompanied by members of his staff, Messrs. Jones, Brown and Ornstein were busy exchanging greetings with old friends during the convention week.

During the past three years, at least, the name of Berliner has become a "household word," as it were, in the trade. The patent bearing this name is one to conjure with these days, though Emil Berliner, the inventor, no longer concerns himself in sound reproduction devices, excepting incidentally. As one of the three great inventors of the industry he will always be remembered. To be sure, Bell and Tainter were never actively identified with the industry, but Thomas A. Edison, Emil Berliner and Thos. H. Macdonald have kept in close touch with present-day developments, as has Eldridge R. Johnson. The presence of Messrs. Edison and Macdonald added distinction to the annual convention of the National Association of Talking Machine Jobbers at Atlantic City, N. J., last week, and the unavoidable absence of the other two distinguished gentlemen was greatly regretted. Mr. Berliner sailed for Europe while the convention—the largest, most representative and successful in the history of this practical organization—was in session, and the good wishes of the members and his eminent contemporaries accompanied him on the voyage.

EDWARD N. BURNS' PLANS.

Over the national holiday, Edward N. Burns, vice-president of the American Graphophone Co. and manager of the export department of the Columbia Phonograph Co., General, was at his picturesque home in the Thousand Islands, N. Y., with his family. The house, one of the many pretty cottages at that favored resort, was built by the late Andrew Devine, father-in-law of Mr. Burns, on Madawaska Island, at the top of a rocky point fifty feet sheer to the water, and a small fleet of launches and rowboats are attached to the premises. This has been the summer retreat of Mr. Burns for a number of years.

On July 24 Mr. and Mrs. Burns and their children sail for Europe on the "Minneapolis," the Atlantic Transport Co. liner, going direct to London, England, and thence to Carlsbad, Austria, where Mr. Burns will take the waters. Later he will call upon the talking machine trade in Germany. The party will be absent three months, being scheduled to arrive in New York October 15.

BRIEFLETS.

Landay Bros.' branch store at 27 West 34th street has been completely remodeled and newly furnished and decorated. The store is occupied by eight booths with a private telephone in each, for the use of the occupant.

The new talking machine department of Rothenberg & Co., New York, Columbia jobbers, was formally opened on June 22.

Max Landay, of the Talking Machine Supply Co., New York, expects to leave on an extended road trip about August 5.

The travelers of the National Phonograph Co., who are to meet and confer with the officers and selling department managers at Orange, N. J., are coming in on the instalment plan, and the entire force is expected to reach Orange within the next two weeks.

WILLIAM F. NYE
NEW BEDFORD, MASS.

"CANNED" SALESMANSHIP.

Vice-President of United Cigar Stores Co. Sends Out Selling Talks to Clerks on Talking Machine Records.

H. S. Collins, vice-president of the United Cigar Stores Co., who have over six hundred retail cigar stores in all sections of the country, has perfected a wonderful selling organization, and in order to improve the efficiency of clerks in the smaller stores, has prepared a series of short lectures on "Merchandise" and "Service," which have been recorded on talking machine records and will be distributed among the clerks. As the Saturday Evening Post says, "Like music and the drama, salesmanship has at last been "canned."

T. M. Becker, the enterprising, energetic and effervescent representative of the Chicago house of the Rudolph Wurlitzer Company, has left for a trade round-up of Wisconsin and Michigan. John Otto of the retail department takes his vacation next week. He will spend most of the time around his handsome home in the suburbs.

TRAVELING SALESMAN WANTED

WANTED—A traveling salesman who can sell goods. Must be experienced in the talking machine line. Give qualifications and experience. Manufacturer, care The Talking Machine World, 1 Madison Ave., New York.

FOR SALE

A large stock of Victor and Edison machines and records, kept up in fine shape. For particulars write E. F. Wood, Bloomington, Ill.

3,500 RECORDS

Columbia X.P., Edison Gold-Molded and Amberol; large Revolving Rack for 1,000 records; 3 Edison Machines, 6 Columbia Machines, extra horns, stands, etc. I wish to close out my phonograph department and will sell for $400. F. T. Evans, Delaware, Ohio.

PARTNER WANTED

WANTED.—A PARTNER FOR PHONOGRAPH, Piano and Sheet Music Business.—High-grade machine and record trade; fine location; all factories working; 35,000 population; only two dealers; richest city in Virginia; partner must be a hustler and give his entire time as my only reason for a partner is that I am compelled to be away on account of large territorial agency; great chance for the right man; small capital necessary. Address "BUSINESS," care The Talking Machine World, 1 Madison Avenue, New York.

BUSINESS FOR SALE

MUSIC STORE.—Pianos and Talking Machines—established three years in one of the most lively cities of the West. Good chance for a piano tuner—no other in town. Reason for selling: Owner's ill-health compels change of climate. Address "XX." care The Talking Machine World, 1 Madison Avenue, New York.

C O L U

Columbia Double-Disc Records, 65 cents.

Columbia Disc Graphophones, $25 to $200.

DOUBLE-DISC RECORDS

The Columbia Double-Disc has come to stay. You may as well face that. Why shouldn't it? You buy a Columbia Double-Disc for less money than the single disc would cost you and you sell it for more money than the single disc would bring you. And it's not only better profit for you, it's double value for the man you sell to.

Columbia Double-Discs are far and away the biggest thing in the disc situation, have been ever since their introduction, and shall continue so. The public have taken to them more quickly and completely than to anything else ever introduced in the talking machine industry.

OUR DOUBLE-DISC GUARANTY

We guarantee to every purchaser of Columbia Double-Disc Records that the material used in their composition is of better quality, finer surface and more durable texture than that entering into the manufacture of disc records of any other make, regardless of their cost. We further guarantee that their reproducing qualities are superior to those of any other disc record on the market and that their life is longer than that of any other disc record, under any name, at any price.

Everything above included in

SEND POSTCARD

COLUMBIA PHONOGRAPH

M B I A

INDESTRUCTIBLE RECORDS

Played with the new Columbia Indestructible Reproducer, the Columbia Indestructible Cylinder Record has a clearer, fuller, more brilliant tone than can be obtained from any other cylinder. The Columbia Indestructible Record supplies the one great need for a cylinder that combines the best attainable tone qualities with indestructibility. The people have found out that the Columbia Indestructible is the one ideal cylinder record.

Here's how the dealer's end of the Indestructible proposition sums up; you buy a record you know will be eventually sold to a customer—no loss from breakage, your investment is always secure. It is not only safer and better business for you but it is extra value for the man who buys from you.

Columbia Indestructible Records, 35 cents.

OUR INDESTRUCTIBLE CYLINDER GUARANTY

We positively guarantee that the playing of Columbia Indestructible Cylinder Records with any of the regular sapphire reproducers will under no circumstances injure those reproducers in any manner or to any extent whatsoever, and that Columbia Indestructible Cylinder Records may be played with any cylinder reproducer of any make, on any machine, indefinitely, without the slightest impairment of the record or any part of the mechanism.

The above guaranty is issued upon the strength of experiments recently concluded in our factory whereby it was proven by test that an ordinary sapphire reproducer point, playing Columbia Indestructible Cylinder Records uninterruptedly from 8 A. M. to 6 P. M. for TWO AND A HALF YEARS, showed at the end of that time not the slightest sign of wear, under the most powerful microscope. Tests of a slightly different character prove that Columbia Indestructible Records may be played indefinitely without showing the least impairment of tone or other appreciable sign of wear.

Columbia Cylinder Graphophones, $20 to $100.

our Exclusive Territory Program

FOR PARTICULARS

COMPANY, Gen'l, New York

THE RETURNING CONVENTIONISTS ENJOY DELIGHTFUL LUNCHEON PLANNED BY F. K. DOLBEER AND FOUND A VISIT TO THE EDISON WORKS AN ENTERTAINING ONE

A very pleasing finale to the convention was planned by F. K. Dolbeer, general sales manager of the National Phonograph Co. A large number of delegates and their wives left Atlantic City on the 9.20 train on Friday morning.

Upon reaching Newark a string of automobiles met the party at the Pennsylvania depot and conveyed them to the Essex County Country Club at Orange. Here a sumptuous luncheon had been prepared through telegraphic orders from Mr. Dolbeer.

The Essex County Country Club is known all over the country and a beautiful repast was arranged. The tables were prettily decorated. After the luncheon the party was taken to the Edison works, where a couple of hours were passed in inspecting the plant.

There were a number in the party who had not previously visited the Edison works, and they expressed much astonishment at their size and equipment.

After a most enjoyable and instructive tour of the factories the guests of Mr. Dolbeer left for home.

Among those who assisted Mr. Dolbeer in entertaining were Frank L. Dyer, president of the National Phonograph Co.; Alfonso Westee, auditor; Carl H. Wilson, general manager of the companies, and others.

The guests were Mr. and Mrs. L. C. Wiswell and Mr. and Mrs. F. A. Siemon, Chicago, Ill.; Mr. and Mrs. E. F. Taft, Boston, Mass.; C. B. Haynes, Richmond, Va.; J. C. Roush and C. M. Roush, Pittsburg, Pa.; William Pardee, New Haven; E. H. Silverman, New Haven; H. R. Skeldon, Providence, R. I.; J. B. Ogden, Lynchburg, Va.; T. H. Towell, Cleveland, O.; B. J. Pierce, Kansas City, Mo.; C. H. Droop and C. E. Gore, Washington, D. C.; James Fletcher, Pittsburg, Pa.; Mr. and Mrs. C. N. Andrews, Buffalo, N. Y.; Mr. and Mrs. J. Gerson, Philadelphia, Pa.; P. B. Whitsit and W. F. Davison, Columbus, O.; Mr. and Mrs. J. Newcomb Blackman, East Orange; Isaac Davega, Jr., New York City; Benjamin Neal, Buffalo, N. Y.; Mr. and Mrs. Lawrence McGreal, Master Jack McGreal and Miss Gertrude Gannon, Milwaukee, Wis.; Mr. and Mrs. Edwin Buehn, Philadelphia, Pa.; Mark Silverstone, St. Louis, Mo.; C. W. Hickok, Toledo, O.; J. N. Swanson, Houston, Tex.; Victor H. Rapke, New York City; N. D. Griffin, Gloversville, N. Y.

TALKING MACHINE JOBBERS ENTERTAINED AT BANQUET.

SNAPPED IN FRONT OF ESSEX COUNTRY CLUB.

The guests were much pleased with the entertainment planned by Mr. Dolbeer and the admirable manner in which the program was carried out.

The export department of the Columbia Phonograph Co., General, has signed two new jobbers in the City of Mexico this week.

HAWTHORNE & SHEBLE COLLAPSE.

Talking Machine Concern Unable to Meet Its Obligations—Receivers Appointed—Creditors' Meeting Called.

Just as the June issue of The World went to press it was announced that the Hawthorne & Sheble Mfg. Co., Philadelphia, were in financial difficulties, and shortly after James M. Rhoades and E. A. Hawthorne were appointed receivers in the United States District Court. Security was fixed at $50,000. The concern operates plants at Howard and Jefferson streets, Philadelphia, and Bridgeport, Conn. The liabilities are estimated at $140,000. The assets consist of machinery valued at $70,000; talking machines, $22,000, and supplies, $20,000. The company admitted its inability to pay its debts. The Hawthorne & Sheble Co. were large manufacturers of talking machines and accessories, and when the change came in the horn situation their business was seriously crippled, and with the later court decisions the collapse became inevitable.

The latest development in the situation is that Joseph Mellors, referee in bankruptcy, 528 Walnut street, Philadelphia, Pa., has sent out the following communication, under date of July 9, to the creditors of the Hawthorne & Sheble Co.:

"You are further notified that the meeting to be held at my office on July 20, 1909, at 10.30 a. m., is called to consider the acceptance of a proposition for the purchase of the plant of the bankrupt at Bridgeport, Conn.; to consider also the advisability of authorizing an appeal from the decree of the United States Circuit Court for the Western District of Michigan in the case of the Victor Talking Machine Co. et al., against the Duplex Phonograph Co., and to consider also a petition for leave to continue the operation of the Philadelphia plant by the trustee."

ATHLETIC ARTHUR GEISSLER.

How This Gentleman Saved a Life at Critical Juncture—The Close Resemblance Between Father and Son.

The big athletic figure of Arthur D. Geissler, manager of the Talking Machine Co., Chicago, loomed up prominently on the boardwalk and in the Chalfonte lobby during the convention at Atlantic City.

Mr. Geissler, now that he has permitted his mustache to grow greatly resembles his distinguished father, and the two might pass for brothers rather than pere and fils.

Mr. Geissler is a trained athlete and his splendid physical powers came in good need, for he rescued a lady from the sea who would have been drowned before the arrival of the life savers had it not been for Mr. Geissler's presence at the critical time.

THE "MUSIC MASTER" HORN

And Its Clever Exploitation by the Manufacturers.

The "Music Master" Horn announcement, appearing in another section of this paper, is deserving of more than passing comment.

The form of advertising put forth by the manufacturers of this horn, Messrs. Sheip & Vandergrift, has been beneficial in promoting interest in horns, particularly the "Music Master" Horn.

The illustration appearing in this month's announcement showing David Warfield, "The Music Master," in a characteristic pose, will be followed up by changes of position and expression, which will accentuate interest in the advertising put forth by Sheip & Vandergrift.

It is this form of original advertising which counts, and in this case counts well, for the interests of horn manufacturers.

The dealer who doesn't contemplate making every new customer a regular one might as well keep his books in good shape so that the receiver will have little trouble in adjusting affairs.

LEEDS & CATLIN IN TROUBLE.

Petitioned Into Bankruptcy on June 21—Liabilities Estimated at Over $1,000,000—Berliner Patent Litigation Which Was Decided Against Them Cause of Trouble, It Is Said.

What has been expected for some time by those having a knowledge of the predicament in which the Leeds & Catlin Co., New York, have been since the decision of the Supreme Court of the United States in the Victor Co. litigation, occurred on June 21, when a petition in bankruptcy was filed in the United States District Court, New York, against the company by Leonard Bronner, attorney for these creditors: Charles Goldstein, $1,033, on an assigned claim of the Sackett & Wilhelm Co., and Leo Wise, $12, on an assigned claim of L. J. Murray. It was alleged that the company is insolvent, made preferential payments of $10,000, and transferred assets of $5,000.

The company is one of the largest and best known in the talking machine business, and is capitalized at $1,000,000. The business was started in 1892 by Leeds & Walcott, who were succeeded by the present company in July, 1899. The capital stock originally was $10,000, and has been increased at various times up to August, 1907, when it was put at $1,000,000. Besides a recording laboratory and general offices at 53 E. Eleventh street, they have a factory and pressing plant at Middletown, Conn.

The officers are Frank P. Byrne, president; I. Allen Sankey and Louis P. Wilson, secretaries; Henry Leeds, treasurer. The company's statement of August 21, 1908, showed liabilities of $661,120 and assets of $2,003,000, the principal items of which were real estate, $375,000; machinery plant at Middletown, Conn., $779,169; cash, $26,466, and patents and special processes, $710,000.

Leonard Bronner said after the petition was filed that the bankruptcy petition was occasioned by an adverse decision of the United States Supreme Court for an infringement of patents given April 19, when the Supreme Court of the United States declared the company infringed on the Victor talking machine patents. The result was that numerous records had been previously sold and the purchasers would not pay for them now for fear of being involved in litigation. The stock on hand was largely of the same kind, and is practically valueless, as it cannot be disposed of. Liabilities are estimated at over $1,000,000. The value of the assets is hard to estimate, as a large part of the property at Middletown is incumbered by mortgages to secure bond issues.

The Leeds & Catlin Co. were among the first to manufacture the old wax cylinder records in a commercial way, having contracts with the Edison interests when the old North American Phonograph Co., of litigious memory, was in existence. The company has stood the brunt of the court fights inaugurated and aggressively waged and successfully terminated, to sustain the Berliner patent, owned by the Victor Talking Machine Co., Camden, N. J. When the various suits in which they were involved were decided adversely and their largest buyers were being proceeded against for contributory infringement, the collapse came.

Next day Judge Hand adjudicated the Leeds & Catlin Co. bankrupts and appointed Theodore M. Taft, of Taft & Sherman (no relatives of the national administration), 15 William street, temporary receivers, under a bond of $15,000.

On motion of the Hamilton Trust Co., New York, trustee of bonds issued by the Leeds & Catlin Co., and secured by the factory at Middletown, Conn., Judge Case, Superior Court, Hartford, on June 22, appointed Thomas F. Brown temporary receiver of the property at the former place. This proceeding was upset by Judge Platt, District Court of the United States, who named Theo. M. Taft and Mr. Brown temporary receivers, as it was in direct conflict with the bankruptcy case pending in the Federal courts. They were placed under a joint bond of $100,000.

Up to going to press no schedules of the company had been filed, and Receiver Taft stated to The World a composition of settlement and a reorganization was being considered by the heaviest creditors.

THE VOICE AND BRAIN POWER.

One Reflects the Other, According to the Conservatory of Ghent.

At the Conservatoire of Ghent, in Belgium, a suggestion was made a short time ago by the professors in council urging the arts and science faculties of the university to give more study to the subject of the voice, inasmuch, they declared, as that organ, being the last to attain to complete development, usually afforded the best criterion of the physical and mental state of progress of any given student.

As everyone knows, the voice cultivator is almost always a person who possesses a very full knowledge of the anatomy of the body, and it was advanced in support of the said suggestion that complete and full use of the voice was never attained until the vertebral column structure, and consequently the structure of the brain, had reached its full development.

It was found, for example, among the pupils attending the conservatoire that backwardness in the tones generally corresponded with an incomplete development of the mental faculties and a weakness in the condition of the spinal column. There was also noted a disposition of anemia or bloodlessness, and it was definitely agreed upon that experience showed that those suffering from spinal infirmities and mental troubles were incapable of good singing. This, indeed, would appear in any case to be a somewhat obvious conclusion, since it is a well known fact that music is conceived on a principle of natural mathematics. The simple deduction from this would be that only a comparatively high kind of intelligence is capable of the musical faculty, a deduction which may be said, on the whole, to possess considerable truth.

Accordingly it was suggested that the condition of the voice at a certain age after it had "cracked"—with the advent of that change known as puberty—afforded an adequate test of both mental and physical development. We have all met the man and woman of the uncertain voice—that is to say, of a voice the tones of which alternate between the shrill, the baritone and the basso. Such persons are invariably of the erratic and whimsical order. In the course of time, however, the voice tones acquire their due consistency, and at the same time a change is noted in the character of such persons, the whole tenor of disposition and mind becoming duly consistent and reasonable.

The moral of the whole is, therefore, that the voice in the youthful should be cultivated without being forced. The forcing of a voice has been shown in the case of many a promising singer, male and female, to upset the mental balance, and to have the same effect upon the brain as the "cramming" of children's brains with knowledge—that is to say, of forcing the brain to take more than it can possibly assimilate, as in the case of the boy in "The Mighty Atom." The voice, on the suggestions put forward above, as one of the most delicate of the organs and one which attains its fulness comparatively late in life, may afford teachers and parents one of the safest guides as to the mentality and physical condition of children and young adults. In the case of throat doctors of long experience it frequently indicates the likely length of life in any given individual.

A live wire carries current; current, properly connected, produces power and light. Be a "live wire"; do a little advertising in your local paper; if you make proper connections, it will produce results.

The most convincing sales-talk is the one which possesses the clearest logic. The customer likes to be told facts.

We've earned the medal for promptness

That's what we have! There isn't another Victor Distributor with anywhere near as good a record as ours. No, sir! We've never kept a customer waiting, and what's more, we never will.

We have hundreds of Victor Dealers who buy all their stock from us—Victors, Victor Records, record cabinets, fibre cases, horns, Victor needles, English needles—everything in the Victor line. And they're the most satisfied lot of customers you ever saw.

You never find *them* "hollering" because their goods don't arrive on time. *They* never have to make excuses to their customers on account of unfilled promises. *They* don't lose sales because some jobber had to "order from the factory."

Why? Because we guarantee that

We ship all goods the same day we get the order

And we don't mix up our orders, either! We are Victor Distributors exclusively, carry an enormous stock of all Victor goods, and know our business from A to Izzard. Therefore, we make far less mistakes than firms that handle both disc and cylinder machines, and we get up our orders quicker, too!

We offer you this unequalled service

It won't cost you a cent extra, you'll save a big amount of money, and you'll be able to hold your trade. Try us on your next "rush" order, and we know you'll be our regular customer from that time on.

By the way, write us to-day for our handsome booklet of Victor cabinets, called "The Cabinet That Matches." We have a cabinet to exactly match each style Victor, both in design and finish. Ask for our other catalogues, too.

New York Talking Machine Co.

Victor Distributing and Export Company
83 Chambers St., New York

TRADE NOTES FROM CLEVELAND.

American Sero-Phonograph Co. Organize to do Business—Will Have Instruments on the Market by Fall—W. J. Roberts Incorporate—Bailey Co.'s New Addition—What a Run Around the Trade Reveals—Regarding Business Conditions Generally.

(Special to The Talking Machine World.)

Cleveland, O., July 8, 1909.

While business has been rather quiet with the talking machine dealers during June, the volume of trade in the aggregate was large and the undercurrent of feeling is hopeful. Sales of the cheaper machines are increasing as the labor conditions improve, but improvement in the high-grade class of goods is most distinctive. Improvement is noted in the wholesale situation from month to month, and jobbers are busier filling the orders of the small dealers.

It is anticipated business will settle down to a more satisfactory basis by the first of September, and a large fall trade counted on with some degree of certainty.

There is a lively demand for the new June records, both of the Columbia and Victor lists, and sales of the Edison Amberol records are growing to large proportions.

The American Sero-Phonograph Co., incorporated under the laws of Ohio, have taken over the patent (No. 925,430) recently granted J. I. Gemmill, of this city, and are beginning active operations. A subsidiary company is being organized for the manufacture and sale of the machines.

The feature of the new machine consists of an automatic multiple record system by which the records are automatically placed in playing position and displaced in consecutive order in an endless chain manner. The present machine is equipped with sixteen records, run by an electric motor and operates continuously without attention. It has been running for six months, producing perfect results, and has been examined by mechanical and talking machine experts, who pronounce it an ingenious, remarkable piece of mechanism. Its marked simplicity is the automatic attachment, the parts being few and of the most simple nature.

Arrangements, it is stated, have practically been completed, and the company expect to have the machine on the market by fall, a number of machines having already been spoken for by dealers, moving picture show operators, penny arcades, advertisers and others. Any standard cylinder record can be used and it has a selective system, placing any desired record in position or duplicating the same. There is also a slot attachment which can be utilized when desired.

The application for this automatic multiple record phonograph was filed by James I. Gemmill, of this city, in June, 1905. It was contested on various interference claims, resulting in the case being finally appealed to the Court of Appeals at Washington, where Gemmill won by default of the other claimants. The case was in the Patent Office for four years. The patent covers 41 claims and is exceptionally broad and comprehensive. Patents have also been granted in Great Britain and France, and applications are pending in other foreign countries.

F. Woodward, representative of the Victor Co., was in the city for a few days the last of June, and gathered in a good bunch of orders.

J. Herbert Roach, general manager of the Specialty Sales Co., having the management of the Edison business phonograph, said the past month's business had been excellent. Besides installing several outfits he stated he had many good prospects.

Joseph F. McCoy, of the National Phonograph Co., on his way East, stopped over for a day, July 1.

W. J. Roberts, Jr., has incorporated under the laws of Ohio, with a capital of $15,000, under the name of the W. J. Roberts, Jr., Co. He stated his object in incorporating was to largely extend the business. It is the intention of the company to carry a large and complete stock of everything in the talking machine line.

The May Co. report good sales of the higher-grade machines and records. They have many prospects for the new Victrola XII and the new Fireside, both of which they have on exhibition.

The new addition to the Bailey Co.'s store is nearing completion, and the large space on the second floor apportioned to the music department is being fitted up with elegant fixtures. Mr. Friedlander, manager of the talking machine department, said trade was excellent and the business constantly extending, and he expects it to very greatly increase when they get into their new and greatly enlarged quarters.

Mr. Robbins, of the B. L. Robbins Co., says they are having good sales of Amberol records, that they are proving popular and giving entire satisfaction. Their sales of Red Seals are also fine, with an excellent demand for machines.

John Reiling says he is doing a fairly good business in Columbia graphophones on the West Side.

Collister & Sayle report good sales of high-priced machines and records. Visitors are highly pleased with the Victrola XII, which is now on exhibition.

The Goodman Piano Co. also make a cheery report of business improvement. Mr. Goodman stated: "June was a splendid month in sales of the high-priced machines and records, and I am pleased with the general outlook."

G. J. Probeck & Co. also make an excellent report anent sales of Columbia double disc and indestructible records.

The Gottdiner & Wicht Co., who cater to a large foreign clientele, have had a busy month, as also have the Hucter Jewelry Co., who report big sales of Edison and Victor machines and records.

The Talking Machine Store is to be remodeled and enlarged.

Recent visitors to the city were W. H. Hug, the Edison representative, who stated that business in the territory visited on his way West from New York was improving, and Harry Rood, of the Rood Co., talking machine dealers in Warren, O.

ZONOPHONE WOOD HORN.

Zonophone Machines to be Equipped With Handsome Wood Horn Hereafter—Description of This Device.

Following the equipment of their machines with a wood horn by the Universal Talking Machine Mfg. Co., Newark, N. J., the subjoined circular letter of July 1 was mailed the trade:

"The wood horn is 24 inches long with 22-inch morning glory bell and is made either in mahogany or quartered oak, both highly polished and perfect in every way. This horn will not fall to pieces as some wood horns now on the market are doing. The manufacturer guarantees the horns to our company, so we can guarantee the horns to the dealers. These horns are equipped with a nickel-plated screw elbow. There will be no exchange of wood horns for metal horns under any circumstances. These wood horns will list at $14.

"We also wish to call your attention to the parlor $30 machine which in the future will be shipped with a new highly-polished cabinet much larger and of a different design."

General Manager Macnabb stated business was picking up in all parts of the country both in records and machines.

The responsible head of any company should see to it that there are placed at the heads of the various departments under him men who will realize the necessity of tactful treatment of those with whom they come in contact. The methods of the various employes will in most cases be found to be in line with the methods of the head of the department, and for this reason *suaviter in modo, fortiter in re*, mildness in method, force in execution, should be the governing principle for all heads of departments.

GOODWIN WITH NATIONAL CO.

Becomes Manager of Sales Force, Succeeding E. H. Philips, Who Will Give Entire Attention to Credit Department.

C. E. Goodwin, for many years in charge of the talking machine department of Lyon & Healy, has joined the Edison forces. He has accepted a position as manager of salesmen, succeeding E. H. Philips, who will hereafter devote his entire time to the position of manager of credit department. Since F. K. Dolbeer was made manager of sales, Mr. Philips has filled the two offices of credit manager and manager of salesmen.

Mr. Goodwin is one of the best known men in the talking machine trade. He is not only prominent because of his former connection

C. E. GOODWIN.

with Lyon & Healy, but because of the active part he took in forming the National Talking Machine Jobbers' Association, a work in which he has ever since been greatly interested. Mr. Goodwin assumed charge on July 1. All of the salesmen now on the road are to be brought to the factory this month and will there become acquainted with their new chief.

The National Phonograph Co. are planning to make a large addition to their corps of salesmen this fall, and Mr. Goodwin will be kept busy breaking in new men, to say nothing of the work incident to getting acquainted and laying out work for the present force. While the salesmen of the National Co. rank second to none in faithfulness and efficiency, Mr. Goodwin's practical connection with the talking machine industry cannot fail to increase the value of their work.

LIFE.

Vociferation.
Liquefaction.
Mastication.
Education.
Spoliation.
Osculation.
Domestication.
Ossification.
Plantation.
Transportation.

The Fort Wayne Machine Co., of Fort Wayne, Ind., was incorporated recently with a capital of $10,000, to buy and sell talking machines, musical instruments, automobiles, bicycles, etc. The incorporators are S. Z. Davis, M. M. Davis and F. L. Young.

Fred E. Brown, Waverly, N. Y., is carrying a very fine stock of Edison machines and records.

WURLITZER EMPLOYES' PICNIC.

An Enjoyable Outing Participated in by Wurlitzer Forces—Loving Cup Presented to Rudolph Wurlitzer, Sr., by Wurlitzer Employes—Over Two Hundred Present.

(Special to The Talking Machine World.)

Cincinnati, O., July 7, 1909.

On Saturday, July 3, the Rudolph Wurlitzer Co. tendered their employes and families their annual picnic excursion at picturesque Gravel Beach Park. Special cars were chartered to take the party, numbering over 200, from Fountain Square, over the Cincinnati & Columbus Traction Line tracks to the park. The cars were gaily decorated in banners and bunting and a stop was made long enough to secure a photograph of the first division of the happy picnickers.

The Wurlitzer orchestra dispensed sweet music during the trip down, which occupied an hour and a half. Everything in connection with the outing had been most carefully arranged by a committee, consisting of Messrs. Zinzle, Metzel, Wells and Mahret, and a neatly printed program contained a list of the day's events. These began promptly upon arriving at the park, and consisted of match games of baseball between teams representing the different departments of the Wurlitzer store, all kinds of races, boating and bathing in the Miami river, and dancing on the spacious pavilion. Every person present was the recipient of an appetizing picnic dinner box prepared by Peebles. There was a superabundance of refreshments—ice cream, mineral waters, fruits, etc.

SNAPSHOT OF WURLITZER EMPLOYES AT GRAVEL BEACH PARK.

Late in the day 50 prize balloons were sent up. These had tickets attached, each of which is good for a prize if the finder presents it at the Wurlitzer store.

By far the most interesting event of the day was the presentation of a loving cup to Rudolph Wurlitzer, Sr., by all of his employes. The cup, which stands 13 inches high, is a beautiful three-handled Tiffany design in sterling silver, and is inscribed with the words "Presented to Rudolph Wurlitzer by his employes, as a token of affectionate esteem. Cincinnati, Ohio July, 1909."

The days' festivities were brought to a happy close by the distribution of prizes to the winners of the day's athletic contests, and this was followed by a delightful twilight ride to Cincinnati.

DUPLEX HORN LITIGATION.

(Special to The Talking Machine World.)

Grand Rapids, Mich., June 28, 1909.

The Conn patent on a double or duplex horn for talking machines, involved in a suit brought by the Victor Talking Machine Co., Camden, N. J., against the Duplex Phonograph Co., Kalamazoo, Mich., was heard Friday in the Circuit Court of the United States, western district of Michigan, before Judge Knappen. The motion argued was for a preliminary injunction pendente lite, and decision was reserved. The duplex horn invention at issue was patented by C. C. Conn, the widely-known musical instrument manufacturer of Elkhart, Ind., and subsequently acquired by the Victor Co.

"TALKER" STIMULATES WORKERS.

Considers the Talking Machine a Most Valuable Asset in Getting Quick and Good Work Out of Operators of Typewriters—Some Good Logic.

Two days after the fireproofing agent rented deskroom in the office of the patent medicine concern, he complained that he couldn't stand the noise.

"It isn't the noise from the street that bothers me so much," he said. "It's that confounded talking machine at the other end of the room."

The manufacturer of patent medicines looked grave.

"When you malign that machine," he said, "you are slandering one of my most valuable assets. Without that my expenses would be increased at least $10 a week. I'd have to hire another typewriter. As an incentive to speed, music has no equal. It puts lightning into a girl's fingers. Of course, I am speaking of the right kind of music. I don't want any dead marches in Saul played around this establishment. I'd have to hire two extra clerks then instead of one, for slow music is sure to produce soporific effect on the girls at the machine. It is the quick and devilish tunes that make them knock stars out of a typewriter. Usually they keep time with the music and accomplish half as much again.

"I found out about the potency of music when I had an office next door to a talking machine exhibition room. Under the influence of the lively pieces played there my girls did stunts that were astonishing. When we moved away they slumped terribly. It took me some time to figure out that the music had been the source of their inspiration. As soon as I learned that, I bought this talking machine. It has been a profitable investment. Of course, if you are willing to pay a big enough rent to enable me to hire extra help—"

But the agent closed the conversation.

DO IT! DO IT!!

Do it! Keep on and leap on—get through it!
Don't stop in the road or hop like a toad
From this side to that, or fly like a bat
With your head upside down till your brains rattle 'round.
Of course—there are boulders!
But you have strong shoulders—
A tug and a stride, though, will move them aside, so!
Deep ruts? To be sure.
Toward the end, though, they're fewer.
The path over there may appear far more fair.
But you haven't the time to find out if it's prime,
And the road to the right winds too far out of sight.
It may prove much slicker and smoother and quicker,
But you know your way's right, for the goal is in sight.
So what if it's rough—isn't sureness enough?
Jot this down where 'twill stay, for you need it all day.
What's got without effort is worth what it cost,
The easily gained things are easily lost.
When a road is worn flat you can bet your best hat
That it leads to a place where too many are at.
When a way is all roughness and gruffness and toughness,
And brambled and scrambled and wildly o'ergrown—
You can make up your mind
There are new things to find,
That you're getting at something that hasn't been known.
If you don't go on through it you'll live on to rue it.
Somebody who isn't a quitter will do it!
He'll laugh as he rambles his way through the brambles;
He'll know that the big things of life must be won.
He won't mind a stumble (it takes time to grumble);
He won't care a hang if he does bark his shin.
He won't be defeated because he's o'erheated,
He'll leap on and keep on until he gets in.

—Herbert Kaufman.

INVITED TO SUBMIT BIDS.

(Special to The Review.)

Philadelphia, Pa., July 1, 1909.

Ballinger & Perot have invited bids on a large addition to the plant of the Victor Talking Machine Co., Camden, N. J. The improvements comprise a six-story fireproof building on the southwest corner of Second and Cooper streets, opposite Cooper Park, connected with the present buildings on Cooper street. The length on Second street will be 135 feet and depth 174 feet. All the latest improvements as to toilet and dressing-room facilities, including individual lockers, will be installed to make the plant of the best as to conveniences for employes.

WOOD DIAPHRAGMS

For cylinder records; every detail reproduced; nothing missed. For the four-minute records they are a revelation.

PRICE REDUCED TO 50 CENTS EACH (including cross head and link).

MASTER RECORD MOULDS

Absolutely perfect copper matrices from cylinder masters furnished at short notice. By our new process we produce a matchless surface, even improving that of the master. Prices furnished on application.

SLOT PHONOGRAPHS

Large and small lots of slot phonographs to rent for parlors and summer resorts at nominal prices.

NORCROSS PHONOGRAPH COMPANY

New Lang Building, (39th Street) 662 Sixth Avenue

NEW YORK CITY

TRADE NEWS FROM THE "HUB."

J. L. Gately Returns to Talking Machine Business—E. F. Taft Home from Convention—Eastern T. M. Co.'s Good Report—New Columbia B. N. W. Machine a Favorite—C. E. Osgood Co.'s Department to be Enlarged—Victrola as Prize at Fair.

(Special to The Talking Machine World.)

Boston, Mass., July 12, 1909.

Nobody killed the fatted calf, but there was general rejoicing just the same when the prodigal son of the local talking machine trade, J. L. Gately, returned to the fold—this time as the New England representative of the Victor Co. Gately is very popular here with the dealers and he knows the business thoroughly. He can tell you all about the scientific course in salesmanship, and he can put the theory into practice. He is very happy at being stationed on his home district.

At the Eastern Talking Machine Co., this week, Manager E. F. Taft had just returned from the convention, filled to the brim with new ideas. J. W. Scott, representative of the National Phonograph Co. also came to town from the convention.

The Eastern Co. are very agreeably surprised at the growth of the business during June and so far into July. Trade is holding up remarkably well. An enormous sale is predicted for the new Victrola No. 12. As one salesman says: "It is just big enough to put into an automobile and carry to the summer home." Quite a number of orders have been booked in advance for it.

At the Columbia offices this week the new BNW $35 machine was reported as being a strong favorite and bringing in unusual results. Manager Erisman has shown himself to be a great hustler for outside business. The window displays are a noticeable factor at this store.

Manager Sylvester at the C. E. Osgood Co. store is planning to make some necessary enlargements to the talking machine department next fall. More space is needed badly. This company used to do a jobbing business as well as retail, but has abandoned everything now but the retail trade and the results are most encouraging to everybody concerned. Manager Sylvester is a young hustler, and he has developed a big business through "getting out after it." He is building new racks now, in order to be ready for the enlargement the coming fall.

Harry Lauder's jolly Scotch songs are still selling in good numbers at the Houghton & Dutton department. The Edison line is a strong puller there says Manager Howes.

In the window at the Eastern Talking Machine Co. is a Victor Victrola, which has been bought by the Bristol Patent Leather Co., and is to be given away as a prize at the Shoe and Leather Fair, now open here. The winner may select $50 worth of records.

E. P. Ashton, of the American Phonograph Co, who just removed from 106 to 252 Woodward avenue, Detroit, was the subject of some complimentary words in a recent issue of the Detroit Saturday Night.

In the September list of Edison Amberol records will appear the first made by Victor Herbert and his orchestra, a selection of several airs from "Mlle. Modiste," his own opera.

DISC RECORD STOP

The Chambers Automatic Stop for Disc Records

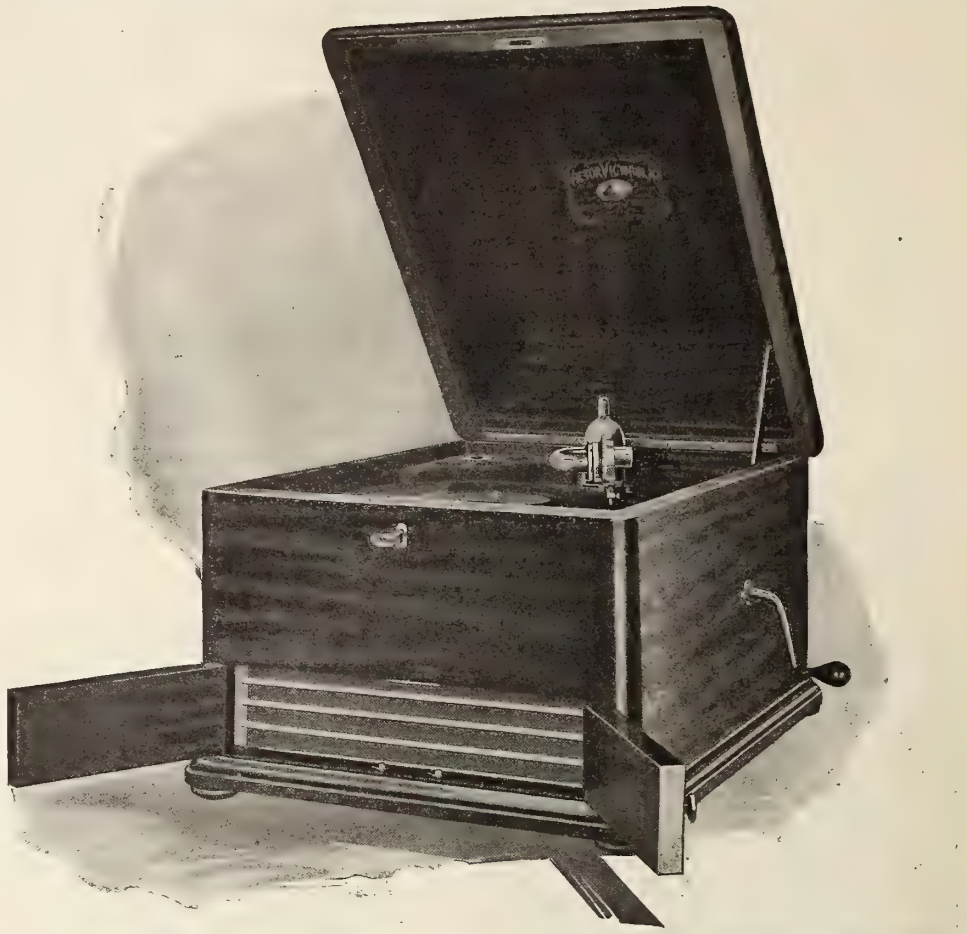
Stops the Talking Machine instantly as soon as the record is finished. Simple in construction—Perfect in action Fits any record—No springs or strings to get out of order—Absolutely guaranteed.

ASK YOUR JOBBER FOR IT.

CHAMBERS AUTOMATIC STOP CO.

J. R. LYNCH, Mgr, Tribune Building, New York City

THE NEW VICTROLA XII WHICH IS GREATLY IN FAVOR.



The new Victrola XII., which, as announced in The World recently, has just been placed on the market by the Victor Talking Machine Co., has already proven a favorite with the trade, judging from the many orders which are reaching the manufacturers. Its compactness, its tone volume, due to the amplifying sounding-board principle, and the absence of the horn which insures convenient handling, as well as the finish of the mechanism and cabinet throughout, marks it as one of the season's big sellers. The cabinet is mahogany, while the motor is nickel-plated, with extra heavy triple springs, spiral drive. It plays eight 10-inch records with one winding, and can be wound while playing. The turntable is yielding, of 12-inch dimensions and accommodates all size records. It has a gold-plated sound-box of the exhibition type, and if preferred, the concert style can be had.

The Victrola XII. contains an improved speed regulator and indicator, which gives the revolutions per minute of the turntable. The machine measures 15⅞ inches high; 17⅝ inches wide, with a depth of 21 15-16 inches. The total weight is 50 pounds unboxed. When closed, the Victrola XII. has the appearance of a small square cabinet. Shown in the illustration herewith, the Victrola is open. The lower doors modify the sounds, loud to soft, by opening or closed. It retails at $125.

The Victor Co. also announce an early production of Victrola record cabinet, No. 50, which is intended to take care of the demand that will be instantly created by the Victrola XII. This cabinet will retail at $75, and the dealer's discount will be 33⅓ per cent. Shipments of these cabinets will not be made before the middle or latter part of July. The Victor record cabinet 50 is in mahogany, Colonial in design. It contains seven albums for 10-inch records, holding fifteen records each; seven albums for 12-inch records, holding fifteen records each—a total capacity of 210 records. There is a drawer for accessories, and a sliding shelf on which to conveniently handle album or record. Within a week or ten days the Victor Co. will issue a pamphlet describing another record cabinet, made in both oak and mahogany, which will be in keeping with and readily sold in connection with any of the regular line of Victrolas.

SUIT FOR PATENT INFRINGEMENT.

Brought by Victor Co. Against Isidor Straus and Others—Injunction Is Granted and Judge's Ruling Contains Novel Points of Interest.

Of the many actions brought recently by the Victor Talking Machine Co., Camden, N. J., against alleged infringers of the Berliner patent—adjudicated by the Supreme Court of the United States in April—the one with Isidor Straus and others (R. H. Macy & Co.), New York, is the most interesting. While the defense submitted, when the motion for a preliminary injunction was argued before Judge Lacombe, Circuit Court of the United States, southern district of New York, June 19, was weak, and the issuance of a restraining order anticipated, the question of the legal disposition of the "Nassau" records, manufactured by the Leeds & Catlin Co., of which they had in stock 20,000, was awaited by the entire trade with interest. The court's decision, handed down June 30, though somewhat hypothetical, is as follows:

"Manifestly complainant is entitled to the ordinary injunction against infringement of claims 5 and 35 of the Berliner patent. What defendants may do with the infringing discs they now own is a question to be dealt with when it arises. If they ship them abroad and sell them *after they get there* it would be difficult to see how they would infringe. If they find someone who owns and uses a mechanical feed device, they would run the risk, upon selling to him, of his putting them to an infringing use to which they would have contributed.

"If they wish to test their right to sell to a licensee of the complainant, they might do so by selling a single disc to him, notifying complainant promptly of such sale. Then the test of the license would be before the court and the question could be disposed of understandingly. In the event of an adverse decision under such circumstances, the court would surely not impose more than a nominal fine."

Don't change your windows too often; there are extremes both ways. Give the public time to see your display, but don't let them get tired of looking at it.

MILWAUKEE'S BUDGET OF NEWS.

Summer Resort Business Redeeming Feature of Trade—Wisconsin Attracts Vacationists from All Middle West—New Machines Boost Business—Dealers Disappointed at Killing of Bulder Ordinance—Victrola at Bankers' Convention—Columbia Machine in Tuberculosis War—Other Items of Interest.

(Special to The Talking Machine World.)

Milwaukee, Wis., July 9, 1909.

The summer resort business seems to be the redeeming feature in the Milwaukee talking machine business just at the present time. Dealers in all of the larger cities about the State report that trade has been showing considerable improvement of late, largely because of the demand from summer resorts. Wisconsin is a State of many lakes and people all through the Middle West flock here during the summer months. It would seem that the talking machine plays a most important part in the vacation days all over the State. General retail business is somewhat better in the cities and larger towns, but trade is still quiet in the smaller places and in the country where the farmers are experiencing their busy season. A big fall business all over the State is expected this fall.

LAWRENCE McGREAL'S HEADQUARTERS.

The wholesale trade is showing more life, although it is conceded that the next two months will be rather quiet, as is usual during the summer. The appearance of several new machines in the field has done much to boost business in a wholesale way.

The Victrola 12th is proving itself a winner and some big sales in both a retail and wholesale way are reported by Mr. McGreal. The new Edison Fireside machine seems to be a big success and dealers are already reordering after trying their sample machines. A new Columbia model is expected in Milwaukee soon, and advance information would indicate that the machine will be popular from the start.

Milwaukee talking machine dealers are disappointed that the Bulder moving ordinance, requiring expressmen to make reports on all removals of household and other goods, was killed by the Judiciary Committee of the Milwaukee Common Council. Dealers were heartily in favor of the ordinance, as it was the belief that it would have been a great protection to the entire instalment business. Lawrence McGreal, well-known jobber and retailer in the talking machine field, appeared before the committee in defense of the measure and said that he believed that at least 95 per cent. of the business men of Milwaukee were in favor of its passage, on the ground that the measure would assist in stamping out fraud. Expressmen and movers, on the other hand, were opposed to the measure, on the ground that it would work extreme hardship upon them. Attorneys for the expressmen were of the opinion that the bill would make a collection agency of the city and a police department out of the expressmen. Chief of Police John T. Janssen said that the measure was honest and fair, and that it would greatly assist the police in tracing dishonest persons, and he believed that the expressmen should have the interests of the city enough at heart to lend their assistance, especially as the ordinance required them to report but once a week.

The Victrola played a most important part in the recent convention of the Wisconsin State Bankers' Association. The sessions of the bankers were held aboard a steamer on Lake Michigan, and the talker, furnished as usual by Lawrence McGreal, supplied most of the music for three days. The bankers are now swearing by Mr. McGreal and the Victrola.

The Columbia is proving to be a valuable factor in fighting tuberculosis in Wisconsin. A. D. Herriman, manager of the local Columbia branch, has recently sold a Twentieth Century machine to the Wisconsin Anti-Tuberculosis Association, and it is now being carried all over the State aiding in the widespread movement against the great white plague. Manager A. D. Herriman aided in making half a dozen records for the association, which tell of the work that the organization is doing and also inform the people as to what should be done to fight and to prevent the dread disease. Harry D. Brown is the lecturer in charge of the work, and he is most enthusiastic over the Columbia as a valuable accessory.

Alfred Hille, manager of the talker department of the Joseph Flanner Music House, report good sales in both the record and machine line.

A. D. Herriman, the local Columbia manager, has just returned from Waterford, Wis., where he spent his vacation in catching all the fish in the surrounding lakes, judging from the way he remembered his friends.

Henry Saak, who recently opened a new Columbia store at 1602 Vliet street, is making good use of his automobile to push the talker business. Mr. Saak's auto bears a big sign telling of the merits of the Columbia, and it never fails to attract notice.

Lawrence McGreal, accompanied by Mrs. McGreal and Jack McGreal, their son, and Miss Gertrude F. Gannon, have left for the East, to be in attendance at the convention at Atlantic City of the National Association of Talking Machine Jobbers. Before proceeding to Atlantic City the party arranged to visit New York and several other points. Jack McGreal, well known to the talking machine trade of the West, is the young son of Mr. McGreal, who was made mascot at the jobbers' convention last year.

E. C. Plume, western wholesale manager of the Columbia, with headquarters at Chicago, was in Milwaukee recently while on a combined pleasure and business trip.

A big and attractive fiber needle exhibit is on display in the windows of the Hoeffler Manufacturing Co.

The Boston store, of this city, is preparing to remodel its talking machine department, and plans are under way for pushing this phase of the business to its full limit. Both Victor and Edison machines and records will be handled. The store is in the heart of the retail district and a big trade is looked for.

William P. Hope, Wisconsin and upper Michigan representative of the National Phonograph Co., was a recent visitor. He will soon leave for Orange, N. J., to spend three or four weeks at the main plant of the company.

W. J. Boss, talking machine dealer at Appleton, Wis., and C. H. Viebranz, dealer at Hillsboro, Wis., were recent Milwaukee visitors.

William Schmidt, Wisconsin representative of the Victor Co., was here for a few days, after a successful trip about the State.

LITIGATION STILL UNDER WAY.

In the pending litigation against the International Record Co., Auburn, N. Y., in which the American Graphophone Co. (Columbia Phonograph Co.) have argued a motion for permanent injunction and a decree to enforce the final decision of the United States courts on the Jones patent, the complainants desire to inform the trade that the defendants suspended business operations months ago. In fact, a temporary restraining order was issued November 23, 1908. Since that time the International Co. ceased operations. About a month ago they were given further time, now about expired, to examine experts. July 7 Waldo G. Morse, the defendants' attorney, posing as an expert, testified. The court has the matter once again under advisement. There is litle doubt about the outcome.

MARIETTA PHONOGRAPH CO.'S DISPLAY.

The Marietta Phonograph Co., Marietta, O., are displaying a very fine line of Columbia machines and disc records, also a complete line of Zonophone machines and records, in their establishment in that city, in addition to the Edison and Victor lines. J. V. McCollum is manager.

C. L. Mason, who conducts a phonograph store on Main street, Enosburgh Falls, Vt., reports increasing business.

Needles Free To Prove Quality

"THE BEST THAT MONEY CAN BUY"

Playrite TRADE MARK

Working for Uniform Classification of Trade—Impressions Made by the Recent Music Trade Conventions in Detroit—The Trade Situation Discussed—Valuable Victor Adherent—Some Columbia Items—An Interesting Photograph—How the Jobbers Convention at Atlantic City Was Referred to in the Daily Press—A Victor for Governor Dineen.

(Special to The Talking Machine World.)

Chicago, Ill., July 7, 1909.

A very important work is now in progress in Chicago. It is the result of the experience and agitation of the years and has for its purpose the securing of a uniform classification of freight rates. As every one knows the same articles at present pay different rates according to the classification territory in which they move. There often is confusion when they move from one territory to another.

The difficulty in reconciling the rates lies in the fact that the three classifications are governed by local conditions and that manufacturing industries and trade centers have developed and become interwoven with the existing basis of schedule.

At a meeting in 1907 it was agreed to make a beginning by standardizing the various articles, a few at a time. A general executive committee has been appointed to work in connection with the three territorial committees and the various rate organizations will shape the action of all these bodies toward the common end.

Under the jurisdiction of this executive committee a working committee with a representation from each of the classifications has been appointed to continue the work of unifying the rules, minimum car-load weights and description of articles.

The Piano Men's Conventions.

The Chicago representative of The World had the pleasure of attending the conventions of the National Piano Dealers', Manufacturers' and Travelers' Associations, held in Detroit last month. Many of the conventioners were, of course, talking machine as well as piano men, and the writer had many interesting conversations and received many valuable pointers, some of which will be found in letters in this and succeeding issues. Talking machines were mentioned, however, several times in addresses and papers during the sessions; for instance, retiring President C. A. Grinnell, of the Dealers' Association, and himself a prominent factor in both the retail and wholesale talking machine business, in his annual report suggested that a committee be appointed "whose business it should be to write articles at least once a week, which should pass through the hands of the press committee and be printed in our trade journals, and therefrom the dealers should take their clippings, and take them with their paid copy to the newspaper, and insist on its publishing this musical information, and interesting descriptions of new musical inventions, giving them such publicity as they rightly deserve." Continuing, Mr. Grinnell said: "A great deal will depend upon the local dealer who attends to this work. The newspaper isn't going to chase you up to get copy, but will be glad to insert these items if you furnish them.

"Take, for instance, the improvements that are coming out from time to time, such as the change from the 65 to the 88-note player-piano. Often articles could be written along the lines of such improvements and what these improvements signify to the musical world in an educational way.

"The same is true of the talking machine, and excellent articles could be written along this line. Another feature that would make most interesting reading to the general public is the fact that certain inventors are endeavoring to combine the player-piano and the talking machine into one instrument, so that we may hear the voice of a Caruso, accompanied by the piano, all played at the same time by the one instrument. The imagination might draw a still broader picture by showing how the vocalist, the piano and stereopticon views of performances can also be operated by one instrument.

"Publicity on these new inventions, and on the improvements of the instruments we have, combined with spicy musical matters of the day, will all tend to divert the minds of the public from automobiles and other extravagances, and get them more interested in the study of music and the ultimate purchase of musical instruments."

Several of the papers read at the dealers' convention held up the fixed price system prevalent in the talking machine trade as a model for the piano men to pattern after. J. A. Krumme, Jr., of New York, gave it prominent mention and expressed the hope that the time is not far off when the price of every piano will be as firmly fixed. "This will be advantageous both to the dealer and customer," he said. "To the dealer, enabling him to get a proper price for his piano, and to the customer that he will know that he is getting an instrument of the grade desired at the lowest possible price."

Regarding Trade Conditions.

There is little to be said regarding trade. It is in just about the usual July condition. Possibly in a wholesale way business is a little better than it would otherwise be, on account of

"WATCH IT GROW"

The Sectional Compartment Cabinet

FOR DISC RECORDS

A prime novelty but a genuinely useful one. Talking points galore and every "point" is backed up by facts.

"IT GROWS"

And as it grows the dealers' profits increase. The machine owner has to have more sections as his stock of records is augmented. He also has a natural desire to fill every section as quickly as possible. This makes him buy records rapidly. Each section is equipped with 40 separate compartments, either alphabetically or numerically arranged, each compartment holding three records, making a total capacity of 120 records. The compartments are made of the toughest chipped fibre, bound in leatherette, so as to resemble a handsome sectional bookcase.

These sections are made in two sizes; one for 10-inch records and one for 12-inch records and are made in either golden oak, weathered oak or sycamore mahogany. This is an ideal system for carrying your stock of red seal records.

YOU WILL BE SURPRISED AT THE REASONABLE PRICE. Write at once for full particulars regarding the business boomer of the century.

COMPARTMENT FILING CABINET COMPANY

Factory and Office, 426-428-430 Twenty-Ninth Street, Chicago, Ill.

Our Talking Machine Department is at YOUR Service

The facilities of our Talking Machine Department for the prompt and efficient handling of all orders are unsurpassed. Combined with a faultless system of modern shipping and storage methods, we have a trained and capable corps of employees to give minute attention to every detail of your order. This is a combination that prevents mistakes and insures satisfaction to our customers.

Any order—great or small—with which you may favor us, will receive the very best attention of our Talking Machine Department. This department will also be very glad to advise you in regard to your selling plans—to help you increase your sales.

A view in our Edison Phonograph Record Section, fifth floor, showing a portion of the thousands of late records constantly on hand. In the foreground is "Lightning Tom," famous for his skill and agility in filling orders.

A section of our Wholesale Victor Record Department showing the records in paper covers packed flat in the most approved dust proof manner. Immense numbers of factory records are handled here every day.

Let These Efficient Departments Handle Your Phonograph Business

ARE YOU A LYON & HEALY EDISON DEALER?

Lyon & Healy

CHICAGO

ARE YOU A LYON & HEALY VICTOR DEALER?

the various exchange propositions. In a retail way the efforts of local dealers to stimulate business by urging the value of talking machines for the purpose of entertainment in summer homes and resorts is helping things out to some extent.

An Important Victor Adherent.

An important news item is found in the fact that the Wulschner-Stewart Music Co., of Indianapolis, have just been signed up as distributers for the Victor Talking Machine Co. This makes a very notable addition to the list of Victor jobbers. The Wulschner-Stewart Co. are known as one of the strong concerns in the music trade, and the fact that they are going into the talking machine business extensively and aggressively is a marked illustration of the fact that the business is gaining in power and prestige. Dealers in Indiana and adjoining territory are certain to receive prompt service and intelligent service at the hands of this concern. This is further assured by the fact that they have secured as manager of their Victor department Edwin R. Sues, a talking machine man of experience and ability, and who has traveled for some time past for the Victor Talking Machine Co., his territory having been the State of Michigan. With such an equipment and such a manager the Wulschner-Stewart Music Co. will certainly become a strong factor in the western trade in the very near future.

M. B. Henry Joins Columbia Forces.

Malcolm B. Henry, Chicago representative of the Hawthorne-Sheble Mfg. Co., and a "moighty" good talking machine man, by the way, has become associated with the Chicago office of the Columbia Phonograph Co., and by way of introductory, is making a special trip for them in Indiana.

Guttenberger Succeeds Cook.

F. E. Cook has resigned as retail floor manager of the Columbia Phonograph Co., in order to go to Tulsa, Okla., where he will engage in the real estate business. He is a retail talker man of the A1 class, and Chicago will miss him. He is succeeded by E. W. Guttenberger, who made an enviable record as manager of the Columbia branch at Memphis, Tenn., which he has conducted successfully for the past fifteen months. Prior to that he was credit man for the Kansas City house for three years, and received his start in the graphophone business with present District Manager W. C. Fuhri, at St. Louis. Mr. Fuhri, by the way, is now on a trip, the western limit of which is Salt Lake City, Utah.

Big Department Store Deal.

Negotiations, started some time since by E. C. Plume, western wholesale manager of the Columbia Co., have culminated in one of the biggest department store deals of recent years. It involves the handling of Columbia goods by the Siegel-Cooper Co. store in Chicago and also the exclusive handling of these goods by the Henry Siegel store in Boston, and the "Fourteenth Street Store" in New York.

No Longer a Joke.

Notable evidence of the fact that the talking machine is recognized as a musical instrument and an artistic interpreter of lyrical and instrumental compositions is found in the chastened attitude of the jokesmith, as shown in their effusions in the daily papers and humorous "weeklies." Seldom, indeed, nowadays do you see any squibs reflecting on the talking machine. The coffee-grinding prelude is no longer the subject of facetiously worded lampoons, for the simple reason that it no longer exists, except in the case of a badly scratched record, and that's up to the owner and not the machine. The efforts of the funny man nowadays are confined largely to faking up stories where the talking machine is made, unwillingly as far as the machine is concerned, particeps criminis in a diabolical plot, or to likening a supposititious member of the unquiet sex to the festive "talker."

An Atlantic City Quip.

A special correspondent of the Chicago Record-Herald, wiring under date of June 26 from Atlantic City, prefaces his or her round-up of the Chicagoans recreating in the eastern resort with the following: "The next conventions, which will strike this city in July, will be those of the fertilizer association and the talking machine men. Surely that is a lively combination! Things ought to grow here during that convention, and, for the talking machine men, who can talk faster than the beach chair girl, who sits nestled in a cunning bathing suit of blue and scarlet!"

H. H. Myers, representing the Chicago office of the Columbia Phonograph Co. in Michigan and Indiana, is a loyal Elk and left on Thursday of this week for the national convention of the B. P. O. E. at Los Angeles.

An Interesting Photograph.

A very interesting photograph, showing the Tinggians, natives of the sub-province of Abra, in the northern part of Luzon, Philippine Islands, listening to records of their own voices on a Columbia cylinder graphophone, adorns the window of the Columbia Co. here. It was taken last year by Fay Cooper Cole, of the Field Museum of Natural Science of this city. A reproduction of the photograph, together with some account of Mr. Cole's experiences among the head hunting tribes of the Philippines, and a brief study of the music of the Tinggians will appear in the next issue of The Talking Machine World.

Walter S. Gray, Pacific Coast manager of the Columbia Phonograph Co., and J. H. Wheeler, manager of the Minneapolis branch, were both recent Chicago visitors.

Victrola for Governor Dineen.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy's, went to Springfield, Ill., a couple of weeks ago and sold a Victrola to Governor C. F. Deneen, turning the sale through L. & H.'s Springfield dealer, R. L. Berry. Here is the documentary evidence in the case:

State of Illinois, Executive Department,
Springfield, Ill., June 29, 1909.

Dear Sir—Referring to our conversation of Friday last, you may send to the executive mansion your Victor Victrola No. 16, at $200. Yours very truly, C. F. Deneen.

L. C. Wiswell, care Lyon & Healy, Chicago, Ill.

C. E. Goodwin With National Phonograph Co.

The announcement received from the National Phonograph Co. by local jobbers this week that C. E. Goodwin, formerly with Lyon & Healy, Chicago, has been appointed manager of salesmen carried joy to the hearts of many who longed to see Mr. Goodwin back in the harness again, although they knew, of course, that such an occurrence was inevitable. This is the way in which Mr. Goodwin takes that European vacation he was talking about, but it is doubtful whether Goodwin could take a prolonged vacation. He would be unhappy unless he was planning and working along the lines that he has given so many fruitful years of energetic and distinguished service. The National Co. was not the only one, it is understood, that was after Mr. Goodwin, and they are certainly to be congratulated on their acquisition.

Lyon & Healy Equipped for Service.

Lyon & Healy have a very interesting page in this month's World. It shows both their wholesale Edison and Victor departments, and even Lightning Tom is depicted in full blast. No question about it, Lyon & Healy are equipped for service. Harry B. Hopkins is at the helm in the absence of Manager L. C. Wiswell, who is East attending the Jobbers' convention. He was accompanied by his wife and will visit the Victor and Edison factories before his return. J. F. Bowers, secretary of Lyon & Healy, and president of the Talking Machine Jobbers' Association, is, of course, also at Atlantic City.

F. H. Siemon Attends Convention.

F. H. Siemon, assistant manager of the Chicago house of the Rudolph Wurlitzer Co., is at the Jobbers' convention. He has his wife with him, and they will see a few of the glories of the East and Canada before their return.

Talking Machine Co.'s Creed.

In last month's World there was a reference to the Talking Machine Co.'s creed "to be found in their advertisement elsewhere." True, there was a story about Dan Creed, but that was not an advertisement. The other creed referred to did not appear, but that was not the fault of the Talking Machine Co. It's there this trip, however, and is well worth the reading. Furthermore, anyone who is acquainted with Arthur D. Geissler and his methods knows that it expresses correctly the practice and ideals of the company.

LYON & HEALY'S CLEVER WINDOW.

Special Display Made for the Holidays Has Come in for Much Favorable Comment—The Modus Operandi of Its Dressing Will Interest Readers.

(Special to The Talking Machine World.)

Chicago, Ill., July 8, 1909.

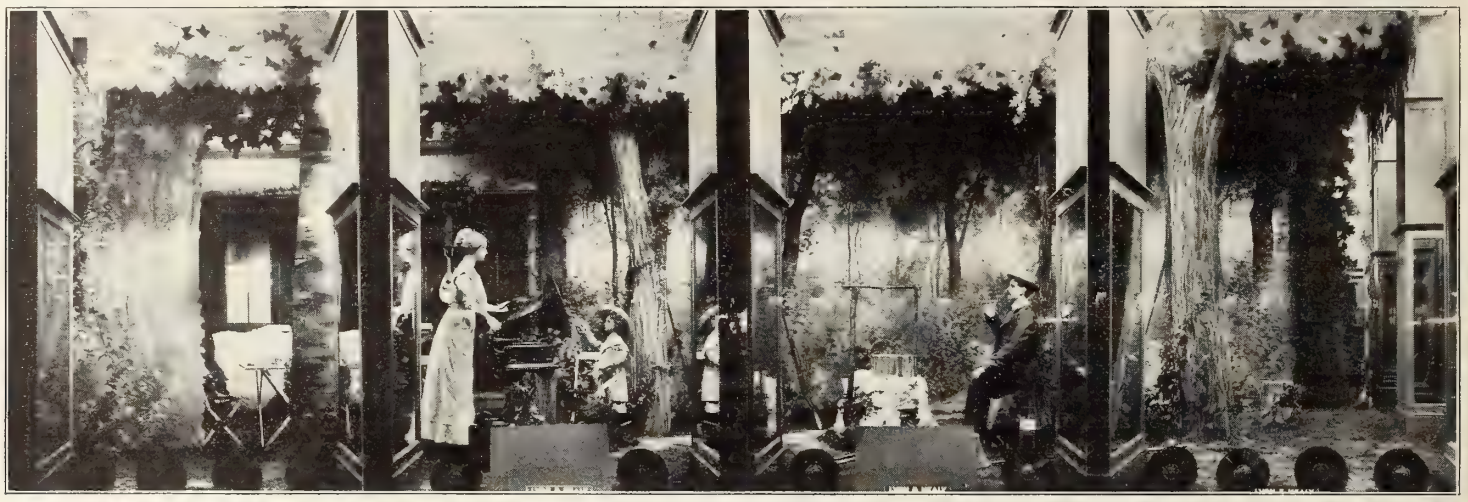
The multitude that pass Lyon & Healy's large show windows on the corner of Wabash avenue and Adams street are attracted by the rural scene there depicted. As they gaze upon the miniature forest with its vine-covered stumps and verdant foliage, they become possessed of an irrepressible longing for a trip to that shady nook in the woods so faithfully represented. Overhanging foliage and tall oak trees so nearly resemble nature as to make one expect to hear the chirp-chirp of the bob-white and whippoorwill as they flutter from branch to branch.

There is green grass in abundance, with here and there a winding path among the trees and moss-grown stumps. Fish rods and landing nets breathe a suggestion of piscatorial pleasures, while cameras, tennis rackets and golf sticks silently appeal to the athletic onlookers' imagination. Within a fireplace created from rough-hewn rocks and crudely cemented together, vivid artificial flames may be seen to leap venomously upward, licking the sides of a bright tin broiler and coffee pot. So real is it all, one can almost inhale the appetizing odors which surely must emanate from those apparently steaming utensils.

In the background is a wood-colored cabin, its comfortable piazza being softly illuminated by the light reflected from the window. At the foot of the cabin porch is a table upon which is an array of shining tinware, evidently in readiness for the al fresco repast that is under preparation.

Seated upon a stump before the fireplace, with a double-barreled shotgun thrown carelessly across his knee, is a man in hunting costume. He is listening intently to the wonderful melody of the Sextette from "Lucia," as played by a Victor talking machine. Operating the Victor is a young woman attired in a gown of hunting khaki. In her hand she holds a Victor record, ready to replace the Sextette as soon as the final strains of that beautiful piece have reverberated through the forest. A little flaxen-haired child in the act of loading a small wheelbarrow with cool, fresh moss has been distracted from his play by the Victor talking machine and stands in rapt attention. A fact that strikes the observer with peculiar significance is that fish rod, shotgun, camera, golf sticks and baby's wheelbarrow have all been temporarily abandoned for the Victor.

So much for a description of the window. Just a few pointers as to the manner to which the effects are secured may interest the readers of The World. Although comparatively few dealers have either the amount of window space or the means at their command to reproduce such a display as this in its entirety, many valuable suggestions can be obtained from it. The "green grass" is simply real tree moss, which can be secured at most florists in rolls. Even in small towns wax figures can be borrowed from the local clothing or dry goods merchants. Lyon & Healy's window trimmer was so anxious to secure natural effects that he clothed the female figure completely, that is, from the waist up, with underwear, corset, corset cover and all, in order to make the gown "hang right." The fireplace was constructed of real rocks cemented together. The fire effect was produced by means of strips of red woolen cloth attached to a screen at the top of the orifice in the rock structure. These sticks were made to flare up in imitation of flames by an ordinary ventilating fan, and the effect was heightened by a red glass incandescent bulb, situated, of course, below the woolen strips.



LYON & HEALY'S SEASONABLE WINDOW DISPLAY.

The background and much of the forest effect were, of course, the work of the scenic artist, but very fair substitutes can be devised by any window trimmer of ordinary ingenuity. The forest paths were made by the use of yellow ochre spread on the moss-covered floor. The display was designed and executed by the Lyon & Healy's regular window trimmer, and he is certainly an artist. He shows this in his "genre" effects. The figures are posed with absolute naturalness. A half-burned cigar is held by the man. An empty needle envelope rests on one of the rocks composing the fireplace. These and many other little natural touches betray thought on the part of the trimmer and add immensely to the realism and attractiveness of the window.

THE FURNITURE EXHIBITION.

Many Manufacturers of Cabinets for Talking Machines in Evidence at This Display.

(Special to The Talking Machine World.)

Chicago, Ill., July 9, 1909.

The semi-annual furniture exhibition, which occurs during the months of January and July, is now in full swing at the three large buildings, 1319 and 1411 Michigan avenue, and at 14th and Wabash avenue, respectively, while a number of exhibitors are located in handsome quarters at 187 Michigan avenue. These quarters are used extensively by furniture concerns throughout the year, the majority of them keeping a line of samples, while a few concentrate during the exhibition months. The attendance so far this month, while rather light, is by no means discouraging, as dealers are arriving in large numbers daily. As a general rule the buying holds off until the latter part of the month.

Among the large number of furniture manufacturers who make a line of sheet music, phonographs, player cabinets and other goods of interest to the trade are the Herzog Co., of Saginaw, Mich. They are using large space in the building at 1319 Michigan avenue and have a very efficient force of salesmen showing the good points of the Herzog goods. Among them are F. W. Riedel, who covers nine States throughout the Middle West for the company; J. A. Rummel, whose face is familiar to dealers in Michigan, Indiana and Ohio; W. Gallacher, who takes care of Dixie, and Walter Langley, who looks after the East in conjunction with Mr. Carpell, who is at present in Atlantic City with the jobbers.

Schram Bros., of Chicago, who make a specialty of music cabinets, have a large and handsome display of these goods at 1319 Michigan avenue. The line consists of 137 styles of cabinets, and is in charge of J. Schram, who is having his hands full taking care of the prospects. The display is decidedly an attractive one.

An attractive feature of the phonograph cabinets and sheet music cases of the Mechanics' Furniture Co.'s exhibit on the third floor is the modus operandi therein used. The patent involves the bringing forward of the shelves as the door is thrown open, while the disc record cabinets contain a slot feature in the shelves, wherein the record rests that ensures a scratchless, dustless and thoroughly efficient method of handling the records. The line is in charge of J. E. Hanvey and S. J. Le Roy.

The Cadillac Co., of Detroit, have on display in their extensive space a line of handsomely veneered music cabinets and piano benches in connection with their regular furniture line.

The Rockford Desk Co. are represented by an attractive line of goods, including music cabinets, in the building at 1411 Michigan avenue on the third floor. The Hohenstein-Hartmetz Co., of Evansville, Ind., with a line of phonographic record cabinets and sheet music cabinets, are also on this floor.

Concerns other than those mentioned exhibiting music, talking machines and music roll cabinets are as follows: Allen Manufacturing Co., W. A. Berkey Furniture Co., Booth Furniture Co., Cadillac Cabinet Co., D. L. Conroy Furniture Co., Forest City Furniture Co., Jamestown Cabinet Co., Northern Furniture o., Rockford Frame and Fixture Co., the Rockford Palace Furniture Co., E. Schloss & Co. and Ballman Cabinet Co.

FILING SYSTEM FOR DISCS.

The Compartment Disc Record Cabinets Are Destined to Win a Great Vogue.

(Special to The Talking Machine World.)

Chicago, Ill., July 8, 1909.

The Compartment Filing Cabinet Co., of this city, with factory and office at 426-28-30 East 29th street, are placing on the market what they characterize as "The only complete filing system for the care of disc records ever offered the public, and which keeps them in such a systematic way that you can instantly lay your hands on any selection you wish to hear."

Its most valuable feature lies in its elasticity. Each section is equipped with 40 separate compartments, either alphabetically or numerically arranged, each compartment holding three rec-

ords, having a total capacity of 120 records. The compartments are made of the toughest chipped fiber, bound in leatherette, so as to resemble a handsome bookcase, and will add to the appearance of either the music room in the home or the dealer's record room.

The compartment disc record cabinets are made in unit sections only. These cases are made in highly polished quarter-sawed oak either in the golden or weathered finish, and also in sycamore mahogany. They are made in two standard sizes, one for 12-inch records and one for 10-inch records. These sectional cabinets are sold at a decidedly reasonable price.

The cabinet is the invention of R. S. Pribyl, the president of the company, and a practical talking machine man of years of experience. Vice-President C. E. Schneider is the son of the president of the Chicago Board of Education, and both he and Max G. J. Hoffman, secretary and treasurer, are young men of long and successful experience in the cabinet making line.

FIBRE NEEDLE POPULARITY.

Orders Are Certainly Increasing Not Only from This Country But From Everywhere.

(Special to The Talking Machine World.)

Chicago, Ill., July 10, 1909.

There is no question but that the now famous B. & H. fibre needles mark a new era in the high-grade interpretation of disc records. They have been undergoing a steady evolution and are now a thoroughly commercial proposition in the sense that they can be sold wherever disc talking machines are sold, and the best results obtained by a little educational work on the part of the dealer. To particularize, the "treatment" of the needle is entirely different from the original method. The purpose of this "treatment" is to toughen, rather than to harden, the fiber. This enables the needle to "stand up" for its work, but makes it no more detrimental to the record than the native untreated fibre, and has the effect, Mr. Hall claims, of improving, rather than hurting, the record in any way. The grade of bamboo used is specially selected for the purpose by a man sent to Japan by the company. The grade selected is the very finest that can be procured and is very large in diameter of "tube," while the bamboo itself is of the thinnest, as it has been found by experience in experimentation that the thin bamboo is the best adapted for needle use. The company have just received a large shipment of probably the finest bamboo ever brought to Chicago. The poles average 16½ feet in length, measure 3 to 3½ inches in diameter and weigh 9 to 14 pounds to the pole.

A visit to the factory of the company at 208 East Kinzie street, Chicago, is a revelation. Its size, the large amount of special machinery used and the productive capacity all speak eloquently of the demand for the product. There has just been installed a machine that has taken six months to perfect. It is almost human and does the work of planing the two pith sides of the fibre needle.

HOW POPULARITY PAYS.

Employers Can Get More Out of Their Men by Friendliness Than Antipathy.

The dealer who is a good fellow with his clerks is the dealer who can get the most work out of them of the cheerfully rendered sort in the least possible time. By that is meant to say that he must keep in touch with them in more ways than simply discussing goods. While that may be largely possible in big stores, there is always the possibility of some mixing with the store force. In the store where the employes never see the boss, and have no idea what he looks like or how his voice sounds, there is an indifference in work which is in sharp contrast to the other stores where the employes know that the boss takes some kind of genuine interest in what interests them outside of sales of goods and coin by the dollar's worth.

The influence of the general manner and attitude of the boss is something rather indefinite, but in the stores where the employes feel they are noticed to some extent and that the door of "the office" is always unlatched to them when they have anything to say, there is more doing every day in the week than in the places where the air is always frigid about the place where the boss moves or where the clerks never think of mentioning anything but business. A "pleasant man" goes a long way toward helping out the work of the clerk who may have thought his labor unappreciated at some other store, and it will go a long way in the vocabulary of satisfaction expressed by the other clerk who doesn't like to leave his present place of employment.

No body of clerks can or does expect anything extraordinary in treatment, but every body of clerks has the right to expect treatment which ought to be accorded to business associates, inasmuch as such associates are intimately a part of the man's own business. It can cost no dealer anything to be considerate of and reasonably interested in his clerks.

R. H. Jones, manufacturer of the Economy record racks and the Tusko talking machine needles, has opened handsome quarters containing a complete line of Victor and Columbia disc goods in connection with his factory at 5513 Monroe ave., Chicago. The concert feature for evenings is being specialized by Mr. Jones and almost every evening in the week, a large sized audience listen to the records upon which the Tusko needle is used exclusively.

It is reported that 90 per cent. of the jobbers at Atlantic City handle the Tiz'-it, all-metal, ball-joint, horn connection for cylinder made by Kreiling & Co., Chicago, and that the remaining 10 per cent. are preparing to stock the meritorious appliance for the fall trade.

F. K. Babson, of Babson Bros., is on a western pleasure jaunt which will terminate at the Alaska-Pacific-Yukon exposition at Seattle. He is accompanied by Mrs. Babson.

"The Way to Succeed is the Will to Succeed and the Manner of Going About It."

Next in importance to a well assorted stock of Talking Machines and Records is your choice of Needles and Record Cabinets.

THE TUSKO NEEDLE

realizes to the ear the actual tones of the original rendition of the selection recorded on the disc. It abolishes the "scratch" and preserves the record forever.

ECONOMY AND PERFECTION RECORD RACKS

THE ONLY PERFECT WAY TO HANDLE DOUBLE-FACE RECORDS

Handsome and ornamental as well as supremely useful. Retail prices from $1.50 to $3.50. Rack for inserting in regular cabinet $1.50.

R. H. JONES, 5513-25 Monroe Ave., CHICAGO

TALKING MACHINE SUPPLY COMPANY

400 Fifth Avenue, New York

MAKING RECORDS IN MEXICO.

Something of the Work Done by the National Phonograph Co. at Their Headquarters in the City of Mexico, Which Is in Charge of Geo. M. Nisbett.

Geo. M. Nisbett, the go-ahead Chicagoan, who recently took charge of the headquarters of the National Phonograph Co. in Mexico City, Mex., is making a great record in the land of the Montezumas. He is making a special point to cater to the demands of the musical people of that country in a manner that is arousing their admiration. In the Mexican Herald of June 13 we noticed the following article about the progress of the National Phonograph Co. in our sister Republic which is well worth perusing:

"Very few of the countless thousands who are now able to enjoy the world's musical masterpieces, as rendered by that most wonderful of modern inventions, the phonograph, have any conception of the infinite pains, labor, time and expense that it requires to produce those results that appear to be almost superhuman. Many thousands of dollars may be spent upon a single record before it ever becomes of commercial value, and the amounts that a great concern like the National Phonograph Co., of Orange, N. J., expend annually upon the production of their matchless records runs up into the hundreds of thousands of dollars.

"The branch of the National Phonograph Co. in this country is known as the Mexican National Phonograph Co., the headquarters being located at 4a Tacuba 33. The general manager of the Mexican company is Geo. M. Nisbett, who is known as 'the greatest hustler in the republic.'

"For several weeks past the National Phonograph Co. have been busily engaged in making records of Mexican bands and talent, and several more weeks will be consumed in the task before the work is completed. With the completion of these records, the company will have a list of 1,000 Mexican selections, all of the famous bands and leading artists of the country being represented. These include the Police band, the Artillery band, the Jorda-Rocabruna quintet and the Coculense quartet. Among the talent may be mentioned the following: Arriaga, instrumental trio; Octaviano Yañez, guitar solos; M. R. Malpica, baritone; Adolfo Jimenez, tenor; C. S. Solorzano, recitations; Sra. Matilde Herrera, soprano; Srita. Emilia Sanchez, soprano; Felix de la Sierra, tenor; Pablo Garcia, Bonfil, tenor; Rosales and Robinson, popular singers; Abrego and Picazo, popular singers.

"The records are being made at No. 18 Avenida Cinco de Mayo, under the management of George Werner, who has devoted many years to the business. Arturo Rocha, the well known Mexican musician, is acting as musical critic in the making of the records, and the work is being done under his supervision.

"The making of records is a very interesting process, and at 18 Cinco de Mayo the same method is followed as has been adopted at the great laboratory of the National Phonograph Co., at Orange, N. J.

"'Performances,' as they are called, are held twice daily, morning and afternoon in a room especially arranged for the purpose, the sound being focused to the receiving phonograph. A record is not permitted to pass until it is as perfect as it is possible to make it. Sometimes a band may play a dozen or more times into the phonograph before a perfect record is made, infinite patience being one of the absolute essentials in the process.

"The records are placed under the microscope and carefuly examined for defects, the least flaw being apparent to the practiced eye of Mr. Werner. When the present records are completed the company will have a magnificent collection that will embrace everything of musical value in the country."

'Twas a great convention; now to work.

COLUMBIA CHANGES IN EUROPE.

Murdoch of London Gets Indestructible Line—Croese & Co., of Amsterdam, Columbia Agents for Holland.

The Columbia Phonograph Co., General, announce the appointment of Croese & Co., Amsterdam, Holland, as sole agents for the Columbia line in that country and Belgium. Murdoch & Co., one of the largest talking machine factors in the United Kingdom, with headquarters at London, have been appointed exclusive selling agents for the Columbia Indestructible cylinder records in Great Britain. A catalog of these goods devised especially for the British market will be issued. The contracts covering these very important connections were negotiated and effected by General Manager Lyle on his recent trip abroad.

FINE VICTOR SHOWING.

Business Growing in Volume—Now Within 25 Per Cent. of Normal Trade—Still Building Additions to Departments.

In a formal statement issued June 28 by the Victor Talking Machine Co., Camden, N. J., they say: "We are pleased to report that a very large addition to our works, in the shape of a four-story concrete cabinet factory and drying kilns for the manufacture of our own talking machine cabinets exclusively, is rapidly nearing completion, from which we expect to turn out cabinets for our fall trade, and which will represent an investment of $250,000.

"Also that contracts have just been let for a very extensive addition to our motor factory, in the form of a six-story concrete plant, which will cost, when finished and equipped, just about another $250,000. We are pleased to note that our business has improved until it has reached within 25 per cent. of our normal trade, with encouraging indications for an excellent fall."

Cylinder and Disk Cabinets

OF

"QUALITY"

Our Cabinets show the highest type of Cabinet construction that has ever been offered. Our line is exclusive and cannot be obtained elsewhere. The styles are varied enough to suit any taste and the prices as low as consistent with the material and workmanship used in their construction. When you sell our line you sell the best. A sample order will prove it. Catalogue sent for the asking. Discounts to qualified dealers.

The Photogram Co., of Manhattan, was incorporated in Albany, N. Y., last week with a capital stock of $500,000 for the purpose of manufacturing talking machines and records. Incorporators, J. Solaff, Brooklyn, and M. Reeves, New York.

SOUSA WITH NATIONAL CO.

The Great Bandmaster and Composer Will Make Cylinder Records Exclusively for the National Phonograph Co. Beginning Aug. 1.

The National Phonograph Co., Orange, N. J., have just signed a contract with John Philip Sousa, the noted bandmaster and composer, for the exclusive services of his band in making cylinder records. The actual work of making records by Sousa's Band will not begin until August and the records themselves cannot be issued for two or three months later. The fact, however, that Mr. Sousa has entered into this

JOHN PHILIP SOUSA.

arrangement is little less noteworthy than the arrangement that the National Co. has made with Victor Herbert. Mr. Sousa has been more or less opposed to talking machines, and this arrangement indicates a decided change in his attitude. He would at once begin the task of making records for the National Co. but for the fact that the engagements of his band organization will make it impossible to do so before August.

While Mr. Herbert has been prominently identified with orchestra work and the composition of light opera, Mr. Sousa has been even more prominent as a band leader and composer of march music. Of the two men, Mr. Sousa is probably the best known among the people to whom the talking machine makes the greatest appeal. The arrangement made between Mr. Sousa and the National Phonograph Co. gives the latter no right to compositions that Mr. Sousa may copyright after July 1. Any of his music that the National Phonograph Co. may use must be had upon the same condition as that of any other composer.

LANDAY BROS.' ALTERATIONS.

With the widening of Fifth avenue, New York, the stoop or steps in front of Landay Bros., Victor distributers, at No. 400, will be removed. The approach to their place on the first floor will be by steps constructed within the building.

You can make dollars out of the horn trade with such a product as this.

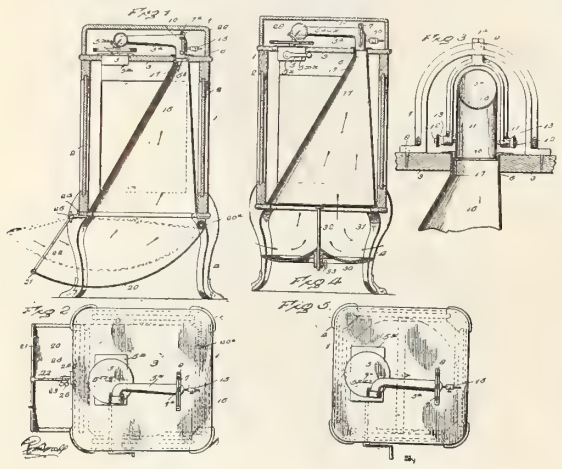
LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)
Washington, D. C., July 8, 1909.

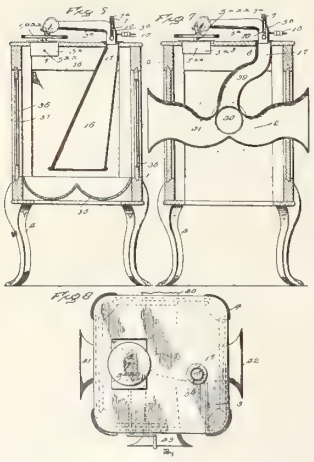
COMBINED STAND AND HORN FOR TALKING MACHINES. Henry C. Miller, Waterford, N. Y., assignor by mesne assignments to Victor Talking Machine Co., Camden, N. J. Patent No. 12,963.

This invention relates to improvements in a combined stand and horn for a talking machine. Talking machines now in use employ a horn extending out from the sound-box, which is large, unsightly, and frequently takes up so much room



that it is in the way. It has been found that it is not essential to extend the horn from the machine and have therefore constructed a cabinet in which the talking machine is placed and utilize the interior of the cabinet to accommodate a horn, and a deflector to distribute the sound. The object of combining these two elements is to economize space and at the same time provide means for utilizing a large horn without projecting it out from the talking machine, as practised with machines of this type now in use. A further object of this invention is to provide a stationary horn in a cabinet with an adjustable exit that the sound may be directed to an audience at any angle.

In the drawings, Figure 1 is a sectional view of the preferred form of the invention. Fig. 2 is a top plan view with the cover removed. Fig. 3 is a detail transverse vertical section of the means employed for supporting the pipe leading from the talking machine to the horn and the connection between the pipe and the horn. Fig. 4 is a vertical sectional view of a modified form of the invention. Fig. 5 is a plan view of the same. Fig. 6 is a vertical section of a different modification. Fig. 7 is a similar view of a further modification. Fig. 8 is a plan view of the modification shown in Fig. 7.



PHONOGRAPHY. Isidore Kitsee, Philadelphia, Pa. Patent No. 920,752.

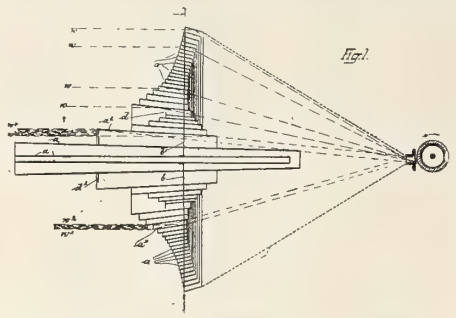
This invention relates to an improvement in phonography. One of its objects is to produce original records wherein the lines of record are in relief and may be used for the production of copies without necessitating electroplating or etching.

It is also the object of the invention to produce simultaneously two records with the lines in relief and then using one of the records as a male and an electroplate of the other record as a female for the production of copies by using these records as dies.

It has been discovered that if a metal of the necessary low fusing point is deposited or projected in accordance with the vibrating diaphragm on a suitable base, cooled or chilled to the necessary low temperature, the lines of record produced by the hardened metal are high enough for the purpose of producing copies therefrom with the aid of a plastic material.

ACOUSTIC LENS. Savid Petri-Palmedo, Hoboken, N. J. Patent No. 920,387.

This invention relates to the art of transmitting and recording sound as embodied in various contrivances now in general use, such as telephones, phonographs, graphophones, and the like. It is the purpose of this invention to do away with the erroneous method of using funnel-shaped horns. To this end the sound waves are collected and condensed in a manner analogous



to the collection and concentration of light waves by means of glass lenses. The inventor does not, however, make use of the property of refraction, this presenting practical difficulties, but that of reflection only. For this purpose there has been constructed an acoustic lens consisting of a screen composed of a series of concentric truncated cones of varying angularity, and by means of these the total quantity of sound waves coming from the source toward the diaphragm is divided into a series of sound wave cones that, after having suffered but one reflection in passing through the screen of concentric truncated cones are directed toward the diaphragm, as per the accompanying drawings, in which:

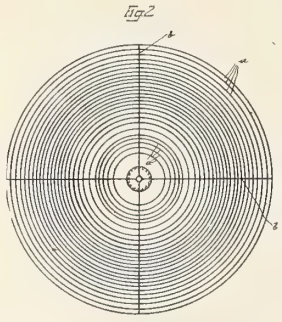


Figure 1 represents in central longitudinal section such an acoustic lens, embodying in desirable form the present improvement, and Fig. 2 is a vertical cross-section of the same on line 2, 2, Fig. 1.

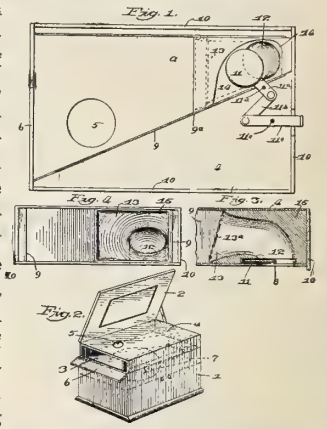
SOUND-REPRODUCING MACHINE. Luther T. Haile, Philadelphia, Pa. Patent No. 924,456.

This invention has for its object the provision of means, applicable to sound-reproducing machines, for governing and directing the course of sound waves from the tone arm to the sound-discharge chamber, as well as to provide a covered seat for a tone-modifying valve between said elements, and the inventor thus explains its construction and mode of operation as applied specifically to the sound-reproducing machine described in and patented by U. S. Letters Patent No. 873,937, dated December 17, 1907, in combination with the resonance chamber of which it has its greatest utility. In said machine the sound waves produced by the vibrating diaphragm of the sound box carried by the movable tone arm are delivered into a resonance chamber having a sounding board wall or walls which are thereby sympathetically vibrated. Diverging partition walls are mounted in such resonance chamber, leading from the sound inlet aperture therein and toward the sound discharge openings, and such inlet aperture is governed by a movable valve. To prevent an abrupt amplification of such sound waves as they pass the valve into the large resonance chamber, to direct their course, to cause them to impinge against the vibratable partition walls of such chamber and against the sounding board wall thereof, it has been found from practical tests that the present invention effects the result stated and enlarges the vibratory effect, besides enabling the valve to operate more perfectly as a tone-modifying agent.

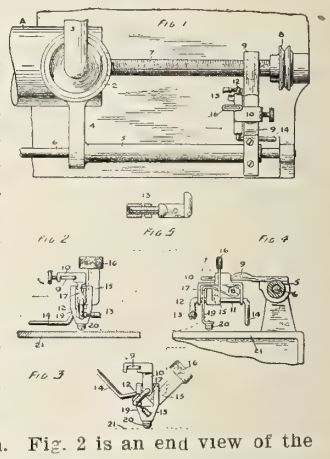
To these ends the present invention hereinafter described consists of the novel member, which is called a valve block and sound wave conductor, interposed between the tone arm and the sound discharge element of a talking machine, and having interior ports and passage adapted to provide a covered or enclosed seat for the upper face of a tone-modifying valve, and to receive in its interior passageway above the valve-seat the sound waves delivered to it past such valve and properly direct their course as aforesaid.

In the accompanying drawings illustrating the invention, Figure 1 is a bottom view of the new element, shown in place on the resonance chamber of a former machine, the base wall thereof being removed; the dotted line indicating the shape of the interior passageway above the valve seat. Fig. 2 is a perspective, in dotted lines, of the same elements in top view, and indicating their relation to the tone arm and connected parts. Fig. 3 is a section on the line a—b of Fig. 1, and Fig. 4 is an end view of the resonance chamber, its partition walls, and the valve block, shown in reversed position in Fig. 1.



PHONOGRAPH STOP. Frank H. Andrews, Watsonville, Cal. Patent No. 924,527.

This invention relates to a stop device for talking machines in which a revoluble record is employed, in conjunction with a sound box and conducting apparatus.



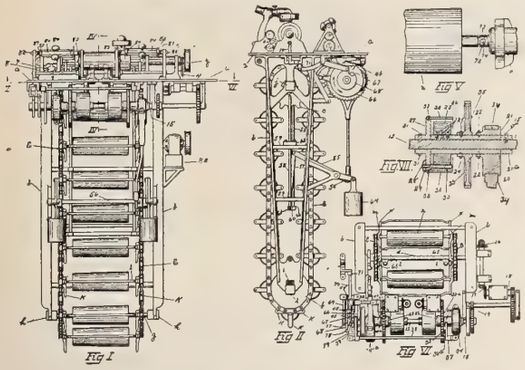
Referring to the accompanying drawings for a more complete explanation of the invention, Figure 1 is a plan. Fig. 2 is an end view of the device, in operative position. Fig. 3 shows the device after the stop is operated. Fig. 4 is a side elevation.

AUTOMATIC MULTIPLE-RECORD PHONOGRAPH. James I. Gemmill, Cleveland, O. Patent No. 925,430.

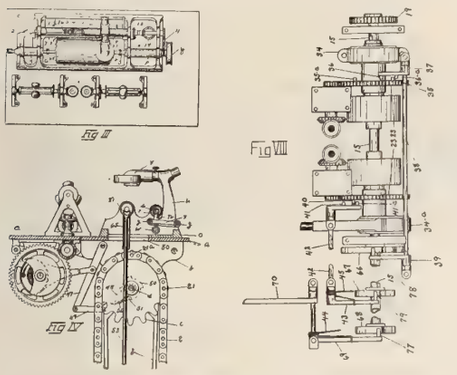
This invention relates to automatically-operated mechanisms and particularly to an automatic multiple-record phonograph. The object is to produce a talking machine which shall be continuous in its action and shall operate for the purpose of repeating a complete discourse or speech of an indefinite length and impressed on a series of tablets or phonographic records manipulated automatically by the machine without any attention or attendance in any way by the operator. In carrying out this object there have been introduced novel mechanical features in the preferred forms of the different mechanisms comprising the machine. These results are obtained by the mechanism illustrated in the accompanying drawings, which form a part of these specifications.

Referring to the drawings: Figure 1 is a vertical view of the machine as seen from the rear. Fig. 2 is a vertical side view of the machine looking at the left-hand side, as in Fig. 1. Fig. 3 is a top view of the machine above lines

6—6, Fig. 1, showing the governor and a common form of a phonograph partly in section. Fig. 4 is a sectional side view of a portion of the machine viewed through lines 4—4 in Fig. 1, looking at the left side. This figure shows the mechanism for rotating the sprocket wheels operating the chains on which are suspended the cradles supporting the record arbors; also shows



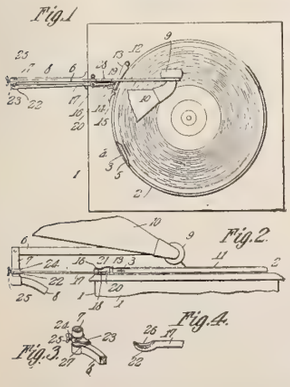
the connecting of the governor to said mechanism and disclosing in section a portion of the clock spring which operates same, together with a view of one of the rods which carry the record and its arbor from the cradle to a point between centers above the plate in which position the record is played. Fig. 5 is a view of an arbor



and a portion of the head or bearing containing the principal driving spindle and showing the chuck piece and its relation to the shaft bearing the arbor. Fig. 6 is a view from the top with all of the mechanisms removed above lines 6—6, Fig. 1, together with one of the arbors. Fig. 7 is a section of one of the spring-driven eccentrics, together with one of the main escapement wheels, showing the construction of same and its relation to the shaft which is adapted to support and drive it. Fig. 8 is an enlarged view of the shaft 15 disclosing the relative positions of the levers and cams, also the detents used for intermittently starting and stopping the gearing operating the eccentrics to produce the several motions of the mechanism.

ATTACHMENT FOR SOUND-REPRODUCING MACHINES. Thompson P. Reed, Richland, Mo. Patent No. 925,025.

This invention has reference to improvements in sound-reproducing machines and its object is to provide a means whereby the sound box or sound box carrying arm or parts attached thereto will cause the stopping of the tablet carrying table at the end of the sound record.



The present invention is designed more particularly for use in connection with the disc type of sound-reproducing machines, but it can also be used in connection with the type of sound-reproducing machines wherein cylindrical tablets are used.

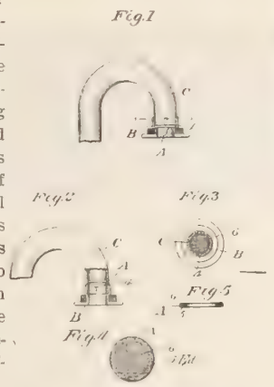
The present invention provides a brake and stop member so situated with reference to the revolving table that when not restrained will engage the edge of the table and brake the same and ultimately positively engage the table in such manner as to hold the same against rotation until released. In connection with the brake mechanism there is provided a catch mechanism controlled by the swinging arm carrying the sound box so that when the sound box is in position to have the stylus engage the beginning of the record groove then the brake mechanism may be latched out of engagement with the table, and when the sound box has traversed the record and reached the final portion thereof the brake mechanism will be released and the table will be automatically stopped.

Figure 1 is a plan view of so much of a sound-reproducing machine as is necessary for the understanding of the invention with the improved attachment applied thereto. Fig. 2 is a side elevation of the same, and Figs. 3 and 4 are detail views of a portion of the attachment.

SOUND MODIFIER FOR TALKING MACHINES. Edward P. Shepard, San Diego, Cal. Patent No. 925,958.

This invention relates to a device designed for use in connection with gramophones and other talking machines whereby the sound can be effectively modified or reduced without, however, producing any detrimental muffling effect.

Another object is the provision of a sound-modifying device consisting of a resilient or elastic ring adapted to fit within the gooseneck of the machine or in the sleeve connecting the sounding box with the gooseneck, and secured to this ring and stretched across the same is a diaphgram of suitable material or fabric such as silk, which allows the sound waves to readily pass with the effect that the sound will be reduced in an effective manner.



In the accompanying drawing, which illustrates one embodiment of the invention, Figure 1 is a fragmentary view of the gooseneck of a talking machine showing the attachment arranged in the sounding box of the gooseneck, said sound box being shown in section. Fig. 2 is a detail sectional view showing the attachment located within the gooseneck at a point inwardly from the box. Fig. 3 is a transverse section on line 3—3, Fig. 1. Fig. 4 is a plan view. Fig. 5 is a diametrical sectional view thereof.

MISS SAND WINS FIRST PRIZE

In Popularity Contest—Is Saleslady for the Garland City Music House.

(Special to The Talking Machine World.)

Milwaukee, Wis., June 9, 1909.

Wisconsin talking machine dealers have been pleased by the announcement that Miss Deva Sand, head saleslady of the Garland City Music House, exclusive talking machine dealers of Superior, Wis., is the winner of a big popularity contest conducted by the Superior Telegram. Miss Sand, who is also exceedingly popular with the State talking machine trade, won the first prize offered—a trip to the Seattle Exposition. Miss Sand left for Seattle on July 1, and will spend three weeks viewing the sights of the exposition and looking over the talking machine field in the West. All of the leading lines of talking machines are carried by the Garland City Music House, and Miss Sand, as head saleslady and assistant manager, is counted as one of the best informed young women in that section.

MISS DEVA SAND.

Wisconsin or Northern Michigan Talking Machine Dealers!

If you want service, I am able to give it and besides save you time and freight.

HANDLING SPECIALTIES.

Sale of Special Lines Increases Profits and Brings New Trade—About Buying Special Goods—Getting Trial Assortments.

The sale of new specialties offers an excellent opportunity for the retail dealer to increase his profits and at the same time brings to his store a class of trade which is attracted by new articles and which, if catered to, is bound to be a valuable asset in his business.

By the term "new specialties," however, is meant new goods worth selling. In order to profit by this class, considerable caution and forethought must be used in buying such goods, for there are many new articles that, though good sellers at present, will turn into dead stock in the course of a month.

In buying new specialties, one must consider this—is the article going to be a staple article, of value at all times, or is it something that must be sold during the first advertising campaign?

Many a man who could make large profits by his specialties is not taking advantage of them because his top shelf is full of novelties of bygone years that speak eloquently of poor judgment in buying.

In buying such goods it is a good plan not to buy until you have made some sort of a study of the article in question. In the first place, your leading trade paper is an excellent medium, because it invariably publishes in every issue descriptions of new articles constantly being turned out, with opinions of their usefulness and their adaptation to the trade. They are essential to the profitable and intelligent buying of new specialties, because they teach the dealer to discriminate, and in addition they show him a large number of good new specialties that he would not see elsewhere. Many of these goods are not carried by most traveling salesmen, as jobbers' drummers in general do not carry an article until it is a staple seller; they put their reliance on regular lines of goods.

When a new thing is noticed that, in the dealer's opinion, is worth looking into, it pays to send for a catalogue and in that way become acquainted with the details of the article: its usefulness, strength, ease of repair, etc.

But the main part comes in the buying—and the buying depends whether the new line will be a profit or loss, says the Sporting Goods Dealer.

Get prices from manufacturer or jobber and if it is a possibile thing get a trial lot with the understanding that if you are not satisfied you can return the unsold ones; some firms will do this, others will not.

Many manufacturers offer trial assortments and include cabinets and cases, together with advertising matter, both for the store and the papers. If you can use them, take them, by all means. The subsequent sale of a good article depends largely on the way it is presented to the public; no matter how good a new article may be, if it does not appeal to the public the sales are decreased.

The sale of new specialties, as I have said, is profitable in itself. In addition to this, it can be made to become a profitable factor in selling other goods.

Start a system of getting new specialties and plan to put a good new article in the store regularly at least once a month. Advertise it well, both by circulars—the manufacturers will furnish these—and by space in the local papers.

Aim to sell as low as possible, not counting on the profit from the article itself, but from the increased sales resulting from the drawing of the trade into your store, and you will find they will become a valuable asset in your business.

The sale of new specialties is worthy of any retailer's consideration, and if it is accompanied by careful and considerate buying, it will prove of immense value, both in itself and in its advertising value.

DEMAND FOR SAFETY RAZORS.

Talking Machine Dealers Benefit by Sunday Closing of Barber Shops—Proving a Profitable Side Line When Pushed.

(Special to The Talking Machine World.)

Milwaukee, Wis., June 10, 1909.

The Sunday closing of barber shops in Wisconsin under a recently-passed State law has resulted in the increase of revenue for all concerns carrying razors and shaving supplies of all kinds. Several talking machine dealers located outside of the downtown sections of Milwaukee have been finding that this line of goods, although out of the ordinary for the talking machine business, is now proving to be a valuable side line. Safety razors especially, are meeting with a ready sale, and various talking machine dealers have been investing heavily in these goods of late.

"A good many people plan to spend a part of the summer in the woods and at lakes camping, and for that reason they purchase safety razors, but it seems to me that there has been an unusual demand during the last few days for shaving supplies of all kinds," said one Milwaukee talking machine dealer.

In most of the smaller towns of the State where many of the talking machine dealers have various lines, trade in the safety razor and shaving supply line has been good.

IN THE POST CARD FIELD.

Novelties Necessary to Keep Trade—What to Buy—Some of the Late Novelties—A Word About Handling Post Cards.

The dealer who handles postcards has come to realize long ere this that to hold and increase trade in that line there must be something doing all the time. The view card, holiday, birthday and "congratulation" cards are staples, but people don't want to celebrate anniversaries all the time.

Novelties are the things that pay, but the dealer must show discernment in deciding what novelties are likely to be lasting and what are liable to become dead stock and understand just what is most likely to appeal to his trade.

Take the popular Billiken, for instance. It was the first of the "gods," and has undoubtedly enjoyed the greatest success. Imitations immediately sprang up by scores, some of them very clever, but the little "god of things as they ought to be" has survived nearly all of them, and at the present time the Billiken craze has spread to postcards, hangers and other novelties too numerous to mention.

Among the latest novelties in the postcard field are the mechanical animals, which, though not strictly postcards, are made of cardboard and fit well in a postcard stock. Then there are the puzzle cards, which are growing in popularity. Cards bearing pictures of prominent men, buildings and views in general, are so arranged as to be readily divided into from 50 to 200 irregular sections. These sections are mailed in one envelope and must be put together by the recipient before the picture may be seen or the message on the back deciphered.

The postscript stamps—stamps bearing sentimental, tragic and humorous text matter—are also being seen to a considerable extent in postcard stores and are said to be very good sellers.

Holiday cards in handsome new and original designs and effects are also being offered by manufacturers and jobbers, and many dealers are already placing orders, feeling sure that they will be readily sold when the season opens.

Just a word about handling postcards. With very few exceptions postcards are handled as a side line, a counter and several racks being devoted to their display. As a rule, the intending purchaser is left to his own devices when choosing cards; he pays for the ones he wants and the deal is closed. What other goods are sold in that manner?

The writer has seen a clever salesman sell two dozen cards for 75 cents to a man who came for two local-view cards for a nickel, simply by showing enough interest in the transaction to explain the special value of certain novelty and high-grade cards in a way that had not occurred to the customer.

The sale might only amount to a nickel as a rule, you say? Only a nickel, perhaps, but if the cash register wears out from nickels there must be enough of said nickels to buy something. Houses have been purchased from the profits of one-cent sales before now—don't forget that little fact.

WHY PICTURE CARDS DON'T GET THERE.

(Special to The Talking Machine World.)

Washington, D. C., July 8, 1909.

Because of failure to enclose tinselled or frosted post cards in tightly sealed envelopes to prevent the escape of particles of tinsel, mica and the like, from fifteen to twenty thousand of such cards are thrown out of the mails daily. Dealers now supply their customers with flimsy transparent envelopes, but that doesn't improve them much, and the stamp is frequently placed on the card inside the envelope, thereby preventing its cancellation.

It's mighty hard sometimes to wear a pleasant smile when business is poor, but the effort pays.

OVERCOMING LOST MOTION.

A Serious Problem in Business—Greatest Success Possible When All Parts of Business Machine Work as a Unit—Constant Watchfulness the Remedy.

The men who design and build machinery have a horror of what they call lost motion. But a lot of people who design and build businesses either don't know what lost motion is or else they don't fear it greatly.

Lost motion takes place when parts are not perfectly co-ordinated—when one part can move a certain distance independently, or when a part that should respond instantly to the motion of another part does not respond until after some time has elapsed.

You will find some businesses advertising to their trade in an educative way and taking the orders or closing actual sales through salesmen. Now, when you find a sales force that knows nothing of what advertising is being done, or an advertising department that is run without regard to what the salesmen are doing or could do, you have a fine example of lost motion.

And this is a very common form of it. Again, you will find a sales force that goes about making delivery promises which are impossible of fulfilment, all because the sales end and the shipping end are not co-ordinated, and neither knows what the other is doing or can do.

You will find in some other business a very fine system of accounting that shows just where the profits are being made and a fine sales force selling the things on which the profit is lowest.

There are hundreds of chances in any good-sized concern for some form of lost motion. And there are few concerns that are so efficiently built up and conducted that some lost motion does not creep in. In a machine, the effect of lost motion is usually to rack the machine to pieces long before it would wear out if it had been properly designed.

In a business, the specific effect is various. It may result simply in loss of sales and of profits that might have been made on them, or it may result in the loss of customers who are witnesses to and victims of the lost motion. Again, the effect may be simply that of lowering the general efficiency of the business, the making of antagonisms and the oozing away of profits.

But the general effect of lost motion is always to cut profits. It always acts as a brake on the progress of the business. It always prevents a realization of what is possible. The principal function of a true executive should be the watching for evidences of lost motion. The slightest signs of lack of co-operation between departments should be the signal for searching examination. The man who notices little antagonisms between employes or departments and passes the matter over lightly has missed his chance to help the business.

When the salesmen complain that orders are not delivered as promised, it is not enough to send word that the shipping department must hurry things, says "The Silent Partner." The right thing to do is to find out why, and then remedy that "why." Maybe the shipping department has too few men in it. May be a salesman has gotten in there some time and called somebody down and has become a legitimate mark in the eyes of the shipper. You cannot tell until you investigate.

And the wisest, keenest-eyed executive that ever lived will fall short of knowing all that he ought about his business. It is a safe bet that many a thing happens that never gets to the old man. But that is no excuse why the old man should not get all that he can. If he does, he will reduce lost motion to a minimum, and that is all he can hope to do.

INCREASE POST CARD DUTY.

Senate Makes 325 Per Cent. Increase in Duty to Protect American Lithographers.

(Special to The Talking Machine World.)

Washington, D. C., June 30, 1909.

The tariff uplift has been applied by the Senate to the picture post-card business of the United States. A large majority of the cards, many bearing American views and now sold in this country, are made in Germany. The business was unknown when the Dingley bill was framed, and, as a result, the Germans got a favorable rate for their cards under the classification of lithographic prints. Since that time the business has grown to mammoth proportions, and the lithographers of this country overwhelmed Congress for an increase in the tariff, so that they could get a larger part of the post-card trade.

When the matter first came up the duty of five cents a pound was raised to seven cents. In the paragraph adopted to-day, the rate on foreign-made post cards is six to fifteen cents a pound and twenty-five cents ad valorem.

"It is an increase of 325 per cent.," admitted Senator Smoot, of the Finance Committee, "but nothing less would save this business for American lithographers."

SUMMER BUSINESS.

Even the Hottest Weather Finds a Demand for Seasonable Goods—The Only Way to Get the Summer Trade Is to Go After It—Invite Visitors to Your Store.

These are days that milk sours, that butter softens, that vegetables spoil, that people long for evenings when they can sit on porch or lawn and cool off. Days when people are fixing up and planning furnishings for summer homes; in fact, they are continually thinking summer goods.

You've the goods—if you haven't, you certainly ought to have—but do the people know you've got them? That's the question, says the Hardware Dealers' Magazine. And how are they going to know you have them if you don't tell them and extend an invitation to the people in your community to call and inspect them? Have you extended this invitation? If you haven't, extend it to-day. Get up a good, attractive newspaper advertisement and extend the invitation.

People in your city are going to buy summer goods—buy them this season in larger quantities than ever before. Unless you let them know that you and your store and your goods are in existence, you and your store and your goods will be forgotten—the other fellow will get the business.

They are the merchants who are continually inviting the people of their communities to their stores. The daily papers show that they are now pushing summer goods. Follow their example—push seasonable goods. Don't extend one invitation to-day, and another a month from to-day, but hold out the hand of welcome and keep it out, and your volume of business for 1909 will be the biggest in your store's history. Do it now.

MARK TWAIN'S HINT.

The Old Story of the Spider That Always Hits the Mark.

It is an old story, but it always applies—the gentle hint conveyed to a none too progressive merchant by our great humorist, Mark Twain. When he was editing the Virginia City Enterprise, writing copy one day and mining the next, a superstitious subscriber wrote and said he had found a spider in his paper. Was this good or bad luck? He replied in the "Answers to Correspondents" column as follows: "Old Subscriber—The finding of a spider in your copy of the Enterprise was neither good luck nor bad. The spider was merely looking over our pages to find out what merchant was not advertising, so that it could spin its web across his door and lead a free and undisturbed existence forever after."

When you see a man sitting idle, with a vacant look and a general air of listlessness about him—and when he tells you by way of apology that he is "waiting for the hour of an appointment," or "waiting for train time"—you can safely put him down for one of those salaried somnambulists who may have persuaded themselves that they are, on the whole, fairly busy and efficient men, but whom it would take more than a cold douche and an alarm clock to wake up sufficiently to do real strenuous work.

A GREAT PIANO PLANT

Is That of the Cable-Nelson Piano Co. at South Haven—Splendidly Equipped for the Production of Pianos in Large Quantities.

(Special to The Talking Machine World.)

Chicago, Ill., July 7, 1909.

The Cable-Nelson Co.'s great factory at South Haven, Mich., is the subject of the accompanying illustration. To paraphrase a famous utterance of a famous American of the elder generation, "There it is; look at it." Capacity, 7,000 pianos a year, and good pianos. The men are good, too. If you ever get over to South Haven Superintendent Rauworth, a bright, modern, live-wire will show you 'round. When in Chicago call at the general offices of the company in the Republic building and meet Mr. Cable, Mr. Myers and Mr. Schultz. They are fine men to talk to, and, if you use sufficient diplomacy and force, they may be induced to show you some of the styles of Cable-Nelson pianos and player-pianos. If you can't visit either point right away a pleading letter may have the effect of securing for you a catalog and some mighty interesting information.

THE CABLE-NELSON CO.'S GREAT PLANT AT SOUTH HAVEN, MICH.

"The greatest specialty ever carried by a retail store"—is the verdict of thousands of dealers—concerning the New Pocket Edition Gillette Safety Razor.

The demand is astonishing. Sales over the retail counter are breaking all records. Every old Gillette user wants the Pocket Edition and it makes new friends at sight.

The set consists of handle and blade box, either triple silver-plated or 14k. gold-plated.

The Pocket case is of gold, silver or gun metal, plain polished or richly engraved in Floral or Empire designs. It is so neat and compact that it will slip into the side of a travelling bag—***the blades are fine.*** Prices, $5.00 to $7.50.

Aside from the sales of the razor, the business in blades is a steady income for a store.

Two additions to the Gillette line this season are the Gillette Shaving Brush—a Brush of Gillette quality, bristles gripped in hard rubber; and the Gillette Shaving Stick—a soap worthy of the Gillette Safety Razor. The stick is enclosed in a sanitary nickel box; both soap and brush are packed in attractive cartons. They will be welcomed by Gillette users everywhere.

Special showcase supplied with initial order for a hundred dollars' worth of goods. Write us for full information. Get our suggestions on popular assortment. Talk to your jobber about it.

WHY SOME MEN ARE FAILURES.

Misplaced Ambition and a Tendency to Overestimate One's Ability Often the Cause.

"If someone were to compile a handbook or list of things to be avoided by the aspirant for success, misplaced ambition and a tendency to overestimate one's ability would command a conspicuous place in such a compilation.

"Misplaced ambition or over-ambition is responsible for many wretched lives and ruined careers. The tendency to overestimate one's ability or to let ambition get the best of one's judgment is responsible for a considerable percentage of the dismal failures, for the hundreds of disappointed men one meets with in Chicago."

A noted Chicago educator, who is as successful a man of affairs as he is a great scholar, made the above statement. This statement, he declared, was not merely spleen talk. It was not reactionary. It was the expression of an opinion based on years of dealing with men. It was the summary, the moral, so to speak, forced upon him by years of experience and observation.

"Now, don't misunderstand me," the man continued. "I am not denouncing ambition as such. Ambition is the essence, the salt of life. It is the first essential to success in every occupation. It is the indiscriminate ambition that I speak about, the ambition which is blind to its own limitations and shortcomings. Many a poor clerk or a $12 a week bookkeeper made his way to the front ranks of the medical or legal profession. But such a man generally had the stuff in him, the ability to back up his ambition. In such ambition there is no danger.

CAUSES OF THE 'ALSO RANS.'

"It is the indiscriminate, the misplaced ambition, which makes one desire to become that for which he is not fit, to enter a profession for which he is utterly disqualified by early training and atmosphere, by years of routine and interest in other directions, that is responsible for the large number of men who 'make a failure of it,' who are among the 'also rans' in their professions."

"There are hundreds of men in Chicago who have given up paying positions in business, who have cast aside good trades in order to enter the professional ranks. Hundreds of young men are doing it to-day," says J. H. Miller in the Workers' Magazine. "They have done it, not because they felt that they were born to be lawyers or physicians, and not printers or clerks, but because Jim Jones or Bill Murphy, who was their classmate and who was not a bit smarter than they, is on the way to get an M.D. or to pass the bar examination.

"It is the misplaced ambitions of such men who cast away an occupation for which they are fitted and which they like merely to ape somebody else that is dangerous that make them valueless and even detrimental to society and make life bitter to their wives and children. Many an unsuccessful lawyer, who is on the outs with the world and angry with himself, would have been happy and contented as well as successful if he had stuck to the occupation which he first entered and for which he was best fitted.

FRIENDS SPOIL GOOD CLERK.

"Many a young man, suave and obliging, becomes a valuable clerk in a big store. Those who know him admire him and think him clever. Everybody comments on his success, with the result that this young man of mediocre ability and little or no reading and culture decides to become a lawyer. As a student he is quite punctual and regular in his studies. He gets good marks and passes his examinations and is ready to make his debut in the world as a young lawyer.

"Here, however, he finds that while he was an excellent clerk, he cannot hope to become more than a mediocre or even poor lawyer. Why? Well, suaveness and a sweet disposition are good qualities in a department store. They will go a long ways to win promotion and a higher salary. In law, however, other attainments are needed. Not ability to bow nicely, but quick reasoning and faultless logic make a good lawyer. In addition he must have read widely. He must have more than an ordinary command of language. He must be able to draw a parallel from ancient history and must now and then quote a line from the scriptures or a passage from Aristotle. All these things, however, the chances are that the ex-clerk cannot do.

"The result is that ten years after he left the counter for the bench he is an insignificant and disappointed lawyer, sometimes not more than a 'shyster,' while if he had stuck to the counter he would have been a successful buyer for the firm, commanding a salary which would keep him in comfort as well as in peace of mind."

THE TEN DEMANDMENTS

As Arranged by a Chicago Business Man and Posted so His Employes Might Read—Some Real Wisdom.

A Chicago business man has posted a list of 10 rules in his establishment, which he calls the Ten Demandments, and contain some sound business advice. They are:

Rule I.—Don't lie—it wastes my time and yours. I'm sure to catch you in the end, and that's the wrong end.

Rule II.—Watch your work, not the clock. A long day's work makes a long day short, and a short day's work makes my face long.

Rule III.—Give me more than I expect and I'll pay you more than you expect. I can afford to increase your pay if you increase my profits.

Rule IV.—You owe so much to yourself that you can't afford to owe anybody else. Keep out of debt or keep out of my shop.

Rule V.—Dishonesty is never an accident. Good men, like good women, can't see temptation when they meet it.

Rule VI.—Mind your own business and in time you'll have a business of your own to mind.

Rule VII.—Don't do anything here which hurts your self-respect. The employe who is willing to steal for me is capable of stealing from me.

Rule VIII.—It's none of my business what you do at night. But if dissipation affects what you do the next day, and you do half as much as I demand, you'll last half as long as you hoped.

Rule IX.—Don't tell me what I'd like to hear, but what I ought to hear. I don't want a valet to my vanity, but I need one for my dollars.

Rule X.—Don't kick if I kick—if you're worth while correcting, you're worth while keeping. I don't waste time cutting specks out of rotten apples.

A "FOWL" BUT PERTINENT STORY.

A duck which faithfully stuck to business during the summer and laid several dozen of large fancy-colored eggs complained that she wasn't appreciated. "See that hen over there," said the duck; "she hasn't laid as many eggs as I have, nor as big, but she has books written about her and verses composed in her honor, while nobody is saying a word about me."

"The trouble with you is," said the wise rooster that was standing near, "that you don't tell the public what you have done. You lay an egg and waddle off without saying a word, but that sister of mine never lays one without letting everyone in the neighborhood know about it. If you want to cut any ice in this community you must learn to advertise."

The post card outlook is steadily improving throughout the United States, according to Joseph Beigman, of 198 West Broadway, New York, who recently returned from a 5,000-mile selling trip. He reports that the demand is principally for the higher grade of cards, and says the trade is on a sound basis, and expects that the business will show a good continuous run for view, sentimental and commercial cards.

The business methods that were "good enough for father" don't get the money to day.

SCHULZ CO.'S BIG OUTPUT.

Turned Out 12,000 Pianos Last Year and Expect to Turn Out Many More the Coming Year With the Growth of Prosperity—A Great Side Line for Talking Machine Men.

(Special to The Talking Machine World.)

Chicago, Ill., July 7, 1909.

The M. Schulz Co., of this city, are not secretive. It isn't every concern that will exploit rear views of their premises, but the Schulz Co. doesn't care. They even indulge in a literary effort on the back fence. It's a monster concern, that, the M. Schulz Co. It turned out

OHIO STREET END OF SCHULZ FACTORIES.

12,000 pianos in the fiscal year ending July 1, and at their present rate of shipment the output this year will reach 15,000, and, if crop prospects materialize, 20,000 pianos. It is hardly necessary to say that a concern with a production like this has studied the matter thoroughly, and by reason of buying in immense quantities and the use of the most modern machinery, equipment and methods effect many savings that are put back into the piano in the way of quality. A dealer who carries M. Schulz Co., Walworth and Irving pianos in even a limited way has a line certain to meet the demands of all classes of people in his town and vicinity. The page illustration elsewhere in this issue presents the portraits of the heads of the factory organization and of the leading members of the selling force.

GOOD MONEY MAKERS

Are Automatic Machines of All Kinds Whether They be Pianos or Candy Devices—Clever Stunt of Shoe Man in Hammond, Ind.

Automatic machines which give up a penny's worth of candy, gum or peanuts are recognized as successful catchers of the nimble sixpence and have made good from one end of the country to the other. But so far nobody has done anything better than the stunt of a shoe repair man in Hammond, Ind., which savors of rare originality. This cobbler saw a peanut machine, inquired as to its ability as a silent salesman and purchased three of them for a try-out. These machines he placed at prominent centers of his city, and one week's flow of pennies convinced him there was something doing. So he raised the strength of his battery of money-makers to twenty-five, and before these were distributed devised the advertising trick which has proved to be commendable.

Upon the inside of each glass globe, safe from the destroying hands of the small boys and other vandals, he placed a red label with these words: "Jones, He Repairs Your Shoes." Hammond not being a metroopolis no further directions were required, and the shoe man is now getting more business than ever before, as a result of this advertising. Better yet, the pennies taken from the machine actually pay his shop rent and leave a little over for the savings bank. The machines are filled and the pennies removed after office hours, and Mr. Shoe Man seriously considers making the peanut machines his main business and the shoe repairing a side line by the addition of twenty-five more machines.—Novelty News.

ORDER IN THE STORE AS AN ASSET.

Customers Appreciate a Neat and Orderly Store—A Profitable Investment.

Order is said to be Heaven's first law. A good many "storekeepers" do not appear to think that this law is on the statute books of business, but it is.

Some persons may not care whether or not the store at which they trade is orderly and clean; but really there are few persons, even though they themselves may be slovenly and unkempt, who do not prefer to make their purchases where everything is in apple-pie order.

It is some work, of course, and yet not as much as some people seem to think, to keep a busy store in order. It simply requires that proprietor and clerks shall make it a rule to put back everything in its place whenever a sale is made, or any goods shown. That's all.

And, of course, this presupposes that there is a place for everything. If there isn't, there are often occasions when it requires a long and sometimes fruitless search for missing or mislaid articles which should have been right to hand.

It really is distressing to go into a business house and see the clerks searching all over the house for some article upon which they should have been able to lay their hand to without a moment's hesitation; and yet it is not an uncommon experience.

But these frantic searchers waste valuable time and exhaust the patience of the customer, and often lose trade—force it, in fact, to go to a competing store where the stock, though perhaps no better, is well arranged and nicely displayed, and where, instead of being painful, it is a pleasure to trade.

A great many dealers have found it a profitable investment to spend hundreds of dollars in fitting up their stores, to make them attractive from show window to back door; with neat shelving and cabinets and show cases, with boxes neatly and plainly labeled, and with the entire stock arranged with a view to convenience of handling. And you may depend upon it that no dealer who has once transformed his store by these modern methods could be induced to go back to the old way for many times what the improvements cost.

Another feature that should never be overlooked is the lighting. All the natural light available should be utilized, by means of large, clean windows, and, if possible, prismatic glass in both front and rear, to refract the light and diffuse it throughout the room.

In a word, make your store noted for its neatness, cleanliness and good order. It will pay you good dividends.

WHERE ORIGINALITY DIDN'T PAY.

Western Merchant Arouses Ire of Chief of Police in "Meanest Man" Contest.

Originality is a great thing in business and frequently adds to the profits, but when in an endeavor to stimulate trade an original contest scheme is decided upon, it is always well to study it carefully in an endeavor to make sure that it will not prove a boomerang.

The story is told of a Western merchant located in a small town, who in an effort to boom his trade during a dull period started a voting contest to determine the meanest man in the vicinity.

Things began to hum in a short while in a way that surpassed the expectations of the dealer, and the end of a week found the mayor of the town and the chief of police tied for the "coveted" title. The excitement was getting intense and everybody seemed to be interested in the outcome. For a while the store did a land office business, as it was necessary to purchase something before being allowed the privilege of casting a vote.

Unfortunately, however, just as the dealer was posting the latest bulletin showing the mayor to have gained sufficient votes to place him away above his antagonist, this worthy was seen approaching the store with rapid strides and a look in his eyes that did not bode well for the merchant.

What happened to this over-enterprising individual was hidden by miscellaneous pieces of stock flying about in all directions, but when a much agitated gentleman made his exit, a skeleton arose from amid the debris and, glancing around, staggered forth into the night, never to return.

NATIONAL COLORTYPE CO.'S REPORT.

The National Colortype Co., Cincinnati, makers of view cards, state that the past year has been the best in their history, and "what might have been" if general business had been normal. As the general business depression of 1908 is passed the outlook is exceptionally bright, and the way the firm's orders are being booked show this will be the banner year. Some of its customers who carry post cards as a side line write that it was actually the post card business that pulled them through the hard times of 1908, and that the post card business for the summer months will be extraordinary.

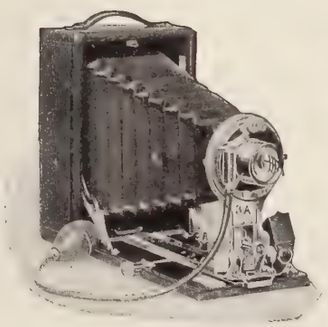
NEW FEATURE IN POST CARDS.

A new feature in post cards which is meeting with a large degree of favor is the printing of a selected quotation, or motto, on a fine white card of first-class quality, some of which are hand-illuminated. So excellent are they that recipients invariably frame them. The quotations chosen cover a large variety of subjects, and the series are most educational and stimulating. In many respects they are replacing the ordinary picture post cards for birthdays and other popular feasts.

Lives of some great men remind us
That we will, if we are wise,
Leave old methods far behind us
And go out and advertise.

SENECA CAMERAS

As A Side Line



THE TALKING MACHINE DEALER is in a splendid position to sell cameras.

¶ The same class of people who buy Talking Machines buy Cameras.

¶ SENECA CAMERAS are the best Cameras made—they have to be for they stand on their own merits against the trade restriction of the Camera combine.

¶ It takes a little knowledge of the subject to sell Cameras successfully, just as it does to sell Talking Machines, but we are willing to help you get going. The profit will be worth the work.

¶ Write to-day for information.

FOLDED POST CARDS.

The U. S. Circuit Court Decides That They Are Dutiable as Lithographed Prints and Not as Booklets, Which Claim Was Sustained.

The U. S. Attorney for the Southern District of New York issued a notice to the effect that suit 5382, R. F. Downing & Co. v. United States (T. D. 29769), was recently decided by the United States Circuit Court for that district adversely to the Government.

The merchandise in suit consisted of six post cards attached together so that the cards can be drawn out in a long strip and each card partly separated from the other by perforated lines and having on the reverse side a view lithographically printed thereon. The six cards as imported are folded and enclosed in a cover consisting of a piece of paper folded once, to which one of the six cards is attached by some adhesive substance.

The merchandise was assessed for duty under paragraph 400 of the tariff act as booklets printed in whole or in part by a lithographic process. The importer protested, claiming the merchandise to be properly dutiable under the same paragraph as lithographic prints according to the thickness of the paper and the cutting size, which claim was sustained by the court.

The Attorney-General has advised the New York Customs Department that no further proceedings will be directed in this case, and suggested the necessary steps be taken looking to the refund of the duties collected in excess upon the merchandise the subject of the suit.

FALLACY OF CUTTING PRICES.

Possibly the most foolish of all fool things in retailing is price-cutting. One merchant comes out with a low price on some staple article and at once every other retailer in the same line goes him one better with a deeper cut. Then the war has fairly begun, and before it is over prices have gone all to pieces and every one of the competitors has lost money and none of them has reaped any benefit from their insane rivalry. Nothing but bitterness arises from such folly.

If you have faith in your goods, hold up the price and talk quality first, last and always. If you have no faith in them, get a line that you can have faith in. You owe it to the manufacturers of honest materials to maintain prices, for a cut price is a confession that you think the goods are not worth what you have been asking for them.

THE STORY OF DOWNE AND OUTTE.

The Demise of a Business—Uppe & Cumming Take Over the Business—An Interesting Satire from Park's Piping Parables.

Downe & Outte have busted; succumbed to the machinations of the trust, Uppe & Cumming. It is said that the chief cause for Downe & Outte's business demise lay with their sales manager, Isadam Grouch.

They do say also that Isy became inefficient, incapacitated through morbid tendencies, so that he occupied most of his time in prophesying just exactly when the whole financial structure would go to blazes.

This demoralized his executive ability. His attitude of pessimism was reflected to his salesmen. Rumors of his deficiencies finally reached the bank where Downe & Outte did business, with the result that loans were called at a time when most needed.

Downe & Outte went down and out, and Isy's prognostications came true.

It is said that Uppe & Cumming, in taking over this house through arrangements with the creditors, found a good, well-selected, seasonable stock; excellent shipping and warehouse facilities; a good corps of salesmen and were fully convinced that nothing was wanted but an energetic manager to put the business on a basis where it would soon prove profitable.

It is understood that Uppe & Cumming will place Mr. O. B. Cheery in charge as general manager with Heeza Hustler as supervisor of sales, salesmen and sales stimulants.

These two gentlemen have worked together for many years and always with good results to Uppe & Cumming, so much so, in fact, that invariably they have been selected when some difficult problem in branch house affairs was presented.

It is understood that these men have made themselves so necessary that the inevitable in the way of large salaries and shares in the profits has happened long ago, and while many attempts have been made to induce them to serve with competitors, they feel they can do their best work with Uppe & Cumming.

USE OF PRICE TICKETS.

Every retail store uses some price tickets. A few stores use many price tickets. Not one retail merchant in a hundred uses price tickets enough. The average store does not use one-tenth as many as it ought.

No store uses "enough" until shoppers can tell the price of every article without having to ask the question. The purpose of price tickets is to interest people in other goods than those which they have decided to purchase.

You use price tickets in your windows to attract attention of passers-by, of whom probably only a small minority can by any possibility be persuaded to purchase.

Why is it not infinitely more important to price-mark goods in your store so that people who come in will buy other wares as well?

SUCCESS IN RETAILING.

Being Prepared to Meet Emergencies, Having the Goods, Competent Help and Publicity Some of the Essentials.

Experience teaches us that one of the most essential elements of every successful venture is being prepared to handle properly whatever business one can anticipate as prospective.

Being prepared includes careful selection of stock, convenient placing of it with a view to proper display and also having it so arranged that salesmen can show it without delay. Thorough knowledge on the part of clerks, not only as to prices but regarding quality of wares, is an important requirement.

Seasonable goods should always be exhibited and advertised a few weeks prior to the period for which they are suitable, and special local events should always be recognized in some manner. Dealers should cultivate the acquaintance of traveling salesmen representing reliable firms and always manage to find time to inspect sample lines, as it means a great deal to be posted thoroughly all the time and to be in touch with up-to-date people.

Whether you are a successful dealer depends largely on your own efforts, and no one factor will contribute more to a merchant's ultimate success than being so equipped that when customers favor him with their patronage he can serve them satisfactorily.

Many a retailer discouraged by lack of business would do well to study his own methods and compare them candidly with those of his successful competitors. Time thus spent will be of great practical value in preparing him for that increase in the volume of his sales which is sure to follow any intelligent effort.

Use your brains in running your business; don't be a machine, but guide your business as carefully and watch it as closely as you would an expensive bit of machinery and you will find an improvement.

HARMONY CO. AT A.-P.-Y. EXPOSITION.

(Special to The Talking Machine World.)

Chicago, Ill., July 7, 1909.

The Harmony Co., of this city, the great manufacturers of guitars, mandolins and drums, have a fine representation at the Alaska-Pacific-Yukon Exposition at Seattle. It is a part of the exhibit made by the D. S. Johnston Co., of Tacoma and Seattle, who are the Harmony representatives in that section. W. J. F. Schultz, the president of the company, is seriously considering a trip to the "expo" before the summer is over.

One of the winning amateur baseball teams of Chicago is the "Ratsch Peerless," a namesake of the famous brand of uniforms and athletic equipment made by the Chicago Sporting Goods Co.

A hoop is an easy thing to roll after you have it started. You've got to keep hustling pretty hard at first to get it going and keep up a steady hit as you go along, or the thing will get wabbly and stop. Just so with your business, says the Hardware Dealers' Magazine. You've got to hit almighty hard at first to get a good start and then keep a-hitting along at even intervals. If you don't, your business will be like the hoop—get wabbling and stop.

SELLING LEADING LINES.

Advantages in Handling Only Representative Goods—Means Satisfied Customers—Treatment of Small Customers—Lighting the Store—The Proper Display of Stock.

Are you handling the best and most representative line of goods the market affords, or have you allowed yourself to be influenced by a persuasive salesman and his "more profit" twaddle?

Do you think it pays to have dissatisfied customers by selling them some "imitation" articles which allow you a larger margin of profit, or do you figure that you can make more money by getting repeat orders from the satisfied purchasers?

Every person engaged in business is there to make money. Doesn't it stand to reason, then, that a firm putting out a meritorious article fixes a fair price for it, consistent with the quality furnished, especially when it has in view the fact that the field is open for other manufacturers to duplicate its offerings cheaper?

Doesn't it impress you when an apparent duplicate of a standard article is shown you at about half price that something is wrong with it? You can safely hazard the guess that this is the case, and also that something is very, very much wrong with it.

Numerous dealers consider the initial outlay on stock more than they appreciate the chance for sales. What counts, anyway, in making a store successful? Sales, of course! Then why not make this your criterion in buying goods? To perdition with what the stuff costs you if you can sell at a profit and give satisfaction. This is the business policy that will build up an extensive trade.

Another good thing to bear in mind is to treat the small customer with as much courtesy as you do the large one, says the National Stationer. He might come in your store some day and give you a big order, and then again he might not. Anyhow, you stand to make something and lose nothing.

By the way, do you read your trade paper regularly? Do you know what the big associations are doing? Do you belong to your local association? Do you give it a boost when possible? Try this and watch yourself rise in the esteem of your fellow merchants.

Put yourself in the consumer's place and see how your store impresses him. Brighten up things a bit and make a strong play for the best trade in town. If you're not running a first-class shop sweep the sawdust from the floor and call it first-class, anyhow. The public will be responsive if they discover you have the confidence in showing A No. 1, 14 carat, "best by test" merchandise.

Do you still light your store by gas when there is an electric plant in town? Start in now and tear out the fixtures and instal electric bulbs. Draw a check from the bank and spend it on improving your store. Start in to make some real money. Pull yourself out of the piker class and be a merchant, and in the course of a short time you may be able to take that trip to Europe, or buy that house you've been paying rent for so long, or maybe get the first instalment down on that runabout.

Don't be satisfied in merely filling a demand. Create a little extra trade yourself by judicious advertising.

A last word about stock. The output of the prominent manufacturers deserves to be placed in the leading store, on the main street, in the front window. Yours is the leading store, isn't it? How about the rest of it?

SUCCESS.

Genius, that power which dazzles mortal eyes,
Is oft but perseverence in disguise.
Continuous effort of itself implies,
In spite of countless falls, the power to rise.
'Twixt failure and success the print's so fine,
Men sometimes know not when they touch the line
Just when the pearl is waiting one more plunge,
How many a struggler has thrown up the sponge!
As the tide goes clear out, so it comes clear in;
(It is almost out now)
In business 'tis at turns the wisest win;
And, oh, how true when shades of doubt dismay,
'Tis often darkest just before the day!
A little more persistence, courage, vim,
Success will dawn o'er failure's cloudy sun.
Then take this honey for the bitterest cup;
There is no failure save in giving up.
No real fall as long as one still tries,
For seeming setbacks make the strong man wise.
There's no defeat in truth save from within;
Unless you're beaten there, you're bound to win.

—Will C. Rhodes.

WHY WILL SOME DEALERS TRIFLE

With a Customer When He Is the Unit on Which They Must Sink or Swim?—Some Illustrations of How Things Should Not be Done.

The customer is the unit of the retail as of any other business. The more customers a store has, all other things being equal, the larger will be its profits. Why, then, do so many dealers trifle with this precious something—this customer, his good will, the possibilities in him? There can be only one answer—they fail to realize that he is the unit upon which they must sink or swim, survive or perish, fail or succeed.

A man having occasion to make a purchase at a drug store called at a prominent place on the main street. Upon making known his wants the article was placed before him for inspection.

"Have you nothing better?" he asked. Imagine his astonishment upon hearing the clerk reply: "That's good enough for me," the natural inference being, of course, that therefore it must also be good enough for anyone. No purchase was made.

He called at another drug store, also on the main street. This store, while one of the largest in the city, had never appealed to him because cleaning operations seemed always to be going on; early morning or late at night some clerk lazily pushed around a step-ladder, a pail of dirty water and some very uninviting rags. Nothing remained, however, but to call, for the store had the sole agency for the preparation desired.

The clerk having first completed his conversation with a young man present, leisurely went behind the counter, took his time to fill the order—wrapping up the package at the rear of the store—and then stayed there waiting for the customer to come back and get it. It was interesting, and it was illuminating. Fully a minute he waited, for the customer determined to stick it out; but, alas! a car, which it was necessary for him to take, came into sight and he had to make a wild dash.

Not very long ago a man requiring six grand opera records called at a talking machine store, and, after a search, the salesman discovered that he had only three of the records required in stock. Now, instead of the salesman taking the full order and stating that he would deliver the remaining three records in a few days, he preferred to inform his customer that the three records he could not supply were "no good anyway," and that "he was throwing his money away to buy them," and stated further that certain popular-priced records which he had in stock were even better. The result was that he disgusted the customer, for, as a matter of fact the three missing records which he required were of noted grand opera artists which he had just heard the evening before at a friend's house. How much better to act the square part and not indulge in deceit and subterfuge. It never pays in the talking machine or any other business.

IT ALWAYS PAYS TO ACT NOW.

"Procrastination is the thief of time," was the maxim of old copy books used to preach very assiduously, and the old proverb will bear many repetitions. "Do it now" is the modern version, and a mighty good one it is, too.

A certain professional man who had a most unfortunate habit of postponing every case that came to him, and who dealt largely in promises, and predictions of what he should do in a certain hazy "sometime," was once described by an irreverent village wag as one "who was always going to raise hell next week!"

This rather questionable phrase accurately describes a large number of the human race, and contains a world of philosophy. It explains in a nutshell the why and wherefore of multitudinous failures in business.

The time to show what a Napoleon of finance you can be is now. The time to take advantage of certain favorable conditions is now. You are reasonably certain of now, but you have no assurance whatever that to-morrow or "sometime" will ever come to you.

The chances are that the opportunities you are looking and waiting for are as good and brilliant at the present moment as they are liable to be in the future, therefore it is the wise policy to utilize the present.

As the old moralist put it: "Wouldst thou live long? Then do not squander time, for that is what life is made of."

No business head is too busy to pay proper attention to suggestions from the ranks. If only one good idea is found in a hundred, it generally pays.

Keep moving. Things move so fast these days that people who say "it can't be done" are interrupted by people who "do it."

Don't trim one nice window and quit; have attractive, original windows at all times; keep the public watching for a change; educate them.

ABOUT OVERSTOCKING DEALERS.

Some Excellent Advice to Salesmen Regarding Retaining Retailer's Confidence in Their Intentions.

One of the cardinal principles which a salesman should observe is never to sell a customer more goods that he would purchase himself were their positions reversed. Sales of the kind mentioned always act as a boomerang. Instead of making a "customer," they have the opposite effect—the salesman has simply secured one order, and in getting it he has lost the confidence of a possible customer.

"The general manager once said to me," says a well-known Chicago salesman, when I was starting out for a new house, "Remember, now, we don't care for orders; what we want is customers." The remark sounded so paradoxical that I inquired his meaning, and he explained at length. He didn't want his salesmen placed in a position where their consciences would trouble them.

No man can succeed as a salesman unless he wins the confidence of his trade. And there is just one way to do this—by fair and square dealing. He may pick up occasional orders, and "load up a jay," here and there, but he will find in a short while that his competitor is doing the bulk of the business in his territory; that is, if his competitor be made of the proper stuff and guards the interest of his trade as zealously as he does those of his employer. Unless this is done, failure is the inevitable fate of a salesman.

It frequently happens that a salesman's suggestions are not asked by a customer. More frequently, however, his advice is sought, and when it is it should be given conscientiously and with an eye to the future—not to the size of the single order he is taking.

WORKING FOR SUCCESS.

The Man Who Wins Out Must Work Whole-Heartedly, Whole-Souledly and Whole-Selfedly if He Desires to be Heard from.

A talking machine man, or, in fact, any other individual who succeeds in any line of endeavor, must work whole-heartedly, whole-souledly, whole-selfedly for success, for as Jerome Fleishmann said recently, for after all this thing called success is simply the realization of ideals we have formed and striven to materialize.

Don't have a "grouch" against a firm that supplies your bread and butter. Better work for $10 a week and work than be employed at $25 a week and shirk. Coming down to the office in the morning with a desire to make the day pass as quickly as possible and with as little real work performed as is absolutely necessary is a dead sure way to oblivion.

There's no exhilaration that can equal the feeling a man sensates after a particularly hard job has been got out of the way, and got out of the way by being done right.

The difference between enthusiasm and half-heartedness is the difference betwen a big, fat envelope on pay day and a salary that gets smaller in the eyes of the man who is always looking for, but never working for, a raise.

Enthusiasm! That's the thing that builds bridges and tunnels through mountains. One enthusiastic employe in an organization is worth an army of wishers for 6 o'clock and Saturday afternoon.

And there can be no enthusiasm unless you are heart, head and hand in league with your work.

The man who views his daily work as part of his daily self is the man who accomplishes things. The man who performs his duties in a spirit of let's-get-rid-of-these-pesky-matters is the man you never hear of as making progress.

Put your heart into your work.

PHONOGRAPH OUTDOES CHOIR.

Pastor Installs One in Place of Striking Church Singers.

The Rev. Dr. S. M. Vernon, pastor of Christ Methodist Episcopal Church, Philadelphia, Pa., has discovered a method of supplying good music to his congregation in the absence of a choir, which has refused to sing while he occupies the pulpit. Doctor Vernon sprung the surprise at a service which he conducted on the church lawn on Sunday night. A large phonograph stood where the choir would have been seated, and sacred hymns rendered by grand opera singers speedily attracted a large and appreciative audience. Worshipers said the choir was much outdone.

It was the first time that a phonograph had been used at a church service. When Doctor Vernon first went to Christ Church he had to lead the singing in person, without the aid of organ or piano, as the musicians joined the church officials in their boycott of him.

JUST FOR THE ADVERTISING DEALER.

A big object is seen quicker than a small object.

An elephant makes more impression than an ant.

A sledge hammer accomplishes its purpose when a tack hammer would fail.

When sailors fish for sharks they use heavy tackle.

The user of large space works in harmony with great natural laws.

When a class advertiser is sure of the character of his audience he gets right down to his selling talk.

And, to deliver the kind of talk that clinches sales, you must have room.

If you had a process to cure deafness, and were permitted to describe your process once to ten thousand deaf people, you would not give them one-tenth part of the necessary information. You would seek for the immediate and direct sale by telling them all about it.

Small space is all right when doubt exists as to the character of the audience you are addressing, but when you have your audience interested in your goods strike out. Sell them.

The man who can afford to take a page in his trade publication and doesn't is simply trifling with its opportunities.—Brains.

THE AMERICAN ABROAD.

It was left for the exhibitor of a phonograph in the streets of Utrecht, according to an American traveler, to put the finishing touch to the wonderful invention. There was the sound of a military band in full blast, and then suddenly the tune stopped and "Halt!" rang hoarsely out upon the air. "Who's that interrupting the concert?" flippantly inquired the American, close to the operator. "That," said the man, surveying him, blandly, "was the voice of Napoleon Bonaparte, giving the order at the battle of Waterloo."—Youth's Companion.

During the recent visit of I. S. Sacks, the Regina traveler to San Jose, and other southern California points, he had great success on one of his fishing trips when he landed a thirty-three-pound salmon. His friends of the Eilers Music Co. verify this fact by favoring The World with a photograph of Mr. Sacks holding the salmon in his hand. There were no affidavits, you say? But who said they were necessary?

THE SIZE OF SOUND WAVES

And What They Will Do—Some Interesting Facts Revealed by a Scientist Connected With One of the Government Departments at Washington.

A scientist attached to one of the Government bureaus at Washington, while discussing our ability to tell the direction from which sound proceeds, calls attention to an interesting difference between the eyes and the ears with regard to the size of the waves that strike them.

The average wave-length of light is about one ten-thousandth of the diameter of the pupil of the eye. On the other hand, the waves of sound issuing from a man's mouth are about eight feet long, whereas the diameter of the passage of the ear is quite small and could not well have been made a large multiple of eight feet. One consequence of the minuteness of light-waves in comparison with the size of the eyes is that the lenses of the eyes are able to concentrate rays of light upon the retina with great efficiency.

And talking about sound, the newest invention in connection with it is the telephonograph. This is a combination of the phonograph with the telephone, intended to record a telephonic message on a wax cylinder at the receiving end of the telephone line, an invention that promises great things. The record is made by a stylus actuated by the undulations produced by the sound-waves. From the impressed cylinder the message can be retransformed into spoken words by the ordinary method of a phonograph.

The usefulness of the instrument depends upon the fact that by its means a message can be sent when the intended recipient is absent. Upon his return the latter can set the phonographic apparatus going and listen to the message at his leisure.

A NEW RECORD HOLDER.

Invented by Southern Woman—Device Fastens to Wall and Holders Swing in and Out.

Another type of holder for phonograph records is the wall bracket designed by a Louisiana woman. The advantage claimed for this holder is that it does not take up the room of a cabinet yet keeps the records as free from dust as the most airtight of wooden cases. The device consists of a rod, fastened to the wall so that it maintains a vertical position. Pivoted to this rod are holding plates, so aranged that they swing back and forth and are out of the way when not needed. Each of these plates is a little larger than a disc record in circumference and deep enough to hold several. A practically airtight lid fits over the top of each and along side is a finger opening by which the lid may be lifted or the records taken out. A pin running up through the centre of the plate pierces the hole in the centre of the disc and one in the lid. The bracket stands far enough from the wall that the plates can be turned in behind it.

LOOKING BACKWARD.

The need of the phonograph was expressed nearly 150 years ago, although no one dreamed of any such device by such a name. But Boswell, the genial and devoted biographer of Dr. Samuel Johnson, in writing of the sayings and doings of his great mentor in 1775, penned this note:

"I cannot too frequently request my readers, while they peruse my account of Johnson's conversation, to endeavor to keep in mind his deliberate and strong utterance. His mode of speaking was indeed very expressive, and I wish it could be preserved as musick is written."

GOOD ACCOMPLISHED AT JOBBERS' CONVENTION

Discussed by J. Newcomb Blackman, Vice-President of the National Association of Talking Machine Jobbers—Has Dignified the Industry and Made Plain the Aims and Aspirations of the Members—An Era of Optimism Inaugurated in the Talking Machine Trade—Expect Much Larger Attendance at Next Year's Convention of the Association.

"There does not seem to be any question that the convention of the National Association of Talking Machine Jobbers at Atlantic City last month was a decided success and will accomplish much good for the entire industry," said J. Newcomb Blackman, president of the Blackman Talking Machine Co., in chatting with The World regarding the recent convention of the National Association of Talking Machine Jobbers.

"When we consider the attendance from the factories and jobbing concerns throughout the entire country and the fact that business conditions have been such that most of us feel inclined to be economical, it appeals to me as an indication of a great future for our industry. In talking with many of those attending the convention the opinion seemed to be unanimous that the convention would do much to stimulate business and inspire more confidence in the factories and jobbers towards each other. The firm manner in which the factories assured the trade of their intention to not only maintain, but also uplift, if possible, the standard of their goods, was good news, for we want to constantly elevate the business and raise it to a higher standard, if possible.

"The Jobbers' Association has outgrown the period of infancy and represents a full grown and healthy body, capable of aiding the manufacturers very materially to constantly improve the industry as a whole. The entire trade greatly appreciated the honor of the greatest genius of the age, Mr. Thomas A. Edison, in attending the convention. There is no doubt in my mind that Mr. Edison's presence satisfied many in the trade that the talking machine was still close to his heart and would still receive the benefit of his untiring energy.

"I am informed that Mr. Edison himself was greatly impressed with the manner in which the trade turned out at the convention and in their confidence in the future and enthusiasm. In fact, I understand it so impressed Mr. Edison that he will immediately put forth some great efforts to greatly improve the Edison product.

"In Mr. Eldridge R. Johnson s paper will be found much food for thought and every reason for confidence in the return of prosperity. A convention of this kind should impress the big manufacturers with the importance of supporting every succeeding convention, for in what better way could the yearly stimulation and exchange of ideas for the improvement of the business be accomplished? The jobbers return impressed with the importance of their best energies being used to get the benefit of the prosperity which is slowly but surely returning. They were pleased to see that the factories turned out in force, for it showed that everybody wanted to do his share to help the business. The factories, I am told, were more than pleased at the way the jobbers turned out, for it gave them confidence that they would receive the support of their jobbers on many things they have in mind.

"Is it not also a fact that those now in the jobbing field and among the dealers represent the best material and the kind that will soon more than make up whatever has been lost by the business depression? The members of the Association are pleased to hear that the factories consider their deliberations always based on a square deal for all, as they see it. Such feeling on the part of the factories will encourage jobbers to make suggestions and desirable improvements will be introduced much quicker with co-operation than without it.

"The trade at large should be very grateful for the liberal way in which the trade press has recorded and spread broadcast the details of the convention. This is more particularly true of the Talking Machine World, which is the only exclusive talking machine organ, and has always worked shoulder to shoulder with the manufacturers and jobbers.

"The good results of this year's convention will be limited only to the extent that we make use of the material we have on hand as a result of same. If the jobbers will consider in which way they can apply to their own business the recommendations of the factories or others in the same line, they will find plenty of opportunity in the speeches of the various factory representatives. Meanwhile the papers prepared on various subjects by different jobbers are full of material that will be well worth most careful consideration from the factories.

The dealers are very much interested in the jobbers' convention and in consulting several they all seemed to be pleased with its apparent success. They also feel that the factory and jobber in these conventions always have their interest in mind and many a dealer who has read the entire account of the convention in the columns of the Talking Machine World has more confidence in the future of the business than ever before.

"I do not think any jobber who attended the convention, or has read the published accounts of same, can question the value of membership in the Jobbers' Association. The manufacturers are beginning to realize the importance of helping jobbers stamp out the evils which have always existed among the class of dealers who habitually make a practice of running up bills with a number of jobbers with absolutely no intention of paying them. Such dealers are a menace to the entire trade, for they are consuming and wasting capital which should go to the support of the honest and deserving dealer. Among this class of dealers will be found the price cutter and the dealer who unfairly competes with the honest and legitimate one that cannot possibly follow such disreputable methods.

"The Association through its system of credit reports is doing much to expose among members such methods, but if the factory will provide a means of cutting off the supply of these dealers it will put a stop to their methods and not only be welcomed by the jobbers, but by the dealers who are suffering through having such dealers as competitors. We jobbers are perfectly willing to help the honest and hard working dealers to the limit of our ability, but the sooner we can kill the habitual dead-beat the better it will be for all concerned.

"The future is before us and we should not consider the past, except as a comparison where we would not only like to duplicate but surpass those things that have made an advancement.

"We do not know what decision will be made regarding the selection of a city for next year's convention, but I do feel we should have in mind the place that will bring out the largest attendance from the factories, as well as the members of the Association.

"If the next meeting place can be decided upon promptly and while the good results of the present convention is fresh in the minds of the entire trade it will do much to keep next year's convention constantly in the minds of every one, and plans be made to insure even a larger attendance than we had this year."

MR. DEALER

If you will repeat the following to yourself each night for a week on retiring, your talking machine business will run more smoothly and more profitably for it:

I will buy of an EXCLUSIVE talking machine jobber.

One who handles both Victor and Edison, so as to get both lines in one shipment at one express charge.

Where my complaints receive as prompt acknowledgment and attention as my remittances.

Where fairness, promptness and full-filling of orders are the watchwords.

Therefore, be it resolved that for now and for all time my source of supply shall be

THE EASTERN TALKING MACHINE CO.

177 TREMONT STREET, BOSTON, MASS.

FOR FIFTEEN YEARS AN EXCLUSIVE TALKING MACHINE HOUSE

BRINGS BACK OLD MEMORIES.

Doesn't this item from the Bridgeport (Conn.) Standard bring back familiar memories? "The factories and offices of the American Graphophone Co. were closed during the hour of the circus parade this morning, thus giving the employes a chance to see it without interfering with their business duties."

It reminds us that there were few happier days than those when the circus came to town. No matter how old and venerable we become or how tense the exacting duties of our business or profession, we are prone to look back with a feeling of joy, and a little shade of envy, to the days when we arose extra early and met the circus "coming to town." What memories cluster about the big tent as it appeared on the village green and the impression the show made when taken under the canvas by some kindly aunt or loving mother. The old country-circus days were great, and no matter what Barnum & Bailey or Ringling Bros. may boast of, the modern circus cannot compare with the one-ringed circus of the days of old—at least to the man whose hair is becoming gray.

Mrs. Carrie Nation, of hatchet fame, is reported to have made two talking machine records abroad.

Mr. Dealer, are you prepared to meet the increased demand for Victor goods this fall?

Do you carry the full line of Victors? Is your record stock up to the mark?

Profit by past experience. Keep a full line of Victor goods, and make every prospective buyer a real buyer.

TRADE ON THE PACIFIC COAST.

Business Rather Quiet During Month—Heavy Demand Looked for in the Fall—Sherman, Clay & Co. Have Record Day—New No. 12 Victrola Creates Sensation—Presidents Johnson and Royal On Hunting Trip—Grand Opera Co. Stimulates Victor Record Sales—Columbia Manager Home from Long Trip—Looking for New Location—Good Orders for Edison "Fireside" Machine.

(Special to The Talking Machine World.)

San Francisco, Cal., August 6, 1909.

The talking machine dealers have had rather quiet times all over the State for the last month, and while there has been a little improvement in the last week or two business is still a little slow. Most of the dealers count on quite an improvement in August, though a good many do not expect any material change before the beginning of fall. All are agreed, however, in looking for a very large business from September on. Heavy advance orders have been taken by the wholesalers for fall stock of all descriptions, though the new machines which have recently appeared on the market have naturally been the heavy sellers.

Andrew G. McCarthy, of Sherman, Clay & Co., states that business in general has been very satisfactory this month, and that one day this week was the best for cash sales since last Christmas. Sherman, Clay & Co.'s wholesale business is keeping up fully as well as last year, and Mr. McCarthy considers outside conditions excellent. He recently received the first shipments of the new No. 12 Victrola, but the stock has moved out almost as soon as it arrived. This machine has created quite a sensation here, and is received with enthusiasm by most of the retailers, who expect it to increase their sales very largely. Sales of the higher priced Victrolas have continued very good, however, and Mr. McCarthy states that there has been a very strong tendency of late toward the better class of machines. Sherman, Clay & Co.'s talking machine department is very busy taking stock this week.

President Johnson, of the Victor Talking Machine Co., and President Royal, of the Universal Talking Machine Co., are now visiting Mr. Douglass, of the Victor Co., at his home in San Rafael, Cal., and will accompany him on a hunting trip this week.

Clark, Wise & Co. report a rather quiet month in their talking machine department, though there has been considerable improvement in the last week, as the vacation season is drawing to a close. They now have the new Victrola in stock, and have found it a very good seller notwithstanding the quiet season.

The sale of Victor records has been stimulated for the last few weeks by the presence in San Francisco of a grand opera company, and the production of the "Merry Widow." Such events never fail to bring out a large demand for new records, which continues long after the departure of the original attractions. It is not infrequently remarked, however, that the possession of a set of good records is preferred by many people to attending the opera itself, where many distractions interfere with a proper enjoyment of the music.

It was expected that the Wiley B. Allen Co.'s talking machine department would be in operation by this time, but the finishing work has taken longer than was anticipated. The stock has been on hand for some time, but it has been kept in storage, and is not likely to be placed on sale for a couple of weeks more.

W. S. Gray, Pacific Coast manager for the Columbia Phonograph Co., has returned from the East after quite a long stay. He stopped for several days at the A. Y. P. Exposition in Seattle, which he found even finer than he expected. He finds that business has moved fairly well in San Francisco during his absence, the past month's business being about equal to that of June, but the outlook for Van Ness avenue in the future is not good, and he is giving his attention to a new location. He has several places in view, and expects to close a deal within the next few weeks. All the locations under consideration are in the neighborhood of the new musical center and general shopping district. The wholesale business has been emphasized during the summer, and the campaign has been most successful. Mr. Storms, who is covering the outside territory, states that Columbia goods are taking better with the country trade all the time, and considers the prospects good for an unusually heavy trade in the fall. He has placed the Columbia line with a great many new dealers this month. The wholesale department will be pushed just as strongly in the future as in the past, but if the new location is secured it is expected that the local retail department will make a much better showing in comparison than it has done for the past year. Mr. Scott, manager of the San Francisco store, will accompany Mr. Gray on a vacation trip to Los Angeles early in August, and Mr. Grimsey of the Seattle store will spend his vacation in San Francisco.

Peter Bacigalupi & Son report a noticeable improvement in sales of machines, though they find things still rather quiet. Their wholesale department has kept up fairly well all summer, but collections are not as good as they should be. Mr. Ackerman, who has charge of the Edison business phonograph, has closed some good sales this month, and has quite a number of the machines out on trial.

C. M. Jones, manager of the Pacific Phonograph Co., has moved his office to the sixth floor of the Harry J. Moore building, on O'Farrell street near Market, with Kohler & Chase, but the company's wholesale stock is still kept at the Oakland warehouse. He is still placing large numbers of the new Edison "Fireside" machines with retailers all over the State, and has a large lot of advance orders for delivery during the fall. Otherwise, he says, the outside trade at present is a little quiet, though he expects that orders will begin to come forward in good shape in August.

The retail talking machine department of Kohler & Chase is now installed in the Harry J. Moore building, occupying a quarter of the sixth floor, part of the mezzanine floor and a display in the window. Several more outside salesmen have been put on in the city, and are stirring up quite a lot of trade, bringing the record of sales up to a very satisfactory figure, though it takes a good deal of work to close sales.

The branch of the Eilers Piano House at Boise, Idaho, recently disposed of its stock of sheet music to make room for an expansion of the talking machine department, and is now carrying a large assortment of machines and records of all kinds.

Kirk, Geary & Co., the wholesale agents for the Columbia Phonograph Co. in Northern California, are sending in good orders from time to time, and are apparently moving a large quantity of stock.

It's So Easy

Yes, it is not only easy **to learn** a foreign language by the I. C. S. system—the easiest and most perfect way in the world—but it is also easy **to sell** I. C. S. language outfits. It is easy to sell them to people who are tired of their machines as an amusement device and will be glad to turn them into a source of profit. It is easy to sell them to persons going abroad and who otherwise desire to learn a language for the sake of the knowledge of it alone. It is easy to sell it to men and women who desire to qualify for positions as translators and foreign correspondents. It is easy to sell it to foreigners, in order that they may learn to speak English. In fact there are a great many sound reasons why it is easy to sell the

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

Do **you** sell I. C. S. Language outfits? If not, why are you thus neglecting such an important and profitable field of your work? Why are you thus absolutely throwing away at least one-third of your business? The Phonograph system of language instruction is now recognized as an educational factor of great importance and the demand for this sort of language instruction is growing by leaps and bounds. The I. C. S. system is undoubtedly the one of the greatest merit obtainable today. Write us a postal **now** for further particulars.

Box 918, SCRANTON, PA.

INCREASING RECORD DEMAND

Noted by Dealers in New York City—Notable Improvement in Trade—Growth of Repair Business Presages Record Sales for Fall.

According to reports made by talking machine dealers, the improvement in trade has been most marked thus far this year. Especially during the summer the demand for records has been surprisingly large, though, according to authorities, more people are out-of-town on vacations this year than for several years past. The only answer is that the records are used to enliven the evenings spent in the mountains or at the seashore.

Another feature of the trade that pleases the dealers is the great amount of repair work coming in, not that the work itself is especially welcome in many cases, but the fact that discarded machines are being bought out and put in running order presages a strong demand for records in the fall and indicates a revival of interest in the business.

TRADE NEWS FROM INDIANAPOLIS.

Summer Dulness Apparent During Month—Number of Outfits Sold to Campers Help Average — Kipp-Link Co. Move — To do Wholesale Business Only—Musical Echo Co. Buys Joiner Victor Stock—Some Recent Visitors—An Attractive Columbia Window —Columbia New $25 Machine a Strong Seller—News of Moving Picture Shows.

(Special to The Talking Machine World.)

Indianapolis, Ind., Aug. 5, 1909.

The fact that the farmers are busy in the country and that many of the city people have been away on vacations, some of them being on extended trips to the northern lakes has cut down the talking machine business in Indianapolis during the last month. At that, however, it has been up to the standard of this season of the year according to the dealers. Several of the dealers have had a good trade in machines, which are being used at camps near the city. Many families are camping at Riverside and Broad Ripple and nearly every family tent has a talking machine.

The Kipp-Link Co. have moved from their old location on Washington street, between Meridian and Pennsylvania, to their wholesale rooms farther west in Washington street. At their present location the company are conducting a wholesale business only. They handle the Edison machine solely.

Joseph Joiner who, with his piano business in Massachusetts avenue, handled Victor machines, has sold out his entire business and gone to Pittsburg. The Musical Echo Co., which has a store in Pennsylvania street got most of his supply of Victors. Mr. Joiner's retirement from business leaves the bulk of the talking machine trade in the avenue in the hands of Frank Lesley who has a store near where Mr. Joiner conducted his business.

W. C. Fuhri, of Chicago, district manager of the Columbia Co., was in Indianapolis for a day or two. He was on his way to Salt Lake City where he has a big business deal on.

Allen A. Jay, who has been looking after the wholesale road work of the Kipp-Link Co., and who prior to that was a member of the Craig-Jay Co., has quit and is now in Texas where he is visiting.

An attractive window has been arranged for the Columbia Co. by Mr. Devine, the manager of the store. In the window was placed a replica of the large diamond which was given to King Edward by a South African diamond mining company. The replica represented the large diamond in the rough and the three smaller diamonds into which it was cut. With the replica Mr. Devine placed a number of records and a large placard with the following caption: "Real Gems from the Opera, Madame Butterfly." The window attracted many passersby.

The new $25 disc machine which the Columbia Co. are putting out is an attractive selling proposition, according to Mr. Devine of the Columbia store. The fact that the machine has an oak horn is one of the best points. The plan of placing a wooden horn on a low priced machine is making a hit among the Indianapolis talking machine buyers. Mr. Devine says also that the lock device which the Columbia Co. are putting out to keep the speed at a given rate is an excellent talking point.

Among the prominent men of Indianapolis who have taken Columbia machines with them to their summer resorts are Harry S. New, formerly national republican chairman and prominently mentioned for the next republican state chairmanship, and H. F. Hill, general manager of the Central Union Telephone club. Mr. New goes to Michigan, where he is a member of a well-known shooting and fishing club, and Mr. Hill goes to Massachusetts.

Among the Indiana talking machine dealers who have been in the city in the last month are L. L. Bair, of Anderson; W. E. Griffit, of Crawfordsville; W. W. Stevens, of Lebanon; John H. Wetz, of Sulphur Springs; J. H. Whitlock, of Rushville, and E. Manlove, of Connersville.

Business has been quiet with the moving picture shows for the last month but they have not lacked for advertising both of the desirable and the undesirable kind. Early in the month two probation officers from the Juvenile Court visited the five-cent theatres and they did not make favorable reports. They said they saw nothing improper so far as the nature of the pictures were concerned. But they declared that the shows were harmful because girls picked up associations there which they should not have. They declared also that it formed an excuse for young girls to get down town at night. In addition they declared that the pictures created in the children the desire for exciting and stirring events. The police, however, were not in very much sympathy with the adverse report and no action was taken. In fact it is not seen how any action could be taken as long as there is nothing objectionable about the pictures.

Later in the month the five-cent shows received a boost when the Children's Aid Association, of which Dr. Eugene Buehler, city sanitarian, is a member, decided they would be useful in the crusade for pure milk for babies. The aid association arranged to show a number of educational slides in the five-cent shows during intermissions. These slides bear such captions as "Dirty Cow's Milk is Rank Poison," "Does Your Baby Get Pure Milk?" "Moving picture shows have come here to stay," said Dr. Buehler. "They are a great institution and when properly conducted are important in the education of the public."

JOYS OF LIVING IN JERSEY.

Music and Pleasure for Boarders in Our Sister State While They Work.

We understand that Lemuel Starkweather, who conducts a summer boarding house in North Caldwell, N. J., has solved the problem of keeping his lawn trimmed and entertaining his summer sojourners by perfecting a combination lawn mower and music box. Up to three weeks ago the Starkweather lawn was unkempt, and the boarders suffered from ennui in the quiet evenings, as the only music the house afforded was from a parlor organ.

Mr. Starkweather, who is ingenious, adapted the mechanism of a music box to the lawn mower, and the men boarders, as well as two women visitors, became eager to take turns at running the contrivance up and down the lawn in the cool of the evening.

The neighbors soon learned of the harmonious lawn mower, and wanted to borrow it. The demand became so great that Mr. Starkweather says he now charges a fee for its use. With the money thus derived he expects to purchase several new records that will bring the machine up-to-date in a musical way.

Now, if Mr. Starkweather would only fit a disc talking machine to the lawn mower he could afford his boarders even greater pleasure, and perhaps so charm New Jersey's national "bird" that his operations on unsuspecting visitors would be a joy instead of a terror. Here is a field for experiment.

DOES A COLLEGE EDUCATION PAY?

Many Graduates Poorly Equipped—Technical Courses More Valuable in Many Instances.

The value of a college education has been the subject of much discussion in the magazines and daily papers recently—in fact, we have a recurrence of it every year after the colleges close when there is let loose in the land a lot of young men who thing they "know it all," but when they commence to enter the battle of life they soon recognize how poorly equipped they are for the struggle.

Many of our great leaders in the inventive and commercial spheres are of the opinion that many young men would be better fitted for life's work were they to take up technical courses instead of spending five or six years in college, acquiring a knowledge of everything, but the practical things of life. An old Columbia man, however, in discussing this subject the other day said:

"The pronounced opposition of Thomas A. Edison, E. H. Harriman, Charles M. Schwab and James J. Hill to a classical education, is an unconscious protest against the idea advanced by the late Mrs. Astor, of New York, that "no one can be a gentleman if he has not been through college.'

"These specialists and technical men will be surprised to hear they have on their side one of the fathers of the Church, for St. Bernard taught: 'Learning is the rock on which the ship of humanity goes to pieces.' But they do not realize that a knowledge of the 'humanities' is almost absolutely essential to well-rounded mental discipline.

"The great benefit of a classical education, as Matthew Arnold observes, is to keep a man from self-satisfaction."

WE HAVE 'EM

TO SHIP AT ONCE

¶ The new Edison "Fireside" Phonograph.

¶ The new Edison "Cygnet" Horns—after September 1st.

¶ Full lines in Cabinets for Records.

¶ The latest Records—and anything in Accessories—as well as full lines of Edison Phonographs. Your orders shipped the day we receive them.

¶ No annoying delays or disappointments because we are always prepared for instant shipments.

¶ Every "symptom" bespeaks a regular "fever" of business the coming fall and winter. The dealer who is prepared will surely get the business.

¶ Won't you favor us with your orders?

American Phonograph Co.

Long Distance Telephones—Numbers 4677 and 4678 Gramercy. Cable Address: "Elbill," New York.

NEW YORK, AUGUST 15, 1909.

THIS publication has been in receipt of many communications embodying terms of praise concerning the report of the Convention of the Talking Machine Jobbers' Association held at Atlantic City last month.

From the interest aroused by the complete publication of the Convention proceedings it is plain that thousands of our readers who were unable to attend the Convention meetings were interested in the Association accomplishments.

The presentation of a complete report of such an important gathering is one of the necessary functions of a trade publication which, however, is not recognized by all trade newspapers.

The audience which listened to the various papers and speeeches was necessarily small, but The World, talking to an audience of thousands, gave the complete Convention report which embodied the views of a number of the leading men of the industry.

It is obvious that The World of last month will be frequently consulted as a reference volume for some time to come.

In reviewing the Atlantic City Convention it is plain that it was the most important gathering of talking machine men ever assembled in one city at one time in the history of the industry.

Not merely that, but never before have the leading men of this trade expressed views so clearly upon topics which are of interest to every one who manufactures, jobs or retails talking machines.

It certainly was an optimistic gathering and it proved conclusively that the great leaders—the men who have built the industry—have faith and confidence in its future.

IT is remarkable that we can locate in an industry, which has developed within a very few years, three concerns which state that they will spend upwards of a million and a half dollars in advertising.

Now that fact alone is worthy of repeated emphasis.

When the great producing institutions stand back of the talking machine industry to the extent of spending a million and a half in publicity, their move is at once inspiring and should encourage faint hearts everywhere.

Advertising is important, and of what value is the rarest product of manufacturers' skill without judicious advertising?

The heads of the talking machine industry early recognized the value of advertising and as a result of a vigorous policy it is generally conceded that the Victor dog is the best known trade mark in the world.

Now that is going some surely.

All of the national advertising which is done is of benefit to jobbers and dealers, and the greatest good comes to the men who are up and doing, men who see a brilliant business future for the talking machine industry and propose to get the most out of it.

The Atlantic City Convention as a business reviver and stimulator was excellent.

Optimism was there in good old allopathic doses and as a result, the men who attended carried home with them renewed confidence in this special industry and the thousands who were unable to attend were stimulated by the report which The World presented of the entire proceedings.

WE appreciate greatly the kindly comments which have been made praising our humble efforts, but last month's World was simply an illustration of what we believe to be the duty of every trade journal.

When a trade newspaper ceases to be a helpful force in the industry its usefulness is ended.

Now the talking machine men of this country have but one publication and it is only fair that that paper should strive by all honorable means to increase the interest in the distribution of machines throughout this land and throughout the world, so if our efforts last month met with the approval of our readers then the outlay which was material was amply justified.

When we consider for a moment that our entire life is a life of dealing with others it should be, therefore, a life of helpfulness or co-operation.

We each have obligations to one another.

Co-operation through business organizations or associations must have concern for the rights of others, and the better understanding of one another is after all the only real progress which we make.

We all recognize that every man who has well adjusted his life sees to it that a portion of it is given to some work for the common good.

The country has a right to expect some return for the manifold advantages which it gives to every citizen, and the time is near when every man will be expected to make some contribution to the common good.

The opportunity of becoming active in any association whether along politics, business or social lines should appeal strongly to the judgment of every individual in the general good that may be accomplished by working together and in the opportunity of meeting with men of affairs and the greater privilege of knowing and working with them.

Hence every jobber should fall into line and help swell the ranks of the Association.

NOW, a good many wrongly view Conventions. Some figure that they amount to junketing trips, but that is not so.

The rise of new conditions and weightier problems call imperatively for a consideration of these problems by business men whether in the talking machine business or any other industry.

Now, every working day of the Convention cost several hundred dollars, but it was worth that amount of money.

The discussions and conclusions reached demonstrated the fact that the talking machine business has steadily evolved from an embryo state until it stands before the world a healthful and vigorous industry.

The roots are firmly planted and the branches, growing in number, are more fully developed than many expected and the future of the business will require work along harmonious and intelligent lines.

A SQUARE deal is essential in every walk of life. Great problems are not so well solved by separate individuals as they are by co-operation.

Best of all, the Talking Machine Jobbers' Convention was not a one-man affair.

It was strongly dependent upon diversified opinion and the aid of widely different experiences.

The fact that the leading men of the industry were present at Atlantic City and delivered addresses upon important topics shows how closely they are in sympathy with the organization, its aims and its objects.

The Talking Machine Jobbers' Association has now become a recognized force in the industry, and there is complete harmony between the manufacturing and distributing interests.

It is quite natural that all of the suggestions made by individuals or officials of the Association should not be readily accepted by the manufacturers.

They are doing some tall thinking along lines of business expansion and they have the whole country and the whole world to scan when deciding some weighty business problems.

It naturally follows that all sorts of concessions cannot be made, but the fact that the Jobbers' Association comes to the manufacturers to aid in eliminating certain evils shows that we have advanced along lines of business harmony and business soundness.

The success of the Convention of 1909 will probably result in drawing more jobbers into the organization.

They will see what the Association is doing and what it has accomplished.

It naturally follows that the separate sections of the trade will be interested in what the organization is accomplishing for the benefit of the whole trade.

The Convention plan was admirably worked out, and, for a young organization, surely the Talking Machine Jobbers' Association has accomplished wonders.

INDICATIONS now point to a Fall trade of great magnitude. From all parts of the country re-assuring news is steadily coming in embodying satisfactory predictions for a Fall trade.

There is a fixed belief on the part of most business men that we shall swing into our own in good form, and it is certain that the talking machine trade in common with other industries will share in the return of good times.

OLIVER DITSON CO.'S FINE "TALKER" DEPARTMENT

Carrying a Full Line of Victor Machines and Records in Up-to-Date Quarters—Old and Respected Boston Institution Has Made Splendid Headway in Recent Years—Prompt Shipment of Orders One of the Secrets of Their Success.

(Special to The Talking Machine World.)

Boston, Mass., August 6, 1909.

When a house of honored reputation—a house which has been identified with the music trade industry for many long years—is wedded to a modern, progressive policy, it means much. Take the Oliver Ditson Co., of this city, for instance, and here you find an institution widely esteemed for its high aims and admirable management keeping right in the front rank of progress in every department.

THE OLIVER DITSON BUILDING, BOSTON, MASS.

With too many concerns age means decay, but not with the Ditson house, for within the past few years, under the able management of Chas. Bobzin, the Ditson house has forged ahead in a manner that has excited the admiration of friends and competitors alike. System and values are the keynotes of the harmony which prevails in this establishment—a harmony which is leading to new accomplishments.

If we visit the talking machine department of the Ditson Co. we find one of the most complete, best arranged and best stocked establishments in the East. "One machine and that the Victor" has been their rallying cry, and as they say, moreover, "Devoted allegiance, singleness of purpose and horse sense have made the Oliver Ditson Co. distinguished as the only jobbers of Victor talking machines and supplies whose business has constantly grown and increased during the depression of business which began with the panic of 1907."

As they stated in their advertisement in this paper last month, some five years ago they paid the Victor Co. an average of $500 per month, and to-day the monthly remittances are near $20,000. This policy of concentration has been productive of splendid results, as may be seen in the growth of the Victor trade with the Ditson house in this city. They have an enormous output of high-priced machines while their trade of Red Seal records is so large that one can get a fair idea of the class of customers to which they cater. But with the Ditson house there is no "class," all customers are treated on an equal plane, all receive equal treatment. It matters little whether it is an order for $5 or $500, it is filled with promptness.

This immediate attention to orders has been most gratifying to dealers, and has helped to augment the good reputation which the Ditson house enjoys with the trade in New England.

The Oliver Ditson Co. are quite optimistic regarding the fall outlook. They have been increasing their business steadily and expect to reach record proportions with the improvement in business, which is now conceded is becoming more apparent as the year grows older.

VARIOUS CLASSES OF TRADE.

Merchant Can to a Large Extent Control the Class of His Patronage by Judging His Trade With Fairness—A Sour Disposition Makes Everyone Seem Undesirable.

A man's business may be done with just as good people or just as bad people as he has an inclination or desire to judge them. The retailer who has soured, for any reason, on the neighborhood in which he is doing business, invariably finds that the makeup of the locality is about as vile as it is possible to be, according to the way in which he judges vileness in humanity. The fellow who considers all his customers beneath him in social standing, inclined to be thieves or purloiners of goods, unable to reasonably judge what they want, incapable of seeing values in goods offered them, unwilling to accord him any profit, or what else of derogatory nature he may wish to attribute to them, will necessarily be perfectly satisfied that such are the inclinations, habits and constitutions of the people he has to contend with, and that settles the question, so far as he is concerned.

Now, what's the use? Trouble interminable will come to us without the seeking, and what possesses the mind of man to so upset his entire equilibrium that he shall go about seeking the cussedness he thinks ought to belong to other people is beyond the comprehension of the minds of people who are willing to take conditions and people as they are without compelling them to be any worse. If we are not satisfied with dealing with the families of iron workers and coal miners, it is up to us to move on to more congenial fields, without impugning the reasonable characteristics that belong to such people. If we think people are stealing our goods, it is up to us to prove it as a fact or stop thinking it, and, much more, stop saying it. If we consider our customers unable to see that we are offering values, possibly it is time to investigate and find out whether those same people are not somewhere near right on some things. There is a possibility that we can learn something of usefulness from the very people we are given to criticising.

The retailer who has a case of the dumps, for any reason, is assuredly the man whose business will suffer perceptibly because of the difficulty, says the Sporting Goods Dealer. That which does not seem to go right is the surest cause for upsetting the business judgment and stability of the victim. No man can entertain doubts and put forth acid criticisms without having the whole attitude reflect on his business returns. Business that may be bad cannot be made any better by adverse conclusions; business that is reasonably good can be made extremely bad by the off attitude of the man who runs it. The easiest way to gain a sour stomach is to entertain a sour disposition, and when the sour stomach gets in its work the business likewise sours and the jig begins to slow down ready for the quitting. The man who forces himself to laugh when he feels like the opposite will invariably come out all right in the final shakeup. We get what we are willing to work for, and the longer we live the more we realize it.

VICTOR HERBERT'S

Connection With The National Phonograph Company, As Adviser and Critic

is the biggest selling argument for the dealer since the invention of Amberol Records.

It means that a great deal of the Edison Phonograph music will be on a higher plane than ever before, enabling you to reach that class of people whose musical taste takes the place of musical ability, and whose appreciation of good music is far above the average of that offered by other sound-reproducing instruments.

It means that all the higher class orchestra and operatic selections and much of the best popular music will be recorded, and under the personal direction of Mr. Herbert, insuring absolutely perfect records.

The new records will include selections from Mr. Herbert's opera "Mlle. Modiste" and other Herbert music played by his orchestra, under his own direction.

If you are not an Edison dealer, just size up the situation—consider the success of Edison dealers everywhere. But don't take too long to size it up. The man across the street may want it for that territory too.

Your jobber will take care of you.
Better write him to-day.

NATIONAL PHONOGRAPH COMPANY

59 Lakeside Avenue **ORANGE, N. J.**

Your Stock + Amberol Records = Your Salesmanship × 2

Amberol Records sell with far less effort than any other records, and at a much bigger profit for you.

Edison Phonographs now sell all the more easily because they play Amberol Records.

Attachments for playing Amberol Records for instruments not already so equipped, bring home a handsome profit for you.

These three points make the Edison the real profit builder and the instrument for you to push. Amberol Records have doubled your selling efficiency.

If your line is broken or you're not up on the new records write your jobber to-day.

THE POPULARITY OF SIDE LINES.

Extracts from a Prominent Dealer's Views on This Subject Which Should Prove of Interest to the "Talker" Man.

With the idea of ascertaining if possible just what the average dealer's opinion as to the most popular side line would be, I wended my way to the store of the leading "talker" man of my city, and below I give you the result of my visit:

"Side lines are fast becoming a necessity," remarked the gentleman upon whom I called by way of opening up the subject. "I do not mean by that," he added emphatically, "that the talking machine business is on the wane, and, therefore, in dire need of a stimulant, but it strengthens any trade wonderfully to have something of interest on the side to show your patrons; an article that will harmonize with your

main seller, and increase your hold on their custom."

"What do you consider one of the most successful side lines?" I inquired curiously.

"Sheet music, and I'll tell you why," he answered. "There are a number of selections listed every month by the different talking machine companies of such rare charm that an immediate demand is created for them in sheet music form. When a man takes a record home to his wife and it makes a hit, nine times out of ten she will remark: 'Oh, John, dear, why didn't you buy the music for that too? It is beautiful, and I'm just dying to play it on the

piano.' Now, if the gentleman in question happens to be one of my customers, the chances are very much in favor of his being able to deliver the goods. In that case, of course, his wife will be flattered by his thoughtfulness, and, as a fitting finale to the phonographic concert, there will be a few stunts on the piano as well. Tiring of that, the Stradivarius will be lifted from its case, and just to prove that a violin record with piano accompaniment can be successfully made at home, he will record so diligently before he is entirely satisfied with the rendition that my shaving machine will be working overtime next day.

"By the way, I want to tell you about a sale I made yesterday which I think demonstrates most conclusively that side lines of the right sort pay. I make it a point to display all my goods as conspicuously as I do the "talker," and the result is that when a man comes into my store he has three or four things to engage his attention instead of only one, as is the case with the dealer who depends solely on the "talker" for a livelihood. Well, a customer came in to hear some selections from the new record list which had just arrived from the factory, and as he turned toward the little table where I keep my literature, he spied a pamphlet setting forth the merits of a certain safety razor.

"'Say, I want one of these,' he exclaimed, 'and had expected to purchase it on my way home at the hardware store on the corner. This one will be about right,' he added, picking out a $5 Gillette.

A few minutes later, while listening to the new records in the hearing room, his ear caught the sound of a vocal duet being run off in the adjoining booth by one of my clerks. 'Put that one on for me, will you?' he asked. I did as he requested, and the record, No. 9515 (Edison 2-minute) "When Bob White Whistles in the Meadow," impressed him very favorably. As I was removing it from the mandrel, he remarked, 'There was a line in that song about a lover sending his sweetheart a post-card, which reminds me that I want some for the Fourth of July. Have you any pretty ones?'

"Result:—I sold him an assortment of these also.

"Just as he was leaving, I suggested that inasmuch as he was impressed with the beauty of the record, his wife might like to have the music. 'By Jove, that's right; thanks for the reminder,' he responded in parting, carrying with him samples of my entire line.

"Oh, side lines pay all right," the manager declared positively in closing the interview, "and any talking machine dealer who does not believe in them must surely have a leak in his think tank." Then as an afterthought, he continued:

"Photographic supplies, particularly at this season of the year when all the world goes a-kodaking, is also a line that is bound to make good. I do not consider it a product that will run itself, but by energetic pushing and judicious advertising it can be brought into the class of real winners. I started in this spring to handle the Seneca line. I am an ardent amateur myself, but had never had any experience in selling

ARTISTIC PRINT BY WALTER TURNER.

cameras, so I simply brought forth my small stock of common sense, and passed it along to my clerks, with the result that we are selling a very satisfying number of picture makers. My methods are very simple. I endeavor to ascertain from everyone who calls whether or not they own cameras. If they do not, I go after them good and hard at once. If they do not immediately become impressed, I send them each month along with the new record supplements, an artistic folder illustrating the delights of photography, and continue to do so until I either make a sale or am convinced that there is nothing doing. If my customer already has a camera in his possession, I explain to him the advantages to be derived from purchasing his supplies from me. He is in the habit of coming to see me often to hear new records; therefore, it will save him time and car-fare to buy his photo supplies here also. There being no camera store near me, he will, of course, see the justice of my argument, and become my patron in this line as well as that of the 'talker.'

"I sell artistic prints also and they pay very well. Mr. Walter Turner, a young amateur from Chester, Pa., makes them up for me, and such is his talent in the photo art study line that he makes a pile of money for himself and his dealer, besides giving a heap of pleasure to people who admire fine pictures.

"I intend to add a framing department soon," he confided to me after I had admired one of Mr. Turner's prints; "my aim being," he explained, "to always handle a line in its entirety and not to allow some other fellow to get a bite out of the apple after I've had mine. I try to eat it, core and all."

Just then a clerk entered, announcing that a lady was without, who desired some inside information regarding the use of a camera, so

WOOD DIAPHRAGMS

For cylinder records; every detail reproduced; nothing missed. For the four-minute records they are a revelation.

PRICE REDUCED TO 50 CENTS EACH (including cross head and link).

MASTER RECORD MOULDS

Absolutely perfect copper matrices from cylinder masters furnished at short notice. By our new process we produce a matchless surface, even improving that of the master. Prices furnished on application.

SLOT PHONOGRAPHS

Large and small lots of slot phonographs to rent for parlors and summer resorts at nominal prices.

New Lang Building, (39th Street) 662 Sixth Avenue

NEW YORK CITY

with a hearty handclasp, and an invitation to call again, he bade me a courteous adieu."

SIDE LINES.

(Air—"School Days.")

Side lines, side lines;
Ever helpful side lines;
Razors, and post cards, and sheet mus-ic
Will make you money and make it quick.
So if you yearn for lots of dough
Dress your window and make a show
With some Seneca cameras in a row,
And you will be rich as John D.

TALKERS TO STIMULATE WORKERS.

Factory Superintendents Now Realizing the Value of Music as an Aid to Better Work—Player-Piano Used—Big Opportunities for Live Dealers to Introduce the Talking Machine.

Mills and factories all over the country are beginning to realize the value of music from a straight commercial viewpoint, especially where a large number of work people are employed. Many have installed pianos and player-pianos in the recreation rooms, or directly in the workroom and a number of factories have bought high-class talking machines for the entertainment of their employes and only recently a large concern in New York state purchased a Victor Auxetophone for this purpose.

It would seem the proper thing for talking machine dealers to get after manufacturers in their vicinity, especially those employing girls, and point out the wisdom of purchasing high class talking machines and good record outfits as a recreation feature. It has been proven that where music is introduced in the workroom, instead of causing an interruption the employes are influenced to work faster and more cheerfully and good feeling holds sway. During the lunch hour and rest periods the music has been found to encourage dancing and singing, putting the employes in excellent humor to put forth all their energy in the afternoon's labors.

The value of music as an incentive to special effort has been realized by southern planters since ante-bellum days and even at the present time a negro who is a good bass singer can always find work in the fields during harvest time to "drone" the accompaniment to the choruses of the workers. When negros are not singing they naturally carry on a running conversation and usually stop working at the interesting points. When they are singing, however, they work with renewed energy, keeping time to the music which is usually of lively character.

It has been found that the same principle applies to factory workers and they are less inclined to waste time carrying on conversations when music is played.

The talking machine being practically automatic should find a good demand in this field and it is the energetic dealer who will get the business. But he must go after it.

SOME BUSINESS LOGIC.

Reputation Plays an Important Part in Making Success or Failure for a Business.

A bad reputation is easily made, but it takes years to build up a good one.

No business man can afford to take a chance on gaining a bad reputation, for once gained it will be a hard thing to overcome, and every effort made to keep away from a bad reputation will be one more step towards gaining a good one.

The amount of credit a business man has is based more upon his reputation than upon his holdings of worldly goods, for it is a well-known fact that a rich man can so convert and cover up his property holdings, if he so chooses, that it can never be made useful to his creditors, while a bankrupt with the right kind of a reputation, and who is determined to always improve it, will eventually be able to pay every dollar he owes.

If young men could thoroughly understand the value of a reputation they would keep away from the things which cause black marks to be made against them, and could thus be fitted for the better things much earlier in life than is the case when they have a few of these marks to live down.

If business men would take a more serious view of this little matter of reputation they would see the folly of taking an undue advantage of others, for the reason they would see the damage such a reputation would be to them later in life.

ENTERPRISING CONNECTICUT HOUSE.

Harry W. Yeager, president of the Yeager Piano Co., was a visitor to New York early in the month, and was a caller at the headquarters of the Columbia Phonograph Co. in the Tribune building. Mr. Yeager, who is one of the enterprising piano men of Waterbury, Conn., being president of the local Piano Dealers' Association, is well pleased with the talking machine end of the business. It will be remembered that Mr. Yeager recently took over the Columbia store in that city. He has fitted up handsome Columbia quarters in his establishment, having six specially equipped booths for demonstration purposes. He has also added a talking machine department to the store in Torrington, which will be fitted up in a manner to attract and build up Columbia trade in that town.

The Yeager Co. are a valuable acquisition to the Columbia line of representatives, for the members of the firm are go-ahead, energetic gentlemen "who do things," and the Columbia line is certainly to get a splendid representation throughout Connecticut.

AUXETOPHONE FOR ENTERTAINMENT.

The Beech-Nut Packing Co., Canajoharie, N. Y., have purchased through the F. C. Knapp Co. a $500 Victor auxetophone. The instrument has been placed in the reception room and will be operated by electricity and heard daily by dozens of visitors.

The Music Master Wood Horn

offers a *new* source of profit to the dealer in phonographic goods.

This unique horn transforms the Talking Machine or Phonograph into a musical instrument. Owners of these machines buy it eagerly.

With the MUSIC MASTER they can realize their fullest expectations in the reproduction of both instrumental and vocal music.

The MUSIC MASTER is more than a horn—it is a ***sounding board,*** constructed of ***solid wood*** on scientific principles of acoustics. It has vibratory freedom—which is impossible with horns of metal or veneered wood.

TURNER MUSIC STORE OPENS.

Large Crowd Attends Opening of Wallace, Idaho, Business House.

The Turner Music Co., of Wallace, Idaho, opened for business in their new quarters near the O. R. & N. depot a few weeks ago, a large crowd being present. The new store has been handsomely fitted up and is the only exclusive music store in Shoshone County.

Upon entering one is confronted by the piano room and the office, which is on the right, elegantly fitted up in arabesque work. Next there are two rooms on either side, which are soundproof, one being known as the "Victor"' room and the other as the "Edison." In these are kept the records for the phonographs of the respective machines, where they may be heard before purchasing. Next is the piano studio presided over by Miss Blanche Smallwood, a graduate of Faelton Pianoforte School of Boston and Mt. Allison conservatory of New Brunswick. In this room lessons are given and sheet music sold.

Opposite the studio is the waiting room for the accommodation of ladies desiring to await the arrival and departure of trains, and adjoining this is a fine lavatory. On the center table of the waiting room are the latest magazines, periodicals and newspapers for the accommodation of the guests.

In the rear of the building is the general repair shop and storage room. There is yet some uncompleted work, but this is being rushed as rapidly as possible. A fine and attractive window display has been made.

The company was formerly located on Bank street, where the store was destroyed by fire recently. The present stock is entirely new.

Don't sit round with hanging lip, that is sure to floor you; try to get a better grip on the work before you. Put some ginger in your words, when you greet a neighbor, throw your trouble to the birds; get right down to labor, an' you'll notice things comin' right your way.

TRADE METHODS DISCUSSED.

Careful Consideration Given to "The Law of Unfair Business Competition" by Harry D. Nims in His New Book.

Harry D. Nims, of the New York Bar, has just issued through Baker, Voorhis & Co. what is said to be the first book to deal with the equitable principles applicable to all sorts of competition in business. The volume is entitled, "The law of Unfair Competition." It is intimated that business men and lawyers who look into this book will be astonished by the demonstration it makes, that it is fairly easy for a manufacturer or merchant in these days to protect himself from injury through the wrongful acts of unscrupulous competing concerns.

While business of every sort has been undergoing vast development in recent years through the application to it of science, invention and modern enterprise, the liability to attack naturally has increased, for the number of things worth stealing has, of course, been multiplied greatly. "Men are constantly acquiring new rights," Mr. Nims remarks, "and new kinds of property almost unknown to law and in lawful ways are putting themselves into new positions."

But, we may add, with the acquisition of each new bit of property there is need of sharper watchfulness against the depredations of the unprincipled wretches who covet that new right and that new bit of property. The genius of criminal rascality is no laggard and no dullard; every good thing that comes into its field receives its prompt attention, and if it is not promptly stolen, the reason must be that it may not be stolen with impunity. It is gratifying to be advised that the lawmaking and law-interpreting powers of this country have done a good deal recently to safeguard legitimate business interests, and to make commercial thievery difficult.

"It seems sometimes," says Mr. Nims, "as if the progress of the unscrupulous merchant and manufacturer in inventing new schemes for filching away the trade of others unfairly has been far more rapid than that of the courts in finding ways of protecting the honest business man against such schemes. But whatever has been the activity of these unscrupulous members of the business community in the last decade, during this time very marked progress has been made by the law in developing rules and remedies relating to dishonest and unfair commercial practices."

It is Mr. Nim's effort in his book to show what is unfair in competition and what the remedies are to which those who have been harmed may resort with assurance that what they complain of will be quickly righted. He shows, he thinks, that the present tendency in court practice is to give the promptest possible relief to those suffering through unfair business competition. The courts, he tells us, as a rule, are fully persuaded they should uphold honesty and fairness in all relations to business life and are inclined to stop instanter wrongdoings of the wrongfulness of which they are well convinced. This he regards as one of the most healthful signs of the times.

We are reminded, however, that there are some questions of business morality concerning which it is impossible for judges to form their judgments without study and deliberation. Many problems of large import to individuals and corporations have yet to be authoritatively disposed of before we shall know just what must be endured in the way of competition and just what is subject to suppression on the ground of unfairness.

HERZOG CO.'S HANDSOME EXHIBIT.

The Herzog Art Furniture Co. has a most attractive and comprehensive exhibit of piano benches, music cabinets and phonograph cabinets, etc., at the New York Furniture Exposition, which was in progress during the month of July, and M. A. Carpell, the concern's able representative, informed The World he enjoyed the best selling season in two years.

MISTAKES OF OUR EXPORTERS.

Three Salient Points Necessary to Observe in Trade Extension With Brazil.

(Special to The Talking Machine World.)

Washington, D. C., August 7, 1909.

Vice-Consul D. P. De Young, of Santos, gives some important pointers in a recent report to the Department of Commerce and Labor, which he says cannot be too frequently and persistently impressed upon American exporters seeking to establish a permanent and profitable trade in Brazil. These matters are often neglected and generally cause more or less annoyance, loss of trade, and sometimes loss of money. He says:

When possible, exporters should make such arrangements with the consignee that the latter assumes the responsibility and expense of clearing the goods at the port of arrival. If it be impossible to do so, they should make a careful study of the Brazilian tariff schedule, so as to be able to classify their goods in an intelligent manner, avoiding excessive taxes. There is no end to the trouble American exporters cause by utter ignorance of how to classify their own goods under the Brazilian tariff schedule, and by failing to transmit the necessary documents for clearance. Only recently an American manufacturer of post cards sold 2,000 cards to a local merchant and, because they were poorly classified, a duty of 500 per cent. on the New York price was levied against them. This might have been 200 per cent. less had he classified them as mere printed matter.

Other articles are now being held up at the custom-house here, with storage charges against them for more than they are worth, because the shipper, or his broker in New York, did not send along the necessary shipping documents without which it is impossible to clear the goods. The exporter referred to writes letters blaming the consignee, when his, or his agent's, negligence is entirely to blame for the unfortunate incident. When goods are not marked plainly, in a manner which leaves no doubt as to what they are, the highest possible tax is always levied and, if not marked correctly, an additional tax is imposed in the nature of a fine. If these regulations seem severe, the way to avoid their penalty is to obey them.

American exporters should, by all means, not neglect to place a 5-cent stamp on all letters to Brazil. There are countries to which letters are carried for 2 cents, but not in South America. It is the source of considerable humiliation to those representing American interests in foreign lands to know what a large per cent. of American letters arrive at the local post-office short paid. The error is not generally made by European exporters, and it tends to cheapen the appearance of American business methods. The managers of American exporting houses are not doing this intentionally, but by neglecting to see that stenographers or errand boys, whose duty it is to stamp the letters, does it, they get the criticism at this end of the line.

The overdue charges here for the regular 5-cent allowance is generally 240 reis (about 7 cents), but since they can not change the 100 reis at the office, 300 reis (9 cents) is always charged. This 9-cent overdue charge added to the 2-cent stamp used in the first place makes 11 cents for the letter, when it could have been carried by a 5-cent postage stamp. A short-paid letter always has a negative effect when soliciting trade, and besides damaging one's interests it reflects upon American business methods in general.

Not all brokers and merchants are responsible, therefore great caution should be exercised to avoid bad debts. This is as true of home brokers as it is of those at the foreign port. There are, however, a lot of reliable brokers, both at home and abroad, and accurate rating can be had from those here by writing to the leading banking institutions of Santos. Consular officers are, of course, always ready to assist those who get into difficulties, but if a little more care were exercised by shippers many pitfalls could be avoided.

A MESSAGE TO DEALERS

TO EDISON AND VICTOR DEALERS:—

There is a great opportunity at the present time for every dealer of Edison phonographs and Victor talking machines.

I think you can grasp it and hope you will give my suggestions your very careful consideration.

It is generally conceded that the recent business depression is over, and that prosperity is returning.

There are less dealers and jobbers, but those who are left represent the best material and are being protected by the manufacturer against unlimited competition.

Exclusive territory is not granted by the Edison and Victor Companies, but they have morally committed themselves to protect dealers and jobbers, by not establishing competitors, where they show reasonably satisfactory results.

Between now and fall you will have ample time to find out in what way you can improve your business, and I therefore submit the following suggestions:

Look over the field in your territory and if you find opportunities to remove competitors by taking over stocks, under satisfactory arrangements, get in touch with your jobber and the factory and see whether you will not be protected against additional competition by doing so.

In return you may have to carry a larger stock, invest more capital and hustle a little harder, but if the field is yours you can afford to do this.

Many of our Edison and Victor dealers are doing this and we are always glad to do what we can as their jobber.

Business will undoubtedly be much better this fall and winter and constantly improve, but the man who gets the business must be up-to-date and be able to give the best service.

That means your stock of machines and records must be as near complete as possible.

Don't wait until everybody is doing a good business for your competitor will want to stay in the business then.

I have been identified with the jobbing of Edison and Victor goods for 11 years, and the Blackman Talking Machine Co. has handled nothing but talking machines, records and supplies from its start.

I have great faith in the future of the Edison phonograph and Victor talking machine. In evidence of this we have been carrying a larger stock than ever, endeavoring to give better service all the time, and at no time have we lost confidence in the future of the business.

This means we have been giving our dealers good service on either Edison or Victor goods, or both, and that we will continue to do so.

When the depression hit the country some jobbers immediately let their stocks run down, called in their salesmen and did not show the leniency towards their dealers that they were entitled to receive.

Our policy has been to run the business regardless of the times, consistent with good business judgment and help every deserving dealer "weather the storm."

I have no use for the "dead beat," nor should any honest dealer, but the dealer who deserves a helping hand will get it, if possible.

In every way possible it is my intention to improve our organization, stock and methods, so that this fall the Blackman Talking Machine Co. will be known as "headquarters for best service on Edison and Victor goods."

With those dealers who know us, I think we have that reputation now.

Our door is open to every reputable dealer, and if we have any suggestions or ideas we can give to help him they will be his for the asking.

I want to personally meet as many of our dealers as possible, for we expect to stay in this business for many years to come, selling nothing but Edison and Victor goods, and we must, and will, give the kind of service that the most successful dealer will need to make money.

Come in and see us, or write. We want you to know us and we want to know you.

We will earn your patronage and won't ask you to buy from us to "help us," for we will "help you" first.

Send us your name and address; tell us what lines you handle and we will do the rest.

Yours for satisfaction,

J. Newcomb Blackman, President

ST. LOUIS HAPPENINGS.

Continued Activity and Improvement in Trade —Manager Gressing's Recent Visits—Columbia Entertains American Woman's League—J. L. Burr Makes Encouraging Report—Vacations Now Under Way at All the Leading Stores—Stocking Up Energy for an Active Campaign in the Fall.

(Special to The Talking Machine World.)

St Louis, Mo., Aug. 3, 1909.

There has been no great activity in talking machine circles here during July, though the outlook is pronounced to be excellent.

O. A. Gressing, manager of the St. Louis Talking Machine Co., reports that business for the month of July was only fair. He made a week's trip to Little Rock and Memphis lately, and states that conditions in that territory are very favorable for a nice fall trade. Mr. Gressing attended the National Jobbers' convention at Atlantic City last month and had a very enjoyable, instructive and profitable trip. He was away ten days and returned very much recuperated. L. A. Cummins traveler for this concern, is now on a several weeks' trip through central and southeast Missouri. C. O. Thompson, of this concern, is home from a two weeks' vacation spent in the country in this State. Miss Carrie Goetz, saleslady, is home from a two weeks' vacation spent in Illinois. A. D. Geissler, manager of the Talking Machine Co., spent Tuesday, August 3, here.

E. B. Walthall, manager of the Columbia Phonograph Co., reports that they had the best July business they have ever had for that month, and that it was better than that of December last year.

The Lewis Publishing Co., of University City, one of our suburbs, has had 710 chapter houses under construction for some time, a few of which were recently completed. These houses are being constructed for the American Woman's League in different parts of the country, and probably there will be thousands of them built. Their value is from $1,500 to $5,000, according to the size of the place where they are built. They are furnished very handsomely, and each one is to have a library table graphophone which costs $225. The Lewis Publishing Co. has closed a deal with Manager Walthall to furnish the graphophones for these buildings, a number of which have been furnished already, and orders for others placed. The Lewis Publishing Co. have an agreement with the American Woman's League, whereby they take these buildings off their hands as soon as completed. The chapter house at Edwardsville, Ill., just completed, was dedicated on Tuesday night, July 20, at that place, by the American Woman's League branch of that place. Over 300 members of the organization attended. E. B. Walthall, manager, and C. L. Byars, retail manager of the Columbia Phonograph Co., attended and gave a very fine entertainment on the handsome new graphophone owned by the league. All present enjoyed the evening, and the graphophone recital was enthusiastically received. C. L. Byars, retail manager of the Columbia Phonograph Co., is home from a week's fishing trip up the Mississippi River. E. Schuedding, chief repair man of this concern, is home from a two weeks' vacation spent in St. Paul. C. M. Morris, in charge of the shipping department of this concern, is home from a two weeks' trip to Niagara Falls and other points.

Wm. Pfisterer, manager of the Columbia Phonograph Co. at Memphis, Tenn., was a visitor here recently. He reported the outlook in his territory very favorable.

J. L. Burr, manager of the Columbia Phonograph Co. at Omaha, spent a day here recently on his way to Chicago. He reports that conditions out his way point to a great fall and winter business. He states that they took on the wholesale interests there on January 1, and since then they have taken on 188 dealers in the territory, and that every account is absolutely a good one.

A. L. Owen, manager of the talking machine department of the O. K. Houck Piano Co. at Memphis, accompanied by his wife, recently spent ten days here at his old home.

The Koerber-Brenner Music Co. report that their talking machine business for July has been up to the season of the year. Wm. Brenner, secretary of the company, is spending August at the Colorado resorts.

D. K. Meyers, the Zonophone jobber, reports that July was rather quiet, but that prospects are excellent for a fine fall trade.

A. J. Robinson, of the talking machine department of the Thiebes-Stierlin Music Co., states that their July trade was fair, and that the high-priced machines were in demand.

Marks Silverstone, president of the Marks Silverstone Talking Machine Co., attended the National Talking Machine Jobbers' convention at Atlantic City last month and had a very pleasant and instructive time. This concern has just been making extensive alterations at their store by enlarging their wholesale department, increasing their bin capacity and enlarging their office.

Miss Blanche Silverstone, saleslady for this concern, is now on a two months' trip to New York, Norfolk and other points.

A. Haas, traveler for this concern, is now on a month's trip through Missouri and Illinois.

STRENGTHENING THE 'CELLO'S TONE.

Inventor of Turbine Engine Contrives Clever Attachment for Musical Instruments.

Not satisfied with the subdued tone of the cello, Charles Parsons, the English inventor of turbine fame, has contrived a remarkable attachment, known as the auxetophone. It is a mechanism by means of which compressed air can be utilized to strengthen the tone of the instrument to which it is attached. It is the principle now utilized in the auxetophone sold by the Victor Talking Machine Co.

The apparatus may be described as a comb, or multiple-reed valor of aluminum, which is hinged so that each tooth of the comb can vibrate closer to or further from a corresponding slot opening in a little box to which compressed air is supplied at about five pounds pressure.

When applied to the cello or other stringed instrument, the valve is connected by a rod of aluminum to the bridge of the instrument. Thus the valve is caused to vibrate in accord with the characteristic tone of the instrument.

Mynheer Von Biene, the Dutch artist, is pleasing large audiences in the European capitals with the new contrivance.

A WORD FROM THE POSTMASTER.

Learn More About the Postal Rates and You'll Trouble Him Less.

Postmaster Morgan said Monday that the post-office was troubled with big batches of letters addressed to foreign countries on which postage was shy. The public seems, he said, to possess a very hazy knowledge of the countries to which letters can be sent at the domestic rates. The only countries to which letters can be sent at the two-cent rate are Great Britain and Ireland, Germany, Newfoundland, Canada, Cuba, Mexico and Panama. The rate to all other countries is five cents. The postmaster also calls attention to the fact that while the letter rate from New Zealand and the Bahamas to the United States is two cents, the rate from here to those countries is five cents.

THE UNITED STATES PHONOGRAPH CO.

(Special to The Talking Machine World.)

Cleveland, O., July 30, 1909.

Lieutenant-Governor Francis W. Treadway is one of the incorporators of the United States Phonograph Co., of Cleveland, chartered by the Secretary of State at Columbus Wednesday, with $10,000 capital stock. William H. Marlott, F. H. Pelton, T. B. Bolton and M. B. Campbell are the other incorporators. The company will manufacture and deal in phonographs, records, etc.

MILWAUKEE NEWS BUDGET.

Celebrating Home Coming—Auxetophone Prominently in Evidence—Talking Machine Houses Decorated—McGreal Plans Trip—Records to be Made of President Taft's Speech When He Visits Milwaukee to Dedicate Auditorium—Green City Supply Co. Remove—Other Changes—Recent Visitors.

(Special to The Talking Machine World.)

Milwaukee, Wis., Aug. 7, 1909.

Milwaukee is celebrating a big home-coming during the opening week of August and visitors have been flocking to the city by the thousand. As a result, dealers have been meeting with a big increase in business. It would seem that home-comers in most cases took the opportunity to purchase new records or machines while in the city. The popularity of the new August records offered plenty of attraction to say nothing of the inducements held out by dealers. It is believed that the present week will prove to be one of the best of the year so far in a retail way. The retail trade all over Wisconsin has been showing considerable improvement of late and the dealers believe that the worst of the dull season is now over. Some big preparations for the coming fall trade are being made by most of the dealers.

The wholesale trade is still a little quiet, although a change for the better is expected some times this month. Dealers about the state seem inclined to clean up their stocks as much as possible and order new stuff for the fall trade.

The Auxetophone played an important part in Milwaukee's home-coming. Lawrence McGreal kept the big machine at his establishment hard at work furnishing music for the crowds that flocked to his attractive store and it will be responsible for lining up some good sales later in the season.

Most of the leading talking machine houses were decorated with flying colors during home-coming week in Milwaukee. One of the catchiest designs was that displayed on the front of the building occupied by the Milwaukee branch of the Columbia. Manager A. D. Herriman had arranged a big poster bearing the picture of a double disc Columbia record in the center of which was placed the design of a Columbia machine. Above the picture in big letters, glared the sentence: "The (B)right Spot for Columbia Graphophones," a parody on Milwaukee's famous advertising phrase, "Milwaukee—A Bright Spot." The display windows of both the McGreal and Hoeffler establishments were filled with home-coming signs, bunting and special exhibits.

George W. Eichholz, well-known talking machine dealer of Milwaukee, has sold his Mitchell street store to Peter F. Piasecki, who is now in charge. Mr. Eichholz will now devote his entire time to his Fond du Lac avenue establishment.

The Green City Supply Co., successors to the late Huseby Co., have removed from Grove street to 428 National avenue. They believe the new location will offer much better results in a business way. Dealers say that the south side, the location of numerous talking machine establishments, is somewhat overworked and that the severe competition is not working to the best things for the trade.

William Schmidt, the Victor Wisconsin representative, has been spending a few days calling on the local trade in Milwaukee.

Lawrence McGreal is planning a trip to be taken soon after the home-coming celebration is past, when he will personally visit most of his dealers in Wisconsin and northern Michigan. Mr. McGreal believes in coming in close touch with his dealers and he feels that he can do this in no better way than by meeting them in their own places of business. In this way he secures a better idea of the retailers' trade and requirements.

William P. Hope, Wisconsin and Upper Michigan representative of the National Phonograph Co., has returned from his visit at the Orange, N. J., factory and is now spending a few days with his parents at Spirit Lake, Ia.

D. M. Groulx, Victor and Edison dealer at Green Bay, Wis., accompanied by his wife and baby daughter, called on Milwaukee dealers recently. Rudolph Kemp, Victor dealer at Brillion, Wis., was another visitor.

George D. Ornstein, manager salesman of the Victor Co., at Camden, N. J., was a visitor in Milwaukee during home-coming week. Mr. Ornstein has several relatives in the city.

John Otto, of the Wurlitzer Co., of Chicago, called upon dealers last week.

Talking machines may not be operated in saloons and like business places at Sheboygan, Wis., after eleven o'clock at night and up to five in the morning, if an ordinance now before the council is passed.

Milwaukee talking machine dealers are more than pleased over the fact that Lawrence McGreal was re-elected a member of the executive board of the National Association of Talking Machine Jobbers at the recent convention at Atlantic City. Miss Gertrude Gannon, sister of Mrs. McGreal, who accompanied the well-known jobber and his wife and son to the convention, has just returned to Milwaukee after visiting at various points in the east.

Phonographic records will be made of the speech to be delivered by President William H. Taft at the dedication of Milwaukee's new $500,000 auditorium. The dedication will take place in the fall of this year, and talking machine men here are anxious to preserve for the future the eloquence of the nation's chief executive on such a big occasion as the dedication will be. In September or October the President will make an extended trip to the west, and it is in the course of this journey that he will come to Milwaukee. The opening of the great auditorium is forecasted for Oct. 1, a date which it is thought will be convenient for President Taft to come to the Cream City. If there should be any conflict the dedication of the auditorium will probably be postponed to agree with the President's itinerary.

As soon as the proposition was made it was received with favor by the talking machine men of Milwaukee. Joseph C. Grieb, secretary and manager of the Auditorium association, is enthusiastic over the idea of securing a permanent record of the speech of President Taft, which will be the principal address of the day. It is not doubted that if a good record can be made of the speech that it will be a very popular one, and records of the President's addresses are none too numerous now. The matter is now in the hands of the governing board of the association.

Phonographic records will also probably be made of the speeches to be given at the dedicatory exercises, principally those of Mayor D. S. Rose and Alvin P. Klezsch, who are expected to rise to the occasion and give the public an ideal example of their well-known eloquence.

The dedication of the auditorium will be the big event of the entire week and will be celebrated in becoming style. The "housewarming" will last several days.

VALUE OF CO-OPERATION.

Co-operation is a magnificent religion. Co-operation means helpfulness. It means harmony and upbuilding and that most results can be accomplished by reasoning together. It means fair dealing. Co-operation is the kind of helpfulness that in helping yourself you help others. It is not, as a rule, in the larger communities that you find the co-operative spirit best exemplified. Fortunate is the community in which this co-operatives spirit is early manifested and continues in operation.

THE PRICE TALKING MACHINE CO.

The Price Talking Machine Co., with offices at 54-56 Clinton street, Newark, N. J., has been incorporated with the Secretary of the State of New Jersey with a capital of $25,000. The incorporators are H. L. Price, M. G. Price and H. H. Wilcox.

THE TALKING MACHINE AS AN ENTERTAINER.

City Authorities All Over the World Realizing the Value of Such Music for Entertaining the Public With Good Music—Hotel Gardens Also Using the Talker.

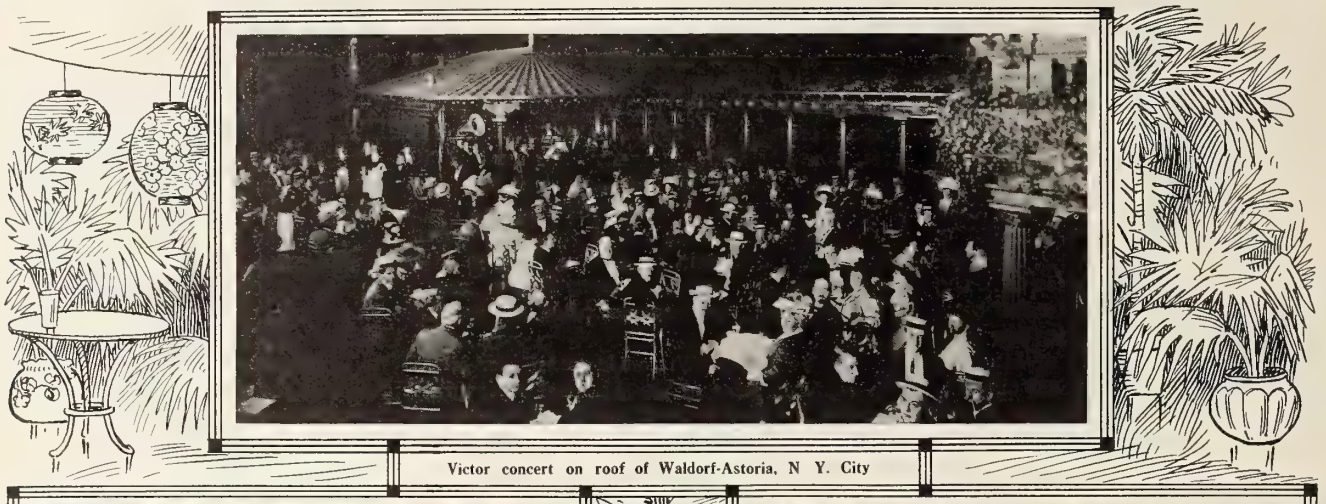
Each year, during the summer months, the use of talking machines in high class parks and other outdoor resorts is becoming more widespread. The idea of using the talker for furnishing outdoor music is claimed to have originated in England. Now, however, a large number of outdoor places of amusement in all sections of the United States find the talking machine well-nigh indispensable, for even where an orchestra is employed the Victor talking machine is utilized to render any number of all the popular or operatic vocal selections.

The big hotels have roof gardens where musical entertainment is required, while there is not a city without several public or amusement parks, and dealers who fail to impress upon the managers of these places the valuable properties of the talker and the actual money saved by installing one are losing the opportunity of making some good sales, and apart from the sales there is a distinct advertising value that must not be overlooked.

In connection with this article views are shown of American and English resorts where the Victor talking machine is used with much satisfaction to all concerned.

With the decline of summer the winter gardens are to be considered. And they are becoming more and more in evidence, especially in the larger cities. Here an attempt is made to represent summer conditions in midwinter and the public is generous in its patronage.

There are a number of these resorts in New York at present and only a couple have "talkers," the rest employing orchestra or piano and a few indifferent singers to entertain their patrons. Similar conditions prevail in all the large cities.



Victor concert on roof of Waldorf-Astoria, N Y. City

Victor concert, Roker Park, England

Victor concert on the Thames

In short, there is a big field wherein the talking machine can supply popular amusement all the year around and countless opportunities for the dealer to make big sales, for in public places fresh records must be supplied continually to hold the interest of patrons. It needs, however, planning and working. Customers will not always come to the store. You must go to them.

PORTLAND WANTS THE JOBBERS.

The Oregonian State the Place of Opportunity —F. W. Graves Enthusiastic Over His Home City and Wants the Talking Machine Jobbers to Hold Their Convention There.

Frederick W. Graves, president and manager of the Graves Music Co., of Portland, Ore., who came East to attend the convention of the National Association of Talking Machine Jobbers, held at Atlantic City, N. J., July 6, 7 and 8, informed The World in a recent chat that he had received a telegram from Thomas Richardson, manager of the Commercial Club, of Portland, Oregon, urging him to use every effort to have the talking machine jobbers hold their next convention in that city.

Mr. Graves is naturally enthusiastic about his home town, which he describes as the land that produces apples and strawberries in trainload lots for the millionaires of the United States and Europe, also the land where the roses are in bloom in profusion all the year round.

In his invitation to the association at Atlantic City to hold its 1910 meeting in Portland, Mr. Graves stated that every good American citizen who could possibly afford it should visit Oregon, where great fortunes in many instances were made by poor men in the twinkling of an eye, figuratively speaking, and that while you could not pick up gold in the street, brainy men could always make good.

Mr. Graves, in his chat with The World, proceeded to give the names of a number of men now eminent in Oregon who had started with actually nothing and added: "Take the case of D. E. Keasey, who practically a few years ago was a helper to a piano mover in Portland. He was ambitious, saw the opportunities in real estate around him, took advantage of them, and to-day ranks as one of the wealthy men of the city. The Portland Oregonian a few days ago contained the news of the sale of valuable water front property, near Riverdale Station, to Mr. Keasey, the amount changing hands being $22,500. This purchase was not for speculative purposes, but to build a home for himself and family. And, mark you, this man started in a humble station of life, and he is only one of dozens of men with similar records in our section. As a matter of fact you people in the East have no idea of our country, or the opportunities that prevail for men of ambition, brains and grit. We want the talking machine jobbers and all other members of the music trade to come out our way, see our country and know our people."

TRADE IN THE TWIN CITIES.

Talking Machine Dealers in Northwest Selling Goods Instead of Taking Vacations This Summer—Good Demand for All Makes.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, Aug. 7, 1909.

Talking machine dealers throughout the territory tributary to Minneapolis and St. Paul are doing an unusually fine business for this time of the year, and instead of taking vacations are selling goods and booking orders. Lawrence H. Lucker, manager of the Minnesota Phonograph Co., general jobbers for the Victor and Edison goods, announces trade to be highly satisfactory.

"We are particularly well pleased with our wholesale business this summer," said Mr. Lucker. "The country dealers, without exception, are placing liberal orders for instruments, records and supplies and are justified in doing so by the prospects for great prosperity among the agriculturists. The retail or local trade also has been much better than is looked for at this time of the year. Edison records and supplies have been in good demand. The Victrolas have found a place and the sales are highly satisfactory."

Equally encouraging reports are made by W. J. Dyer & Bro., who handle the Victor and Edison machines and supplies, and by the Columbia Phonograph Co.'s northwestern branches.

VICTOR RECORD CABINET CATALOG

Just Issued—Shows Full Line of Cabinets—A Valuable Aid to the Dealer.

The Victor Talking Machine Co. have recently issued their new record cabinet catalog describing and illustrating their entire line of cabinets, including styles for use as stands for the various machines, among them being cabinet No. 50 for the new Victrola XII. The capacity of the cabinets ranges from 180 to 230 records, and the styles are sufficiently diversified to meet all demands, the finishes harmonizing with the machine cases. The catalog also shows the Victor record album, holding fifteen records. The booklet will be found of great value to the dealers.

TRADE HAPPENINGS IN LONDON.

Month of July Shows Awakening of the Talking Machine Industry—Traders Elated Over Turning of the Tide—Threatening Strike of Miners Settled—Colonial Trade Rapidly Increasing, Due to Special Efforts on the Part of the Manufacturers—More Litigation Involving Tapered Tone Arm Patents—Frank L. Dyer and Edward D. Easton Among Prominent Visitors—New Edison Machines in Heavy Demand—Fine August Gramophone Record List—Some Splendid Favorite Selections—The New Primaphone Machine—Gramophone Defends Budget—Beka Expansion—Gramophone Traveler's Long Trip—Gramophone Co.'s Plans for the Season—New Carton for Sterling Records—Decline to Revoke Amplifying Horn Patent.

(Special to The Talking Machine World.)

London, E. C., August 5, 1909.

July for a summer month has made itself very welcome and the talking machine trade will lose it with regret. For July came in company with substantial orders. During this month traders everywhere woke up to find that there was still some life left in this industry. The public were out to buy. Not individually to any great extent, but collectively something to be reckoned with, especially from the makers and factors' points of view. Trade has indeed been poor this year, and in consequence one is prone to magnify the improvement which set in during June, but there can be no doubt that the tide is steadily turning in our favor; an encouragement to stimulate our energies to hopes of a brighter future.

The holiday season is now in full swing. Many prominent traders have left town for a short rest before the season's rush, and their interests are in the hands of competent deputies. A welcome change from that prevailing last year.

Since my last report the dispute in certain sections of the coal industry has become sufficiently acute to warrant the friendly intervention of the Board of Trade. A strike, if decided upon, would affect about 500,000 wage-earners. Failing to reach an agreement the Scottish miners are promised the support of all their confreres throughout the United Kingdom. Such a state of things would prove intolerable, for within a month's time general business must practically come to a standstill. At the last moment of posting, news is to hand that a settlement has been arrived at. There will be no strike, and in consequence the condition of the talking machine trade will remain undisturbed by any labor trouble. A happy augury for the future!

Cultivating Colonial Trade.

There is no denying the fact that our trade in the Colonies is latterly very much on the increase; particularly is this the case in the South African and Australian markets. Both the Gramophone Co., and Barnett, Samuel & Sons, Ltd., are alive to the importance of cultivating these fields, which have from time to time been the objects of special visits on the part of the companies' representatives. Export figures for last year in relation to the South African market are not yet available, but for 1907 the total increase in comparison with 1906 was something just under £4,000, which is a very substantial improvement. German exports to that colony are also marked by a good increase during the same period, while the United States exports show a slight decline. These figures must be sufficient evidence of a desire on the part of our Colonial friends to trade with the mother country. It, therefore, behoves English talking machine manufacturers to meet this desire by putting forth their best efforts to help traders abroad with the right goods at the right price. To get into touch with one another no better means can be found than by publicity in the World, which has an exceptional sale among good class traders in the chief cities of our colonies and foreign countries. Do it now; it's a good investment.

The Tapered Tone Arm Question Again.

Since the famous action of 1906 we have had quite a rest from litigation involving talking machine patents of any material note, but from what I hear this sublime peacefulness is about to be disturbed. Since the matter is *sub judice* I am precluded from commenting upon it, yet I may say that the question of tone arm (alleged) infringements will again see the light of publicity in the courts; possibly this year. Writs have been issued against four companies, but injunctions will not be sought until the actions are tried. When this comes to pass we shall hope to give our readers detailed particulars with a full report of the proceedings.

Frank L. Dyer in London.

Frank L. Dyer, president of the National Phonograph Co., is a visitor to these shores, combining business with pleasure. He will visit Paris, Berlin, and possibly Italy before his return home on September 3. Interviewed by your correspondent, President Dyer had a few interesting words to say concerning conditions in this country. "As in America, I find that the British markets are experiencing a similar general depression, which reacts upon this industry. Business with us has, however, held up remarkably well, chiefly owing to the increased trade which usually follows the introduction of something different—to instance the Amberol records and attachment. In combination with these and our new machines next season's trade is likely to develop very rapidly."

To Give Evidence Before Copyright Committee.

We were glad to learn of Mr. Dyer's intention to give evidence before the Copyright Committee. His views are that if musical copyright must be recognized in relation to records, the Parliamentary Bill should be so framed as to disturb our interests as little as possible. No monopoly on any one piece of music must be allowed, as such would create an intolerable state of things very harmful to the industry as a whole. Mr. Dyer's contribution to this question will merit the appreciation it deserves throughout the trade.

Premier Mfg. Co. to be Heard from.

The Premier Manufacturing Co., who are ever to the fore with new and improved goods, promise some exceptionally interesting information shortly. Clarion sales are steadily on the increase, and much appreciation has been shown of the 200-thread Ebonoid record, which home and Colonial traders will find is a good competitive time to handle.

Summer Concerts in Parks.

Messrs. Pathé Frères have made arrangements with the L. C. C. to institute summer talking machine concerts in several of the London parks.

Closer Communication With India.

Messages can now be forwarded to India by telegraph to London, by post between London and Bombay, thence by telegraph from Bombay to their destination; a similar service being in use in the reverse direction.

The "Twins" First Anniversary.

On August 15 the Twin Record Co. celebrated their first year of existence. Under the able and fatherly guidance of Mr. Manson, the lusty youngsters have made tremendous progress far in advance of their age. May their life be long—humorous and merry, with an occasional splash of sentiment and pathos. Thus shall they be in full accord with nature.

President Easton's European Trip.

Edward D. Easton, president of the Columbia Phonograph Co., paid a short visit to London last week, and after looking over the Continental situation generally, left here July 24 on his return to New York.

Beyond All Expectation!

Such is the cheery report from the National Phonograph Co. regarding the reception of their new Fireside machine and Gem attachments, for which heavy orders have been placed by traders throughout the kingdom. The need for these two lines has therefore been amply justified, and by their generous support factors have shown keen appreciation of the National Co.'s foresight in thus issuing the products in good time for in-

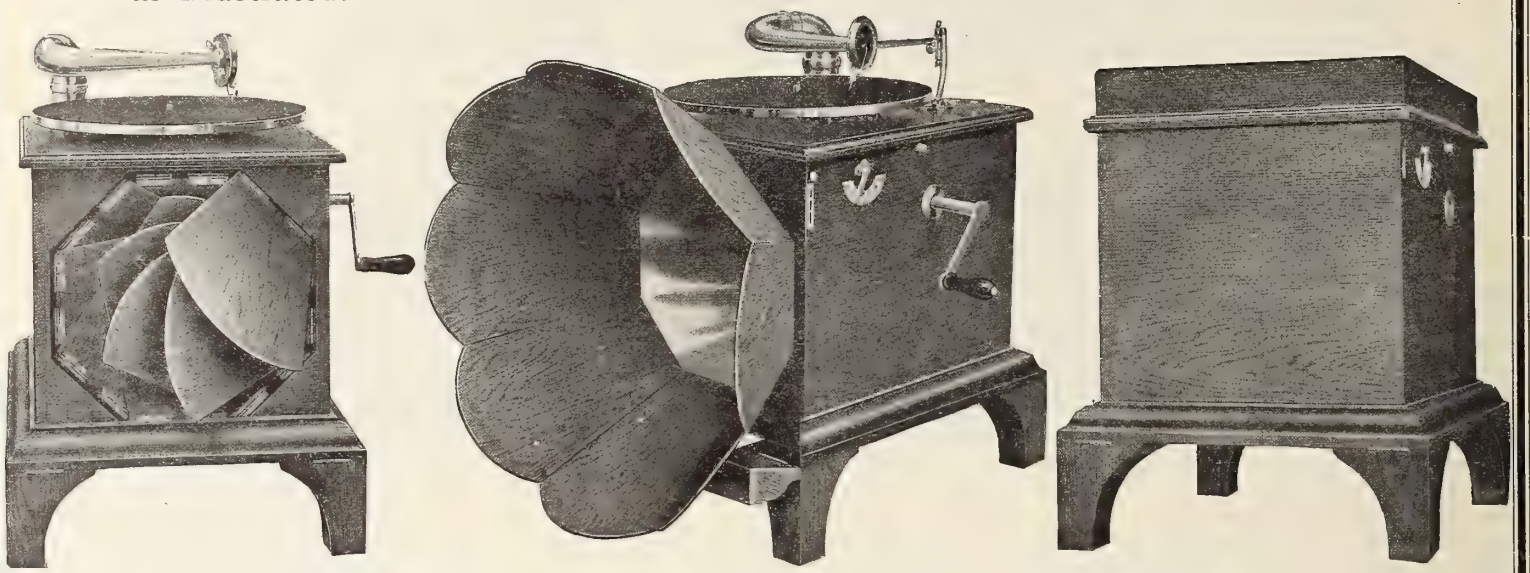
HORNLESS MACHINES

Look out for the

Edison-Bell Primaphone

which gives out clear full tones, not choked, muffled and strangled in a restricted box—but amplified by means of the PATENT FOLDER HORN as illustrated.



MACHINES IN VARIOUS DESIGNS READY IN SEPTEMBER

The Primaphone machine and sound-box is upon an entirely new principle. The Tone-arm is fixed and, being stationary, does not rest upon and require to be carried by the record, in addition to the weight of the sound-box, as in all other machines.
This increases the life and beauty of expression of records by reducing the wear during operation.
The Sound-box itself is caused to advance and by an insulated Telescope connection the music, etc., is projected direct into the Taper Tone-arm and finds a clear passage without joint or obstruction of any kind into or through the trumpet, horn, or other amplifying chamber.
The volume and quality of tone is thus greatly improved. The insulated connector creates a natural beauty and excellence of sound free from the hard brassy emissions which are so objectionable. Wait till you see and hear the "PRIMAPHONE" and you will not be satisfied with any other.

J. E. HOUGH, Ltd., EDISONIA WORKS, Peckham, London, S. E.

clusion in the various new season's catalogs and lists.

A Strong Gramophone List.

In the Gramophone August list of records we have two fine selections—"Ballet Egyptien, No. 1 and 2" (Luigini) and "Stately Dance, No. 1" (Cowen)—by the band of H. M. Coldstream Guards; "Overture," from Mendelssohn's famous "Midsummer Night's Dream," splendidly recorded and played by the La Scala Symphony Orchestra; "Et Punas de Rosas," by the Spanish Royal Band of Halberdiers. Some good concert music is given, "Where'er You Walk" (Handel) sung in fine style by John Harrison; "Rose of Killarney," by Mr. Hirwen Jones; "Good Night" (Balfe) by Evan Williams; "Who'll Marry Me?" (Newton) Maurice Farkoa; "A Bride Song," by Miss Agnes Nicholls; "Concert à la Cour—Noel" (Auber) beautifully sung by Mlle. Alice Verlet; while "Three Fishers," the first of a series of records by Mme. Kirkby Lunn, is rendered with exceptional power of expression in clear, rich tones; "Melisande in the Wood" (Goetz) is sympathetically sung by Miss Pelgrame Turner, as also is the duet "Sainted Mother" (Maritana) by Miss Perceval Allen and Edna Thornton. The inimitable Harry Lauder in "I've Loved Her Ever Since the Day She Was a Baby," almost brings tears to one's eyes. The Renard Quartet are always welcome and doubly so with their record of "Sizilietta" (von Blon); a fine violin record is "Capriccio All 'Antica, and Capriccio" (Bohm) played by Lady Speyer; and "Two Studies" (Chopin) by Herr Wilhelm Backhaus (piano) completes a splendid list of good selling records for August.

Favorite Records Much in Evidence.

During my runs around the trade I find the Favorite record much more in evidence of late. The splendid things in their current list may be some explanation, but the quality is going up all the time, while the price remains the same, 2/6 double. These are encouragements which traders are quick to recognize, as is manifested by their repeat orders.

Faster Mails to the Cape.

In order to bring the Cape within a 14 day journey from England, the Union Castle Co. will build faster boats.

"Primaphone," a New Interior Horn Machine.

"Primaphone" is the name given to a new interior home machine introduced by J. E. Hough, Ltd. It embodies many novel features. The sound is amplified by means of a sectional folding horn (metal) which projects about six inches beyond the face of the case. This extension is made in hinged flaps which can be closed in sections (See advt. illustration). The tone-arm is curved and is stationary. In playing a record the sound-box is caused to advance, the sound being conveyed through an insulated telescopic connection which projects into the taper tone-arm and finds a clear passage without joint or obstruction. The tone and volume is good and on this machine the wear and tear of records is much reduced.

Will Insure Quicker Transit.

By arrangement with some of the railway companies they will now accept and convey by the next available train or steamship, single post letters. Such conveyance after August 1 will include letters addressed to places abroad. A fee of 2d in addition to the ordinary postage rate is charged upon each letter not exceeding 4oz.

Another Gramophone Triumph!

Sir Henry Norman, M. P., stated at the House of Commons recently that the country is clamoring for explanations of the budget and every town and village wants a Cabinet Minister. This being impossible, it was decided that some of the provincial centers should be addressed by gramophone. The Gramophone Co. were therefore asked to send their installation to the official residence in Downing street to record the pronouncements of the three leading fighters. They replied that the apparatus weighed at least three tons. So Mahomet agreed to go to the mountain—a tripartite Mahomet, represented by Mr. Asquith (Prime Minister), Mr. Lloyd George (Chancellor of the Exchequer) and Mr. Churchill (President of the Board of Trade). There, in the proper environment, the three Ministers declaimed crisp, concise speeches into the mouth of the recording trumpet and an admirable summary of the budget from the Government's point of view will thereby be disseminated throughout the land. Like newspapers, however, the gramophone does not necessarily endorse the views of its contributors. In fact it holds no brief for any political party, since some very good conservative speeches have been recorded during the past year or so.

Beka Record Co. Expansion.

The expansion of the Beka Record Co.'s business throughout the world is as much due to their enterprising methods as the actual value and quality of the records offered. Local impressions from almost every civilized country are included in their "world" repertoire, and not the least remarkable is the recent issue of a new list containing over 600 titles from all the well known operas and sung by artists of renown. Many of these admirable records will sell freely in the United Kingdom, while a phenomenal sale is being experienced in Italy, South America, Europe generally, and other countries recognized by their musical characteristics. The Beka list for September will contain some wonderful operatic records sung in Russian and Italian at the extraordinary price of two shillings and sixpence per double-sided disc.

A Record Journey.

Occupying in all over nine months, a journey of something like 35,000 miles has just been completed by that veteran traveler, S. H. Sheard, of the Gramophone Co. His tour included the South African colonies and the chief centers of Australia, Tasmania and New Zealand Judg-

ing from the splendid orders which Mr. Sheard secured it is manifest that the colonial demand for high class goods is very much on the increase.

J. E. Hough, Ltd., Exchange Scheme.

There has been many attempts to imitate an equitable record exchange scheme; one that should be as profitable to either side, but no fair basis was reached until the issue of the above firm's system. With every pound of old wax returned, accompanied by an order for six new shilling records, the dealer is credited 1/; and 8 if the order is for ninepenny records. Thus as the average weight of six broken records is a pound, the dealer receives an allowance of 2d. per record, and is enabled to turn over a larger amount of business by always having new and up-to-date titles on hand. Disc or broken cylinder wax of any make may go to make up the pound for an allowance of 8d off on accompanying order for two Bell discs. We have not the space to reprint in full the letter which accompanies Messrs. J. E. Hough's exchange proposal, but here are some pertinent extracts: "The necessities of distributers are fully understood, particularly in reference to the question of exchanges and unsaleable records. This does not occur with any other class of merchandise —summer sales (as with Drapers) do not fit— prices ought to be maintained. But this is an impossibility unless some standard method of exchange, equitable alike to distributers and manufacturers, is devised. Stale records are of no value except as old material, they should therefore be taken off the market and destroyed, so as to make more room for the sale of new goods.

The American scheme known as the "Three for One" has the serious objection that it compels dealers to load their shelves and empty their pockets at a time when it may be inconvenient and frequently causes a future increase in their unsalables.

It is not intended to ask dealers to sign price agreements. We shall, however, take measures to protect respectable and responsible dealers by refusing to supply irresponsible upstarts and cutting off supplies to price-cutters by establishing fewer factors and a uniform system of control between ourselves and them.

There will be four exchange periods during each year, viz.: for fourteen days after the end of the month of January, April, July and October, and this combined with the generous discounts allowed should, we think, receive the whole-hearted support of the trade.

British Zonophone Co.'s Program.

The British Zonophone Co.'s program for the coming season will be marked by several new departures of interest, but right here let me say that the rumors of an impending double-sided disc from this company have no foundation whatever; at least there is no intention of issuing other than single-faced records this year. And now, it will be no breach of confidence to make public particulars of the two new lines to be introduced in good time for the autumn trade. Perhaps that of most importance is the new Zonophone sound-box, which I have been able to test personally. The construction is somewhat out of the ordinary, as it embodies what we term a front sound refractor plate and a special resonator at the back, which takes a form resembling the shape of a bell. The whole shell is in one piece, while the whole diaphragm is well insulated by the usual rubber rings. The mounting of the stylus bar and the tension springs is somewhat similar to the "Exhibition" model. As to reproduction powers, the new sound-box undoubtedly makes good the company's claims of loud, clear and natural tones, which all who have heard it endorse. One other point worth mentioning is that the box is detachable from the tone-arm, but it cannot be purchased separately; only with the new Zonophone two guinea machine, which I find is also equipped with the Gibson taper arm. Hitherto the Zonophone Co. have only issued 10-inch single records, but the September list will show a departure from this rule in the shape of twelve-inch discs. These records are single-sided and will retail at 3/. Very good artists contribute and the first issues will comprise ten numbers of a variety to suit the tastes of all. I have not yet had an opportunity of judging the quality, but traders may feel assured that it will not fall short of the average high standard which the Zonophone company maintains.

Latest "Twin" Records.

Selections by the band of H. M. First Life Guards, appear in the September list of "Twin" records—2/6 double-sided.

"Sterling" Record in New Carton.

J. E. Hough, Ltd., inform me that the "Sterling" record, which is now under their sole control, is to be put up in quite a new and attractive box of striking design.

Activity With Rena Mfg. Co.

That the sale of high class goods is a strong feature of this summer's trade is more than evidenced by the Rena Manufacturing Co.'s report. The month of July brought along phenomenal business for the new Rena "Sonola" cabinet machines and traders throughout the country have in addition placed heavy advance orders in view of the general opinion that next season will show a considerable improvement over last. The ordinary machines are receiving their share of sales, while of Rena double records the trade is getting quite enthusiastic, since they sell freely upon the quality point alone quite apart from the popular fixed price of 2/6 per double disc. Colonial and foreign traders should refer to the Rena Co.'s announcement elsewhere and write to Worship St. for lists, prices, and full particulars.

Some Excellent Sellers.

Some excellent Zonophone records from the August list are to hand and include the ninth grand opera record, entitled "Give Me Thy Hand, Oh Fairest," from "Don Giovanni"

Other good records are "Songs d' Antomme," a pretty piece by the Black Diamond Band; "The Moon Has Raised Her Lamp Above," duet by Mr. Ernest Pike and Peter Dawson; "High Life in Vienna," whistling by Mon. Alexandre; "The Czarina" makes a good Tubaphone record by H. Muller; and "I'm In Love With the Slide Trombone" is a good comic song by Miss Ada Jones.

Important Patent Ruling.

The refusal of the British Comptroller-General to revoke the patent "for improvements in sound-magnifying horns for phonographs, talking machines, etc," specifically covered by patent No. 8401, issued in 1903, is the source of much bitter disappointment to German manufacturers particularly. Under the new law, if a patent granted by the British government is not placed on a working or manufacturing basis within two years after its issue, it is subject to revocation, within the discretion of the Comptroller-General.

In this particular instance the official in question declined to revoke the amplifying horn patent on the ground of inadequate manufacture in Great Britain, as applied for by Otto Ruhl. The horn is made by the Gramophone & Typewriter Co., Ltd., and the decision of the British patent office related to what is required in the manufacture of a machine, only a portion of which formed the subject matter of the invention. In patent No. 8,401 the invention is described in the specification as consisting "in constructing a curved, tapered, amplifying horn, with joints, such that the larger portion thereof may be adjustable on a fixed support, while the small end thereof, or that upon which the sound-box is mounted, is pivoted so as to swing horizontally, and also has a secondary joint which allows the sound-box to move vertically to follow the irregularities of the record and also to allow the needles being inserted and removed." The specification says that the sound-box is "the usual sound-box."

It appears there was no evidence or suggestion that the sound-magnifying horns themselves were solely made abroad, and the patentee's evidence, which the applicant was unable to shake, was to the effect that 11,000 of the horns had been made in Great Britain. The evidence of the applicants was directed only to show that the sound-boxes used in connection with the special horns were made in the United States, but, as above pointed out, the sound-box, according to the specification, was "the usual sound-box." No evidence having been produced to show that the parts had not been put together in England, the comptroller came to the conclusion that the applicant had not made out a *prima facie* case that the patented article was manufactured mainly or exclusively outside that country.

The comptroller, in his opinion furnishes some general statements as to what is incumbent upon a patentee whose invention forms part of a machine or an improvement in a machine. He is of opinion that as a general rule the patentee ought not to be called upon to manufacture any mechanism or machine which he had not specifically described and claimed in his specification, and he considers that the following general results follow from this principle:

"(1) If the patentee has claimed a wholly new machine or mechanism he must manufacture the whole in this country.

"(2) If he claims an improvement in a well-known machine he must manufacture the improvement and not necessarily the whole machine; but if he claims the improvement in combination with a machine consisting of well-known parts it may be that he must, besides manufacturing the improvement, put together the whole machine in this country, or at any rate the combination that he claims. And

"(3) If he claims a new combination of old and well-known elements it will apparently be sufficient for him to put together the whole machine in this country when manufacturing the old and well-known parts, although if important alterations have to be made in the known parts to produce the new combination more may be required to be manufactured. Of course it will be open to the patentee to give sufficient reasons for non-manufacture and such reasons may include considerations as to the special character and importance of the invention."

As above stated, the continental manufacturer who had aimed to flood the British market with tapering horns is now blocked out by this decision.

THE COPYRIGHT QUESTION.

The Other Side Presented by the London Music Trades Review—What Was Overlooked—Committee Takes Further Evidence—J. E. Hough's Interesting Views—Some Pointers That Are Worthy the Consideration of Those Framing the Bill—The Gentlemen Who Were Recently Heard.

(Special to The Talking Machine World.)

London, Eng., August 6, 1909.

Our contributor's views upon the copyright question in the last few issues of this paper seems to have aroused a veritable hornet's nest in the editorial sanctum of the London Music Trades Review, who comment with unnecessary force upon the naturally very partisan attitude of the talking machine manufacturers in the matter of the suggested tax upon records. The Review's statement that they hold no brief for any one branch of the trade may be true in substance, if not in fact, for their article appears to have been written with anything but an unbiased mind, which must very considerably distract from its value. Mr. Sterling drew attention to the points that sheet music sales were greatly diminished by the fact that the publishers have mortgaged their rights to the newspapers who print a complete song each week, thus distributing something like 500,000,000 copies free each year. The Review says: "Scarcely any of these songs are real sellers," which is hardly a fair statement to make, seeing that the newspapers have given us most of the popular songs and pantomime hits of the last year or so! We would also remind our friends that the publishers at the first Berne convention in agreeing that musical instruments were not an infringement of copyright, must certainly have had in view some mechanical instrument capable of reproducing the copyright subject and what more likely than a musical box which contains a record or perforated plate? The Review seems to have overlooked this and therefore their gibe against the then non-existent talking machine falls rather flat, to say the least. Further, their remark that "the new law when it does obtain, should prevent the piracy which is prevalent in the talking machine trade itself" only brings to light what little they do know of this trade, seeing that dubbing or record piracy is now and has been for the last three or four years practically of no account whatever. All said and done, the position is this: the publishers are out to rob the hen roosts, but so far they haven't been able to get there, and whether they will or not remains to be seen. In any case claims from publishers are unwelcome, and we can therefore only hope that the composer himself will receive the benefit of the royalties should such be passed into law through the recommendation of the Board of Trade Copyright Committee.

We are, however, very pleased to observe that the record-makers are continuing their strenuous opposition of all claims upon their purses and they have marshaled a formidable array of good fighting men, capable of putting before the committee a clear statement of the view of the whole trade, whose vital interests are so much dependent upon the findings of the conference now sitting. The committee took further evidence on July 15 and among those examined were James E. Hough, James Van Allen Shields (Columbia Co.) and Alexander Dow (Murdock & Co.). Mr. W. Force, of the Premier Manufacturing Co., was unfortunately prevented by illness from presenting himself for examination, as he intended. Mr. Force is now back in harness and we trust he will take the first opportunity of giving evidence. Since giving his views Mr. Hough, who rightly takes up a very strong attitude, has sent supplementary evidence to the committee and from which the following are pertinent extracts:

"It was sought to cast a somewhat unworthy inference upon composers of what are termed comic songs, etc. I should like to point out that at least two-thirds of the phonograms issued by any company are composed of works which are commonplace. These composers have their full rights as well as others, and at least two thirds of any income derived from copyright taxation would go to them. But we obtain solicitation from composers of higher class works, a recent request being from the author of such songs as "Sing Me to Sleep," "There is a Garden," and others, who requests the issue of a new song on a record in advance of sheet publications. Mr. Greene, the author in question, says that there are not a sufficient number of his songs issued in the shape of phonograms."

To obtain reliable information as to whether the issue of phonograms is or is not beneficial to copyright owners, Mr. Hough makes this suggestion to the committee: "That the Gramophone Co. be asked to supply the committee with the names of songs sung by such eminent singers as Caruso, Melba, Patti, etc., and the dates they were issued to the public in the

FROM OUR LONDON HEADQUARTERS—(Continued.)

shape of phonograms. Let these dates be supplied to the respective composers or publishers and ask them to give a list of the sales in sheet music of each for six months prior, and six months subsequent to such publication of the phonograms." This appeals to us as being a practical and common sense test.

Mr. Hough further submits the possibility of both parties, setting their case too high, and says, "If the copyright owners can say to the committee, 'It is true we get benefit by phonogram publicity, but we are not satisfied and wish for more,' it will be an honest representation and I submit that great importance lies in the fact that under those conditions a mere acknowledgment not sufficient to harass the production of the least profitable phonograms would be sufficient to meet the sentimental side of the case."

On the suggestion that the copyright owner should have the right of rejecting any bad reproduction in advance of issue, Mr. Hough says: "This matter opens an objectional field for the possibility of undue favoritism, and in any event might be highly restrictive to enterprise. No manufacturer would willingly issue a bad record which would be immediately vetoed, and thus lose all expenses of its production, while on the other hand a copyright owner would be reluctant to curtail his income by raising frivolous objections."

The foregoing embodies practical and concise views which merit serious consideration by the committee.

TRADE REPORTS FROM THE PROVINCES

LIVERPOOL NOTES.

Liverpool, August 4, 1909.

We are glad to say that trade in this district shows distinct signs of improvement. In several of the Liverpool houses, sales have been very good, summer season considered, and there are signs already, that the worst (as far as retail sales are concerned), has passed. Most of the traders are looking forward to a busy season, which should commence with September.

At Jake Graham's, they have had an exceptionally busy time; sales in the better class of gramophone machines predominating. Disc records also have been in good demand.

Messrs. Van Gruissen report that the disc business has been very good recently; "Pigmy Grands," gramophone, zonophone and Twin records being sold very freely.

Cramer & Co., Church street, report that business recently has held up very well, considering the summer season; some very nice sales in expensive machines having been effected this month.

At Messrs. Johnson's, they are hopeful regarding the future. They get through an enormous quantity of Zonophones and Twin Records, each month, and report that sales are going up steadily. Mr. Johnson is very enthusiastic over the new Zonophone machines, with which he expects to do a large business this summer. Zonophone machines, with Zonophone and Twin records, will be their leading line for next season, but they will also handle Clarion and Columbia goods, as in the past.

At Messrs. Richardson's, Mr. Abbott said that next season will be a "boom" year for the new Edison "Fireside" machine. Selling at £4 4s., he expects the demand to be exceptionally large. Fitted with the new K reproducer, to play both types of cylinder records, he considers it to be the finest value offered to the trade. They also anticipate that the other three new Edison combination machines will have large sales. Lists and circulars for the forthcoming season have already been issued. Their depot, at Blackburn, is meeting with great success.

Messrs. Archers report trade as fairly moderate; nothing startling, but there were indications that business would recover in the near future.

Messrs. Thompson, Helsby & Co. will specialize in Pathe goods, during the next season, in addition to one or two new models of their own.

At "The Gramophone Supply Stores," business has been somewhat slack, but during the past few weeks, has picked up considerably.

Trade at Crane & Sons was reported as exceptionally good up to the end of April. Since that time, however, like others, they have felt the depression, but hope for good things next season.

J. Foster, of Borough Road, Birkenhead, reports business as fairly moderate, for the summer season. Gramophone goods have sold fairly well; Zonophone and Twin records in proportion. The cylinder trade has not been quite so good as was expected, but he nevertheless, hopes to do well with the new Edison machines and records.

MANCHESTER NOTES.

Manchester, August 5, 1909.

Manchester generally, has not done nearly so well as Liverpool. We regret to say that the operatives in the various cotton mills in this district, are still working short time, three or four days a week, and as this will probably not be altered, for some time to come, the outlook is not quite so hopeful, as we should like it to be. Resumption of full time may be expected about the end of September.

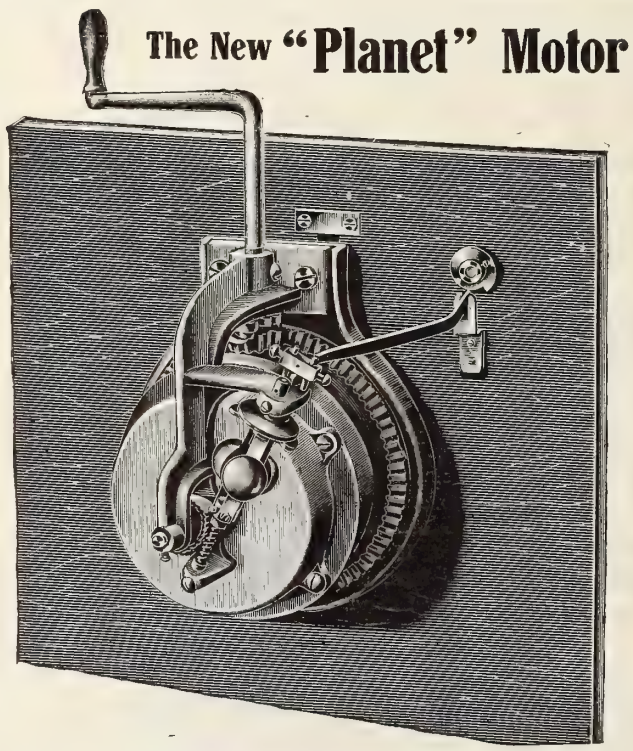
The New "RENA" MACHINES

"RENA" MACHINE, No. 4, £5 10s.

Cabinet: Solid Oak, size 16 in. by 16 in. by 8½ in. Fitted with "PLANET" 16-minute Motor. Self-regulating SPEED INDICATOR. Nickeled Aluminum TAPERED TONE ARM. Improved Sound Box, fitted with Patent Needle Clip.

Prices range from £2 10s. to £11 10s.

The New "Planet" Motor



The "PLANET" Motor is an improvement on all others and embodies an entirely new principle of construction. As may be seen above, the gearing is horizontal, running parallel with the turntable and so minimizing friction. All the gearing is encased and runs in a GREASE BATH. It is DUST-PROOF, therefore always CLEAN and SILENT-RUNNING. It is also CLIMATE-PROOF. So simple that there is nothing to go wrong. All "PLANET" Motors are guaranteed. "PLANET" Motors are fitted to "RENA" Machines from £3 10s. upwards.

The Life of a Talking Machine is its Motor

—WE'VE GOT THE MOTOR!

"RENA" MACHINE, No. 5a, £8 8s.

Cabinet: Solid Mahogany, with Inlay, size 16 in. by 16 in. by 8½ in. Fitted with "PLANET" 24-minute Motor. Self-regulating SPEED INDICATOR. Nickeled Aluminum TONE ARM. Improved Sound Box, fitted with Patent Needle Clip.

Prices range from £2 10s. to £11 10s.

WRITE FOR FULLY ILLUSTRATED LISTS.

"The Motor That Runs In Grease."

Messrs. Brown Bros., Deansgate, have installed a full line of Zonophone machines, and Zonophone and Twin records for the forthcoming season. They will also handle one or two special lines of machines of their own, as well as the whole of the Edison Co.'s products. Mr. Jacks is most enthusiastic over the new "fireside" model, and anticipates that sales will be very large. A new list is in hand.

We were pleased to hear that Messrs. Burrows Co., of High street, find business in the Pathe and other machines looking up very considerably. They have also done a nice amount of business with their side lines, roller skates, etc., and altogether, have every reason to be pleased with present and future prospects.

At Messrs. Richardson's Manchester depot, business is exceptionally good in roller skates and cycle goods, while Zonophone, Twin and Edison products are selling well. They are just commencing a propaganda to try and enthuse the various agents, in the Blackburn district, to make special efforts to push the phono and disc business, during the whole of the summer as well as the winter months. In fact, to make an all round trade of it, instead of a season's trade only. Covering the ground, systematically with their travelers, in Manchester and Liverpool, Messrs. Richardson propose to do the same with the Blackburn district, and by this means will keep dealers alive to the various novelties and improvements that are continually cropping up.

Messrs. C. Duwe, of High street, report business slightly on the increase during the past two months. They anticipate a quick demand for the new 12-inch Zonophone records, as well as for Edison and other goods, which they handle in very large quantities.

Mr. Alker, of the Rena Manufacturing Co., states that they are fairly satisfied with the results, in both machines and records, up to date. They have appointed Mr. Karl Wagenhaus, of Shetford Road, their wholesale factor, and this gentleman, we are given to understand, is very pleased with the records, as well as the machines. He is stocking all the Rena models, and anticipates a very large demand from the dealers in the surrounding district.

LEEDS NOTES.

Leeds, Aug. 6, 1909.

Trade is apparently looking up in this district. The leading houses report business as progressive, and altogether a good season is anticipated.

As already mentioned in a previous issue, Messrs. Scott & Co., 8 York Place, are now devoting themselves to the wholesale trade entirely. They will handle, during the forthcoming season, Edison goods exclusively on the phono side, with Zonophone and Twin on the disc side. They are laying themselves out expensively for this business, and are equipping quite a new building, fitted up with all modern requirements.

Messrs. Hopkinson, who last year handled Gramophone and Pathe goods, report business as moderate, but look for a good season.

Messrs. Jenkins, of Queen Victoria street, report good business in view, for their portable inverted tone arm machine, particulars of which have already been given in a previous issue of this paper.

Business is fairly steady with Messrs. Hilton & Co., Aire street. There is a slight increase, as compared with the same period, last year.

Trade is on the increase at Messrs. Tilly & Co., of Queen's Arcade, and with their leading lines, such as Zonophone, Twins, etc., they are very optimistic regarding the future state of the trade.

In conclusion, notwithstanding the bright aspects of the trade in the North of England, and Yorkshire, we are sorry to say that owing to rumors regarding certain patents, there is not the confidence expressed in the trade that there should be. As we already know, when various patents are likely to be disputed, between rival manufacturers, the agent is generally placed in a very awkward position. It destroys stability and confidence, and the unfortunate result is, orders are not placed nearly so soon as they otherwise would be. We hope, however, that these little matters may be adjusted, and that nothing will crop up to disturb the relations between the manufacturer on the one hand, and the dealers and agents on the other.

TALKERS DEFEND BUDGET.

Liberal Party's Budget League Distributes Gramophones All Over the Country to Deliver Series of Speeches.

(Special to The Talking Machine World.)

London, England, August 1, 1909.

This week the Liberal Party's Budget League will inaugurate a gramophone campaign throughout England, explaining and defending Lloyd George's budget.

Sir Henry Norman, secretary of the League, explains that the country is clamoring for an explanation of the budget, and that demands are pouring in for speeches by Cabinet Ministers. As it was impossible for the Ministers to comply with all requests, Sir Henry brought the gramophone into use.

Premier Asquith, Winston Churchill and Lloyd George delivered speeches into the machines, which will be sent throughout England.

WIRELESS TELEPHONY.

Last month a successful test was made of a wireless telephone between Paris and Melun, covering a distance of 30 miles. The details of the apparatus have not been made public beyond the fact that electric oscillations, all possessing the same force, are directed by means of

an arc light onto antennæ, consisting of four metal wires hanging down to which a microphone is attached for the transmission, while antennæ are connected with a telephone for receiving.

The firm which manufactures this radio-telephonic apparatus had another set of antennæ at its works near the Eiffel Tower, where journalists who had been invited to witness the test could tap the sounds as they passed from the tower to Melun.

Last month a wireless telephone outfit was put into operation at Portland, Me. Four wireless phones were used at the same time, and each received its designated message. The messages are even more secret than the present wire phone systems. Over 400 messages were sent the first day.

SOUTH AFRICAN IMPORTS FOR 1907.

The figures relating to the imports of talking machines into South Africa during 1907 have just been published, and show a very marked improvement over the preceding year's figures. Imports from Germany led, being of the value of £7,303 in 1907 over £4,597 in 1906. Great Britain was next with £6,349 in 1907, as compared with £2,456 in 1906, while from the United States only £1,418 worth of talking machines were received in 1907, as compared to goods to the value of £1,446 during the preceding year. All other countries together contributed goods to the value of £382 during 1907 over £107 worth in 1906.

PATENT TREATY WITH GERMANY.

Ratifications Exchanged Between the Two Countries—Some Details.

(Special to The Talking Machine World.)

Washington, D. C., Aug. 4, 1909.

The following is the official text of the New Patent Treaty just signed by the Secretary of the State, Mr. Knox, and the German Ambassador, Count Bernstoff, in Washington:

Article I.—The provisions of the laws applicable, now existing or hereafter to be enacted of either of the contracting parties under which the non-working of the patent, working patent (Gebrauchsmuster), design or model carries the invalidation or some other restriction of the right, shall only be applied to the patents, working patterns (Gebrauchsmuster), designs or models enjoyed by the citizens of the other contracting party within the limits of the restrictions imposed by the said party upon its own citizens. The working of a patent, working pattern (Gebrauchsmuster), design or model in the territory of one of the contracting parties shall be considered as equivalent to its working in the territory of the other party.

Article II.—This agreement shall take effect from the date of its promulgation and remain in force until the expiration of twelve months following the notice of termination given by one of the contracting parties.

Article III.—The present agreement shall be ratified and the ratifications shall be exchanged at Washington as soon as possible.

Secretary of State Knox and Count von Bernstorff, the German Ambassador in Washington, exchanged ratifications of the new German-American patent treaty July 14.

OLD-TIME SALESMEN.

Be it known that one and a half centuries ago commercial travelers were termed riders (as journeying on horseback was the vogue).

These were the high and palmy days of travel, without the modern paraphernalia of gigs and oil-skins (animal raw skins steeped in oil, then dried—whence the name). Mounted on his stout and sleek palfrey, he would sally forth. He would be almost enveloped by saddle-bags of giant mold; and as he would thus issue forth upon his excursion of peril and adventure he would be cheered on his pilgrimage by the beacon of profit. No modern innovation of hurry and despatch clouded the calm dignity of the gentle trot of his staid steed. No goading fears of rivals and competition haunted him, to mar the mild method of the march. Conscious of bringing his own welcome with him; feeling that his exits and entrances were marked as events by his customers in each town, village or hamlet, what a pleasing sense of his own worth and dignity must have cheered his lonely ride! The almoner of practical benefits on the most comprehensive scale—from tea to tooth brushes—in each district he made joyous by his presence, what keen delight must his philanthropy have inspired him with.

In the present time the highwayman has ceased to be the confidant of the family secrets of each customer, possibly because their rapid progress through the country leaves too little time to elicit them. The modern bagman has ceased to be the "Sir Oracle" of the country shopkeeper.

See him arrive at his hostelry; with what care does the rosy-faced host help to extricate him from his pyramid of saddle!—with what ready zeal does the dame produce the savory rashers (of bacon) and the tankard? While these condiments recruit his strength the landlord spreads the glad tidings of his advent; and ere the snow-white cloth has disappeared, his customers throng into the little parlor with their hoarded money and the already transcribed order. Among those simple craftsmen exists no jealousy save that of being the most esteemed of him, "the observed of all observers."

Keep up your stock of staples; never be out of a staple article. If a consumer asks for some article that you are out of, and should have, you not only lose the sale of the goods, but are liable to lose the customer.

Mechanical and live displays as a rule rarely advertise anything shown in the window, yet it is well to use them once in a while if they have merit. "Variety is the spice of life."

IMPORTANT MEXICAN DEAL.

New Company With R. Cabanas as President Takes Over the Columbia Co. Interests in Mexico City on August 1.

An important deal has just been consummated in Mexico whereby the entire Mexican business of the Columbia Phonograph Co. was taken over by Compania Fonografica Mexicana, S. A., of City of Mexico, on August 1. The lease of the Columbia Co.'s premises at Avenida Juarez 20, Mexico, D. F., has been assumed and the stock on hand purchased by the Mexican company, financed by local capital, and of which R. Cabanas, formerly in charge of the Mexican National Phonograph Co., is president and general manager. Hereafter the Columbia business in the Republic will be handled entirely by the new concern, whose dealings are to be made direct with headquarters in New York. Joseph Hoffay, recent manager of the store in the City of Mexico, will call at the executive offices in New York and then be transferred to some other foreign field under the control of the export department.

WILL SUE ALL INFRINGERS.

The Victor Talking Machine Co. Again Caution the Trade Against Infringements of the Berliner and Other Patents Which They Control.

In important letters issued by Eldridge R. Johnson, president of the Victor Talking Machine Co., and General Manager Geissler recently, emphasis was placed on the fact that they intend to enforce their patent rights as regards infringements, and cautioned dealers and jobbers against lending support to any product which would infringe on the Berliner and other important patents which they control.

Supplementing this another important circular was issued by the Victor Co. on July 30th in which they emphasize afresh their intention of bringing suit against any concern or concerns producing machines which infringe or attempt an invasion on their patent rights. The position of the Victor Co. on this question should be clear to every member of the trade by this time.

NEW HEPPE QUARTERS.

Well-Known Philadelphia House Will Have One of the Largest Talking Machine Departments in the Country—The Growth of This Business Has Been Marked.

(Special to The Talking Machine World.)

Philadelphia, Pa., Aug. 9, 1909.

When C. J. Heppe & Son get in their new quarters at 1119 Chestnut street they will have one of the largest talking machine departments in the country, and the wonderful growth of this division of their business makes the increased space very necessary. Close attention has been given to the talking machine department, and its growth is the result of systematic hard work.

This house have been particularly successful with the Victor-Victrola, and have recently placed a large number of these machines and generous quantities of high-class records in cafés and hotels in this and neighboring cities. The July business of the department is reported as being close to the record volume, and when the fall trade is in full swing some great results are looked for.

VICTOR CO. SUES LINDSTROM

For Alleged Infringement of the Berliner Patent

Papers have been served in a suit of the Victor Talking Machine Co., Camden, N. J., against the New York branch of the Carl Lindstrom Co., whose headquarters are in Berlin, Ger., and one of their representatives, for alleged infringement of the Berliner patent. An order to show cause why a preliminary injunction should not be granted was issued by the Circuit Court of the United States Court, New York, last week. When the motion is argued Waldo G. Morse will appear for the defence.

LEEDS & CATLIN SALE

In New York City—Realizes Less Than 75 Per Cent. of Appraised Value.

The sale of the property and effects of the Leeds & Catlin Co., bankrupts, 53 East Eleventh street, New York City, at public auction realized $2,400, less than 75 per cent. of the appraised value, which was estimated at something over $3,500. The articles sold represented a small part of the assets, and consisted of office and laboratory equipment, etc. The larger portion of the bankrupt firm's property is embraced in the assets of the factory at Middletown, Conn., with which nothing as yet has been done, according to Receiver Taft. The patents, valued at a million and a half, are among the latter effects, and have caused some inquiry as to their nature, as they are comparatively unknown in the trade.

NEW CATALOG OF FRITZ PUPPEL.

Well-Known House of Berlin, Germany, Issue Sixty-two Page Volume in Four Languages and Showing Over Fifty Styles of Machines.

We are in receipt of the latest catalog of Fritz Puppel. G.m.b.H., Berlin, Germany, an impressive volume of sixty-two pages devoted entirely to the extensive line of talking machines and parts manufactured by that house, over fifty distinct styles of machines being shown.

A feature of the catalog that betokens real enterprise is the fact that it is printed in four languages—German, English, French and Italian—and is therefore especially adapted for the export trade, in which direction the house of Fritz Puppel is especially strong.

What particularly impresses the American who is used to talking machines with plain cabinets, as a rule, is the great number of ornate case design shown in the Puppel line, those in the L'art Nouveau style being very handsome.

The cover of the catalog bears a heavily embossed picture of the Elite style 10 machine in gold.

REINSTATED AS JOBBERS.

The Eilers Piano House, Portland, Ore., have been reinstated as jobbers of the National Phonograph Co., Orange, N. J. The difference between the two companies were amicably adjusted, and a large initial order placed under the new dispensation.

EAGER TO GET JOBBERS' CONVENTION.

The Eilers Piano House of Portland, Ore., have sent out a circular to the leading jobbers setting forth the claims of that city for the next convention of the National Association of Talking Machine Jobbers. In this connection they say: "Portland is unquestionably the ideal convention city. Its natural beauties are simply unsurpassed. Hotel accommodations are in every way first class and our summer weather is always thoroughly delightful and cool. The talking machine interests of Portland we know will be only too happy to make the visit of the National Association of Talking Machine Jobbers thoroughly pleasant and notable one next year."

Letters have been sent out by the officers of the association for the purpose of getting an idea from the jobbers where they desire the next convention to be held. Of course the majority will decide the place of meeting.

COLUMBIA RECORDS FOR PORTO RICO.

The export department of the Columbia Phonograph Co., General, have placed on sale in San Juan, P. I., W. I., the new records made by Wm. Friedburg, of the laboratory staff, who recently returned from Porto Rico, where he had been for a month on a recording trip. The special list, which will be off the press in about a week consists of nearly 120 numbers, including a number of vocals, but mostly instrumentals—dañzons—and military band pieces, the work of the best and highest class artists on the island.

HEARING ON MOTION MADE.

The motion for a preliminary injunction in the case of the American Graphophone Co. against the Universal Talking Machine Mfg. Co., Newark, N. J., that was on the calendar of the Circuit Court of the United States for argument August 13, was not postponed on request of Horace Pettit, counsel for the defendants. Mr. Pettit urged that with Mr. Mauro, of the American Graphophone Co.'s legal staff, absent; Eldridge R. Johnson, president of the Victor Co., away on a fishing trip; and B. G. Royal, president of the Universal Co., in the West, all material witnesses, he was in no position to proceed with the case. Counsel for the complainants were opposed to the postponement, but the court heard the case.

Max Landay, of Landay Bros., Victor distributers, and the Talking Machine Supply Co., New York, has been drinking the waters at Saratoga, for a week or so, getting back Aug. 9. Just which water Max preferred and indulged in he is chary in saying, possibly Hathorn; at any rate he is the picture of health and condition, preparatory to an extended selling trip through the West in the interest of the Supply Co. Max never fails to return without a well-filled order book, with needles as his long suit, and this time will be no exception.

Stimulants, like bees, won't hurt the man who leaves them alone.

RELIEF FOR INVENTORS.

Onerous Restrictions in Germany Removed by Important Treaty.

(Special to The Talking Machine World.)
Washington, Aug. 8, 1909.

A reciprocal patent treaty with Germany was simultaneously promulgated at noon to-day by President Taft and the German Emperor. It is immediately effective, and is to remain in force until the expiration of twelve months following notice of termination by one of the contracting parties.

Under this treaty American manufacturers will be relieved of the existing requirement that in order to sell their products in Germany they must manufacture them upon the basis of patents in Germany, which called for investments of large sums of money in maintaining duplicate plants.

Inventors will be relieved from the German restriction under which their patents have hitherto been forfeited if not actually worked in Germany within three years. Under the new provision it will be sufficient to protect patents in both countries if they are used for manufacture in either.

SOL BLOOM'S NEW STORE

At 364 Fifth Avenue Is Now Complete.

The new store of Sol Bloom, Victor goods exclusively, 364 Fifth avenue, New York, is now complete as to furniture, furnishings and a number of unique demonstrating apartments in the basement. These include a small auditorium, capable of seating comfortably about 100 people; a ship's cabin, with the familiar port-holes and swimming fish in enclosure; a Japanese tea-room, cool and restful; a Greek room, in strictly classical style; and a nursery. The furniture and decorations in each of these respective quarters are of special design and in perfect harmony with the architectural features. Victor Victrolas are ready for demonstration purposes in the rooms. Mr. Bloom also displays in the show windows representations, in miniature figures, of the principal operatic characters in correct costume, as seen in their parts as they appeared at the Metropolitan and Manhattan Opera Houses, New York, last season. The figures were made by Freisinger, costumer for both companies, and are therefore absolutely correct. Some of them are "Rhadames" and "Faust" (Caruso); "Aida" (Destin); "Escamillio" (Campanari); "Carmen" (Calve), etc.

TRADING STAMPS FORBIDDEN.

Georgia Law Intended to Check Trade of a New York House.

(Special to The Talking Machine World.)
Atlanta, Ga., Aug. 9, 1909.

Trading stamps are now contraband in Georgia. Gov. Brown yesterday signed the bill which prohibits the use of little stickers for barter or trade inducements.

The bill was introduced at the request of the retail merchants of the State, who discovered that a New York mail order house was reaping a harvest by using the stamps.

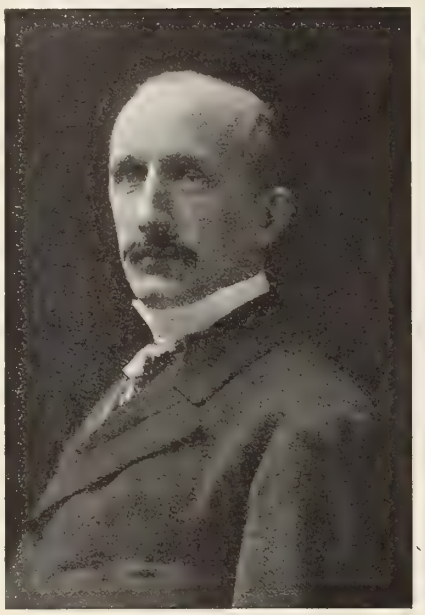
"TALKER" MEN AT CONEY ISLAND.

L. C. Wiswell, of Lyon & Healy, Chicago, and Mrs. Wiswell, J. C. and C. M. Roush, of the Standard Talking Machine Co., Pittsburg, Pa., and Lawrence H. Lucker, of the Minnesota Phonograph Co., Minneapolis, Minn., were all guests of J. Newcomb Blackman, of the Blackman Talking Machine Co., on a trip to Coney Island recently. George G. Blackman and F. B. Caldwell, of the Blackman Co., also accompanying the party. The Island was reached by steamboat, and all the amusements of Dreamland, Steeplechase and Luna Park indulged in to the limit, after which the party adjourned to Feltman's, for one of the famous clambakes. In the evening Pain's fireworks at Brighton Beach were witnessed. The party enjoyed the outing thoroughly, especially Mrs. Wiswell and C. M. Roush, who visited the world-famous pleasure resort for the first time on that occasion.

EDWARD D. EASTON RETURNS

From Enjoyable Visit to London and Other European Points of Interest.

Edward D. Easton, president of the Columbia Phonograph Co., General, who has been in Europe with his family since June 22, reached New York, Aug. 3, on the "Berlin," of the North German Lloyd Co., embarking at Genoa, Italy. He



EDWARD D. EASTON.

had a most enjoyable time, and found trade conditions, especially with the Columbia representatives, very much to his liking. Mr. Easton is in excellent health.

PROPHESIES A BUSINESS BOOM.

John W. Gates Says "The United States Is Entering a Period of the Greatest Prosperity the World Has Ever Known"—Need Free Raw Material to Open Our Workshops.

"The United States is entering into a period of the greatest prosperity the world has ever seen," said John W. Gates, who returned from Europe last Monday.

"Each year I come back I am more bullish on America and American securities, because I see the possibilities here and the impossibilities on the other side. Taxes are very high in England and Germany. There has been a large increase of taxation in Germany."

Mr. Gates was asked if the rich were alarmed at this taxation.

"I do not believe that the very wealthy men of England control her politics any more than they do here," he replied. "It is the trudger that carries the dinner pail and the torch that controls politics in America. The vote of a man worth $1,000 counts for as much as the vote of a man worth $1,000,000.

"I have been a Republican all my life, but I can see the value of getting in all the free raw materials we can to open up all the free American workshops. We have got to have free raw material if we want to be a great manufacturing country."

"Wouldn't Canada run us out of the market on free lumber?"

"You must remember that if we buy our lumber in Canada our forests will be growing. If Canada cuts all her forests then we will save ours. It is like wheat and cotton—a question of supply and demand. No matter what conditions are in the United States, supply and demand will ultimately govern.

"Gen Hancock, although people laughed at him, was right when he said: 'The tariff is purely a local question.'

"What of the tariff bill just passed and signed by President Taft, the surplus piling up in the banks and manufacturers accumulating their surplus?" Mr. Gates was asked.

"Two years ago," said he, "I made a statement that people would wear their old clothes, and now they are surprised to find out how much money they have saved. I said in 1907 that the people would economize. The extent of this economy is shown in the bank deposits to-day. Two years' economy means a world of money.

"I think we are going into the period of the greatest prosperity that the world has ever seen. It will be for three or four years the period of the greatest industrial development the world has ever seen."

TRAVELING STAFF MEETS.

The National Phonograph Co.'s Forces Developing Plans for Fall Campaign.

The traveling staff of the National Phonograph Co. have been visiting the factory at Orange, N. J., during the past month. It is the custom of the company to have their road force from all parts of the country come in at this time and have a formal conference with the selling department and the officers preparatory to the fall campaign. The men from the Eastern States were first on the ground, and after inspecting the line and works and exchanging views and receiving suggestions from C. E. Goodwin, manager of traveling salesmen; F. K. Dolbeer, sales manager; C. H. Wilson, general manager, etc., they adjourned to their respective fields of activity. The western contingent is now in session, going through the same program, and will probably scatter in about a week, so as to be ready for the work before them in September. Dinners were enjoyed at the Orange Club and other divertisements indulged in by the "boys" while here.

PFISTER BUYS COLUMBIA BRANCH.

(Special to The Talking Machine World.)
Memphis, Tenn., Aug. 11, 1909.

William Pfister, manager of the Columbia Co.'s branch, of this city, has purchased the business, taking over the lease, buying the entire fixtures, stock, etc. He will continue the retail business as usual and will also have the exclusive jobbing agency for the Columbia product for western Tennessee.

TO CHOOSE NEXT CONVENTION CITY.

Letters have been sent out to all members of the National Association of Talking Machine Jobbers by the secretary requesting opinions as to the most desirable place to hold the annual convention in 1910. Replies have not yet been received in full, but a concensus of opinion is expected to be arrived at shortly, the city favored by the majority naturally being chosen.

SUPPLYING FOURTEEN TOWNS.

The Yeager Piano Co., Waterbury, Conn., Columbia jobbers, now supply stock to dealers in fourteen towns of that State.

L. C. McChesney, manager of the advertising department, and Walter Stevens, chief of the National Phonograph Co.'s export branch, started on a fortnight's vacation Saturday last.

During the absence of Frank L. Dyer, president, in Europe, C. H. Wilson, general manager, has become the temporary chief executive of the National Phonograph Co.

The New York Talking Machine Co., New York, have recently closed several important sales for high priced Victor outfits and Auxetophones. They say business is brightening and that dealers are preparing to place orders for strong Victor stocks for the fall. The new $125 Victrola XII is reported as having scored a success, judging from the sales and the opinions of progressive dealers in the metropolitan territory and throughout the East.

VICTORY FOR THE RIGHT IN "DUBBING" SUIT

Judge Chatfield Hands Down a Most Exhaustive and Interesting Decision Upholding the Contention of the Victor Talking Machine Co. and the Columbia Phonograph Co. in Their Suit Against W. V. P. Bradley and the Continental Record Co. in Granting a Permanent Injunction Enjoining the "Dubbing" of Records—This Is One of the Most Important Decisions Handed Down in Years and Closes the Market to a Dishonest Species of Competition.

Another important suit at law has been decided in the Federal courts that will make "dubbing" in the future more "honored in the breach than in the observance," so to speak. This is the meaning and intent of Judge Chatfield's decision handed down August 7 in the Circuit Court of the United States, Brooklyn, N. Y. For five years it has been an open question whether the manufacture of imitation, fraudulent and spurious records could be carried on with impunity. A number of "sea lawyers" in the trade openly contended the production of such goods was legitimate, and no court would enjoin the practice. Further, men holding this erroneous opinion went ahead and placed a line of "dubbed" operatic and high-class records on the market.

Finally the owners of the property got busy and instituted a suit against one W. V. P. Bradley, of Brooklyn, N. Y., who advertised himself as sales agent of the Continental Record Co., New Baltimore, N. Y., with no plant there and so-called offices in a storage building in New York, where no signs were displayed or other evidence furnished to prove the tenancy of the company. The contentions of the defendant in the case were declared untenable by Judge Chatfield, and on the general principles of unfair competition and the "unfair taking of complainants' property" relief was granted in equity and a permanent restraining order issued, subject to appeal, of course.

The Columbia Co. were the first to open fire on Bradley and whoever might be under cover, with the Victor Co. joining issue subsequently. Argument was submitted in March, and at the request of Judge Chatfield the pleadings and affidavits then presented were allowed to stand by stipulation as on final hearing. Meanwhile it was agreed that the Continental Co. would suspend manufacturing until the decision was rendered, and of which the subjoined are the essential portions:

Following a summary recital of the record in the case the Justice said:

SUMMARY OF JUDGE CHATFIELD'S OPINION.

"The court must take into account in any such matter not only questions of public policy, but questions of public benefit. * * * The defendant has been for some months advertising by circular letter and in other ways his ability to sell records of the Continental Record Co., stating in these advertisements that the records are sold at prices not more than half those now charged for the original records. The advertisements claim that the records themselves are pressed upon the very highest class of material, finished equal to the original; that the character of the record itself is identical with the original record, and that experts who have listened to samples are unable to determine between the original and the copy. The catalog contains a statement that the records offered by Bradley are 'all duplicates from the original records made by the artists whose names are used herein.' * * * But the defendant's records are not duplicates. The testimony shows that the defendant, the Continental Record Co., makes its records from commercial discs of the complainants.

ELEMENT OF FRAUDULENT IMPOSITION PRESENT.

"The imitation or use of centers or seals, calculated or likely to deceive the purchaser into thinking that he was buying these so-called 'red seal' or other records, has been enjoined by Judge Lacombe, in the case of the Victor Talking Machine Co. against Armstrong et al. (132 Fed. 711), and there would seem to be no room for argument about that particular question. * * * The Fonotipia, Ltd., and the Columbia Co. urge that the defendant is intentionally offering to the public a disc with a center or label of the same general style and character as those of the Fonotipia, Ltd., and Columbia Co., and which purport to be guarantees of a careful reproduction of the original record; and thus the element of imposing upon the public, or of imitating and appropriating the complainants' property rights, is present, even if the appearance of the label be not an imitation.

"It would seem to be true in a sense (and the evidence tending to show likeness between the original records of the complainant companies and the particular records sold by the defendant only accentuates this testimony) that the records put upon the market by the defendant have been made, through some transmutation, from original songs sung under contract by the artist to whom the disc is accredited, and to whom a royalty is being paid by one of the complainants and with whom the defendant has no contractural or business relations whatever.

SPURIOUS DISC RECORDS GREATLY INFERIOR.

"But a more serious question comes from the testimony offered by the discs presented in the case themselves. If the defendant is selling to customers records reproduced by processes of the Continental Record Co., are all in restraint of trade and contrary to the that company for the purpose, and if he advertises and guarantees to his customers that the Continental records are duplicates equal in all respects, including composition and finish; and that it is impossible to distinguish between the Continental records and those produced by the complainants, we have a question of fact presented in which the public is interested; namely, do the records submitted as evidence in the case lead to any determination upon the question of deception or imitation of the product, and the resultant benefit to the imitator, with corresponding injury to the imitated, by the results of the sales, and by the effect upon future sales if the product of the imitation be unsatisfactory?

"A comparison in order to observe points of similarity between the records put in evidence by the complainants, and made by themselves, with the records produced by the defendant and introduced as purchases from him, leads irresistibly to the conclusion that the material used in the Continental Record Co.'s discs is greatly inferior. Actual comparison of the discs warrants the finding that the Continental records are not in every way the equal, even when played upon the same machine, of the complainants' records, and it is impossible to hold that they are duplicates in the sense that they cannot, in most cases, be distinguished from the genuine, or that the imitation product is the duplicate in the sense of being the equal of the original.

SPECIOUS ARGUMENTS BRUSHED ASIDE.

"The defendant contends that the complainants should be compelled to rely upon their patent rights; and inasmuch as their rights under their patents would prevent infringing, making and sale of discs of the form in question, the defendant attempts to urge the converse of the proposition. * * * The license system of the complainant companies, as shown by the notices printed upon the discs when sold, is based upon patent rights, and upon the legality of the use of patented articles in order to give the person owning the patent the full enjoyment of the monopoly secured thereby.

"The answer of the defendant, to the effect that the records reproduced by him were purchased out of the United States, is evidence of his knowledge of the existence of the license system in the United States; and in so far as sales of the defendant's discs might be effected to dealers having knowledge of the license system of the complainants, the question of contributory infringement or of inequitable inducement to violate a contract agreement, would immediately present itself and would render a court of equity more willing to prevent that situation by a decree forbidding the sale of a product which would cause the injuries described.

LICENSE AGREEMENTS NOT IN RESTRAINT OF TRADE.

"It is also contended by the defendant that the license agreement of the Victor Co., and its attempt to restrict or control the retail price at which its records shall be sold, by printing a notice upon its discs that the record is sold only to be retailed at a certain rate; and an agreement which has been entered into between the Victor Co. and the Columbia Co. are all in restraint of trade and contrary to the so-called anti-trust law forbidding monopolies.

"But if we are dealing with a patented product, a monopoly in the sense of right to control the sale of the product and the price which shall be asked therefor, is admittedly within the legal benefits conveyed, to the patentee by the issuance of the patent. If the patents be disregarded and the matter be considered as a purely business arrangement, it is impossible to see where any offense against the statute mentioned has been shown.

"We therefore reach the broad question of the power of a court of equity to secure to an individual by injunction the full enjoyment of both corporeal and incorporeal rights in property created by him or at his expense, and capable of a taking by another, where such taking either diminishes or destroys the enjoyment of those rights by the owner and diverts a part of the enjoyment or profits from the rights to the one complained of.

UNFAIR APPROPRIATION OF PROPERTY NOT EQUITABLE.

"Equity has granted relief in certain typical lines of cases where the doctrine of unfair competition seems to have been the guide to the decision, but where the basis upon which the relief was granted was the unfair taking of the complainant's property, rather than the deception of the purchaser, or the imitation of a patented or copyrighted article or a registered trade mark or trade name."

After citing a number of cases that applied, the Court remarked:

"In the ticket-scalper cases injunctions were granted, not because the purchasers of tickets were deceived by imitation or fraudulent tickets, but because the railroads issuing the tickets were injured by the trade in tickets obtained from them under special contracts and then sold to other individuals who were not entitled to enjoy those contracts. The present case is extremely like these just considered, in principle. The principle involved is far reaching, especially in that it carries the scope of equitable jurisdiction into matters frequently considered to be purely the result of business competition, and which even if in themselves morally or financially wrong, are supposed to be without remedy where no contractual relations have existed from which suits for damages could arise.

DEFENDANTS PERMANENTLY ENJOINED.

"The relief asked in this case would protect those who have already sung or played compositions having a pecuniary value because of their musical excellence; and also the persons who have invested capital and labor in putting a valuable product upon the market. The education of the public by the dissemination of good music is an object worthy of protection, and it is apparent that such results could not be attained if the production of the original records was stopped by the wrongful taking of both product and profit by any one who could produce sound-discs free from the expense of obtaining the original record.

"It cannot now be determined how far such appropriation of ideas could be prevented, but it would seem that where a product is placed upon the market, under advertisement and statement that the substitute or imitating product is a duplicate of the original, and where the commercial value of the imitation lies in the fact that it takes advantage of and appropriates to itself the commercial qualities, reputation and salable properties of the original, equity should grant relief. That is the particular proposition presented in the present case, and to that extent it seems to the court that the principles applied in the stock-ticker and similar cases above recited should be followed and relief by injunction granted."

Appearances: Ralph L. Scott, solicitor for Fonotipia, Ltd., and the Columbia Phonograph Co., Philip Mauro and C. A. L. Massie, of counsel. Horace Pettit, of counsel for Victor Talking Machine Co. Waldo G. Morse, solicitor for defendant, Bradley.

GREAT ADVERTISING CAMPAIGN

To be Conducted by the National Phonograph Co. This Fall.

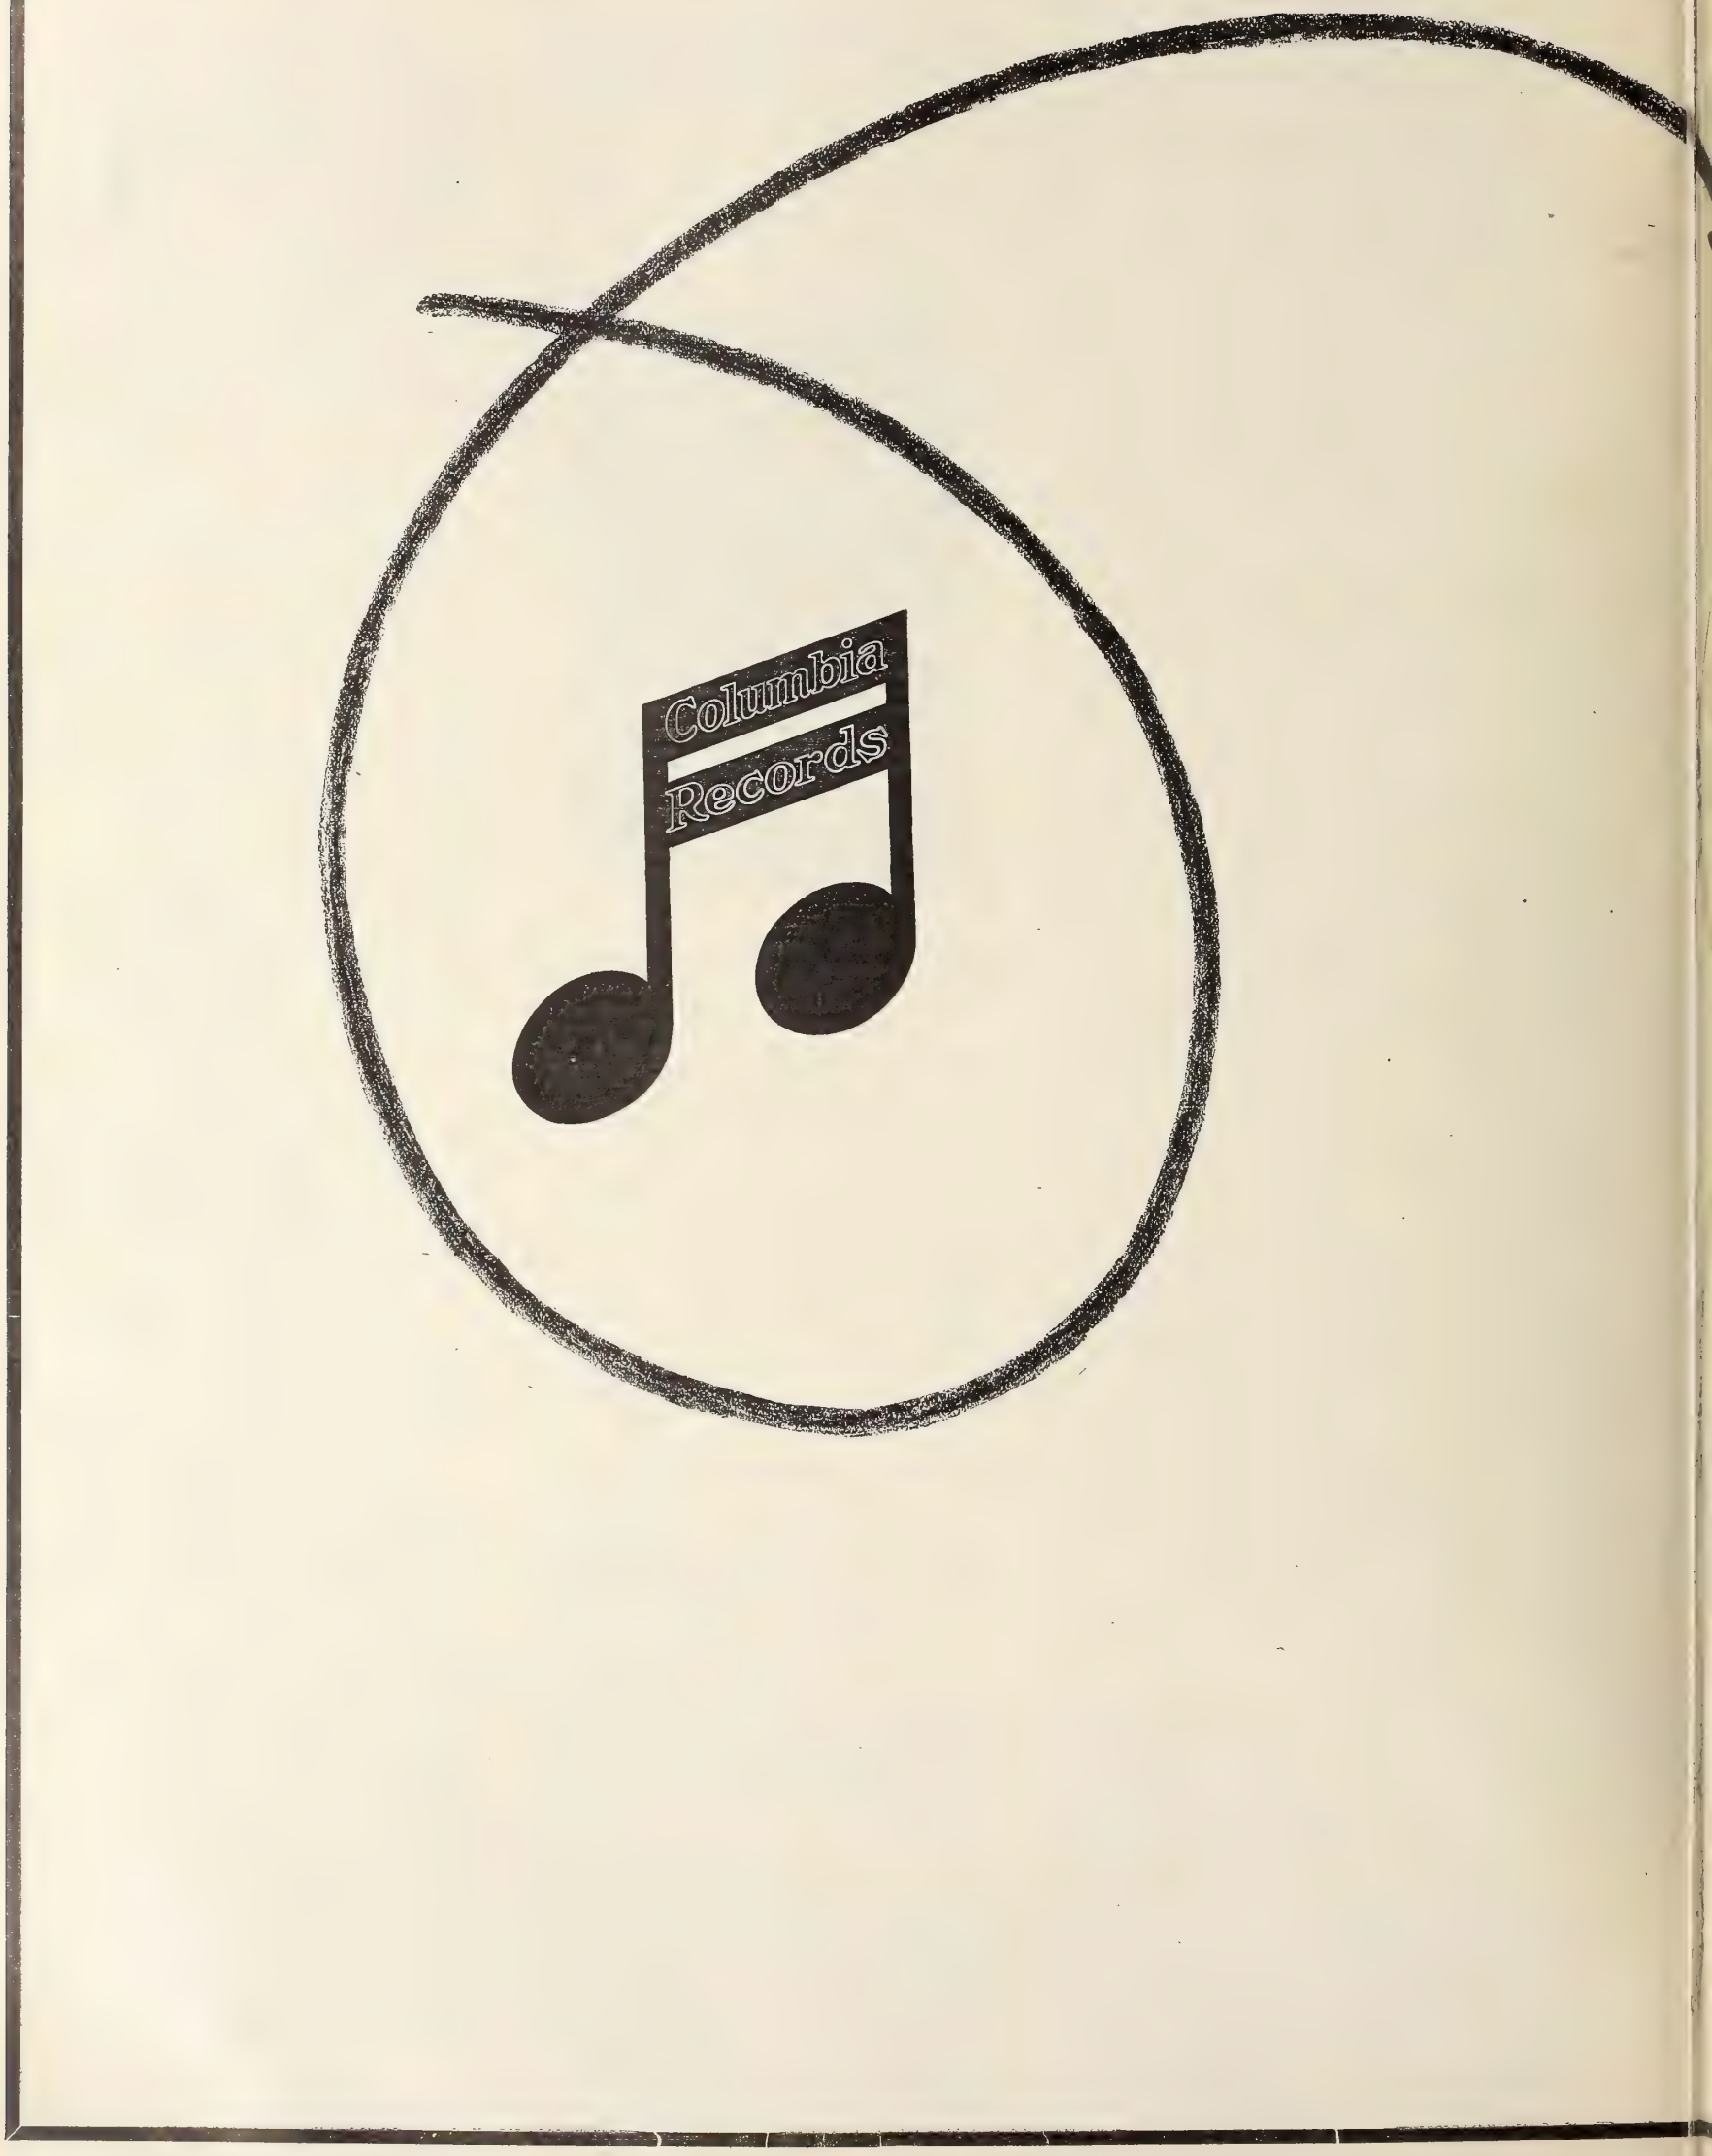
Concerning the statement, first given the trade at the recent convention of the National Association of Talking Machine Jobbers at Atlantic City, N. J., that they proposed to appropriate the enormous sum of $500,000 for advertising, publicity and general exploitation of their products, the National Phonograph Co., Orange, N. J., say in part:

"During the period of financial depression from which the country is fast emerging we did not pursue a policy of retrenchment in this or any other public feature of our business, for we realize the necessity of sustaining the established reputation of the company. On the contrary, in the face of decreased sales and an apathetic trade situation we maintained our high standard and improved the opportunity by aiming to attain perfection in many things to which the previous rush of business did not permit us to give our full attention.

"In the campaign that we propose we are not actuated by motives of self-preservation. We believe that this fall and winter will see a restoration of normal business conditions in all lines, and we propose to share in the harvest that will follow. We have the most sublime confidence and faith in the future of the talking machine business, and we intend to display that confidence by a carefully planned expenditure of this extraordinarily large appropriation.

"We are optimists, first, last, and always! We share the feeling that characterized the recent convention at Atlantic City. We believe that the future of this industry is assured; it is not problematical, it is established. And so, in a spirit of the most cheerful optimism, we are facing the future, determined to give to the further development of the business the best that is in us of enterprise, encouragement and moral and financial support."

Glance at your ledgers and you will realize that your sales are largely made to people who constantly visit your store.



Columbia
Records

You ought to secure the exclusive Columbia selling rights for your town

When you sign up with us for exclusive territory it means that every user of Columbia product in that territory must come to **you.** It is an exclusive arrangement that **excludes**—competition, attempted price-cutting, and all other evils of the sort.

It ties all ends of the business together and makes them all pay. Complete lines of **DOUBLE-DISC** and Indestructible Cylinder Records —and of disc and cylinder Graphophones. Everything you need and your customers can ask for supplied through one organization.

There is nothing compulsory about the Columbia exclusive arrangement; we merely make it **unnecessary** for you to go outside of the Columbia Company in order to handle the territory for which you have the exclusive right.

In the Fonotipia Series of **DOUBLE-DISC** Grand Opera Records alone there is enough prestige and profit to make such a contract valuable to you. In the complete line of Columbia product there is strength enough to make argument unnecessary.

SOMEBODY GETS IT. WRITE IN, ANYWAY

Columbia Phonograph Company, Gen'l

Wholesale Department

TRIBUNE BUILDING, NEW YORK

TIMELY TALKS ON TIMELY TOPICS

It is almost unnecessary to call special attention to the judicial decision that knocks the nefarious, not to say swindling, practice of "dubbing" into smithereens. The opinion of Judge Chatfield dealing this only too long deferred blow is reported elsewhere, and it will repay reading by every dealer and others who are twisted on property rights as defined by law. The Columbia Phonograph Co., General, New York, and the Victor Talking Machine Co., Camden, N. J., are to be congratulated upon their sweeping victory that establishes, beyond the peradventure of a doubt, the undisputed privilege of enjoying the emoluments and profits of property created by them at great expense, unremitting effort and praiseworthy enterprise. Judge Chatfield is also to be felicitated upon his clear and adequate handling of a complex question. Every contention of The World regard "dubbing" and its legal suppression has been upheld in this able opinion, sufficient cause, indeed, for such modest self-congratulation as may be indulged in.

In these days of expensive publicity campaigns carried on by the talking machine manufacturing companies the writer is reminded of an incident that caused great hilarity in the office of The World. The company in point was quite prominent at the time, but now in eclipse, and their advertising manager was an experienced newspaper man, with peculiar ideas as to the scope, intent and functions of his position. The company referred to his opinions, of course, one of which was that the talking machine was primarily intended for the amusement and entertainment of wage-earners only. Ergo, his advertising should be placed in mediums read chiefly by the working people. The advertising manager's arguments on this contention were lengthy—often wearisome—and had a tendency to make his principals weary.

Well, to make a long story short, as the fellow says who indulges in long-winded narrations, Mr. Advertising Manager selected an obscure paper in a quarter of Greater New York, where a large number of manufacturing plants are located, with the operatives living in the same section. He contracted for eight inches of space, "top of column, next to pure reading matter," as the professional advertising agent would technically describe the position occupied by the ad. The manager was sanguine of the results, and when a salesman was despatched to visit the dealers in that part of the city and take their orders he found them all in profound ignorance of the line so "liberally" exploited. Of course, the salesman expected nothing and he was not disappointed, while the advertising manager expressed his surprise. Think of this alongside of the National Phonograph Co.'s announcement that they would expend a half-million dollars this year for advertising, with the Victor Talking Machine Co., the Columbia Phonograph Co. and the Universal Talking Machine Manufacturing Co. using amounts for the same purpose running into equally altitudinous, if not higher, figures!

With the basic patents of the talking machine industry adjudicated, the next litigation in order is said to be over the tone-arm inventions. The tone-arm horn is now in general use, and doubtless the basic patent—claimed by several—will come into its own some day, and then there will be more trouble and readjustment of conditions. The English decision referred to at length in another part of The World in no wise treats this matter on its patent merits, but only as to the maintenance of manufacturing rights in the United Kingdom under the recently enacted British law.

From what has been going on in the trade for the past few months regarding the retirement and elimination of financially weak dealers, representative jobbers and distributers are satisfied conditions will be greatly improved, from a selling point of view at least. In other words, the trade will be on a firmer and more substantial basis, and greater enterprise and more energy and versatility will undoubtedly be displayed in marketing goods. This is a blessing, and a spirit of thankfulness is therefore in order.

Finally, the tariff act is on the statute books, President Taft affixing his signature to the bill, thereby making it a law, August 5, and it went into effect the following day. Paragraph 468 of section 1 of the dutiable list provides: "Phonographs, gramophones, graphophones and similar articles and parts thereof, 45 per cent. ad valorem." This schedule, originally appearing in the House bill, remained unchanged throughout the vicissitudes attending the progress of the measure through both branches of Congress and into and out of the Conference Committees. The rate is the same as it was under the old law, so far as machines, etc., were concerned, but on some requisites there has been an increase of 10 per cent. If the passage of the tariff law has held the talking machine trade in restraint, the cloud has passed. Therefore, no other reasonable excuse for business lethargy being urged in extenuation thereof, no excuse can be made why things should not hum, and once more prosperity be restored and abide for an indefinite period, should that not be asking too much.

While waiting upon Congress to pass the tariff bill President Taft had a few leisure moments between conferences which he turned to good account for himself and his friends. Of course, Washington weather during the summer is of the frizzling kind, and no one does anything more than was actually compulsory or to "hold down his job," and the rules were relaxed in this respect almost to the point of breaking. In the evenings, however, a different condition prevails. The inhabitants rouse from their siestas and "get a move on." At the White House the President, who had a Victor-Victrola installed (who was the lucky dealer to get the order?) entertained his callers and intimates with Red Seal numbers—operatic selections and classical gems. The favored audience were delighted, and the wonders of the Victrola contributed not a little to the enjoyment of these pleasurable occasions, besides being largely beneficial in distributing among otherwise discordant political elements much of the hearty good nature, congeniality and *savoir faire* of the affable chief executive.

Now and again reports go forth that the disc record with the vertical line or up and down-cut sound wave, such as is familiar in connection with the cylinder record, is about to be introduced here on discs, and the sapphire reproducing point used in connection therewith. Once more the same declaration is made, and this time from a factor of machines who must either market that description of record or stay out of the business. To be sure the patent situation is not altogether to the liking of people who have been waiting to "butt in" for lo! these many years, and get a slice of the money which others have made possible by the expenditure of large sums, creating salable goods and protecting their rights under the law. Neither ridicule, coarse abuse or specious argument can change the legal aspect of affairs; nor is a market, even if only in a sympathetic sense, created by such questionable tactics. If a line of machines, records or any essential requisite possesses intrinsic merit, and can stand up against charges of infringement as conditions now exist, their recognition will not be long delayed. Everyone knows precisely the position occupied by sentiment in business.

But all this is beside the sapphire point and the "hill-and-valley" disc record. Were one brought to the front that would stand the test, buyers would not be lacking. Laboratory experts aver that the same brilliant results cannot be obtained from a vertical cut on a disc record as with the lateral or zig-zag line, now used almost to the exclusion of the former. In this country it is absolutely unknown outside of perhaps the recording laboratory. A French company of repute contemplated placing such a disc on sale here—and the records were pronounced A1 by those competent to judge—but for reasons unknown to the deponent the intention was abandoned. Possibly fear of litigation may have occasioned this weakness of heart, for the concern in question was amply buttressed with capital. At any rate, the trial was never made. Are we on the eve of its introduction now, or is the report merely idle gossip?

As a general proposition mail order houses are looked at askance by the trade at large. Notwithstanding this strong prejudice, however, a few concerns who have embarked in the line on a large scale have been successful. As the selling prices are the same as any other jobber or dealer handling the same goods, no objection can be urged on this score. Curious tales are reported about some of these houses; that is, of their experience and not anything to their business discredit. Of course, firms of this calibre are obliged to carry heavy stocks, so as to be prepared to meet any delivering emergency. In this connection the principal of a western jobbing enterprise of magnitude recently stated that while their energies and resources were employed to promote the mail order business, not an effort was made to attract or obtain the trade of dealers. Despite this, however, dealers were regularly buying goods from them, possibly on the score that their orders could and would be filled promptly and completely. At first this part of the business was given little if any specific attention, but it had grown so that the firms were compelled to assign a special clerk to care for the orders, and so rapidly had it increased that $30,000 monthly was the net aggregate. The amounts occasion no trouble, as the terms of payment—30 days net—are strictly enforced. In narrating this incident, the senior member of the firm laughingly remarked: "This trade does not cost us a penny; it simply comes to us without solicitation, and when you can turn over $30,000 a month so easily it is like finding money."

Another field of usefulness has opened up for the talking machine. The leading railroads of the country are seriously considering the entertainment possibilities of the "greatest discovery of modern times," and are installing them on their fast trains for the diversion of travelers. It is an excedingly happy thought. Recently it was officially announced that the Chicago, Rock Island & Pacific line decided to equip all its limited service with Victor talking machines, contracting for a dozen high-grade numbers and a stock of records at an expense of $5,000. Experimental trials were first made on this road's Mountaineer Limited, and they were so great a success and gave so much pleasure to the passengers constituting the audience that the officials lost no time in recommending the installation of the machines on the system's de luxe trains, where they will be placed in the observation car. The lucky dealer who landed the order is to be congratulated, especially if he originated the idea. As a suggestion for other progressive dealers all over the country it is a "pointer" of no small value to seize and act upon immediately, if not sooner.

RAISED PRICES.

A traveling man stopped at a small hotel one day and was charged 50 cents for his dinner. He asked the boy if he did not pay 25 cents about six weeks previous for the same meal.

"Yes, sir," he said. "But a fellow come along and told dad that drummers would pay 50 cents as quick as they would a quarter, so dad riz the price."

NEWS FROM BOSTON TOWN.

Business Makes Splendid Showing for Summer—Grand Opera Records in Demand—Ditson's Victrola Campaign—Rosen Opens Up—Anent the Eastern Co.—Columbia Activity—Remick Has the Victor—Osgood's Display—Anxious for Lauder's Return.

(Special to The Talking Machine World.)

Boston, Mass., Aug. 14, 1909.

Generally speaking, the talking machine business in Boston may be said to be unusually and unexpectedly good this summer, for money is easier, more people are taking vacations than was the case last year, and the canoeing on the Charles, in which the talking machines play an important factor, is much larger than ever before. As a result there is a steady demand for the newer records and the medium priced machines. The increase in the number of summer bungalows of the wealthy and the near-wealthy accounts for the increase in the sales of the high priced machines, in the sale of which the double-disc records have almost proven a revolutionary factor.

Interest in grand opera records, both instrumental and vocal, still continues and the announcement of the forthcoming opening of Boston's own grand opera company's season has stimulated the demand. The Columbia Phonograph Co. have for some time made a window feature of grand opera records and photographs of the leading artists. The Oliver Ditson Co. and the Eastern Talking Machine Co. are "playing up" the Melba and Caruso records to a great extent, and there is an enormous sale for these records here.

The Ditson house, which deals in Victors exclusively, has been doing some unusual advertising and the effect has been evident in the increased trade. This firm has the advantage of very quiet surroundings and an entire floor for its talking machine department so that every good quality in a record or a machine may be brought out. Manager Winkelman has made a special feature this season of the Victrola and as a result the cottages and bungalows of the wealthy all along the North Shore contain many of these instruments. The sale of grand opera records there is big.

J. B. Cook, the piano man, is one of the latest additions to the list of Victor dealers, and he makes a feature of them in the Colonial Theater building.

Harry Rosen has recently opened a new store on School street here for the sale of Victor and Edison goods. Although on the second floor he succeeds in making a great window display and attracts attention by playing a big horn through the open window. Mr. Rosen says that business has been excellent this summer.

Although the meetings of the Talking Machine Club at the Eastern Talking Machine Co.'s store have been adjourned until fall, there is much interest among the men this summer to see who shall make the largest number of retail sales between July 1 and Sept. 1. It is planned to have a very interesting series of meetings this fall and the scope of the discussions will be very broad. Wholesale Manager Chamberlain has been enjoying a vacation. The new style Victrola has become very popular here and there are indications that this style will constitute the larger portion of the total sales made. One interesting feature at this store is the fact that every old customer comments very favorably upon the recent change in the arrangement of the lower floor. The business has been much simplified and the sales floor looks much better. Manager Taft is very confident that the early fall will see a big boom in the talking machine business.

At the Columbia Phonograph Co. Manager Erisman spoke very confidently this week about the general condition of trade. This firm has but recently moved into its new store, which is much better arranged and more convenient for buyer and seller. The advantage gained by better show windows is also appreciated. Business here has increased greatly over that at the other store on account of the better location and greater convenience.

Advantage was taken recently by the talking machine department at the C. E. Osgood Co. to make another attractive window display of talking machine goods. This firm has an enormous, long series of windows fronting Washington street and the different departments alternate in using it. The talking machine display of Victors was unusually attractive. Business is reported as excellent. Mr. Osgood, the head of the company, has expressed himself many times as greatly pleased with the department's progress and it is planned to enlarge it considerably before the end of the year.

At Remick's Song Store on Washington street a new line of Victors has been put in, and the sheet music works in very well with it.

The Iver Johnson Co., despite the fact that it has just moved into a fine new building, is feeling that a little more room would be enjoyable, and the talking machine department is now trying to arrange things so that it can secure an additional lot of floor space. This firm makes a special bid for the sporting goods trade and a large sale was reported this summer of talking machines for campers and canoeists.

Manager Howe, at the Houghton & Dutton store, is praying for Harry Lauder to return to America, for he says the Scotch comedian was a great boomer for the talking machine trade. This firm makes a specialty of the so-called "popular" records and is working up a very excellent Victor trade.

NATIONAL PHONOGRAPH CO. BRING SUIT.

On August 5 the New Jersey Patents Co., Orange, N. J., instituted a suit for its licensee, the National Phonograph Co., against the Columbia Phonograph Co., General, New York, charging infringement of patent No. 744266, covering phonograph recorders and reproducers. The invention is that of Peter Weber, superintendent of the National Phonograph Co.'s plant, and was issued November 19, 1903. The subpœna is returnable in the Circuit Court of the United States, Southern District of New York, on September 7. Louis Hicks is counsel for the complainants.

A NEW UDELL CABINET.

The Udell Works of Indianapolis, Ind., have just put on the market a new cabinet which will match the new Victrola No. 12. This cabinet, the Udell people have had designed especially to match the Victrola No. 12. In every way it will be a cabinet that dealers can handle to their advantage and profit. The cabinet is to be mahogany, and, of course, can be shipped either dull or polished. The interior arrangement will be very fine, and the capacity of the cabinet will be 180 twelve-inch disc records. This will be the capacity, figuring that the records will be kept in the cabinet in envelopes. Not only will the style and finish be all that could be asked for in a cabinet of this kind, but the price is very attractive. This cabinet is colonial in design, there is a needle box on the door for the points, and each cabinet will be equipped with a sliding shelf on which to conveniently handle a record. On the door of each cabinet there will be a card on which the owner can list his records, and as the compartments in which the records are to be kept, are also numbered, it will be possible to find a record instantly. The Udell people have ready a new catalogue showing their complete line of cabinets for disc and cylinder records, and also showing this new cabinet.

COLUMBIA CO.'S PHILADELPHIA STORE.

(Special to The Talking Machine World.)

Philadelphia, Pa., August 8, 1909.

The store of the Columbia Phonograph Co., at 1109 Chestnut street, which was damaged by fire several months ago, is now being handsomely refitted and redecorated and will be reopened shortly, when the company will move back from their present temporary quarters. The interior furnishings and arrangements are similar to that of the company's Boston establishment, which is considered one of the best appointed in the country. The wholesale stock carried by the Philadelphia establishment supplies the dealers in the entire eastern part of the State. H. A. Yerkes, manager of the wholesale department at headquarters, was here to-day looking over the situation. He left for New Haven, Hartford, Waterbury and Bridgeport, Conn., to night, and expects to be back in New York Monday.

WOOD JOINS DITSON FORCES.

On August 2 John J. Wood, for many years with the Regina Co., entered the talking machine department of Chas. H. Ditson & Co., New York, as assistant to Harry L. Hunt, the manager also of the small goods branch of this veteran gilt-edge house, widely known as musical instrument manufacturers and dealers, as well as music publishers. Mr. Wood is a particularly well equipped man for this position, both as an outside and inside salesman, and with a special knowledge of store management besides; and therefore an expansion of this important department of the Ditson Co. along progressive lines would not be a surprise to those who know something of the capabilities of the gentleman. The Ditsons are exclusively Victor dealers in their extensive Boston, New York and Philadelphia establishments. The talking machine departments in the several places are magnificently equipped in every way with facilities for handling and storing stock and the demonstration of goods.

SNELLENBERG HAS COLUMBIA LINE.

N. Snellenburg & Co., Philadelphia, Pa., whose talking machine department is under the experienced and skilful management of Newton Bachrach, has added the Columbia line, placing a large initial order with the Columbia Phonograph Co., General. B. Feinberg, the company's special representative, negotiated the deal.

On Aug. 9 B Feinberg, special representative of the wholesale department of the Columbia Phonograph Co., General, left New York for a trip through the Middle West. He will be gone a month.

Good Opening for Solicitor.

WANTED—Energetic man. Good opening for A1 phonograph solicitor. Fine territory; easy to cover. Address "Opportunity," care Talking Machine World, 1 Madison avenue, New York, N. Y.

REPAIR MAN WANTED.

WANTED—A repair man; must be familiar with Victor and Edison machines. Good opening for right man. Give references. Address "Competent," Talking Machine World, 1 Madison avenue, New York.

SALESMEN WANTED.

WANTED—Several first-class salesmen experienced in calling on the talking machine trade to sell a line of high-grade record cabinets; commission basis. Address "Cabinets," care of Talking Machine World, 1 Madison avenue, New York.

MANAGER WANTED.

WANTED—Experienced man as manager talking machine department, large western piano house. Address "500," care of Talking Machine World, 1 Madison avenue, New York.

FOR SALE.

Elegant Corner Store, finest location downtown (New York) for retailing Italian Grand Opera Records among refined Italian people. Good trade. Established 3 years. Chance for good house who want a first-class branch store. Must sacrifice. Compelled to leave city. Address G, CROCCHIOLO, 141 Second Ave., New York City.

"The House Beautiful"

¶ A man once said to the writer, *"Before you write one word in favor of your goods, think of the other fellow's views."*

¶ Good advice, that. Pity we can't all be reminded of it once a week. But you, Mr. Dealer, do you think of your customer's home when you sell him a machine? Do you find a place to put it? Do you suggest a way to keep his records from being strewn about—from being broken up and scratched?

¶ Do you plan his Talking Machine future so that he will continue an interested and enthusiastic buyer?

¶ This Cabinet game is worth while. The "Cabinet that Matches" is the one thing necessary to make a complete Talking Machine outfit. It is a distinctive piece of furniture. It has a place in the parlor.

You may have one or the whole line on approval.

"Mark." We have Victrola XII's and XVI's in abundance.

A postal card to us will bring you information and plans to aid you in selling Victrolas.

July Wholesale Trade Very Satisfactory—Lull Looked for This Month—Good Demand for New Victrola 12—G. M. Nisbett's Mexican Experience—E. C. Plume's Vacation—Edison Phonographs in Canada—German Talking Machine Men in Town—Daynes-Beebe Music Co., Salt Lake City, Appointed Columbia Jobbers—A New Cylinder Record Cabinet—Some Recent Trade Visitors—High-Class Advertising.

(Special to The Talking Machine World.)

Chicago, Ill., August 7, 1909.

Talking machine jobbers say that trade in July more than held its own with a year ago. Prospects are for a quiet August, but orders already in hand for September shipment furnish a foundation for a belief in an unusually strong fall trade. All conditions are favorable. Travelers returning from the West say the wheat in nearly all sections is in excellent condition as the yield has been good and the berry large and the standing wheat in fine condition. Oats and barley also make a fine showing.

The new Victrola 12, which was described fully in last month's World, is selling nicely and the demand is beyond expectations.

Nisbett in Role of Toreador

It is always pleasing to record notable instances of heroism and particularly if the heroes happen to be members of the trade in which the recorder is interested. The many friends of George M. Nisbett know him to be a fine fellow and an excellent phonograph man, but few perhaps realize that he has in him the stuff of which Kosciuskos, Admiral Deweys and Grace Darlings are made. Read the following from the Mexican Herald, published in the City of Mexico, issue of July 15, and judge for yourself.

"A party of ladies, in charge of G. M. Nisbett, general manager of the Mexican National Phonograph Co., had a thrilling experience at Cuernevaca a couple of days ago. The party consisted of Mrs. G. M. Nisbett, Miss Margaret McCarty, Miss Kathleen McCarty and Miss Donnelley.

"While descending the steep trail to the famous falls of San Antonio the party was met by half a dozen bulls which were coming up the trail after having been to water. At sight of the bulls, even before the animals made the least demonstration, the ladies scattered in all directions, leaving Mr. Nisbett to dispute the path single-handed with the bulls.

"The animals had by this time become frightened at the antics of the ladies and began to toss their heads in ominous fashion, but Mr. Nisbett proved a valiant fighter and with the aid of a handful of rocks succeeded in forcing the animals from the trail. But they rushed wildly to and fro and several of the ladies had narrow escapes from being gored by the animals.

"After the bulls had finally been forced from the path, Mr. Nisbett began his search for the fair members of his party, and it took him considerable time to round them all up and lead them in safety up the steep hill."

Plume Family Take the Plume.

E. C. Plume, western wholesale manager of the Columbia Phonograph Co., is, as usual, spending his summer vacation of a fortnight's duration, at Penelwood Farm, Berriem Springs, Mich. He is accompanied by the whole blessed family. It's a great combination. When Plume returns in the evening, after a hard day's combined work and pleasure shooting alligators, Mrs. Plume, as a prelude to supper, brews him, with her own fair hands, a cup of the finest coffee that mortal ever quaffed. Plume, Jr., besides being an expert golfist, has cultivated things domestic to the extent that he can bake the most delicious rolls which serve to make the coffee kaffee klatsch a most distinguished success.

Bagshaws Visiting the Trade.

The Bagshaw Brothers, of Lowell, Mass., and of talking machine needle fame, were here recently on one of their joint trips, which always proves most welcome to their many friends in the trade.

Opportunities in Canada.

"System," the business magazine published in this city, has an article on winning trade in the new Canada, which describes the opportunities for United States manufacturers in the great Northwest territory of the country to our North. It describes the methods used by different companies in their invasion of Canada. Some establish a subsidiary company, with a branch factory on Canadian soil. Others do business direct with Canadian concerns and while framing their advertising to appeal to Canadians make no effort to identify themselves as Dominion industries. The latter is the case with the National Phonograph Co., and "System" reproduces a couple of Edison advertisements, in which the address is given as 124 Lakeside avenue, Orange, N. J. One of the these advertisements bears a picture of a Highland laddie with his bagpipes, and among other things says this:

Carlisle Said

"That music was the least disagreeable noise he knew. Few people will agree with Carlisle. Some people like noisy music.

"Did you ever hear the skirl of the bagpipes, for instance? You can hear it perfectly on an Edison phonograph. The point is to have an Edison phonograph, a great household entertainer, which brings into the home just the sort of music or other entertainment that you like."

Then the consumer is told that there is a dealer near him who will take pleasure in demonstrating the phonograph, etc.

Visitors from Germany.

Chicago has had a couple of very interesting visitors the past week. They were Otto Heinemann, director of the Carl Lindstrom corporation of Berlin, one of the largest talking machine manufacturers in the world, and Paul Kretschmer, the manager, and who a few months ago opened an office in New York City for the purpose of showing their goods to exporters with a view of inducing them to buy the German machines for export to South America, Mexico, etc. Mr. Heinemann, who is accompanied by his wife, arrived recently in New York and with Mr. Kretschmer, is making a tour of the country, studying the conditions of the American market. He is a courteous gentleman of aristocratic appearance and while speaking little English, speaks that little well. For an extended conversation he uses Mr. Kretschmer as an interpreter.

An Interesting Chat.

"To my mind the talking machine industry, with all of its marvelous development, is still little more than in its infancy," said Mr. Kretschmer in a talk with The World. "The taste for music is constantly growing and in no manner can people satisfy this desire in such a varied manner or at such small cost as through the talking machine.

"As regards conditions in the United States a few leading concerns by their commendable activity and remarkable cleverness have succeeded in creating a great market. It seems to me that without infringing on any of their devices possessing intrinsic value that it is possible for foreign manufacturers to do business in this country as they do in other parts of the world. Our company, for instance, would like a fair share of the American business just as the American companies are getting their share in other countries. For instance—The Gramophone companies in Europe control practically the same patents and trade marks as the Victor Co. You are, of course, aware that the German Gramophone Co. has opened retail stores in such cities as have no distributors under their own name. These stores are all handling our machines in order to meet the demand for a cheaper machine than the Gramophone and thus enable them to increase their sale of records. I think that there is a market for a cheaper machine in this country and it would not interfere, in my opinion, with existing lines but would increase the business by reaching different classes of trade, who would prove good record buyers in the aggregate."

Whatever the American view may be on the subject treated in the above interview the opinions quoted are interesting as showing the attitude of the other fellow. Mr. and Mrs. Heine-

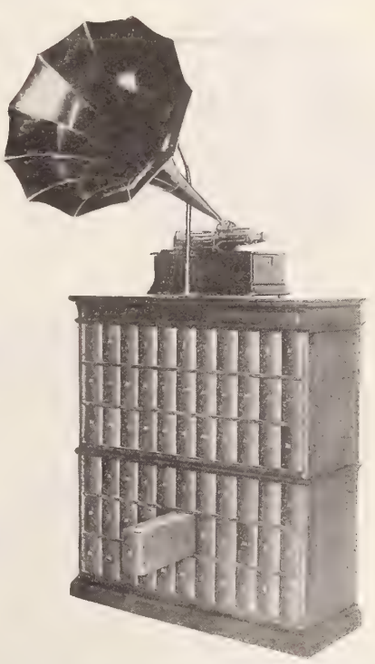
SECTIONAL CYLINDER AND DISC RECORD CABINETS

Resembles a Handsome Sectional Book - Case.

The sections for cylinder records are equipped with thirty three compartments, each compartment holding four cylinder records, each section having a total capacity of 132 cylinder records.

The sections for disc records are equipped with forty compartments, each compartment being subdivided for three disc records, each section having a total capacity of 120 records.

The record filing capacity in these cabinets is unlimited.



Write for descriptive catalogue and dealers' special prices.

COMPARTMENT FILING CABINET CO.

426-28-30 TWENTY-NINTH STREET, CHICAGO, ILL.

mann and Mr. Kretschmer left on Thursday evening for the east; intending to spend a day or two viewing the glories of Niagara Falls.

Discusses Victor Expansion.

Mr. Dennison, mechanical engineer of the Victor Co., was in Chicago the latter part of last month. He was very enthusiastic regarding the rapid development of the talking machine industry and of big things to come. He referred to the large cabinet facilities of his company and also to the immense new addition to the machine shop now under construction. Mr. Dennison, while a very conservative man and not exactly a news source from the trade paper point of view, possesses a most interesting personality and his visits here are eagerly looked for.

Important Columbia Deal.

W. C. Fuhri, district manager of the Columbia Phonograph Co., has just closed a deal whereby the Daynes-Beebe Music Co., of Salt Lake City, Utah, become the exclusive jobbing representatives for Utah and a portion of Nevada. The initial order is one of ample dimensions. The deal involves the discontinuance of the branch store formerly conducted in Salt Lake City by the Columbia Co. George F. Standke, the former manager of the Salt Lake City office, has been transferred to an important position with the Kansas City branch. The Daynes-Beebe Co. have fitted up fine retail quarters occupying large space on the main floor. W. J. Clawson, who has the management of the department, is not only a good business man but an accomplished musician and will go after the high grade trade.

Cylinder Cabinet Now Ready.

The Compartment Cabinet Filing Co., of this city, in addition to their disc record cabinet have now ready for the market a cylinder cabinet on the same general lines. There are 33 compartments in a section each having a capacity of four cylinder records, and thus each section accommodates 132 records. The sections are 33 inches wide, 17 inches high, and 13 inches deep. The compartments have rounded, rigid outer-ends bound in leatherette to resemble books. The fronts are tinted in gold bronze and are placed in the section in numerical order. The whole makes an exceedingly attractive cabinet and should meet with great favor with the trade. The company are booking many orders.

Arthur D. Geissler Off to Pacific Coast.

Arthur D. Giessler, general manager of the Talking Machine Co., left on Wednesday of this week, accompanied by his wife, for a trip to San Francisco and Los Angeles to visit relatives and friends.

Chandler Entertains Renner.

A. V. Chandler, Illinois representative of the National Phonograph Co., had the pleasure of entertaining Mr. Renner, one of the company's far western men, whose particular territory is Colorado, for a couple of weeks. The twain left here Saturday for Orange, N. J., for the annual round-up of the travelers and incidentally to get in touch with C. E. Goodwin, the National's new manager of traveling salesmen. Gill, of California, Lyons and others of the Edison force, stopped over in Chicago en route to Orange.

Rudolf Wurlitzer, Jr., a Visitor.

Rudolph Wurlitzer, Jr., of the Rudolph Wurlitzer Co., was in Chicago this week on a visit to their local branch and incidentally inspected the alterations and improvements being made to the company's local store and pronounced them good.

J. C. Roush Visiting Western Points.

George Ornstein, manager of traveling salesmen of the Victor Co., was in Chicago this week on one of his ever welcome journeys among the jobbers. He was accompanied by J. C. Roush, of the Standard Talking Machine Co., of Pittsburg, and who was honored by the position of secretary of the National Talking Machine Jobbers' Association at their recent convention at Atlantic City. The Standard Co. are about to move into a fine new building and Mr. Roush is accompanying Mr. Ornstein on his trip in order to visit some of the up-to-date retail and wholesale establishments and to get pointers to aid him regarding the arrangement of the store, fixtures, stock keeping methods, etc. He obtained many valuable hints in the Windy City.

F. H. Harnden has been appointed private secretary to Arthur D. Geissler, general manager of the Talking Machine Co.

Pertinent Trade Sermon.

"As ye sow so shall ye reap," is the text of a very pertinent trade sermon preached by Lyon & Healy in their page in this issue of The World. It gives some valuable points on preparation for the fall trade and will no doubt be read and harkened unto by the brethren and also by such of the sistern as help their hubbies "in the store."

Baer's Hot Weather Trip.

C. F. Baer, local manager of the Columbia Phonograph Co., is on a brief hot weather trip among some of the dealers in the territory covered by the Chicago office.

An Artistic Announcement.

The Talking Machine Co.'s advertisements in The World because of their pertinency and artistic beauty, have attracted wide attention. The page in this issue is right up to the standard of its predecessors. It shows a Victor outfit with the "Cabinet that Matches," in the environment for which it is intended. Dealers who are in a position to supply these outfits would do well to cut out the page, frame it and use it in connection with a window display. It would unquestionably prove a good missionary.

H. H. Brown a Visitor.

H. H. Brown, whom Chicagoans will remember as the local representative of the Talkaphone Co., some years ago, is now a prosperous talking machine dealer of Toledo, O. He was in the city a couple of weeks ago and placed a good round order for machines and records.

A HORN OF CUT GLASS.

Charles P. Schuller has introduced a distinct novelty to the trade in the form of a cut glass horn for talking machines, which is to be sold at $15 wholesale. The inventor claims that the horn, outside of being ornamental, has specific acoustic advantages, stating that it gives a rich and mellow volume of tone that is both surprising and pleasing. The horn is of regulation size, 15 inches long and 14 inches across, and fitted with a rim to adjust to the record arm.

Arthur J. O'Neill, president of the Aretino Co., Chicago, is the originator of a plan for the distribution of talking machines throughout the United States, which has been the means of supplying the needs of country people, as well as many dwellers in large cities with practical machines of decided musical merit. Through this plan more than 250,000 machines have been placed in homes and have created a permanent market for records.

Mr. O'Neill is a decided optimist regarding the talking machine industry and believes that it is on the eve of the greatest prosperity that was ever known. Following out this conviction of its president the Aretino Co. are seriously considering the carrying of a general jobbing line besides working along the lines of their premium proposition. From evidence already piling up in their office they anticipate that their business this fall will prove a record-breaker.

"As Ye Sow, So Shall Ye Reap"

The basis of every farmer's crop is the *seed.*

Upon the manner in which that seed is sown and the care with which it is later cultivated depends the success or failure of the harvest.

The Talking Machine dealer who fails to sow the seed of a profitable business will likewise fail to reap the profits which might easily have been his.

Plant a dozen Victor Talking Machines or Edison Phonographs in your local field; cultivate these purchasers with monthly circulars, and you are bound to reap a handsome harvest in the way of *record sales.*

The sale of records to Victor and Edison owners is an endless chain in the harvesting machine. It is up to you to apply the necessary oil in the way of circularization.

Then you simply stand by and reap the harvest—the result of a little effort once a month on your part, and of the care and attention given your orders on *our* part.

Our New Talking Machine proposition is interesting.

Dealers Well Pleased With Improvement in Business—Look for Old-Time Prosperity—Vacations Now Under Way—Items of News.

(Special to The Talking Machine World.)

Baltimore, Md., Aug. 5, 1909.

The talking machine dealers of this city are a brighter lot just now than what they were at the same time last year. At that time business was at a complete standstill and the prospects were extremely gloomy. But now the reports come from all sections that business for July has been fairly brisk, while August has started in as though the long-looked-for brace will be on hand at the time anticipated—during the very early fall. Wholesalers and retailers alike are of the opinion that they hit the right dope when they predicted that business would get back to its old-time form of the days of prosperity, and they are satisfied that they were not mistaken in making early arrangements and having their forces finish up their vacations by the middle of August. The dealers have about completed these preparations, with the exceptions of the last vacations, and are ready to tackle all the business that comes their way.

Manager M. E. Lyle, of the local branch of the Columbia Phonograph Co., says that the summer business has been quite satisfactory in both the wholesale and retail lines, and that the prospects for the territory that the local store covers are very rosy. The reduction sale of the wax cylinder records continues to be popular at the Columbia store, while the demand for the Columbia indestructible cylinders proves that they are becoming more and more popular every day. Mr. Lyle expects to receive the new hornless cabinet machines at the local branch shortly. These will be in the form of a library table and take up less room than the other styles of talking machines. He believes that the demand for the latest line of instruments will be heavy, if the way that Baltimoreans have taken hold of the newest things in the talking machine line heretofore counts for anything. Mr. Lyle will spend the remainder of his vacation, which starts within a week or two, at his home in Hackensack, N. J.

Joseph A. Grottendick, manager of E. A. Droop & Sons Co., the Victor and Edison representatives here, reports that August business has started in well, and that fall prospects are encouraging. He will leave for the mountains on August 14 for a two weeks' vacation.

Robert Ansell, of the sales force of Cohen & Hughes, who handle the Victor line in this city, is away on a two weeks' holiday.

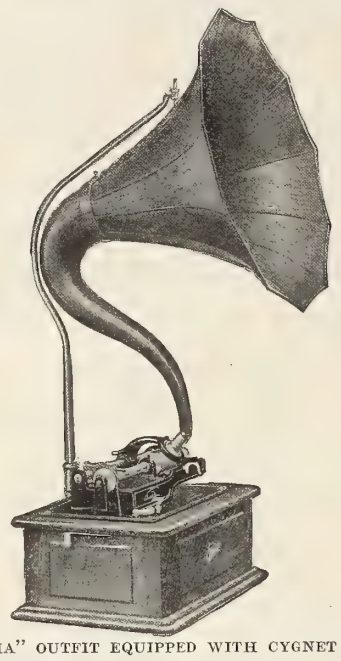
Albert Bowden, of the talking machine department of Sanders & Stayman, states that July and early August sales are brisk, and that he has excellent prospects for the fall. The high-priced Victors and Columbias have been in the greatest demand.

THE NEW EDISON CYGNET HORN

Will be Placed on Sale September 1st—The Special Acoustic Merits of This Creation—Saves Space Also on Front of Machine.

On September 1 the National Phonograph Co., Orange, N. J., will place on sale through their dealers the new Edison Cygnet horn, herewith illustrated. Samples were placed with jobbers at the usual advance time and orders from all parts of the country assure its success. As the company say:

"The necessity of a new style horn has long been apparent. Its introduction to the trade was a matter of time depending upon the success of our efforts to devise a model whose attractiveness of style would not be secured at the expense of volume of sound, clarity of tone or distinctness of enunciation.



"IDELIA" OUTFIT EQUIPPED WITH CYGNET HORN.

"The only objection that was raised against the old style horn was the fact that because of its shape it occupied considerable space. In this respect the new horn will have a distinct advantage, the space in front of the machine being free and clear. This, together with the fact that it is possible to point it in almost any direction, assuring convenience of position, are its chief recommendations.

"Hereafter all 'Idelia' phonographs will be equipped with mahogany Cygnet horns without additional cost. It is the company's intention to continue to supply their regular horn with all of the present types of machines."

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., August 9, 1909.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

JULY 21.

Berlin, 334 pkgs., $2,575; Bombay, 7 pkgs., $119; Buenos Ayres, 13 pkgs., $2,963; 490 pkgs., $6,594; Callao, 5 pkgs., $103; Cartagena, 2 pkgs., $182; Colon, 4 pkgs., $108; Curacao, 3 pkgs., $170; Guayaquil, 5 pkgs., $392; Havana, 25 pkgs., $919; 4 pkgs., $364; 2 pkgs., $240; Havre, 3 pkgs., $156; Kingston, 3 pkgs., $201; La Guayra, 5 pkgs., $177; La Libertad, 3 pkgs., $934; London, 8 pkgs., $406; 2 pkgs., $175; Mallendo, 8 pkgs., $203; Melbourne, 7 pkgs., $371; Mazatlin, 31 pkgs., $1,073; Para, 7 pkgs., $716; Rio de Janeiro, 1 pkg., $100; Shanghai, 2 pkgs., $168; St. Johns, 10 pkgs., $203; Sydney, 26 pkgs., $848.

JULY 28.

Berlin, 10 pkgs., $247; 42 pkgs., $1,025; Brussels, 127 pkgs., $886; Buenos Ayres, 52 pkgs., $4,023; Cape Town, 3 pkgs., $452; Demerara, 4 pkgs., $437; Havana, 17 pkgs., $429; 34 pkgs., $377; Havre, 3 pkgs., $155; Limon, 258 pkgs., $1,568; London, 38 pkgs., $1,336; 5 pkgs., $625; 162 pkgs., $3,844; Melbourne, 1,383 pkgs., $22,459; Punta Arenas 3 pkgs., $213; Rio de Janeiro, 3 pkgs., $117; Santiago, 2 pkgs., $150.

AUGUST 4.

Antwerp, 2 pkgs., $111; Amapala, 3 pkgs., $154; Buenos Ayres, 61 pkgs., $2,675; Callao, 10 pkgs., $195; 11 pkgs., $128; Cienfuegos, 24 pkgs., $992; Guayaquil, 4 pkgs., $148, Havana, 3 pkgs., $130; 8 pkgs., $600; Kingston, 36 pkgs., $2,243; London, 7 pkgs., $649; 65 pkgs., $1,748; Mazaltan, 3 pkgs., $115; Savanilla, 46 pkgs., $2,025; Valparaiso, 10 pkgs., $290; Vera Cruz, 104 pkgs.,

DISC RECORD AUTOMATIC STOP.

Every dealer knows that a device for stopping records automatically when through playing is desired by every owner of a machine. The Chambers Automatic Stop Co., 622 Tribune building, New York, have introduced to the trade an appliance that stops the revolution of the record automatically on all disc machines. It is simple in construction and sure and accurate, with nothing to get out of order. They are proving good sellers.

A MESSAGE OF OPTIMISM.

As an evidence of great faith in the future of the talking machine industry, J. Newcomb Blackman, president of the Blackman Talking Machine Co., of New York City, sends a message to Edison and Victor dealers over his signature, which will be well worth their consideration. This will be found in their advertisement on page 15 of this issue.

ACTIVITY IN CINCINNATI.

July Makes Fine Showing—Leading Concerns Getting Back to Old-Time Conditions—Victrolas Being Pushed by Wurlitzer in Various Ways With Success.

(Special to The Talking Machine World.)

Cincinnati, O., Aug. 7, 1909.

The dealers in talking machines and records report that the month of July showed a satisfactory volume of business for a summer month and was marked by indications that give promise of a better condition of trade with the coming of fall. The fact that more of the working people are getting back on a sound financial basis is having much to do with the dealers' confidence in future business. Few are still out of employment. Cash receipts are showing a better form than usual, and the amount of local trade being done shows that there is more confidence in the public's view of the future. Local business continues to show material improvement. This month will hold its own, with the outlook for September very encouraging.

The Columbia Phonograph Co. continued their sale of wax X P cylinder records at 15 cents throughout the past month, with fine results. A large sign above the store's front door proves a good eye-catcher. Manager Nichols said of July trade: "We are very much pleased with the way July business showed improvement. The month brought out a larger volume of local business than we have had for some time, the out-of-town business heretofore having been relied upon to make up the showing that ordinarily would have been made with city business. The demand for machines and records last month was equally satisfactory. I am confident that this month will see a fine lot of business put on record, and that next month will surely see a long step toward a return of the splendid times we enjoyed two years ago. The general condition of the working people, which is showing splendid improvement right along, is a sure sign of better trade. The higher class of business has shown up well, but the smaller buyer is a strong factor in trade when he enjoys a well-filled coffer." Manager Nichol leaves for his vacation next week at Atlantic City for two weeks. In the fall he contemplates making a few changes in the arrangement of his store room for the better display of the machines. Small parlors will be provided for the use of customers who visit the store for the purpose of hearing the machines.

The Milner Musical Co. sent out a letter the last of July calling attention to the August list of Victor records. In the letter Manager Strief called attention to the fact that he had tried out certain of the records in this booklet, and that he had checked them in red ink. These he recommended to the purchaser as being very good—the best contained in the new August list. The letter calls attention to the five parlors of the store that are used for demonstration purposes, kept cool with electric fans, and presided over by lady attendants. These letters were sent out to a large mailing list, and with very satisfactory results thus far. The new Victrola XII for $125 was a feature of the July trade. Records had a good call. Cash business showed improvement, and collections are getting better every week. This store will open a booth at the county fair to be held at Coney Island this month between the 13th and 22d. It will contain a fine display of all the goods handled by this store. Mr. Kenney will have charge of this display. The outlook for this month is considered good.

The month of July was a very satisfactory one with the R. Wurlitzer Co. High-grade talking machines and Victrolas had a very satisfactory sale and a number of expensive outfits were delivered. The Victrola No. 12, which went on sale on July 20, was a record-breaker in Cincinnati. Very few were delivered in comparison with the large number that were sold for September delivery. The reason of this is obvious. Every family in Cincinnati that can afford it has gone to the north or to the seashore, and only the business men remain in town. These are the people that the announcement of the new Victrola has brought into the talking machine stores, but they do not want the goods delivered until September.

The new Victrola No. 12 has filled the purpose for which it was designed—namely, to stimulate the demand for talking machines of a high grade.

The Rudolph Wurlitzer Co. have been making very attractive window displays of the new Victrola. Many comments have been made on these artistic displays, and they have done much to attract the public to the store. This concern is now waiting on practically all of their talking machine trade on the main floor. This has been very much appreciated by the Red Seal customers, who dislike to buy goods in the basement department.

The basement has been handsomely fitted up in wood panel work and handsome decorations, to be used as a reserve record sale department and a machine display room. One portion will be arranged as a little auditorium, in which continuous concerts will be given through the main hours of the day.

The Rudolph Wurlitzer Co. are now engaged in an active campaign, which includes giving concerts at schools and churches, in which the Victrola is always used in preference to the Auxetophone. The reason for this preference is obvious. The Auxetophone is an instrument which is out of the reach of the average club or school, while the Victrola is a moderate-priced instrument, and appeals also to those people who want an instrument for the home. From present indications the fall trade will be a great improvement over that of last year, and may possibly exceed the retail business of any past year in Cincinnati.

WIN PRIZES IN DRUM CORPS CONTEST.

The American Graphophone Drum Corps, of Bridgeport, Conn., the members being employes of the American Graphophone Co., won three prizes in the contest conducted during the annual convention of the New York Drum Corps Association held in Poughkeepsie last month.

A FIRESIDE MACHINE equipped with a

LIN-O-TONE HORN

MAKES A PERFECT COMBINATION

THE material from which the Lin-O-Tone is made, pure linen, gives better results acoustically than any other. The tone is round and full and marvellously natural. The Lin-O-Tone pleases not only the ear, but the eye as well. The horns are finished in either red, black or blue, gold striped and furnished with heavily nickeled ferrule. Make up your mind, Mr. Dealer, to sell a Lin-O-Tone with every Fireside and you will please your customer, and incidentally increase your profits.

Length, 21 inches; Width of Bell, 17 inches. Retail Price, $3.00

TRADE NEWS FROM LOS ANGELES.

New Style Machines Help Trade—General Condition of Business Shows Improvement—"Talker" Men Decorate for Elks' Festival—Southern California Dealers Make Cheery Report and Look for Big Fall Trade—The News in Detail.

(Special to The Talking Machine World.)

Los Angeles, Cal., July 28, 1909.

The Elks' grand reunion is now over, after a most successful convention. During the week of festivities practically all business was suspended, although there are many good reports for that period.

Since then, trade has resumed its normal condition, however, and everything is moving rapidly once more. The opening of the sale of the new Edison Fireside, and later the new Victor Victrola XII have somewhat livened up the dealers.

Several of the prominent trade members are enjoying vacations, while many have already returned to duty.

Sherman, Clay & Co. have received their first shipment of new style Victor Victrolas, type XII, which was sold almost as soon as received. Their second shipment of these machines is expected, while a third order has been placed for another consignment.

The late list of Italian Victor records just received are in great demand as there are among them many fine new numbers.

Manager Chas. Ruggles is preparing for a trip to San Francisco, where he will visit his old home and confer with the management of the firm's home office. He seems quite anxious to see how the two cities, Los Angeles and San Francisco, compare as to trade conditions.

Business is good with the Southern California Music Co. in all branches. The new style Edison Fireside has been in great demand, in fact, larger than expected. The Amberol attachment for the Gem Edison has also created interest.

The retail department has received an extra shipment of Victor Victrolas in styles XIV and XII, both of which are in growing demand. Mr. Wayne is enjoying a short stay at the island (Catalina) in company of Mrs. Wayne. Francisco Moreno is back from a vacation trip to Mexico, where he had a very pleasant time.

The Geo. J. Birkel Music Co. have specialized on the new Victor Victrola XII to a very successful extent in newspaper advertising as well as attractive window displays. Mr. A. Graham Cook of the talking machine department expects to take a vacation trip at an early date, when he will visit his old home in Denver, from which he departed several years ago to take his present position.

The Fitzgerald Music Co. have increased their staff of salesmen to handle their Victor department, and are considering the addition of more space to their present quarters. Mr. Andrews will spend a few days at the seaside during the coming month.

The Holmes Music Co. have received a large shipment of Victor double-faced records, which consists mainly of the May supplement. Their department is in splendid shape and business good.

The windows of the Wiley B. Allen Co. attracted much attention during Elks' week, as a result of one of Mr. Clubb's displays, which represented a miniature head of Elks listening to the Victor address of "Hello, Bill!" The Victor dog was sitting off to one side, conversing with a small goat in rather a jealous tone, saying "I wish I was an Elk," while the goat in turn advised him that he "Would have to ride the goat."

News of splendid trade conditions come from San Diego. Edward Borgum of the Southern California Music Co. branch, has visited this city and tells of the great growth of trade in the southern city. During the month much advertising has been done by the leading dealers. A rather novel method was recently adopted during the engagement of "Uncle Josh" (Cal Stewart) at one of the theaters in that city.

Mr. Stewart rendered his services at a special matinee when he related to the audience the manner in which records are made and told some of his latest stories.

The venture proved a great success, being a very interesting subject to owners of talking machines, as well as the general public. No undertaking of this kind has ever been taken before in this section.

Two visitors from Arizona, Robert B. Berryhill from Phoenix, and H. Efker, of the Geo. Fisher Co., Tuscon, have brought news of good trade in the territory. Mr. Berryhill is contemplating an enlargement of his talking machine department for the coming holiday season and has come to look over some of the stores in this city before making his improvements. Mr. Efker is spending his vacation in Los Angeles and meanwhile is surveying conditions in the trade.

T. J. Hammett, the Victor dealer of Redlands, dropped in for a few days. The season for oranges has closed in that section after a very heavy crop, which makes things prosperous in all lines of trade. Geo. L. Snyder, the Edison man at Kern, Cal., is happy with the good business he has done lately. He has sold a number of high-priced phonographs in the past week.

A veteran talking machine man, W. A. Mullen, has called on several of the dealers in this city, and while he is no longer connected with the trade is still enthusiastic over it and its great growth.

Mrs. M. E. Gilbert, who will be remembered in the trade by her very successful demonstrations of Mr. Gilbert's repeating device for the Edison phonograph, is making a visit to Los Angeles.

The performance of "The Merry Widow" at a local theater has increased the demand for talking machine records of its different numbers.

William Roddy, the advance agent for the company, has given his assistance to the dealers in the way of advertising matter and newspaper cuts.

Andrew Hang, who for many years has been one of the foremost talker experts, is making his home in Los Angeles.

The Columbia window, prepared recently by the Southern California Music Co., was much admired by Mr. Dorian. It represented the figure of Columbia (flag, etc.) standing majestically at the side of a choice display of Columbia machines and double discs and proved a strong attraction.

SLEZAK WITH NATIONAL CO.

Famous Tenor Who Will be Heard at the Metropolitan Opera House Next Season to Make Records for the National Phonograph Co.—Important and Valuable Acquisition.

The list of grand opera artists singing for the National Phonograph Co., Orange, N. J., has a notable addition in the recent signing of a contract with Leo Slezak, the famous tenor of the Royal Opera House, Vienna, Austria. He is entitled to take the front rank with the leading tenors of the world, and will be heard during the coming season at the Metropolitan Opera House, New York. When G. Gatti-Casazza, general manager of the Metropolitan Opera Co., contracted with Slezak he and Andreas Dippel, the director, were enthusiastic over the acquisition of the great tenor. They call him a second Tamagno, and stated he has the very highest reputation at Vienna and Budapest, where he has been singing for the last nine years. He has also been heard and received with great acclaim in Berlin, Paris and London.

According to musical authorities Slezak commands vocal powers that are nothing short of astounding, and it is not surprising that at the age of twenty-two he already enjoyed public acceptance as one of the leading Austro-Germanic tenors of the day. He first attained real prominence in Berlin, where he created a great stir in the part of "Lohengrin." This led to his being offered an engagement at the court opera house there, which he filled for several years subsequently. Everywhere he was received with unparalleled enthusiasm, and each town that he visited bore out the verdict of Berlin and paid tribute to him as an operatic star of exceptional brilliance.

LEO SLEZAK, WHO WILL SING FOR THE NATIONAL CO.

Slezak made his first appearance at Covent Garden, London, Eng., in the year 1900, and he was most favorably received by both press and audience. He is now returning to the scene of his former triumphs to appear in some of his favorite parts, and to take the principal rôle in "Tess"—Baron Erlanger's new opera, which met with such conspicuous success in Italy last autumn.

Since 1901 Slezak has practically been permanently attached to the Royal Opera House, Vienna, and he has now become one of the musical institutions of that great city. Austrian music lovers literally worship him, not alone for his great vocal gifts, but also for his many attractive personal qualities, and he plays a prominent part in the social and intellectual life of the capital.

The National Phonograph Co. are to be congratulated not only upon their enterprise, but also for introducing to the American public through the phonograph so eminent an artist as Slazek, whose records promise to be among the best sellers ever placed on the market.

Window displays are divided into three classes—good, bad and indifferent. The first one pays.

CLEVELAND'S BUDGET OF NEWS.

Good Demand for Higher Priced Outfits—Dealers Getting After the Trade of Mechanics—Ross Makes Change—Repair Business Growing—Amberol Records Please—Progress of American Sero-Phonograph Co.—Bailey Co.'s Handsome Department—Other Items of General Interest.

(Special to The Talking Machine World.)

Cleveland, Ohio, August 7, 1909.

July closed a rather quiet month in the talking machine trade, although the aggregate of business was larger and a distinctive feature was the demand for high-priced machines of the various makes. Sales of highest priced records was also the rule. The consensus of opinion of the dealers is in agreement with authorities in business circles generally, that very great activity and prosperity is at hand, and is an opinion from which few dissent. The iron and steel industry, a very large Cleveland interest, is leading the way upward, and it carries with its own growth a swift development of allied industries and forms of traffic. Dealers are renewing acquaintance with mechanics and workmen, who were former good customers and who are again in steady employment, and find themselves enabled to add weekly to their repertoire of records. Increasing activity in the jobbing trade is noted and dealers are anticipating a largely increased business within the next two months.

Charles J. Ross, formerly manager of the Federal Manufacturing Co., who made the Devineau Biophone and Ideal horn, has accepted a position with the W. J. Roberts, Jr., Co.

A large number of talking machines are in daily use at the parks and numerous summer resorts, adding to the pleasure of the thousands of visitors.

The talking machine repair business is becoming more and more an important feature of the trade. Some of the Cleveland dealers make a specialty of repair work and keep in stock a complete supply of parts for the various machines they handle. Results are not only profitable, but afford satisfaction to customers, who are apt to neglect the care of their machines.

It is noticeable that Amberol records are creating an increasing demand for Edison machines, persons who have heretofore not been interested becoming profitable customers. Owners of Edison machines are purchasing the four-minute attachment, with selections of Amberol records, and all express themselves delighted with the improvement.

The talking machine department of Aldrich, Howey & Co. is getting a good share of local business in Columbia goods and the manager is optimistic of the near future.

The American Sero-Phonograph Co., which recently purchased the Gemmill patents covering an automatic multiple record phonograph, are making rapid progress and now expect to have their machines ready for the market for the holiday trade. Experts and dealers from various cities, who have examined this machine, have expressed the opinion that the invention will create a new business field, not only for the sale of the machine itself, but will give a marked impetus to the demand for records. A number of prominent financiers of Cleveland have become interested in the new company.

Expressing himself optimistically as to the future, Irving H. Buescher, of Buescher & Sons, said trade had been fairly good during the past month, having made sales of a number of the high grade machines, with an excellent and increasing demand for Amberol, Red Seal and other records.

Phil Dorn, manager of the talking machine department of Collister & Sayle is away on his vacation.

At the May Co.'s Mr. Tinker, the manager, said trade had been fairly good during the past month. We sold quite a number of machines, including several Victrolas, and have a number of prospective sales of Victrola XII. Our record sales are fine. Business is improving."

The talking machine department in the new Bailey Co.'s store has been finished up in artistic style. The space has been divided into several sound-proof rooms. First, are two rooms, one for the manager of the talking machine, and the other of the piano department; adjoining and connected, is a Victor and an Edison room, then follow a series of six demonstration rooms, in the rear of each is left an opening, with a shelf of suitable height to hold the machine. Running the entire length, in the rear of the rooms, is a wide space containing shelving and fixtures for records, and where the operator gives demonstrations. Mr. Friedlander said business was fair in both machines and records, and with their improved facilities expects to largely increase trade.

The jobbing trade is very good, said Mr. Lowell, of the Eclipse Music Co. July, he stated, showed a substantial increase in the volume of business, coming from dealers widely scattered, and indicating a general impetus to the talking machine trade.

H. E. Jones, manager of the Dictaphone Co., resigned July 11, accepting a position in another line of trade, and G. J. Probeck, of the Geo. J. Probeck Co., has been appointed district manager in his place.

The W. J. Roberts, Jr., Co. are doing a very good business according to Audley V. Biesinger, manager.

The Brown Bros. report fairly good sales of both Columbia machines and records.

Business was said to be just fair at Robbins & Co.'s, The Arcade. "Conditions," said Mr. Robbins, "are still unsettled and trade is fluctuating.

Mr. Denslow, manager of the Talking Machine Store, said: "We are selling machines right along, Victrolas and the higher grade ones. I have a number of prospects and the Victrola XII is going so well—it commands the admiration of all who hear it. Our record sales are good and demand is increasing, especially for Red Seals and Amberols."

H. E. McMillin reports sales of several Victrolas, and the higher priced machines in July, but that business is quiet at present.

Trade in the talking machine line was reported excellent at the Goodman Piano Co.'s.

Mr. Goodman is highly pleased with the Melville Clark Apollo Player Piano of 88-note range, one of which he was testing when your representative called. He says the dominant feature of the instrument is the solo-apollo accent, accentuating every note to perfection.

The West Side agency of the Columbia Graphophone Co., under the management of John Reiling, is doing a prosperous business. "Things are moving along very satisfactorily," said Mr. Reiling. "I have a number of good prospects in view and am selling machines right along. Demand for records keeps up and is good, but I am handicapped in not being able to obtain foreign records. I look for a big improvement in business in September."

W. H. Hug, representative of the National Phonograph Co., was a visitor in the city August 1.

SNAPPING GEORGE P. METZGER.

When The World photographer got ready to snap George P. Metzger, advertising manager of the Columbia Phonograph Co., at Atlantic City, last month a gentleman rudely placed his hand in front of Mr. Metzger, so Mr. Metzger does not claim ownership of the hand which is shown on the rail. Mr. Metzger's hands are placed in his own pockets.

GEO. P. METZGER.

CONDUCT FINE QUARTERS.

The department in the Henry Sigel store, in Boston, Mass., designed by B. Feinberg, of the wholesale selling firm of the Columbia Co., occupies two large rooms on the fourth floor of the capacious building as demonstrating booths, and finished in Circassian walnut.

WHOLESALE

EDISON

¶ An order for the smallest part is given the same careful attention as would an order from a dealer for ten machines and a thousand records. During the seven years of jobbing Talking Machines I have never lost a dealer through poor service. My stocks of Edison and Victor machines, records and supplies are second to none in the country. I want the entire business of every dealer in Wisconsin and Northern Michigan, and I'll make good, when I get it. When you can't get service or the goods elsewhere, try me.

I Sell Nothing But Talking Machines

VICTOR

Lawrence McGreal, Milwaukee

SNAPSHOTS AT THE EDISON FACTORY.

Several Interesting Photographs Taken by J. Newcomb Blackman During the Jobbers Visit to the National Phonograph Co.'s Plant at Orange, N. J., After the Convention—Pictures Have Added Value Inasmuch as the Subjects Were Snapped While in Natural Poses.

There is something about snap-shot photographs, whether they catch the subject unawares or in careless poses, that appeals to the average mortal, for they show up the true characteristics of a person much more faithfully than is possible with any carefully made photograph in a studio. J. Newcomb Blackman, of the Blackman Talking Machine Co., New York, is quite an adept at handling the kodak, and at the Atlantic City convention he took a large number of snapshots which greatly pleased his many friends.

PERRY B. WHITSIT AND J. NEWCOMB BLACKMAN; RECENTLY ELECTED PRESIDENT AND THE PRESIDENT OF THE NATIONAL ASSOCIATION OF TALKING MACHINE JOBBERS.

The Blackman camera was also working during the visit of the jobbers to the National Phonograph Co.'s factory in Orange, N. J., after the convention, and we are therefore enabled to present herewith a quintet of views taken on that occasion. It will be noted that a very pretty semi-tropical background was obtained in two of the photos which proved most effective. The building seen in three of the pictures is a portion of the plant of the National Co.

MR. AND MRS. E. F. TAFT OF THE EASTERN TALKING MACHINE CO., BOSTON.

CURFEW FOR TALKING MACHINE.

Long Island Barber's Talker Purchased to Encourage Trade Becomes Too Popular—Children Cry for Haircuts.

Justice of the Peace Wright, of Islip, Long Island, has rung the curfew on the phonograph. Under his ruling it is illegal to operate a talking machine out of doors after 9 o'clock at night and before 8 o'clock in the morning. Justice Wright, however, tempered that ruling with mercy. After he had decreed that Julius Mentz, a village barber, had violated the unwritten silencer law against the talking machine and said he thought sixty days' imprisonment would fit the offense, he suspended sentence. That was not done, however, until Mentz had promised, reluctantly, to keep his talking machine quiet in the night and early morning hours.

F. K. DOLBEER, SALES MANAGER OF THE NATIONAL PHONOGRAPH CO.

Islip is a quiet, conservative village. Mentz is an alert, enterprising barber, who knows the value of advertising. The trouble with him is that he overdid it. He lost sight of the fact that most of the Islipers go to bed at 9 o'clock at night and that few of them are awake at 6 o'clock in the morning. When Mentz purchased his talking machine his purpose was to operate it inside the barber shop to entertain men who were waiting for shaves and children who were waiting for hair-cuts. It became so popular with the children that soon they began crying for haircuts every day.

The machine was such a success that Mentz recently placed it in a window with a trumpet protruding over the sidewalk. From 8 a. m. to 9 p. m. it was all right. The Islipers drank in the ragtime and coon song melodies and dubbed Mentz a public benefactor. Soon he extended the time until well on toward midnight and set the thing going again at 5 or 6 o'clock in the morning. That was too much. Islip rebelled. It must have its sleep. Mentz's insomnia produced must be silenced. Justice of the Peace Wright was appealed to. He does not care much for music anyway. Mentz was haled before him and asked what he meant by disturbing the beauty sleep of the Islipers. His explanation bore no weight and the Justice issued his 9 to 8 decree.

"A RAPKE SANDWICH."—R. E. CALDWELL OF THE BLACKMAN TALKING MACHINE CO.; THE GREAT AND ONLY VICTOR H. AND GEORGE G. BLACKMAN.

ELMIRA ARMS CO. ENLARGE QUARTERS.

(Special to The Talking Machine World.)

Elmira, N. Y., August 9, 1909.

Owing to the steady increase in business at the present time and the fine outlook for fall and winter trade, especially in the line of imported toys, talking machines, sporting goods, and novelties, the Elmira Arms Co. has been compelled to double the capacity of its store at 117 Main street, and the contract will be let this week for the work.

GIVE TALKING MACHINE TO CRUISER.

On July 27 the municipality of Salem, Mass., presented a big talking machine to the United States cruiser "Salem," named after that city. A handsome silver service and the seal of the city in bronze were also among the gifts to the vessel. A great crowd was present, it being "old home week."

Don't think you know it all about displaying talking machines, records and supplies. Many admit that they are just beginning to learn that there is something else still to be learned.

LEEDS & CATLIN CO. SCHEDULES

In Bankruptcy Filed—Liabilities $937,072 and Nominal Assets $2,005,172—Concerted Action by Creditors Advised.

Schedules in bankruptcy of the Leeds & Catlin Co., manufacturers of talking machines and records, at 53 East 11th street, New York, with a factory at Middletown, Conn., show liabilities of $937,072, of which $629,944 are secured, and nominal assets of $2,005,172, consisting of factory property, $375,000, mortgaged to secure an issue of bonds of $500,000; machinery, $823,053; stock, $35,000; accounts, $31,516; notes, $13,805; office furniture, $2,383; patents and copyrights, $710,000 and cash in banks, $14,415, of which $11,000 is a deposit for a surety company in the suit brought against the company by the Victor Talking Machine Co. for infringement of patents, and $3,020 belongs to the Independent Steel and Wire Co., of Pittsburg. Among the creditors are the estate of John Byrne, $409,290, of which $341,000 is secured; Henry Dexter, $81,000, partly secured; New York County National Bank, $76,000, secured; Commercial Trust Co., $9,500, secured; Metropolitan Bank, $10,000, secured; Importers and Traders' Bank, $7,000, secured; I. C. Yowger, $12,500, secured; Independent Steel and Wire Co., Pittsburg, $47,690, and the James O'Neill Co., Chicago, $35,000.

The Independent Steel & Wire Co., of Pittsburg, has suggested concerted action by the unsecured creditors with a view of realizing on the assets and offer the free services of their attorneys, Bilder & Bilder, Newark, N. J., in pressing claims.

NEW MOVING PICTURE ATTACHMENT.

James M. Kirby, a teacher at Frederick, Colo., claims to have invented an attachment to a phonograph, which combines the music of the machine with a moving picture show. The invention projects pictures on the screens as the music is played, thus illustrating the song appropriately. The invention is said to be automatic and can be put on any machine at slight cost.

DISC RECORD STOP

The Chambers Automatic Stop for Disc Records

Stops the Talking Machine instantly as soon as the record is finished. Simple in construction—Perfect in action Fits any record—No springs or strings to get out of order—Absolutely guaranteed.

J. R. LYNCH, Mgr, Room 622, Tribune Bldg., New York

TO AWARD EDISON MEDAL.

Institute to Give It for a Notable Achievement in Electricity.

A gold medal for meritorious achievement in electrical science or electrical engineering will be awarded shortly by the American Institute of Electrical Engineers from the income of a $5,000 fund established for the purpose.

A committee of the institute, of which Charles L. Clarke, of 120 Broadway, is chairman, will award the Edison medal whenever in their judgment a resident of the United States, its dependencies, or the Dominion of Canada makes a sufficiently meritorious achievement in electricity.

The medal has been executed by James Earle Fraser, a New York sculptor, and bears on the obverse a portrait of Thomas A. Edison, with the inscription, "Awarded by the American Institute of Electrical Engineers for Meritorious Achievement in Electricity." On the reverse is depicted, "The Genius of Electricity Crowned by Fame."

The Edison medal was founded on Feb. 11, 1904, through the contribution of a $5,000 fund by friends, associates, and admirers of Mr. Edison on his fifty-seventh birthday, in commemoration of the twenty-fifth anniversary of the successful introduction and commercial development of the incandescent light.

IMPORTANCE OF STORE EQUIPMENT.

A good many men in business to day seem to forget that not only interest, but a profit above interest, should be made on the investment each year, not only the investment in stock, but also in fixtures and equipment. Every part of the business equipment deteriorates in value as it grows older, so a certain amount of its value should be cut off from the inventory each year, and this loss should also be considered when the earnings of the equipment are figured.

Many men in business never take the trouble to figure whether they are making or losing money on their equipment. They find they have a little more money at the close of the year than at the beginning, and do not bother to see where it comes from. They do not know whether the addition of a new machine or other equipment will make or lose them money; if it is a little handier, that is enough.

The right way to figure on the profits on any new equipment contemplated is to make the best possible estimate of its earning capacity, that is, how much it will increase business or cut down expenses, as a labor-saving device which will save the hire of help may be a better investment than one which will increase the volume of business. After finding out about how much more it will make for the business, figure up how much it will cost to operate it, then interest on the investment and an allowance for wear and tear, the same as though you borrowed money to buy with, and deduct these figures from the earning capacity, and it is easy to see whether it will pay to add that particular kind of equipment.

REMICK HAS COLUMBIA LINE.

J. H. Remick & Co., the widely-known sheet music publishers of New York and Detroit, Mich., with retail stores in both of these cities, and also Philadelphia and Baltimore, have become Columbia dealers and are handling the complete line in their various places with gratifying success. This is only one of several recent important arrangements.

The Victor Co. also announce the issuance of their new July record catalog, the regular May list being omitted on account of the double-face records published at that time. This July bulletin is complete and contains all Victor records intended for sale to the domestic trade, both single and double face. Shipments are now being made to distributers, and it is expected that those east of Denver will be in position to supply July record catalogs to dealers.

Be on the safe side

It's a mighty comfortable feeling, whether you're dealing with a bulldog or a talking machine jobber.

Don't risk being "chewed to pieces"—that is, losing trade and customers and money and prestige—by staying with some jobber who hangs on to antiquated business methods and who fails to fill your orders on time.

You certainly can't afford to let your jobber dilly-dally with your order. And what's more, you needn't do it.

We'll ship your order the same day we get it.

Yes, sir! We guarantee this, and every item you send for will be in the shipment, too!

You just ought to see the size of our stock, and the way we handle it. Why, you can call on us for anything in the Victor line *in any quantity*. We've got it right here in our warehouse. We never have to "send to the factory" when a customer orders from us.

We sell Victor goods and accessories *only*, and consequently we don't get mixed like some distributor who handles both disc and cylinder machines.

Put us to the test. Send us an order (large or small) for Victors, Victrolas, Victor Records, record cabinets, horns, fibre cases, needles, repair parts or supplies, and we'll prove to you how fast and accurate we are.

Come, join our "happy family." We want you to be our customer, whether you buy much or little. You'll get perfect service, and *you won't pay a cent more than anywhere else*.

Drop us a postal to-day for our catalogues, and ask specially for our handsome booklet, "The Cabinet That Matches," describing our cabinets that exactly match each style Victor.

LOOKING FAR AHEAD.

Boston Writer Draws Ambitious Picture of the Joys of Ocean Travel When the New German Talking Machine, Utilizing a Heavy Current of Compressed Air, Comes Into General Use—Listening to Operatic Airs Wafted for Leagues Over the Ocean.

Some months ago extended reference was made in these columns to the invention of a loud sounding phonograph by a German—an application of Parsons' utilization of compressed air, as shown in his invention of the Auxetophone, to the phonograph.

Commenting on this invention a writer in the Monitor of Boston, Mass., paints a fanciful picture, forgetting that it is ofttimes a long road between invention and perfection, so that we may have to wait for a realization of the enjoyments pictured. The story is worth printing, however.

"If while crossing the Atlantic one of these days the tourist hears a popular air, or something from one of the operas, or even something symphonic, wafted across the water, by daylight or by moonlight—something melodious, apparently issuing from some point beyond the horizon—he will be better informed than a majority of his fellow passengers if he happen to know where it comes from, what it is, or, at least, how it is produced. Such music may be explained by a recent invention in Germany, and we are indebted to our consul at Chemnitz, Saxony, T. H. Norton, for the facts, so far as they are at present known. Consul Norton is the first, it seems, to recognize the novelty as well as the value of the invention, and he has taken occasion to communicate his knowledge on the subject to the department of state.

"And now, when the informed tourist listens to the popular song or the operatic tenor or soprano solo or the instrumental selection from one of the masters, as it comes floating across the sea, he may know that the sounds are produced by tangential incisions on the surface of a large record cylinder, which is overlaid by another close-fitting cylinder, between which a powerful blast of compressed air is being directed, which sets the cylinders in motion and produces tones as clear as any that ever were evoked from a pipe organ.

"It is well to know this much about the new invention, not only because the knowledge may help some of us to entertain and instruct our fellow passengers during an ocean voyage, but because it will help us to explain another matter. The production of music at sea is by no means the only mission of this clever invention. It is also intended to enable the captains of vessels, scores and even hundreds of miles apart, to carry on a conversation. Of course, the conversation must first be reduced to records, but this can be easily done. It is predicted, indeed, that in a very short time machines capable of carrying the human voice over leagues of ocean will form part of the equipment of every modern seagoing vessel.

"Added to the wireless telegraph, the department store, the daily newspaper, the moving picture show, the roof garden concert, and other features of the modern steamship, the new invention evidently will contribute not only to the safety but also to the pleasure of those who travel on the ocean."

RECEIVER FOR CAMERAPHONE CO.

Judge Hand has appointed Arthur F. Gotthold receiver of bankruptcy for the Cameraphone Co., of 573 Eleventh avenue, New York, with a bond of $5,000, and authorized him to continue business sixty days and continue leases of moving picture machines and films. Most of the leases run through the summer months. The company have also been in the habit of exchanging films, so that films used by a customer in one city during a week would be transferred to another customer in another city for a week, the machines remaining in the possession of the customer. The sheriff was also directed to turn over to the receiver the property levied upon under an attachment for $20,000 on payment of the sheriff's fees. It is expected that the company will be speedily reorganized.

BIG FIRE IN MARIETTA.

The Marietta Phonograph Co.'s Store and Stock Completely Destroyed by Fire.

(Special to The Talking Machine World.)

Marietta, O., July 26, 1909.

The Marietta Phonograph Co., of this city, on Thursday night experienced the second fire within a year, which completely ruined their stock and store equipment.

It was one of the most stubborn blazes that the fire department has had to cope with for some time. The fire started in a small frame building used for the storage of talking machines and supplies, located in the rear of the main structures, and spread so rapidly through the main building that at one time it was thought it could not be got under control. The Marietta Phonograph Co. carried about 35,000 disc records and about the same number of cylinder records, besides a large number of talking machines and sundries. The entire stock of records and machines was destroyed. It was possible to save only a few talking machines.

Mr. McCollum, the proprietor, states that his loss amounts to $15,000, and that he carried $8,000 insurance. The loss on the building, which was rented, is about $3,000.

Last October, when the Marietta Phonograph Co. occupied quarters in the Mueller building, a disastrous fire occurred there, causing a loss of nearly all the stock and damaging the building to a considerable extent.

PROCESS OF EVOLUTION.

The clerk is in direct line to become a salesman. It is the next job above him; he has an option on it. It is merely a matter of "getting busy" with his mind and learning all that can be learned (which is a great deal) about the merchandise under his charge.

TALKING MACHINE SUPPLY COMPANY

MANUFACTURERS OF

High Grade—Made by Skilled Mechanics

REPAIR PARTS

For all Kinds of Phonographs or Talking Machines

How to Preserve Records

This is a matter that we have given a great deal of our time and money. We now have in the most elaborate catalog that we have ever produced, illustrations of our New Cabinets for Disc and Cylinder Records. Twenty-five Patterns to select from, in Oak and Mahogany. Cylinder Cabinets equipped either with pasteboard pegs or clamps on which the cylinders can be put in the original cartons. A Udell Cabinet to keep your Records in is not a luxury but a necessity if you have a talking machine. No broken records, none lost, Can lay your hand on any record that your library contains instantly. A Udell Cabinet is a piece of furniture that will grace the most exquisite surroundings. In patterns made, finish put on them, interiors and general workmanship, Udell Cabinets are it. **Now** this beautiful New Catalog is ready for every Dealer that wants it. Write

VICTOR WINDOW DISPLAYS.

Special Catalog Prepared Covering This Field —Ellis Hansen's Clever Work—Secures Gold Medal—Study to Make Your Window Individual.

The Victor Talking Machine Co. have prepared a catalog of "ready made" window displays which every dealer should have, and which will be supplied on request. These windows have been prepared by Ellis Hansen, who is acknowledged to be one of the best window dressers in America, and who only recently was honored by receiving the highest prize—a gold medal—in the window trimming contest conducted by "The Merchants Record and Show Window," a journal devoted to window trimming. When it is known that he won out in a field of 426 contestants one can get an idea of his ability.

The Victor Co. have placed the services of this gentleman at the disposal of Victor dealers with the object of making the Victor show window advertising strongly individual. This has been done at great expense, but it is in the interest of trade advancement in which the Victor as well as all of us are keenly interested.

VICTROLA XII. IN GREAT DEMAND.

V. W. Moody, of the New York Talking Machine Co., the Victor distributers, stated that the new Victrola XII. has caught on in great shape, and substantial orders are received daily for that style. Business in general shows considerable improvement.

A TALKER MAN'S VACATION

Spent in a Sportsman's Paradise in New Zealand—Entertaining the Native Maoris With the Talking Machine.

C. E. Bryant, a well known talking machine salesman, who has been located in India for some time past, recently took a short vacation, going to Australia. He sends The World the accompanying photograph of himself and a resident of Rotorna, New Zealand, and showing the results of one day's fishing by Mr. Bryant on Lake Rotorna—twenty-three fine rainbow trout, ranging, dressed, from three to six pounds. Mr.

C. E. BRYANT'S BIG CATCH.

Bryant writes: "I had in the evening of my return several good shots at wild duck on the lake, also along the shore of several bevy of California quail; also two brace of Chinese pheasant, besides which I killed a number of hares, and saw during the day two wild pigs, which are very numerous here, and about thirty black swan, and all this within the comforts of modern civilization, as we were only a few hours from the town of Rotorna. Surely you will say a marvelous sporting country. In the evening I regaled the native population (Maoris) with a few choice selections on a talking machine, which created much interest."

Surely the sportsmen among our readers will envy Mr. Bryant in his vacation environment.

ESCAPES SERIOUS ACCIDENT.

J. Newcomb Blackman, of the Blackman Talking Machine Co., narrowly escaped a serious accident while automobiling near Rahway, N. J., last month, when a loose chain slipped off the sprocket and became entangled in the running gear. Though Mr. Blackman applied the brakes in short order, the car was stopped none too soon, for the axle was broken and the wheel would have dropped off within another 50 feet, causing a serious spill, as the car was going at good speed. It took six hours for expert mechanics to repair the damage.

In this theater of man's life contemplation and action ought ever to be united, a conjunction like unto that of th two highest planets—Saturn, the planet of rest, and Jupiter, the planet of action.—Bacon.

WHO IS THE BEST BUYER?

The Best Buyer Is the Man Whose Goods Sell Best—Who Wins a Reputation for Himself and for the Product He Handles—He Is the Man Who Helps the Prestige of the Manufacturer as Well as His Own.

He is not the man who buys the most goods. He is not the man who buys the cheapest goods. Strange as it may seem, he is not the man who always pays least for the goods he buys.

The best buyer is the man whose goods sell best. The keynote of successful buying is to make the salability of the goods—not the price—the first consideration.

When an article is offered to a buyer his first thoughts should be, "Is it good? Will it sell? Is it a money-maker? If not, I do not want it at any price."

Slow-selling goods which remain a long time in stock are dear, no matter what price was paid for them. The successful buyer considers first whether the article offered will sell readily at a fair profit and then, and not until then, he endeavors to get the lowest possible price on it.

It is not the first cost of the goods which counts, but what can be made out of them—all things considered. It may even be good business to pay more for an article as compared with another because you can make more out of it.

It is a serious mistake to overbuy. The amount of stock carried should bear a definite relation to the sales—say one-third to one-fourth as much as the annual business. To make money the stock should be turned three or four times a year; the oftener the better.

The other extreme is an equally serious mistake—to be so afraid of overstocking that you will not have the goods when they are called for. Buying in this way makes it impossible to build up your business. The ideal condition is to watch the stock closely and buy often and in moderate quantities so as to have the goods on hand when wanted.

One reason why the average retailer fails to get the best results from his buying is because he gives too much time to it.

Ask the average merchant what he considers the most serious handicap in his business, and the reply will almost invariably be "competition." Statistics show, however, that less than 2 per cent. of the retail business failures are due to competition. More than half the disasters are attributed to "incompetence" and "lack of capital." Wholesale houses supplying the retailer put their own interpretation on these causes and say that both may be traced to injudicious buying, but rarely is the buying more than a small percentage of the cause.

Do business with a reliable concern; one that can be depended upon to treat you fairly; one that is conveniently situated so that you can get goods quickly; one whose experience as to the requirements of your trade is such that the goods offered you may be relied upon to be salable at a good profit. As the Furniture World says: The retail merchant often fails to discover the lack of selling qualities in the goods because of his anxiety to obtain low prices and good discounts. His sole anxiety seems to be to buy at the lowest prices, even if he has to overstock in a dangerous degree to get them, which is a dangerous ambition.

"Why do you invite heart palpitation by running for a subway train like that?"

"Had to make it, old man. There won't be another train for thirty seconds."

MUNSON FOLDING HORN

FOR DISC AND CYLINDER MACHINES is the only one-piece indestructible Folding Horn on the market. Made of the finest quality of selected Leatherette—in plain solid colors—Gold, Black or Red, inside and out.

WHEN FOLDED AND CARTONED it occupies a space only 28 inches long by 3½ inches square.

THE MUNSON FOLDING HORN
Greatly improves the tone of the records and means increased record sales. Retails $7.00
Further Particulars and Discount Sheet on Application.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

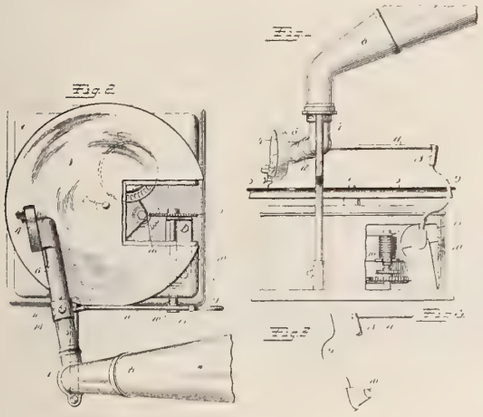
Washington, D. C., August 7, 1909.

TALKING MACHINE. Alfred Keller, Ste. Croix, Switzerland, assignor to Mermod Freres, same place. Patent No. 925,346.

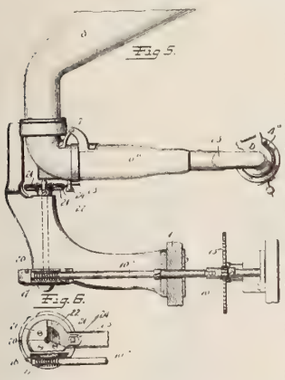
This invention relates to improvements in talking machines, the object being to provide a simple and effective device for feeding the stylus arm over the record in such a manner as to cause the stylus point to register properly with the convolute or spiral groove in the record. By this means undue wear upon one side of the groove and upon the stylus point is avoided when the reproduction of sound is made.

Heretofore in machines of this character the groove itself has been depended upon to move the stylus point across the record, with the result that both the stylus point and the groove have been unnecessarily worn. By this invention this is avoided.

This invention also contemplates the further improvement in that it permits of varying the



degree to which the stylus arm shall be fed, so as to vary the feed to accommodate it to the several different groove spacings. At the present time disc records are made by various concerns having different spacings between the spiral convolutions. By a very simple construction the feed mechanism is adapted to any spacing. This feed apparatus is also useful for recording machines.

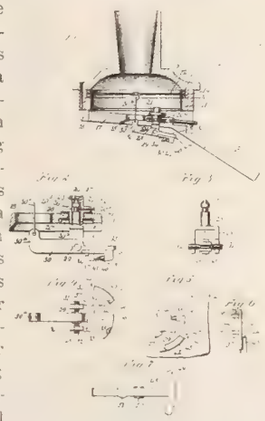


In the drawings, Figure 1 is a side elevation, partly broken away, of a talking machine constructed to embody the invention; Fig. 2 is a plan view thereof, also partly broken away; Figs. 3 and 4 are perspective views of details of construction; Fig. 5 is a side view of a modification; and Fig. 6 is a plan view of certain details of construction shown in Fig. 5.

SOUND REPRODUCER. Richard B. Smith, New York. Patent No. 925,846.

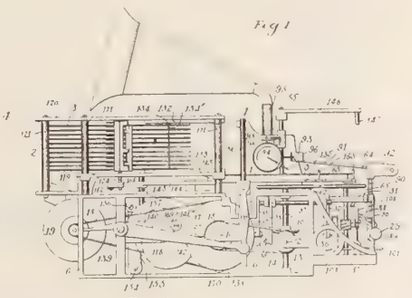
This invention relates to sound reproducers, the more particular purposes being as follows: 1, to increase the sensitiveness of the stylus lever as regards its movement toward and from the general position occupied by the diaphragm; 2, to increase the sensitiveness of the stylus lever as regards its pivotal movement in a direction approximately parallel with the diaphragm; 3, to facilitate the ready interchange of different jewels or other record points, so that by the simple action of a movable part one of these jewels or points may be instantly substituted for another; 4, to reduce the friction of the various parts supporting the stylus lever; 5, to provide a stylus lever with a plurality of jewels or other record points, and to enable the same to be used independently; 6, to provide an indicator for disclosing which particular jewel or other record point is in proper position to be used; 7, to enable the same stylus lever to be played with various records having different types of sound grooves, by merely throwing one jewel or record point out of service and another one into service, both jewels or points being permanently carried by the stylus lever; 8, to provide various details of construction looking toward the general improvement of the reproducer.

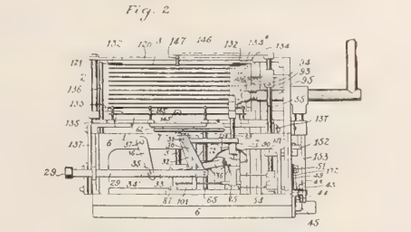
Figure 1 is a substantially central section through a reproducer provided with various improvements; Fig. 2 is an enlarged fragmentary section through the swivel joint for supporting the stylus lever; Fig. 3 is a view partly in section and partly in elevation, showing the swivel for supporting the stylus lever; Fig. 4 is a fragmentary section showing the stylus lever and the means carried by it for supporting a plurality of jewels or other record points; Fig. 5 is a fragmentary inverted plan showing the under side of the weight and a portion of the stylus lever carried thereby; Fig. 6 is a side elevation showing the point carrier removed from the stylus lever; and Fig. 7 is a plan view of another form of stylus lever.

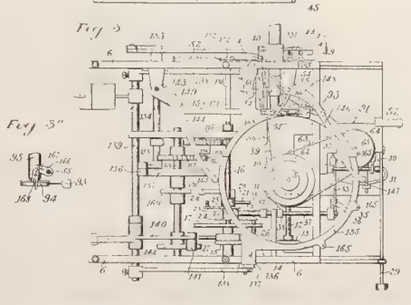


SOUND-REPRODUCING MACHINE. Julius Weilner, Philadelphia, Pa. Patent No. 928,567.

This invention relates to sound reproducing machines and the main object is to provide machines of this character with means whereby one of a plurality of records may be transferred from a suitable magazine or support to the rotatable

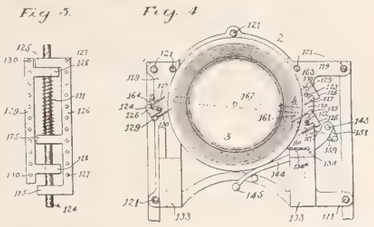




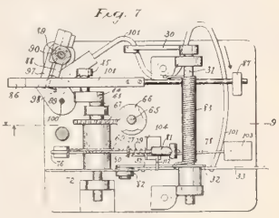


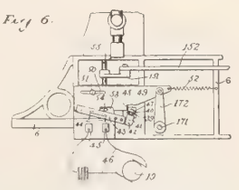
record support, for the purpose of reproducing the record, and also to transfer the record from the rotatable support back to the magazine.

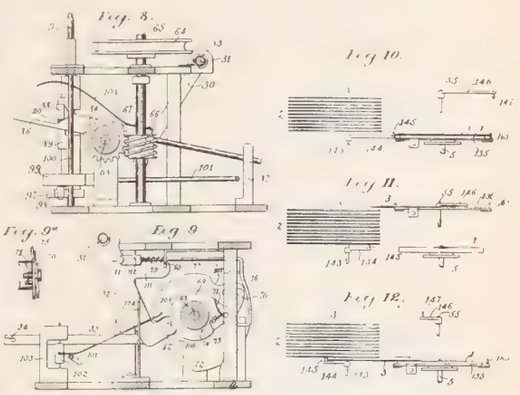
In the drawings Figure 1 is a side elevation of the improved sound reproducing machine. Fig. 2 is an end elevation thereof. Fig. 3 is a sectional plan view, showing the record magazine and turn-table removed. Fig. 3a is a detail, in



plan, of a jointed arm and the sound box. Fig. 4 is a sectional plan, as on the line 4—4 of Fig. 1. Fig. 5 is a detail of a part of the mechanism for supporting and lowering the records. Fig. 6 is a detail, in elevation, of a part of the automatic mechanism for stopping the machine, and adjuncts. Fig. 7 is a sectional plan view, as on the line 7—7 of Fig. 2. Figs. 8 and 9 are sectional elevations as on the line 8—9 of Fig. 7, Fig. 8 as seen from the dotted line arrow and Fig. 9 as seen from the full line arrow. Fig. 9a is a detail of a part of Fig. 9 as seen from the right hand side of the latter figure. Figs. 10, 11 and 12 are diagramtic views showing the series of records, the turn-table and different positions of the parts directly concerned in transferring the records from the series to the turntable and back again; Fig. 10 showing the posi-







tion of the parts while a record is being reproduced, Fig. 11 showing a record raised from the turn-table and being moved horizontally to the top of the series, and Fig. 12 showing the lowermost disc of the series being moved to and upon the turn-table.

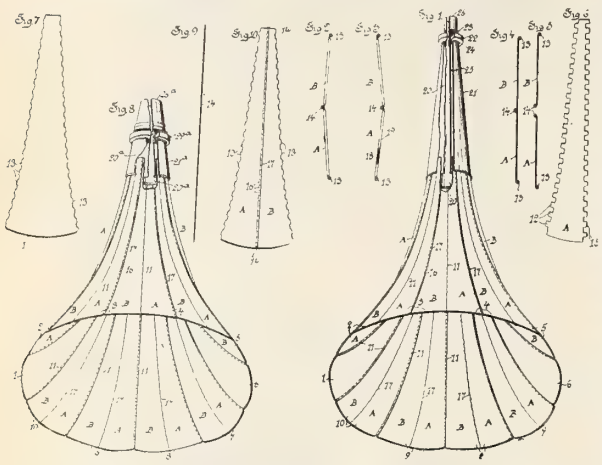
PHONOGRAPH-HORN. Paul B. T. Berner, New York, assignor to the Searchlight Horn Co., same place. Patent No. 926,235.

This invention relates to phonograph horns and like instruments, the bells of which are usually built up of a series of sections, the latter generally having curved side edges which give the desired contour to the bell; and in certain respects it is in the nature of an improvement on the horns shown in United States Patents 12,442 of January 30, 1906, and 771,441 of October 4, 1904.

One of the principal objects of the invention is to simplify the construction and reduce the cost of the built-up bell of a phonograph horn. To this end sections of thin, flexible sheet metal are used, usually with curved side edges, so as to join said curved edges together by means of wires passing through a series of eyes rolled or formed alternately in the contiguous sections. This method of joining the strips together is very simple and inexpensive.

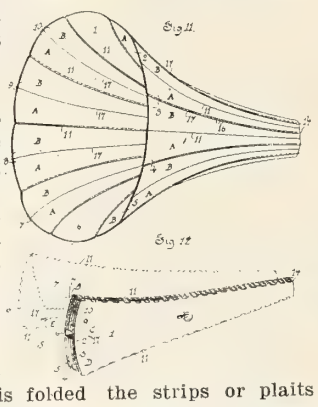
A further object of the invention is to produce a horn which is capable of being folded or reduced in bulk for convenience in transportation or storage.

In carrying out this feature of the invention, certain or all of said sections are formed of two strips. This permits the strips to fold together in the manner of the plaits of a fan, so that all the strips can pack facewise against each other,



thereby reducing the bulk to a minimum. In setting up the horn it is only necessary to expand the bell, which, owing largely to the outward buckling of the large ends of the strips, possesses sufficient rigidity for use.

Preferably each of two sections in the horn is single, that is, formed of a single metal plate instead of being formed of two strips hinged together. These single plates or sections are placed opposite each other in the horn so that when the same is folded the strips or plaits form two sets which lie one opposite the other between said single sections so that the device very closely resembles a folded fan in form.



It will be understood that if the bell is not intended to be collapsible all of the sections may be single instead of formed each of a pair of strips hinged together; the novel method of hinging the sections together, even in a non-collapsible horn, being preferable to methods heretofore in vogue.

In the accompanying drawings, Figure 1 is a view of a phonograph horn embodying several improvements in one form; parts being broken away to disclose the invention more clearly. Figs. 2 and 3 are end views of a bell section, comprising two strips hinged together, and illustrates the buckling or springing of the strips when opening the bell. Fig. 4 is a sectional view to illustrate the hinging of the strips which form a bell section. Fig. 5 shows the Fig. 4 strips separated. Fig. 6 is a blank of one of the strips which make up the bell sections. Fig. 7 is one of the single or main sections of the bell, undivided into strips. Fig. 8 is a view of another construction of device for clamping the neck of a bell. Fig. 9 shows one of the wires which form the pintles to connect the strips and sections together. Fig. 10 is a view of two strips hinged together to form a section. Fig. 11 is a view of a detached opened bell. Fig. 12 shows the bell folded in full lines, and also shows by dotted lines the manner of unfolding the same.

SPEED-CHANGING MECHANISM FOR GRAPHOPHONES. Frederick F. Murdock, Syracuse, N. Y. Patent No. 927,809.

This invention relates to improvements in speed changing mechanism for graphophones, and has for its object to provide an additional attachment or mechanism by means of which both the old and the new machines may be readily adapted to play what is commonly known as the standard two minute record, and also a new four minute record which has recently been produced.

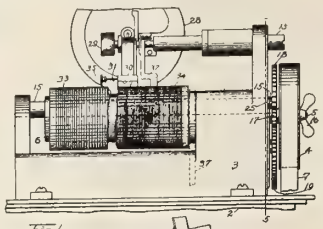


Fig. 1.

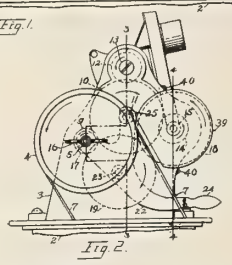

Fig. 2.

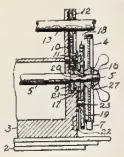

Fig. 3

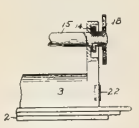

Fig. 4

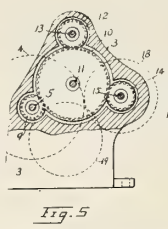

Fig. 5

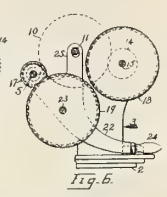

Fig. 6.

The invention relates particularly to improvements in the devices shown and described in pending application, filed Jan. 25, 1909, Serial No. 473,963.

Fig. 1 is a side elevation of a graphophone, showing the location and arrangement of the principal parts of the invention; also showing a portion of the old and new records. Fig. 2 is a front end elevation of the machine. Fig. 3 is a sectional view on line 3—3 of Fig. 2. Fig. 4 is a sectional view on line 4—4 of Fig. 2. Fig. 5 is a sectional view on line 5—5 of Fig. 1. Fig. 6 is a part end elevation showing the manner of throwing the auxiliary train of gears out of mesh.

Fig. 1

Fig. 2.

Fig. 3

COUNTERBALANCED SOUND-BOX. Wilburn N. Dennison, Merchantville, N. J., assignor to the Victor Talking Machine Co., Camden, N. J. Patent No. 927,505.

The object of the invention is to provide means for preventing heavy sound boxes or those of excessive weight from causing the stylus needle thereof from exerting the excessive pressure upon the record.

In the drawings Figure 1 is an elevational view of the invention, showing the fragmentary portions of the adjacent parts of the machine; Fig. 2 is an enlarged view of the sound box turned back on the sound conveying arm; and Fig. 3 an enlarged end view of the sound box turned down into its operative position on the record.

TURNING AND SMOOTHING DEVICE FOR PHONOGRAPH-RECORDS. Frank Able, Jr., Louisville, Ky. Patent No. 928,015.

This invention relates to turning and smoothing means, and particularly to means for turning and smoothing phonograph records, and has for an object the provision of a cutter and holding means therefor that will cause the cutter to evenly and smoothly turn or shave a phonograph record.

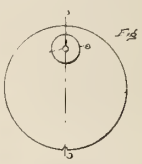

Fig. 1

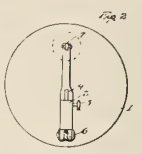

Fig. 2

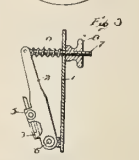

Fig. 3

Another object of the invention is the provision of a plate adapted to fit into the reproducer arm of a phonograph and a cutting tool adjustably secured thereto which in turn is adapted to shave or turn a phonograph record evenly, smoothly and perfectly true.

In the accompanying drawings: Fig. 1 is a top plan view of one embodiment of the invention. Fig. 2 is a bottom plan view of the structure shown in Fig. 1. Fig. 3 is a section through Fig. 1 approximately on line 3—3.

MAKING GOOD.

Here's to the man who makes a name
By up-hill pull, and good, hard work;
Who puts his talents to daily tests,
And scorns to "hurdle," to shift, or shirk.

Here's to the man who's won his fame
And carved his niche in the world to-day,
Whom everyone looks at wonderingly,
And bows as the genius goes his way.

Here's to the captains of industry,
They shine like stars in the black, clear night;
Here's to the men who do big things,
Who lead and command in life's big fight.

But better than all, a toast we drink
To the rank and file—misunderstood;
Who make no name, but spend their lives
Hourly, daily, "making good!"

It matters not if no niche is theirs,
They may not shine like some big star;
Their jobs aren't big, but they're "making good,"—
They're making good wherever they are!

We Are Certainly "After You"

If we can "arrest" your attention for a short "sentence" or two, we believe you will appreciate that our interest "warrants" the haste exhibited here.

REAL BUSINESS SUCCESS.

R. H. McDuffie Discusses the Only True Method of Achieving It—A Healthy, Breezy, Stimulating Talk on a Topic of Interest to Every Talking Machine Man.

Success does not mean simply carrying our point, making money and accumulating fortunes, but it has a broader meaning. A man who accumulates a fortune by shady methods has not made a success, but the man who accumulates something by honest methods, has a clear conscience and is happy and contented, is the man, in my opinion, that has attained real success. However, as my subject indicates that there is only one method, I shall contend that there is but one safe method. Now, I have selected as my text, "Honesty the Best Policy, or the Square Deal." I believe the square deal is the only method that will produce genuine success, and when the square deal is combined with well developed ability placed in full action, success is bound to follow.

The principle of the square deal is not only to be honest and reliable in a general sense, but to be so in the absolute sense; that is, to aim to give an exact equivalent in every transaction and to give the highest possible worth to everything we produce and offer for sale. To simply be honest in the ordinary sense of the term is not enough; we must be so honest that we will not give anything to the world but the very best we can produce. The man who places an inferior product upon the market when he has the ability to produce a superior product is not strictly honest; he is not giving his best to the world. We are not giving the world a square deal unless we offer our very best.

The man who is reckless or slovenly in his work is not an honest workman, even though he may be poorly paid just now. To be strictly honest and thoroughly just to himself he must do his work so well that he could not possibly improve upon it.

ABSOLUTE HONESTY.

There are many people who believe that absolute honesty is not necessary to success, and there are a few even who believe that reliability is an obstacle if great success is to be attained, but it will not require much clear thought to understand that the opposite is the truth. The real business of the world is based upon the principle of an exact equivalent, returning worth for worth, and so necessary is this principle to the very existence of the business world that no enterprise whatever could exist if this principle were removed.

PARASITES.

The man who accumulates a fortune through "shady" methods does not engage in real business; he simply acts as a parasite upon the reliable business enterprises of other men. He would therefore starve if honest men should cease to conduct business. The parasite always dies when you remove the source of his life and power.

Take away legitimate business and illegitimate business would go into bankruptcy at once; take away illegitimate business and the legitimate would thrive as never before. Destroy the animal that supports the parasite and the parasite will also die, but remove only the parasite and it is clear that the animal will become stronger, healthier, more vigorous and more powerful than ever before.

The honest business of the world not only supports itself, but it also supports the dishonest; it not only supplies vitality for its own continued existence, but it gives away a great deal of extra vitality to keep alive the parasites. If it should cease to give away that extra vitality and use all its life in promoting its own legitimate ends, it is evident that real, legitimate business would overflow with wealth in every part of the world.

A WINNING COMBINATION.

The square deal, combined with well developed ability, will win every time, and its gains will be far greater when it refuses to give part of its life to keep parasites in thriving existence. The man who thinks there is no success in reliability tries to supplant his own lack of ability with unreliability. Being unable to create his own success he appropriates a considerable portion of the success that has been created by others. He calls his own power of appropriation and accumulation success, but he forgets that if others did not create success there would be no success for him to appropriate, and he also forgets the fact that only the man who creates success is entitled to success.

When the majority realize that it is only ability that can create success, and that ability produces the greatest results when acting through reliability, the parasite will disappear from the business world, and the number realizing this great fact is growing very rapidly.

In my opinion the quickest way to eliminate this parasite and thereby remove the greatest block in the way to greatest success is to take advantage of the great opportunity we have to labor honestly and deal fairly with our fellowman, always keeping before us as our motto, "A square deal to all."

To the 85,000,000 of people that make up this great Republic the opportunity to labor honestly means more than to all the world besides. It means the development of resources great beyond the comprehension of any mortal, and the diffusion among all riches to which the glories of "The Arabian Nights" are but the glitter of the pawnshop, and to which the sheen of all the jewels of this earth are but the gleam of the glow worm in the pallor of the dawn.

LATEST CUSTOMS RULINGS.

Foreign Souvenir Postal Cards Are Denied Entry as "Lithographic Prints."

Post cards imported by the Souvenir Post Card Co., of New York, were held last week by the Board of United States General Appraisers to be dutiable as assessed by Collector Loeb at 25 per cent. under the provision in the tariff for "printed matter."

It was alleged by the importing concern that the Collector had erred in classifying the cards, and that they should have been admitted to entry at appropriate specific rates under Paragraph 400, covering lithographic prints. General Appraiser Fischer, in his decision for the board, says that the customs tribunal is convinced that the cards are not lithographed, and consequently the assessment imposed by the Collector will stand.

SLOT MACHINE FOR BOOKS.

Russak Has Contrivance Which May do Away With Newsstand Attendants.

Frank Russak has arrived in London from Paris with the object of starting a company to exploit a French invention for which Mr. Russak holds the patent rights in Europe and America. The idea has points of interest, both for authors and publishers, for it concerns the distribution of their wares in a novel fashion. It is the application of a penny-in-the-slot machine to what is generally described as ephemeral literature.

Mr. Russak believes that there is a large public which will be eager to hire a book for a few hours' reading, provided they do not have to trouble to go to a circulating library and can lay their hands upon what they want just when it is wanted.

The machines will hold ten or a dozen books, displaying their titles so they can be read without being removed from the case, which opens only when a certain coin is put in one slot as the price of hire, and another coin is put in another slot as the price of the book in the event it is not returned.

If Mr. Russak can get capital together and make arrangements with publishers, he will distribute these machines in hotels, trains, seaside resorts, and everywhere there is likely to be a demand for books to while away an hour or two. Mr. Russak is so enamored of the scheme that he can see none of its obvious difficulties.

H. L. BRITTAIN CO. INCORPORATED.

The H. L. Brittain Co., New York, have incorporated to manufacture and deal in cameras, lenses, films, etc., and to deal in talking machines and supplies, with capital stock of $50,000. Incorporators: James O'Neill, Hotel Lucerne, Van D. Macumber, No. 900 Bedford avenue, Brooklyn; Henry L. Brittain, No. 201 West Eighty-fourth street, New York.

THE BOOSTER.

When you hear a fellow knocking 'cause the times to him seem hard,
Be a Booster!
Just slap him on the back and say, "Come now, cheer up, old pard!"
Be a Booster!
You will find that knocking never helps, while boosting always pays;
That a cheery smile will brighten up the very darkest days;
So if you'd choose the surest of the joy-inspiring ways,
Be a Booster!

QUESTIONS OF IMPORTANCE.

Expert Comment by an Experienced Dealer on Some Vital Points of Business—Loose Credit Accounts and Unpaid Bills.

Business is a great game. And because it is such a great game is the reason why it takes a skillful player who combines his skill with precision, keen interest and good judgment to win out.

That many do not recognize it as a game, play it for all they are worth and follow the rules, accounts for many of the failures that occur year after year.

The game of business is not one of chance. It is not a game wherein luck plays the most important part and the turn of a dial spells victory or defeat.

No, in business to-day the best man wins. He wins because there are rules which, if followed, mean success. He follows them.

Also, he is possessed of initiative, energy to push his business and business instinct to tell him whether contemplated plans will make for success or failure. And the best part of it all is that he uses them.

The man who goes down to defeat, who belongs to the crowd of "also rans," can blame his defeat to a number of causes. One is a lack of stick-to-it ability. Unlike the man who stuck to the ship and went down with the colors flying, at the first sign of a leak he is ready to jump. He does not stick. And the man who deserts at the first sign of trouble, who lacks determination to see his business carried to the front, deserves to lose. And he does.

Another cause is inability to work harder as things look dark and discouraging. A man who expects to make a success of storekeeping will not allow this sort of discouragement to defeat him. Though he fights against odds, he will not be denied.

Thrice blessed is he that possesses a goodly amount of optimism in his makeup, says The Sporting Goods Dealer. The business man needs it. If he has it he realizes that hard work rolls the clouds away and lets the sunshine in. And, realizing this, he proceeds to do the hard work. If there weren't obstacles to surmount, discouragements to overcome, business would be mere child's play. As it is, it's a man's game and it takes a man's time, thought and best endeavor to play it.

LOOSE CREDITS AND UNPAID BILLS.

When bills become due, many merchants get blue. Their unpaid bills stare them in the face. They see their affairs in what is apparently a hopeless tangle and think "there's no use my trying any longer."

They carry their troubles home at night, eat with them, sleep with them, make them a part of their daily life. Is it any wonder their business reflects this same spirit? And who, pray, wants to trade with the man who is gloomy and who does business in a depressing atmosphere? Not many, that's sure.

Generally the greatest cause of unpaid bills is a loose credit system. Many men there be whose profits would be about as great if they scattered their goods to the four winds of heaven. They make many sales and spend many more hours in vain attempts to collect their money. Instead of taking ordinary business-like precautions before the goods are sold, ascertaining the status of the persons buying and their ability or desire to pay, what do they do? They do this: In their anxiety to make sales they take for granted that they will get their money. They generally lose. And they should.

OVERLOOKING A VITAL PRINCIPLE.

Any man or business that does not take the necessary precautions for protection overlooks a most vital business principle—a principle that can tear down or build up a business in an astonishing short space of time.

System in business means system in credits. The right kind of credit system means the greatest possible knowledge of the credit customers' habits, work, reputation and character. Without this knowledge the liability of loss becomes too great for the merchant to bear.

While competition is said to be the life of business, it is certainly the death of many merchants. Intelligent competition is all right. It is the rash price-cutting methods, the doing business at an actual loss, that strikes at the vitals and proves fatal.

And many times the man forced to go down under this sort of competition has himself to blame. He starts the trouble by starting price-cutting and losing money on it. Generally the only money made by cut prices is when goods are bought at a bargain. Then they can be sold for bargain prices. Any other cutting is too dangerous and expensive, and only in the rarest of cases should it be indulged in.

Employing clerks who have no real selling ability and therefore lose many sales they should make, hurts the business of any merchant. A clerk's value to his employer depends on his ability to help his employer make money. If he can not do this he is of little value. He is so much dead wood in the business machine. He clogs it and prevents it from running at necessary speed.

More time spent in finding capable, honest clerks and then striving to keep them, and less spent in teaching those that never will be of value, would pay handsome dividends.

SHOULD BE UP-TO-DATE.

The man who does not do this is not up-to-date. The man who does not keep up-to-date, whose business methods date back to the war, who is satisfied with things as they are, what can be expected for him to-day but failure?

A man can not pay too much attention to the business he is interested in. When he begins to divide his attention with outside affairs, he then paves the way for loss to enter. He should give to his business the best he knows. He should live with it, eat with it, sleep with it, dream about it and build air castles around it. The man who never builds air castles never builds castles of any kind.

Taking money from the business to speculate with is the cause of many more failures than will ever be known. The temptation to take a flyer in stocks or make a splurge at the race track is too strong for many to overcome.

With an eye to winning in a few hours what it would take a year to make in business, they speculate, and generally lose.

The loss of money undermines their business, the fever of gambling gets in their blood, with the result of neglect and inevitable ruin.

These are some of the reasons why men fail in business. Down through the corridors of time are found examples of men "who might have been, but were not." The failures of others were not heeded, the laws of business were not followed and nothing but disaster could result.

The kind of man who wins in business starts to fight as soon as he sees things are not going right. This kind of a man increases his energy and efforts in proportion as his business begins to fall away.

The more dubious the outlook for business, the more he hustles. And the hustler generally wins. The hustler is alive and up and at it. He knows he's living, that he has a business to run, that he is the pilot that must keep this business off the rocks. He bends every effort, gives it his best, and finally has the satisfaction of landing the cargo safely in the harbor of success.

THE TRIUMPH OF THE YOUNG MAN.

Put in Positions of Responsibility Where Older Men Were Formerly Demanded—Young Men Familiar With Present Day Business Conditions and Requirements.

The mercantile life of to-day exhibits the young man in business as one of the most notable factors. A few years ago it was quite different. Men past middle life and older men predominated. The young man in a responsible position was the exception.

The prime cause of this change is to be sought in competition, which has produced changes in manufacturing and business methods. The old men had their schooling in a nascent school state of competition and formed habits adapted to conditions growing out of it. The young men have grown up under the influence of a broader and more active competition, and hence have formed habits of business life in keeping with new changes in economics.

The changes were so insidious that old business houses scarcely realized what was going on until they found themselves doing a losing business. Thus they were either forced out of business or compelled to seek some change that would bring new life into the business. It was found that the condition to which the change should conform was one adapted to the customs and habits of the men who had their business schooling in the nascent school of competition, and that the end in view could be reached only by calling to their aid the young men, whose customs and habits had been formed by conditions growing out of an active state of competition. In this way the young man has been brought to the front, and now he is to be found an active factor in all well regulated business houses.

The young man is quick to perceive changes in the business world, and is foremost in catching new ideas, as well as predicting their trade qualities. Realizing his responsibility, he is energetic and cautious, conservative to a degree of safety, but sufficiently progressive to hold his business in the front rank. It is argued by some that a business college gives a man a theory of business methods which of itself places him in a rank superior to the young man who has not passed through a similar training; but those who argue in that strain forget that honesty, responsibility and freedom are facts that no college can impart. Honesty is the stepping stone to responsibility, presupposes freedom to act, judge and plan.

The office boy in a large business house receives the confidence of the firm in proportion to his worthiness. Step by step he advances, and with each advancement a little more responsibility is placed upon him, and with each new responsibility his abilities expand to meet it. Responsibility becomes the inspiration of his life—he grows to it, his freedom grows with it and in the end he finds the whole responsibility of the large business firm resting upon his shoulders. As a writer in the Furniture World says, he is prepared for it because of his having passed through all the stages of the business and received a modicum of responsibility with each advancement.

Responsibility has made all great men. Intellect is given man by nature, but its force is never known until the man is clothed with responsibility and freedom to act. To plan and execute, to see opportunities and lay hold of them, quick to adapt himself to emergencies, are a few of the intellectual forces responsibility brings into action. To fit one, therefore, to take the responsibility of conducting a large business, one must grow up with the business, for in that way only one comes in contact with every phase of competition and is made familiar with all the conditions it gives rise to.

It may be true that you can't keep a good man down, but it's equally difficult to keep a poor one up.

"The greatest specialty ever carried by a retail store"—is the verdict of thousands of dealers—concerning the New Pocket Edition Gillette Safety Razor.

The demand is astonishing. Sales over the retail counter are breaking all records. Every old Gillette user wants the Pocket Edition and it makes new friends at sight.

The set consists of handle and blade box, either triple silver-plated or 14k. gold-plated.

The Pocket case is of gold, silver or gun metal, plain polished or richly engraved in Floral or Empire designs. It is so neat and compact that it will slip into the side of a travelling bag—***the blades are fine.*** Prices, $5.00 to $7.50.

Aside from the sales of the razor, the business in blades is a steady income for a store.

Two additions to the Gillette line this season are the Gillette Shaving Brush—a Brush of Gillette quality, bristles gripped in hard rubber; and the Gillette Shaving Stick—a soap worthy of the Gillette Safety Razor. The stick is enclosed in a sanitary nickel box; both soap and brush are packed in attractive cartons. They will be welcomed by Gillette users everywhere.

ADVERTISING AND QUALITY

Should be the Keynotes of the Policy of the Dealer Who Desires to Win Trade.

If many of our business men went after trade like the mail order houses, and as persistently, the out-of-town business would be reduced to a minimum. Many of the retail dealers in the country towns are handicapped for lack of capital to carry the assortment needed, but they buy too many of one thing; do not spread their capital out enough. The result is when more goods are needed, their capital is tied up in stock and not available for new goods.

One of the greatest hindrances to the retail dealer in the country towns is his lack of advertising, it must be admitted. The mail order houses spend millions for advertising, using circular letters and booklets. If every retail dealer would do more circular advertising, coupled with judicious newspaper advertising, then he would see an increase in his sales. Circular letters and booklets of seasonable goods should be sent to each family in each dealer's neighborhood.

Nearly all manufacturers will supply electros of their goods, and the local printer can put them in shape. Don't be content with sending a batch once in two or three months. Send them every two weeks at least and get busy right now. Make your prices attractive. You can do it if you will, "and keep everlastingly at it." A personal visit to talk about seasonable goods goes a long way towards success. Go out among your customers, suggest goods, take their orders for future delivery early enough so you will be sure to have the goods when needed, and last of all, talk "Quality! Quality!! Quality!!!" That is what counts after all.

GOOD BUSINESS COMMANDMENTS.

The following ten commandments have been compiled for the modern business world by Graham Hood:

1. Thou shalt not wait for something to turn up, but thou shalt pull off thy coat and go to work that thou mayest prosper in thy affairs and make the word "failure" spell "success."

2. Thou shalt not be content to go about thy business looking like a loafer, for thou shouldst know that thy personal appearance is better than a letter of recommendation.

3. Thou shalt not try to make excuses, nor shalt thou say to those who chide thee, "I didn't think."

4. Thou shalt not wait to be told what thou shalt do, nor in what manner thou shalt do it, for thus may thy days be long in the job which fortune hath given thee.

5. Thou shalt not fail to maintain thine own integrity, nor shalt thou be guilty of anything that will lessen thy good respect for thyself.

6. Thou shalt not covet the other fellow's job, nor his salary, nor the position that he hath gained by his own hard labor.

7. Thou shalt not fail to live within thy income, nor shalt thou contract any debts when thou canst not see the way to pay them.

8. Thou shalt not be afraid to blow thine own horn, for he who faileth to blow his horn at the proper occasion finds nobody standing ready to blow it for him.

9. Thou shalt not hesitate to say "No" when thou meanest "No," nor shalt thou fail to remember that there are times when it is unsafe to bind thyself by a hasty judgment.

10. Thou shalt give every man a square deal. This is the last and great commandment, and there is no other like unto it. Upon this commandment hangs all the law and profits of the business world.

NECESSITY OF INITIATIVE

Coupled With Action in the Fight for Success—Men With Initiative Command Higher Salaries, but Are Scarce—What Sort of Men the Great Merchants Demand.

Initiative and action, not routine or dependence, are necessary to the success of the young man of to-day. The proprietor of one of the largest retail houses in New York said the other day that he could afford to pay 50 per cent. higher salaries if he could get hold of men who possessed judgment and initiative. Do you know what that means? It means the power to do the right thing at the right time. This merchant said that most of his young men were too mechanical. They learned to do certain things in the earlier days of their experience, and they did those things over and over in a mechanical way each day. They fail to put thought and study into their work. "That's the reason," continued this merchant, "that there is always room at the top. We find it more difficult to fill satisfactorily one $5,000 position than it is to fill ten $600 positions."

The reason is obvious; young men in business are too mechanical. They don't take the trouble to prepare themselves for better positions.

Another merchant in New York recently hired a young man for an executive position at a salary of $3,500 per year. This young man had been at work about a month when the two were having a talk one evening regarding the policy of his department, and the young man referred to the method employed in a similar department of a larger store. "They pay $2,000 a year for an assistant up there," said the young man, "and they also pay the best prices for piecework, so that the manager has only the finishing touches to do and the rest of his work is largely supervision." "Pshaw," was the reply, "that's one way of doing things, but you can do anything with money. What we want is to accomplish the same thing without spending nearly as much money. Give me the man who can do things! I got you because I thought you had initiative. So far you are working out all right, and if you continue you need have no worry about your future. When our business reaches larger proportions you will be relieved of a great deal of detail, but even then I feel that we can accomplish practically what the other concern is doing at a great deal less expense."

These remarks are straws that show which way the business wind is blowing. The great merchants want men of action; men who think; men who watch the work—not the hours. As Mr. Clairfield said recently in The Iron Age: It is results that count. Don't be too dependent upon others. Remember the old saying—"The more oversight, the less pay."

"EXPERIENCE" OUR FRIEND

And a Friend of the Most Practical Sort Who Should be Cherished by Business Men—How We Learn by Mistakes and Profit by the Experience of Others—Interestingly Discussed by John K. Le Baron in The Evening World.

He is a wise man who profits by the experiences of others. Few of us do.

Most men ignore that valuable school and tempt fate against great odds until their own failures and losses teach them the lesson they might have learned from others.

Coleridge says: "To most men experience is like the stern lights of a ship, which illumine only the track it has passed."

That is because we insist upon foolishly learning every lesson from our own hard knocks.

Much of Thomas Jefferson's success and influence were due to his making it a point to profit by the experience of others.

He always made it his business to talk with those whom he thought knew more than he and to talk to them upon the subject which he thought they knew most about.

The experiences of others make a safe ladder for our ambitions.

Franklin learned some of his most valuable lessons from the ants.

When Benjamin West was a very small boy he learned from the Indians how to vitalize the juice of the pokeberry and other plants. When, a little later, he developed his art tastes he profited by the experiences of the red men, for he was too poor to buy paints.

The Quakers were not art connoisseurs and young West found small encouragement in his art aspirations. Without paints his hopes would have been vain had he not learned his lesson from the savages.

We do not gain all our profitable experiences from those above us in the scale of endeavor.

Nor do we get all our valuable ideas from the successes of those whose experience we consider. Pliny, the elder, says, "the best plan is to profit by the folly of others."

There are as great lessons to be learned from defeats as from victories.

The headstrong man is the one who is most given to putting his head in a noose and then pulling the string. He forgets that better men than he have made costly mistakes.

Don't expect at the outset to know more than the man who does know.

"Experience keeps a dear school, but fools

will learn in no other," was one of Franklin's proverbs.

It has been said that "in explaining a theme to another it becomes luminous to ourselves." By that process we often find ourselves profiting by our own experience, though we may have failed to realize the lesson-value of the experience itself.

Speculation is a tempter that defies experience. The Yukon has been the graveyard of unnumbered hopes and uncounted fortunes. Yet men continue to take the chances—to lose. Untold disappointments would have been averted had men been willing to profit by other men's experiences.

We seemingly like to taste the poison ourselves.

"Experience," says Oscar Wilde, cynically, "is the name we give to our mistakes."

When we can learn to avoid our own mistakes by profiting by the experience or the mistakes of other men we will have won one great point in the every-day struggle for existence.

FUNCTION OF ADVERTISING.

Simply a Means of Obtaining Inquiries in Many Instances—Landing the Orders Depends Upon the Advertiser Himself—Every Inquiry Valuable.

"A bird in the hand is worth two in a bush." This old saying applies forcibly to the obtaining of new business, and particularly to getting business out of inquiries received from advertising or similar sources.

When a firm spends money in publicity, using its time and energy evolving and developing selling ideas, and in return procures inquiries from interested persons, its efforts are but partly rewarded. It often takes more persuasion and argument to turn a prospective's interest into a resolve to buy than it does to arouse the attention in the first place. And it is at this point in the campaign that many fail, or rather, neglect to take full advantage of the result of whatever advertising has been done.

It is the opinion of some that when the space has been bought, copy prepared and bills paid, all is finished. They think that it is only necessary then to sit down and the orders will come. They are glad to get the cash, but letters merely making inquiry are treated in a desultory manner; at the same time the advertising is kept going right on.

The value of one inquiry already in hand is often overlooked in the striving to get more people interested. Every inquiry should receive careful and prompt handling sufficiently long to learn whether it will turn into an order or was made out of mere curiosity.

GET DOWN TO BRASS TACKS.

Doesn't Pay to Dream—The Realm of the Dreamer Unreal—Why the Energetic and Practical Man Wins Success—Gives His Whole Mind to the Thing He Is Doing.

T. J. Mathews contributes the following bright little item of practical philosophy to the National Hardware Bulletin:

The dreamer weaves a fabric from the cobwebs of his imagination, but the butterfly of success breaks through, leaving his web in fragments. Don't dream but—

Get down to brass tacks.

Dreams are mind-mists—fogs that obstruct the view. Beautiful mirages may appear upon them, but they leave bread and butter in the distance. It's better to—

Get down to brass tacks.

The dreamer is great on figures. He can make them promise success in any enterprise, but his pie-crust promises are easily broken. His head is above the clouds, where the sun shines brightly, but his feet unerringly find the pitfalls. Better to duck his head, watch his feet and—

Get down to brass tacks.

The dreamer may know how, but is slow to use his knowledge. Procrastination not only steals time, but murders opportunity. Not knowing how, but doing now is what makes for success. It's case of—

Getting down to brass tacks.

Getting down to brass tacks is being energetic and practical—giving your whole mind to the thing you are doing and never letting up until it is finished. Clearness of thought, singleness of purpose and hard work will bring success where dreams means failure. Put the point in the right place, keep your eye on the head—and hit it—that's

Getting down to brass tacks.

GETTING CLOSE TO CUSTOMERS.

Dealers, Especially in Smaller Towns, Should Endeavor to Get Personally Acquainted With Patrons—Such Attention Often Means Holding Their Trade.

Personality in business counts for much. Some men have the faculty of making acquaintances easily and they become successful salesmen when possessed of good business qualities. A dealer ought to acquire a personal acquaintance with his customers; not an intimate friendship, for this would be impossible as well as disastrous, nor should he seek the confidence of his customers in personal affairs, for such friendship could endure but for a brief time before it would be taken advantage of.

The man who has the ability to recall faces and names in an instant has a great advantage in business. This faculty can be cultivated by careful observation and perseverance. Every opportunity should be taken by every dealer to make new friends, for new friends mean new customers and increased sales. But don't interpret this to mean that you should cultivate the formation of new customers to the exclusion or neglect of the old ones, for there is rarely a customer more satisfactory in the long run than the "regular" customer.

People, especially in the smaller towns, like to know the proprietors of the stores which they patronize, and the retailer who has a personal acquaintance with his patrons, if he has the qualities of a good dealer, is pretty likely to be successful.

BRIEFLETS.

The Exhibitors' Film Exchange, of New York, has been incorporated at Albany to manufacture, sell and rent moving picture films, with a capital of $30,000. Incorporators: A. Pradel, 138 Third avenue; J Rosett, 29 Liberty street; L. Rosett, 301 St. Nicholas avenue, all of New York.

The Moving Picture Co. of America Corporation Guarantee & Trust Co., has been incorporated in Delaware with a capital of $600,000. Incorporators: F. A. Barnett, of Phila., Pa.; H. W. Schorr, of Phila., Pa.; S. D. Townsend, Jr., of Wilmington, Del.

The Hayes Lithographing Co., Buffalo, N. Y., have organized a special post card department, which is under the management of Ira E. Seymour. The Hayes Co. are widely known in the art lithographing field.

The Photo and Art Post Card Co., 95 Washington street, Chicago, have sent out a beautiful line of Thanksgiving, Christmas, New Year's and birthday subjects in lithographed colors and gold, richly embossed with frames and other relief embellishments.

The Drysdale Co., Chicago, have issued some very attractive cards of Indian subjects which are bound to win a great deal of favor.

Success in storekeeping comes through keeping the overstocks down, keeping the variety up, keeping the goods plainly marked, keeping the bargains attractive, keeping the public informed, keeping the store and its people clean, inside and out—and keeping at it all the time.

How to Expand Your Business.

¶ That is a subject which interests every live merchant in every part of the country, and if you are selling talking machines why would it not be well to add player-pianos?

¶ They blend harmoniously and you can increase your income very materially if you secure the agency for

The Angelus Piano

¶ Bear in mind the **Angelus** is the original piano player and with it it is possible to accomplish the most artistic results in piano playing.

¶ Musical expression is absolutely under the control of the performer.

¶ The **Angelus** possesses many features of advantage which places it in advance of any player created.

¶ We can explain this to you if you write us, and we can also show you how it is possible to increase the annual profits of your business without materially increasing your expense account.

¶ In other words, with the **Angelus** agency, your overhead expenses are not increased but your receipts will be growing all the while, for the **Angelus** has the power of attracting trade that is marvelous.

¶ Now don't put this off but let us take up this subject with you at once. It will pay you.

Wilcox & White Co.

MERIDEN, CONN.

WAITERS VS. PUSHERS.

Close Attention to Business Is Required if Success Is to be Attained—The Waiter Always a Pessimist—The Rusher, the Man With Faith—Wins Out by Advertising.

Constant study is necessary to keep a salesman at his best. If you want to succeed and get to the top of the list, devote all your thoughts to your business. There is plenty of room at the top without anybody falling off.

The world is full of waiters—not men who poise the festive tray on finger-tips and fire eatables at hungry guests; they are generally hustlers; we mean the waiters who get nothing but crumbs, alleged business men who never see a perfectly clear sky in the financial world.

Not long ago they were waiting until after election day; then they waited until after the new year had made its appearance, then until the tariff question was settled. Now they will wait until the crops are harvested, and it'll be too late to do anything before they see how 1910 is going to open up.

By that time the papers will probably be talking about Taft's successor, and of course it will not do to act until that is settled!

Find a man who is everlastingly holding off, waiting to make sure his bread is buttered on both sides before he takes a bite, and you'll discover a kicker, you'll unearth a man who is always grumbling about business being slow, collections poor, the catalog houses getting most of the business, the jobbers grabbing more than their share and the manufacturers are charging too much.

The waiters are pessimists. Why not? If a man does nothing but pull back, if he hugs his bank-roll for fear it will get away and he'll starve to death, if he has no faith in this great country, he naturally looks at everything through darkened glasses and comes to thoroughly believe his own direful predictions.

Push—don't wait.

The pusher is a different kind of an individual. He is the one who makes business. He gets his stock in early and goes to work to sell it. The people mighty quick find out when he is around and know pretty well whether he is selling axes or brown sugar.

The pusher has faith.

He believes in this great country. He knows there is more money and business here than in any spot on earth and he is out to get his share of it by selling good goods quick. He realizes the vast resources of the nation, the great demands for goods at home and abroad, and is aware that the busy man will find trade if he looks after it. He doesn't wait for elections, for spring or summer, for tariff discussions to cease or for the members of the New York Stock Exchange to tell him that it is safe to do business. He just goes ahead and does it.

The pusher is an advertiser.

You'll see his announcements in the papers, written in an attractive, business-like, to-the-point manner. He doesn't believe that dull times afford the best opportunities to advertise. He is convinced that busy seasons offer him no particular attractions to reduce his outlay in such directions as an exchange puts it, he just knows it pays to advertise all the time—and he gets the business.

Be a pusher and eat sumptuously at the table—not a waiter, starving on the crumbs.

SOME BUSINESS REFLECTIONS.

The Pleased Purchaser—Following Up Sales—Grievances Just and Unjust—Special Letters and Personal Calls.

There is one man who knows a lot about your business and doesn't charge anything for imparting his knowledge. That fellow is the user of your article.

Are the goods that you sell talking in your favor or against you? One of the brightest sales managers in this country once made the statement printed in italic above. There is a lot of food for reflection in that short remark. The man who is pleased with your merchandise is usually willing to speak well of it. The man who is displeased with it is not only willing but anxious to condemn it.

DO YOU FOLLOW UP YOUR SALES?

Do you question your customers to know how their various purchases are meeting their requirements? More important still, do you get after the customer who has failed to come back to your store and find out why? If you do this do you employ patience and tactfulness in adjusting the matter to his entire satisfaction?

To some merchants this may sound like empty talk. If it does sound so it will be for one of two reasons, namely, because the merchant is already following a similar policy, or because he is too independent to entertain such a policy at all.

THE BROADER MAN SUCCEEDS.

The man who is broad enough to realize that he and his business are not infallible; that mistakes in his organization are possible; that flaws in his merchandise may sometimes exist; is far better prepared to grasp opportunity and win success than the man who fails to recognize these possibilities.

Self-confidence is all right in its place. Independence is an admirable quality when judiciously exercised. Still, these two factors have been known to drive business away from a store and make a splendid location a losing investment.

Just grievances should most certainly be recognized, and when the customer does not present them himself, the merchant should make some systematic effort to locate them. Even the unjust complaints should at least be tolerated, and in some instances it will pay the merchant to swallow his pride and make an adjustment which in his heart he knows to be an imposition.

It takes all kinds of people to make a world. The retailer will come in contact with most all of the different varieties at some time during his career. Still he is in business to make money, and, if possible, to do more business this year than he did last. False pride will stand in his way if he doesn't overcome it.

LETTERS AND PERSONAL CALLS.

Courteous special letters should be sent to those customers who fail to call as often as they should. And the effort should not end there. One of your representatives who knows the customer should call and find out why his trade is diminishing or has been entirely transferred, says Clarfeld in The Iron Age. All the effort in the world to get new business will not assure permanent growth unless the regular business is held.

THE FOLDING UMBRELLA.

A Handy Thing to Carry When You Are Going Traveling.

A suitcase alone is more or less of a burden to carry, and if you have an umbrella, too, you have more than anybody can carry conveniently, and in some circumstances the two might handicap you seriously, as, for instance, in boarding a train; but here was a woman going traveling and carrying both who when the time came was enabled to get rid of her umbrella completely and yet carry it along.

When this woman had come into the railroad station she set her suitcase on a seat and then calmly she unscrewed the tip of her umbrella, removing it entirely, and then she slipped a catch on the umbrella handle and doubled the handle back on the ribs, thus altogether reducing the umbrella's length by about a foot. Then she opened the suitcase and put her umbrella inside of that. Laid diagonally it went in easily; it was of the folding variety.

PERSISTENCY LANDED THE JOB.

Some years ago when ——— was city editor of the New York *Herald* he was frequently solicited by a persistent youngster who sought assignment as a reporter on the staff. Rebuffs more or less marked in no way disheartened the indefatigable applicant, who kept at it everlastingly. One inclement day, varying his custom of calling at the office, he telephoned from Newark, N. J., his home, making the stereotyped request, which the busy editor on the instant did not associate with his familiar visitor, but as his identity dawned on him he said impatiently, "Go to h——." Instantly the answer was flashed back, "Shall I get pictures?" The nimble wit of the tireless cub, who, on the spur of the moment assumed that finally he had been "assigned" to cover important territory, caught the astute editor, who detected ability and embryonic conception of a "beat," and reversing himself on the spot, directed him to call and later engaged him. The young man made good as a reporter and his advancement since in other directions has been so marked that in the last edition of "Who's Who" more space is given up to a description of his career than is occupied by his former superior, who is now one of the principal owners of a great metropolitan journal and a man of much weight and influence in the community.

THE ILLINOIS CHROMOPHONE CO.

It's The Shots That Hit That Count

THE man who does not succeed usually claims that Fate is against him, and sometimes it seems as if some unknown forces were combined to make success impossible for many men who are industrious.

Men who have had a long life of striving ofttimes find when old age comes stealing over them, that they are still poor, but let us go deeply into the causes which have militated against visible success, and we will find that their energies have been misdirected.

Now, misdirected labor is but wasted activity, and the plans of men will ofttimes miscarry, no matter how energetic, if the forces are not directed along the proper lines.

A marksman when engaged in target practice uses as much energy when he misses the bull's-eye as his comrade does who scores a hit every time.

The only difference is one shot is well directed and the other is not.

The man who misses wastes just as much powder, energy and temper as the man who wins.

But, it's the shots that hit that count.

So, in the great game of life what a man does must be made to count, or it might just as well have been left undone.

Everyone knows some one among his little circle of friends who though always active is not successful.

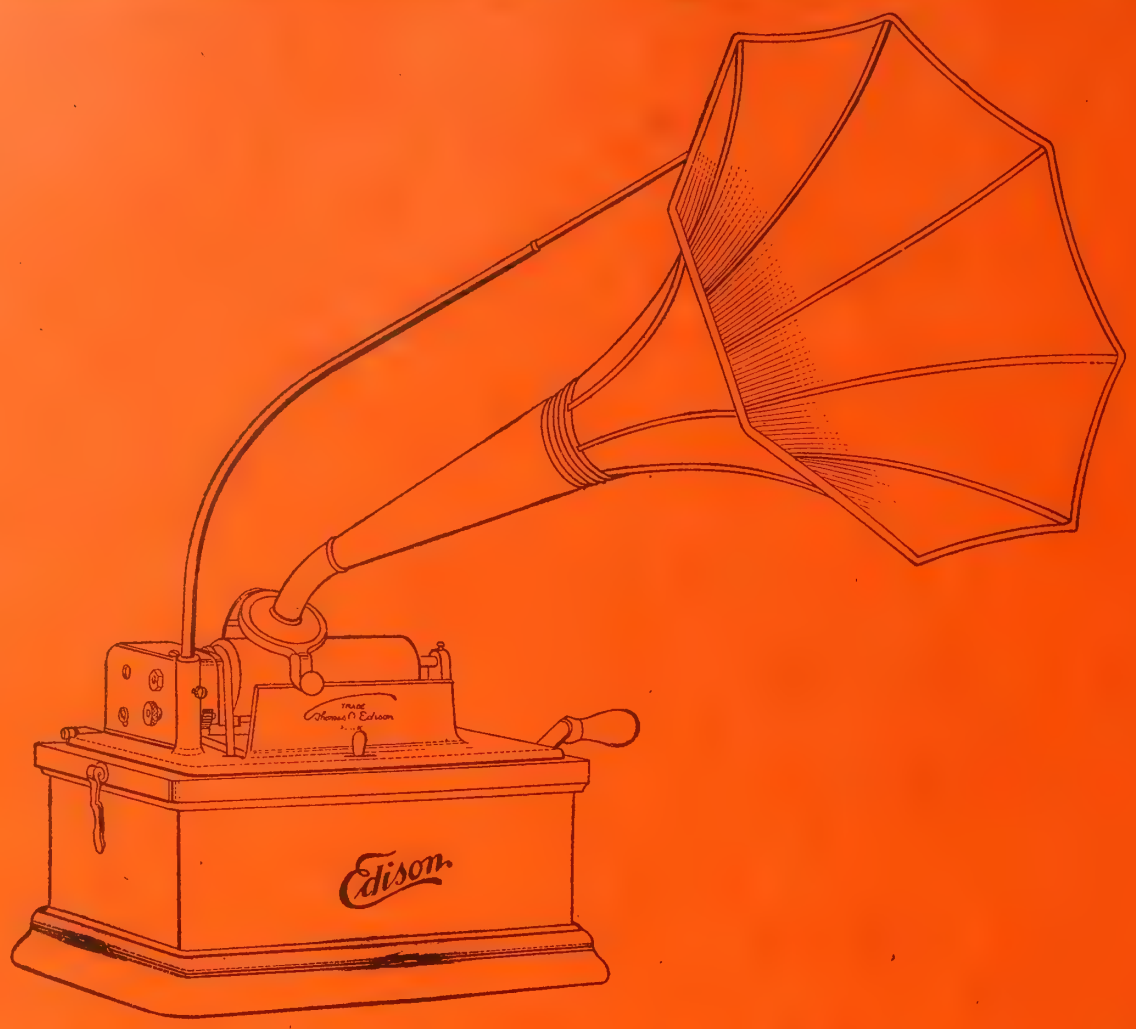
It's the case of the man who missed the target.

How to overcome this?

I should say there are two kinds of activity, one the kind that beats around the fields like an untrained dog, never lighting on the covey—that kind of activity that appears to be without purpose—that is not resourceful, that is not well aimed—that is without concentrative or executive energy. And another kind that goes straight to the target; activity that is aimed to hit, that is carefully thought out; activity wherein energies are conserved until the critical moment arrives and then the shot is fired, and a bull's-eye is scored.

And it is the shots that hit that count.

EDWARD LYMAN BILL.



THE FIRESIDE

$22.00

Plays both Edison Standard and Amberol Records

This should be the greatest selling instrument you have ever handled, for it exactly meets the requirements of the great mass of people who desire and can afford a better instrument than the Gem, and yet to whom the Standard was just out of reach.

This, together with the fact that it plays both Edison and Amberol records and is available for all the new records, should make it your "headliner" as a builder of new business. Order from your jobber to-day.

VALUE OF WINDOW DISPLAY.

The Dealer Should Better Realize the Importance of Reaching Trade Through His Windows—An Inexpensive Form of Publicity.

In The World from month to month there have appeared articles tending to awaken the dealer to a fuller realization of the possibilities of discriminating publicity in connection with his business.

While this may seem patronizing to some, yet the fact remains that there are thousands of dealers who are doing practically nothing to supplement the splendid work of the manufacturers of talking machines and records, who are spending hundreds of thousands of dollars annually for the purpose of making their specialties known to the general public and thus helping the dealer. Hence the justification of this subject being referred to frequently.

In order, however, that the dealer may reap the direct advantage of this great campaign of publicity instituted by the manufacturers, he must keep his name and goods before the public, either by effective publicity in the local paper, striking window displays, electrical signs, or any other means of attracting attention.

To the dealer who is averse to spending money in the daily papers the window is a very valuable consideration. As "The Voice of the Victor" said recently: "One of the simplest, and yet best, forms of advertising is the window display. Get away from the idea that window display means jamming the whole window full of samples of everything you carry in stock. A few articles in a window will attract more attention than a window that is crowded; and the people will be more impressed by what they see because they are not confused by a multitude of articles.

"Here is a little test that will prove to you, as well as to show you just what advertising will really do: Pick out from your stock of Victor records the one you personally consider the best—the one you enjoy the most. Then take a piece of wrapping paper or a large piece of cardboard, and print on it, by means of a small camel's-hair brush and a bottle of ink, an invitation asking every passerby to come in and hear this record.

"You'll find that the people will come in all right. You'll see the effectiveness of displaying one specific thing, and at the same time you will prove to yourself the value of advertising.

"After that test, it's a foregone conclusion that you'll keep it up. For your next window display use a Victor Victrola. That will in itself attract attention, and if you put up alongside of it an invitation to come in and hear this new type of Victor, there will be very few who will not be sufficiently interested to come in and hear it.

"Remember this: Your windows are the most inexpensive form of advertising you can get, and proper use of them will make them extremely valuable to you.

"What has been said about the value of advertising one specific thing in window displays, applies equally well to newspaper advertisements and all other forms of advertising. Don't try to tell people about everything you have in your store. Confine yourself to one or two specific things. Tell them just enough to get their curiosity aroused—to get them interested. Then when you get them to your store you can tell them more about it; go into details if necessary; show them as well as tell them."

Cohen & Hughes, Baltimore, Md., attracted much attention to their business recently through a special Victor window, showing the Victrola and several other styles of machines, as well as a number of grand opera and popular records, all tastefully arranged.

EXECUTIVE COMMITTEE MEETING.

Of Jobbers' Association to be Held in Pittsburg, Pa., on September 19—All Members Welcome—To Decide on Next Meeting Place.

A meeting of the executive committee of the National Association of Talking Machine Jobbers is announced for Sunday, September 19, at 10 a. m., in the offices of J. C. Roush, of the Standard Talking Machine Co., Pittsburg, Pa., and the newly elected secretary of the association.

A general invitation has been sent out to members to be present at the meeting, notwithstanding it is to be an executive one, and it is believed that quite a number will be present to discuss various questions, among them being the most suitable place for next year's convention, as gleaned from replies sent in to the letter of the secretary requesting opinions.

The executive meetings will, as usual, continue to be held at intervals in various parts of the country, and it has been suggested that when a member has a point he desires to bring up for discussion personally, and is unable to attend, that he request a neighboring member, who will attend, to take up the matter for him.

Among the eastern jobbers who have arranged to attend the Pittsburg meetings are J. Newcomb Blackman, New York; Louis Buehn, Philadelphia; and E. F. Taft of Boston.

TALKING MACHINE AT FUNERAL

Of Wealthy Resident of Fond du Lac, Wis., Who Gave Six Victrolas Away as Gifts.

At the funeral of Harvey Durand, a wealthy, but rather eccentric resident of Fond du Lac, Wis., the talking machine took the place of the choir and organ in a very effective manner.

Between the hours of 3 and 4 o'clock in the afternoon on the day of the funeral the remains were viewed by hundreds of people, and at this time several selections were played upon the talking machine. They were "Rock of Ages," as sung by the Trinity choir, with orchestra accompaniment; "Nearer My God to Thee," as rendered by the Haydn Quartette, and the "Sabbath Morn," as sung by Harry MacDonough, with organ accompaniment. During the funeral services, the talking machine again came to the front and the following selections were played: "God Be With You Till We Meet Again," and "Saved by Grace."

Mr. Durand attracted considerable attention during the past year through his gifts to various young people of the city, aggregating over $10,000 in value, and including six $200 Victor Victrolas.

FIGHTING TUBERCULOSIS.

People wandering in the park on an evening in Yonkers this summer have been startled to hear a loud voice say, "If you suspect that you have consumption; if you have a slight cough that hangs on; if you are gradually losing weight; if you have a slight fever in the afternoon, go at once to your family physician. Don't waste time on consumption cures. They only waste your money and your time."

The talking machine has been taken around in Washington in an automobile to give street corner lectures. It has been taken to the races at Syracuse State Fair in a hand-cart, to arrest the attention of followers of the turf. It has competed with the moving picture shows on 14th street, New York, where 172,543 persons listened to this veiled prophet exhort the passing crowd to "be kind to the careful consumptive," and to "avoid the careless consumptive who coughs and spits everywhere."

THE MAKING OF A SALESMAN.

Some of the Essentials Necessary Are Attractive Personality, Magnetism, Contact, Optimism, Tact.

A salesman must go among people. It is the most conspicuous part of his duty to mingle with the world. There are many occupations that do not call for special qualifications in this direction, but the salesman must be qualified, indeed, for contact with others.

It follows that the first duty of a salesman is to learn contact. He cannot begin too early. This part can go on simultaneously with his preliminary training in business method.

Mere contact, unless it carries with it politeness, diplomacy and a generally pleasing atmosphere, is worse than no contact at all. Unfortunately, there are salesmen whose training in contact has been woefully neglected.

In the large retail store of to-day this element of contact is impressed on salesmen and saleswomen very emphatically. Politeness is required, even in the face of insult or affront. With retail salesmen, however, the element of personality is less important than it is with the salesman who visits customers in their own offices. In retail the customer takes the aggressive—the salesman the negative part. The wholesale salesman, or the salesman for the specialty house, on the other hand, is the aggressor, and the manner of his contact with people will measure his success.

When you meet a man, no matter what proposition you may have to present to him, the first thing with which he comes in contact is you. Personality, then, is one of the first things you should seek to develop. An attractive personality is an absolute necessity.

Personality is not confined to dress and cleanliness. There is an atmosphere, either attractive or unattractive, that a man may carry around with him—"Personal magnetism" some folks call it.

There is no doubt that this quality goes with some men naturally to a greater extent than it does with others, and it is a gift that ought to be appreciated. An employer of salesmen ought to gather a magnetic sales force, if he can find men enough of that class. The demand, however, far exceeds the supply. You must create personality, build magnetism in yourself.

Optimism is one of the best aids to an attractive personality. Optimism is another word for enthusiasm. A salesman cannot exhibit enthusiasm to his customers if he does not believe in his own goods. He may, perhaps, feign enthusiasm, but most buyers will detect the deceit. With optimism should go that nice perception that enables a man to say the right thing in the right way.

When a salesman is talking to a customer the right thing said in the right way will cement friendship. This is personality. Personality is the faculty of drawing men to you, making them respect you, exciting in them a genuine pleasure at seeing you or talking with you. It is saying things that compliment without flattering. It is the optimistic smile, the cheerful good-bye. It is the tone of the voice, the light of the eye, the unsullied breath, the clean language, the absence of profanity—all the human qualities that go to make a man's presence preferable to his absence. You do not need to be told what these qualities are, but perhaps you have overlooked the vital necessity of developing them in yourself as a salesman. You may not be a moralist, but as a business man it will pay you to develop a strong personality.

The dealer who doesn't contemplate making every new customer a regular one might as well keep his books in good shape so that the receiver will have little trouble in adjusting affairs.

JOBBERS REPORT SPLENDID TRADE PROSPECTS.

The Fall Outlook Presents Many Encouraging Aspects to Talking Machine Men Whose Opinions Have Been Sought by the Talking Machine World—All State That Trade Is Steadily Increasing in Volume and Is in a Much Healthier Condition—Reports Presented Below from Many Sections Outside of New York City Will be Pleasing Reading for World Subscribers.

LOUIS BUEHN & BROTHER, Philadelphia, Pa.

Relative to conditions as the writer sees them, pertaining to our business, I might say that the outlook is exceedingly bright. Personally, we have had an increase over last year, averaging 25 per cent. since last April, and the quantity of orders which we are receiving from day to day is gradually increasing. While it is true the orders are not particularly large, still the fact that we receive numbers of them indicates a general revival in the demand for our goods which must gradually become better as general conditions improve. I am an optimist in every sense of the word regarding the talking machine business, and have no doubt that conditions this coming winter will equal, if not exceed, anything that we have ever experienced.

WHITNEY & CURRIER CO., Toledo, O.

Regarding the trade outlook for the coming fall will say that it looks good from this point of view. From now on the trade should be of a steadily increasing volume and of a very much more healthful condition than ever before. Your valuable paper should, we think, urge upon all dealers the necessity and helpfulness of good newspaper advertising. Retail dealers are making no greater mistake to-day in the handling of their talking machine business than to feel that local newspaper publicity is not essential, or is money thrown away, because of the fact that to advertise a product that other competitors would also handle would aid their competitors equally with themselves.

The retail dealer who advertises strongly the merit of the machine and records that he handles will get the business, and the man who does not obtain this publicity will grow smaller and smaller in the talking machine business as the months pass by.

We realize that the general thought among dealers is to let the manufacturers do the advertising and create the demand. This is a very grave mistake, for the manufacturers, as generous as they are with their advertising, cannot reach the dealer's local trade except in a very small part. He should do his own advertising in the local paper that reaches the farmer, as well as every small town, and such dealers will feel the effect at once if their advertising is of such a nature as to attract any attention.

It is to be hoped that manufacturers will see it is to their advantage to cut off every dead beat and grafter among the retail dealers who buy of each and every jobber as much as possible, without any thought of paying their bills. Such men are a menace to the trade and hurt the honest retail dealer, as well as the jobber, and they should, we believe, be declared ineligible by the manufacturers when they owe two or more jobbers accounts they will not pay. The trade cannot stand cancers of this kind, and the jobber who fails to report such accounts ought to lose outright. Now is the time to clean house and put the trade in a thoroughly healthful condition.

The talking machine business is really only in its infancy, and the volume to-day, compared to what it will be, if well managed, is very small. The future is bright and full of promise to those jobbers and dealers who have learned to do business in a business way.

E. E. FORBES PIANO CO., Birmingham, Ala.

The outlook for business this fall is encouraging through our manufacturing centers. The industries are starting up that have been idle now for quite a while. Then a great improvement has been made in the talking machine line in the way of records and Victrolas, and I think the market now has a better class of people, and we think the man who will get out and hustle for business this fall will find some.

HOLLENBERG MUSIC CO., Little Rock, Ark.

We feel that we will have a record-breaking business, both wholesale and retail, and in accordance with such feeling are prepared for same. However, the crops over the South in general are somewhat short, yet we have received very encouraging reports from our dealers from the territory covered by us, who assure us they are going to have real business this fall. Our retail business in the city of Little Rock has been exceptionaly good this (August) month. We sold one of the new library table graphophones to the new Capital Hotel, to be used by that hotel to entertain their guests in the lobby. We notice that the people in general "down south" are buying a better class of machines as well as records. Our instalment business is exceptionally good, and our collections this summer have been better than ever before. Taking everything into consideration, we anticipate the best year in the history of our graphophone department.

THE PARDEE-ELLENBERGER CO., New Haven, Conn.

The general business depression which commenced in the latter part of 1907 naturally had its effect on the sale of phonographs and records, but not to the extent that might have been expected, considering that these goods are distinct luxuries, and would naturally be among the first to be dispensed with by those whose incomes had been effected. The class of people who are accustomed to purchase machines and records do not lack the disposition to buy but the wherewithal. Now that general business is coming back to normal conditions, tariff matters disposed of, the mills resuming their old-time activity, and, what is more essential than all, the great mass of wage-earners are receiving steady employment, there is no doubt in our minds but what there will be a steady resumption in the talking machine business and the return to former prosperity in this line. The taste for these goods is not a passing fad, as circumstances have easily demonstrated. The public want these goods and will buy them when their purses will permit. Our opinion is that the coming season will show a marked improvement over the corresponding period of a year ago. Already this improvement has shown itself in a tangible way, and we have received voluntary letters from a number of our customers expressing their opinions in an optimistic manner. The manufacturers are spending immense sums of money for publicity, and this with enthusiasm and work on the part of both dealer and jobber cannot, in our opinion, fail to bring about the results which we not only hope for, but fully expect will follow.

SCHMELZER ARMS CO., Kansas City, Mo.

In regard to the talking machine business this fall we are very optimistic in this matter, for the writer feels satisfied that there will be as many talking machines, records and supplies sold this fall as at any time before. The crops throughout our section of the country were never better. Prices are higher than at any time, and when you figure that a farmer has his crops sold before they are out of the ground, and at good prices, it makes him feel as though he is being paid for his time put in in developing his acreage.

I have spoken to quite a few of the dealers throughout this part of the country, and I have yet to find one who is not of the same opinion as myself. I notice the difference, for last year, speaking to the same dealers, they had a different tale to tell. This year they are looking on the bright side of things, and there is no reason why they should not, for the money is far more plentiful than ever before. The other day a dealer called on the writer—who is also connected with a bank in his town—and on talking with him upon different subjects I asked him how money was in his locality, and he replied that there was so much money that he was compelled to come here to see if he could not loan it to some of the large concerns in this city, as no one out in the country needed any money; they have all they need and are not borrowing. This is a very good sign of the return of prosperity.

We are now getting things in shape to move to our uptown store, which we expect to occupy along about the first of September. We must say we will have one of the finest talking machine departments in this part of the country.

STANDARD TALKING MACHINE CO., Pittsburg, Pa.

Business conditions in our section have been unusually good, considering the hot weather. The outlook in western Pennsylvania, eastern Ohio and West Virginia is extremely pleasing, and we anticipate the best fall business we have ever had, with probably the exception of 1907.

We can already notice the increased sale of machines among our smaller dealers in out-of-the-way locations, and have been extremely fortunate

YOU GET IT ALL FROM US

Quality, Service, Satisfaction and Success

Send your Victor and Edison orders to the "House of Quality." All orders for records, both Victor and Edison, are being filled with records of the most improved recording now leaving the factory. This is important to you.

Our dealers say that we pack goods with more care, ship more promptly and fill orders more completely than jobbers who sell talking machines as a side line Send your orders to the "House of Perfect Service." It costs no more.

The man who hasn't made an error is dead, and those who say they never make one will die soon. We admit making an error occasionally but we are just as quick to rectify it as we are to acknowledge your remittances. That is Satisfaction.

If you will send your orders for Victor and Edison to us you will not only be on a par with your successful competitor, but you will stick out from the bunch like a large wart on a small pickle.

Eastern Talking Machine Co.

177 TREMONT ST. BOSTON, MASS.

We are pushing the Victor idea in every possible way and in every possible direction.

We are spending hundreds of thousands of dollars to advertise the Victor in the newspapers, magazines and farm periodicals; and we are providing the dealer liberally with attractive window-cards, pictorial hangers, catalogues and miscellaneous literature.

What are *you* doing to clinch our arguments, Mr. Victor Dealer? Are you getting *all* the business you might in your locality? Are you holding up *your* end of the Victor's publicity campaign?

Remember, the Victor business is still in its infancy—the biggest money in the Victor business is yet to be made. Right in your territory are hundreds of opportunities to sell the Victor if you will only go after them and "keep at it."

Every Victor sale you make puts us in position to do a little bit more for you. The "little bit" means big things when every Victor dealer gets busy.

Contribute your share of thought and energy to the development of the Victor idea and you will get your full share of the profits.

F

within the last few weeks in starting a number of new dealers in both lines, which alone indicates promising increase in the fall business.

Collections are improving somewhat, and since the new policy regarding the protection of dealers by the Victor and National companies we find that we now have a much better class of dealers who are pushing the talking machine business strongly and who no longer look at it as a side line, but one of the most profitable parts of their entire business.

We take this opportunity of congratulating you upon the extremely fine Convention Number which you issued in July.

THE RUDOLPH WURLITZER CO., Cincinnati,

Our views in regard to the future of the talking machine business are best represented in the arrangement of our store and in our advertising.

On August 1st we completed our new record sales department on the main floor, giving it one of the most effective and prominent locations in our store.

The new field which the Victrola opened is already taxing the capacity of these first floor record booths, and with the return of the instalment customers and the old record buyers, brought about by better business conditions, we are finding that we have ample need for both the new and the old record sales departments.

The talking machine proposition is greater than it ever was before, but it must be handled on a more intelligent basis by the agent. The business offers greater possibilities than it ever did before and it never looked as promising as it does to-day.

The man who will patent a system for increasing the business without an increase of the expenses, will make a fortune out of it. Or even one for keeping the expenses from getting larger, even if the business does not increase.

No one has placed a limit on the possibilities of the talking machine.

ORDERING FOR THE HOLIDAYS.

The Leading Jobbers of Los Angeles Are Now Preparing for a Great Fall, Holiday and Winter Trade—New Victrola Style a Big Seller—Edison Cygnet Horn Liked—Mexican Amberol Records in Demand—Other Items of General Interest from the Angelic City.

(Special to The Talking Machine World.)

Los Angeles, Cal., Sept. 1, 1909.

Since this time last month Los Angeles has become a harbor city and gained in population to quite an extent as a result of the recent annexation of the two smaller cities, San Pedro and Wilmington, through a special election. The future possibilities of this section of Southern California are numberless. The field for new enterprises is large and little developed. Many men of prominence in the talker trade are active members of the progressive committees which are boosting Greater Los Angeles. With the steady development of the new harbor, freight troubles are gradually coming to an end. Preparations for the holiday season are in the minds of trade captains. Sherman, Clay & Co. have placed the largest order yet for machines and records. The Victrola is expected to be in greater demand than ever and a heavy order for both styles has been placed for immediate shipment. Charles Ruggles, manager of the Southern California branch, has returned from a trip of combined business and pleasure which took him to San Francisco. He was pleased to see the progress the northern city has made since his last visit and was warmly greeted by his old-time friends. Speaking of trade in San Francisco, Mr. Ruggles says it is steadily improving in both wholesale and retail. Manager McCarthy, of the San Francisco, has complimented the management of the southern California branch on the success it enjoys.

The Southern California Music Co. have received samples of the new Edison Cygnet Horn, which will be placed on sale about the first of September. The new horn is an improvement which has been expected for some time and meets with approval in general. The Mexican amberol records, of which the first list has been received, are in considerable demand. Their appearance is expected to increase the sales of Edison machines, which are very popular among the Mexican inhabitants of Southern California owing to the distinctness of the enunciation. Among these foreign records have been found some of the finest instrumental selections which the dealers recognize as splendid sellers to retail customers. One number of extraordinary fame as a seller at first hearing is a two-minute record in the Mexican list No. 20,161 "Ultimo Amor" (Last Love) schottische, played by Octaviana Yaney. Many others are to be found which any phonograph owner would be glad to buy. O. A. Lovejoy is enjoying a vacation at the seashore.

The George J. Birkel Co. have added several splendid pictures of celebrities of Red Seal fame to the department which now possesses a fine collection.

A. Graham Cook is back and on duty after a pleasant trip up the coast to Seattle and the exposition. He made stops at most of the large cities on the way and surveyed the trade conditions existing at each which in his opinion are not to compare with the activity in Southern California.

The Columbia Phonograph Co. have had a good summer trade with double disc records. The new Constantino records are meeting with noted success, as are the records of the Fonotipia series.

W. S. Gray was a visitor to this city during the earlier part of the month.

Wm. Fiske, of the Fiske Talking Machine Co., together with Mrs. Fiske, is journeying north to Seattle and British Columbia for a few weeks of pleasure and recreation.

TWO NEW COLUMBIA CATALOGS.

One Comprehensive Booklet Devoted to Foreign Records and Printed in a Variety of Tongues—A Catalog of 65-Cent Double Discs.

After long and careful preparation the Columbia Phonograph Co. have ready for distribution their new and comprehensive catalog of foreign records including double-disc and cylinder styles. The various lists are printed in the language of the countries they represent, such as French, German, Italian, Swedish, Norwegian, Polish, Hungarian, Russian, Yiddish, Danish and Bohemian, which feature makes the catalog highly valuable to foreigners who are unable to read English. The flags of the various nations appear in natural colors on the covers of the new booklet.

Another new Columbia catalog is one devoted to the company's line of 65-cent double disc records, well printed and complete in every detail, and distinctly valuable to the trade for reference purposes.

Orders for both catalogs should be placed through the factory in the usual manner.

MUSICAL ADVERTISING.

A Paris correspondent of Popular Electricity draws attention to the fact that musical advertising, by means of the singing or whistling arc lamp, is being tried in that city. To the right and to the left of one of the store entrances there were hung rather low, two singing, whistling and talking arc lamps, and during their operation a considerable crowd would constantly be gathered in front of the entrance listening to the sounds.

Instead of offering the crowd something to see it was enchanted by the sweet tones of a familiar tune intermingled with some advertising talks in order to render the advertising most interesting.

The valuable clerk is the one who can give information and advise a customer in a way which will inspire confidence.

It's So Easy

Yes, it is not only easy **to learn** a foreign language by the I. C. S. system—the easiest and most perfect way in the world—but it is also easy **to sell** I. C. S. language outfits. It is easy to sell them to people who are tired of their machines as an amusement device and will be glad to turn them into a source of profit. It is easy to sell them to persons going abroad and who otherwise desire to learn a language for the sake of the knowledge of it alone. It is easy to sell it to men and women who desire to qualify for positions as translators and foreign correspondents. It is easy to sell it to foreigners, in order that they may learn to speak English. In fact there are a great many sound reasons why it is easy to sell the

I.C.S. LANGUAGE SYSTEM
WITH
Thomas A. Edison
PHONOGRAPH

Do **you** sell I. C. S. Language outfits? If not, why are you thus neglecting such an important and profitable field of your work? Why are you thus absolutely throwing away at least one-third of your business? The Phonograph system of language instruction is now recognized as an educational factor of great importance and the demand for this sort of language instruction is growing by leaps and bounds. The I. C. S. system is undoubtedly the one of the greatest merit obtainable today. Write us a postal **now** for further particulars.

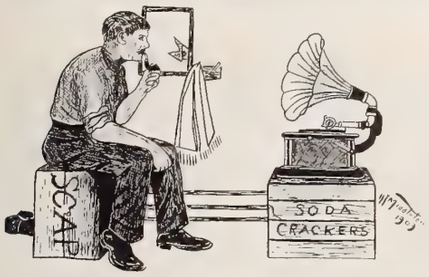
TREATMENT OF CUSTOMERS.

Why It Is Imperative to Treat All Patrons With Equal Courtesy—Some Hints for Dealers on This Important Subject Gathered from Actual Experiences of the Writer.

A great many talking machine dealers draw a distinction between their various classes of customers. For instance, if well-groomed Mr. De Swell saunters in and asks in his languid draul for a certain record, the clerks are all attention, and by look and manner impress him at once with the fact that they are there to do his especial bidding as promptly and agreeably as possible. He may ask to hear twenty selections rendered, but only purchase one, and they will still be delighted to serve him.

"The pleasure is all ours, Mr. De Swell, come again," they call after him most graciously as they bow him out.

But woe unto the poor workingman who, on his way from work, in overalls, perhaps, with his



"PLAIN" JOHN SMITH.

lunch pail on his arm, modestly inquires for "O'Brien Has No Place to Go," and "Meet Me in Rose Time, Rosie," two records which his daughter has asked him to bring home for her.

"Will you play 'em, please?" he asks apologetically. "I want to be sure they're all right; I bought a cracked one once."

The clerks look him over disgustedly from black-peaked cap to mud-smeared shoes, and exchange glances. Then one departs for the records while the other remarks sarcastically: "It isn't necessary to play them; we don't sell cracked records. Seventy cents, please."

The clerk returns with a wrapped parcel, the humble patron hands over his seventy cents, and the incident is closed—without a hearing. Result—A tired laborer worries the whole way home for fear his purchases may not be satisfactory, and eventually, even though standing in a crowded car, he unties the package and gingerly lifts the records to the light to assure himself

"DE SWELL."

that they are uninjured, and that Mame won't be disappointed.

Now, Mr. Dealer, these conditions really exist, for the writer witnessed what he has described above, and seeing is believing, you know.

He felt like asking those two clerks a few questions somewhat along these lines:

Why is De Swell, the gentleman's money any better than John Smith, the workman's? De Swell heard twenty records played and bought one. He was treated with every possible courtesy.

John Smith purchased two selections, did not hear any played, and was snubbed.

Will De Swell come again? Sure! and he'll probably expect to hear thirty next time, and not buy any. However, that doesn't matter. Oh, dear me, no! He's a gentleman.

How about John Smith? He won't come back, will he? No, of course not; he'll go to the little store down the street, where all patrons are treated alike, and it being pay night, he will blow himself for Mame to the tune of a whole dozen records. He'll hear them all played, too, think of it, but you don't want his trade; he's not a gentleman.

The writer is not able to determine what answers the above-mentioned clerks would have made to these questions, but he is inclined to think, judging from their personalities, that they would have rendered in chorus the slangy exclamation so popular just now—"Beat it!"

One reason why the writer thought it well to bring the subject of "Treatment of Customers" up at this time was because statistics compiled by a talking machine man prove that a large percentage of records of popular selections, such as ballads, marches, waltzes, etc., were purchased by the so-called common people, the wealthy confining themselves largely to classical music and grand opera—and that means, Mr. Dealer, that the workingman is worth while, and you should not only be nice to him yourself, but instruct your clerks to acquire the habit also.

Let us gaze for a moment into the respective homes of De Swell and Smith. The former reclines at ease in his luxurious den. At his feet a prize bull terrier capers, and a little further off a "talker" is playing a selection from "The Three Twins." Is De Swell listening to the music? No, he's talking to the dog—telling him in his languid drawl "what a beastly bore music is when a fellow's sleepy, doncherknow."

The latter sits upon a soap box. From across the bare room a talking machine sings to him. Is he indifferent?

Look! With every nerve alert, rigid, scarcely breathing, he listens spellbound to a ballad of his childhood, "When You and I Were Young, Maggie." It recalls running brooks, soft afternoon shadows floating through woodland dells, the far-away tinkle of a cow-bell, and the silvery laughter of a little maid in homespun.

De Swell is bored.

Smith is captivated.

That is the difference, Mr. Dealer.

You will find the most appreciative patrons among the common people, and their trade is desirable; therefore, when they come to see you, treat them courteously. It will pay you well.

HOWARD TAYLOR, Middleton.

CARL LINDSTROM CO. INCORPORATED.

The Carl Lindstrom Co., Yonkers, N. Y., have been incorporated to deal in talking machines, etc., with a capital of $10,000. The directors for the first year are: Adolf Heinemann and Paul Kretschmer, of New York City, and Otto Heinemann, of Berlin, Germany.

A pleasant remembrance wrapped with every article—a smile with every sale—are the best premiums you can use.

IMPROVE YOUR SYSTEM
AND
INCREASE YOUR RECORD SALES
BY USING
THE BLACKMAN CYLINDER RECORD TRAY
(Patent Applied for)
A Record Tray With Record Label for Less Than One Cent

The BLACKMAN Folding Trays for Cylinder Records are shipped FLAT and can be FOLDED into STRONG TRAYS in a few seconds, as shown above. This tray, with Rapke Label, makes a handsome looking record stock and a system you can't beat. The labels act as Silent Record Salesman and the customer can point to the record he wants to hear. Adopt this system and your sales will not only increase but it will never take more than a few minutes to make up a Record order.

THE BLACKMAN FOLDING TRAY USED IN THE SYRACUSE WIRE RACKS
enables you to carry a large stock in a small space, and also use the Rapke Label. We furnish wire racks at regular prices, either wall or revolving style, with opening to accommodate Blackman Trays. Write for prices.

NEW YORK, SEPTEMBER 15, 1909.

THE decision reported in the last issue of The World, in which Judge Chatfield, of the United States Circuit Court, granted an injunction against W. V. P. Bradley and the Continental Record Co. in suits brought by the Columbia Phonograph Co. and the Victor Talking Machine Co., by which the defendants are restrained from selling what is colloquially termed "dubbed" records, is of more than ordinary interest to the entire talking machine trade.

It constitutes one of the most far-reaching decisions handed down in our courts in recent years concerning industrial affairs.

It is thought that this important decision will operate largely to put an end to imitators, who seek to profit through the invested capital of successful business men. It is indeed sweeping, and it not only sustains the rights of the talking machine record manufacturers, but it says that the law against unfair competition is not a dead one upon the statute books.

Indeed there are few court decisions which have ever been made which deal so clearly with the doctrine of unfair competition. The decision of Judge Chatfield, which appeared in The World, is well worthy of the closest perusal, because it shows how the trade field is viewed by members of our judiciary, who realize that aside from patents, trade-marks and copyrights, there are certain rights growing out of lawful business which should be protected by the courts of equity from unlawful use and appropriation by those whose plain desire is to profit not by their own intelligence and well-directed energy, but by the capital, originality and inventive skill of others.

JUDGE CHATFIELD'S decision is without question a most valuable contribution to the legal records of the country in that it shows a wider appreciation of rights which manufacturers of special products may have, and the protection should be afforded them by the courts of the country, according to Judge Chatfield's views.

In this connection it may be well to remark that the decision of this court is in harmony with many others which have been rendered recently, and there is no mistaking the fact that the American judiciary reflects a stronger sentiment during the past few years in the protection of copyrights and trade-marks than ever before.

All of these decisions will have a deterrent effect upon the actions of men who seek to profit by the business ability of others. There have been many cases before the courts in which the use of names which are well calculated to mislead the public by reason of points of similarity are involved which all bear upon the doctrine of unfair competition.

In reviewing this important decision it must be clear to outsiders that the talking machine men propose to defend their rights. In fact, we do not believe there is another industry, young or old, for that matter, in which there has been the amount of money spent to defend patent rights which has been used in this trade during the past decade. The amount exceeds a half million dollars, and it shows that the talking machine men are willing to expend vast sums of money in order to fully protect their interests from illegitimate competition.

In a short time it will be difficult, if not impossible, for the man who wishes to trade even in the remotest degree upon the reputation of others to find any field for his work in this country. Trade-marks and property rights are being safe-guarded better than ever before, and the tendency of modern court decisions is to safeguard them with adequate protection.

IN another portion of this paper will be found some interesting views obtained from jobbers concerning the outlook for business for the fall. As the man at The World masthead views the situation it is decidedly encouraging, and no matter in what section of the country he may carry on investigations it is certain that the clouds of depression are lifting, all of the time, and there is no reasonable doubt why business should not, in many industries, be fully up to normal conditions.

With good crops and good orders on hand it means that there will be business betterment everywhere. There is plenty of money already in the West to move the crops, which, by the way, are enormous, so we should not feel a dearth of cash in the East while the crops are being sent to the seaboard. On the contrary money should be fairly easy in all sections of the country. The indications point to a satisfactory demand for talking machines, and it is believed that the progressive, up-to-date establishments will secure a satisfactory amount of business during the fall.

ADVERTISING brings customers into the stores, but lack of intelligent salesmanship sends them out again empty-handed, and merchants in all lines are looking for the remedy to this greatest drawback to their success. Some suggest a practical school for the study of salesmanship, even with diplomas, with which to better help conditions.

Now, in the talking machine line, there should be no great losses through lack of salesmanship qualities on the part of men on the floor. This business is not like the great department stores, where the individual establishments have an army of salesmen and saleslādies, but the establishments are small, the principal himself oftentimes acts as salesman, and there should be no trouble in seeing that none but intelligent arguments are presented to customers. Not alone that, there should be care taken to see that proper attention and courtesy be extended, of course.

There are a number of people who, through curiosity, are impelled to visit talking machine rooms—perhaps they do not intend to buy, but they are good prospects, and an attentive, courteous salesman who knows his business thoroughly may be able to make paying prospects out of them.

There is a right and a wrong way of exhibiting talking machines and showing off records. It requires intelligence and tact, as well as perseverance. The taste of the individual customer should be sized up and records which will properly appeal should be placed on the machine. A few minutes' conversation will draw out something from the customer which will be of value to a shrewd, careful salesman. Now, business can be made to pay in a better way if salesmanship qualities are brought out in a strong manner.

WHAT may be accomplished by pluck and determination was never better illustrated than in the accomplishments of Dr. Frederick Cook, who planted Old Glory upon the apex of the globe.

No one can read the thrilling and dramatic narrative of his path through eternal snows without feeling intense admiration for that superb will power which at last caused him to win the great goal for which men have struggled for ages.

No matter what the accomplishments of Cook may be worth to the world of science; no matter whether out of this discovery may come something practical; no matter whether it may help along ethnological lines, but one thing is certain, Cook's accomplishments will act as an onward spur to every ambitious man. When he is downcast and when he sees ahead obstacles which are seemingly unsurmountable, let them read Cook's dramatic narrative of his march to the Pole. He must then take fresh courage. He can draw inspiration from the accomplishments of this dauntless American.

Americans have won in aerial and Polar flights, and when we think that the Stars and Stripes are floating upon the roof of the world it is rather an inspiring thought.

MAKE the advertising campaign for the fall a lively one. The manufacturers are certainly doing splendid work in bringing the attention of millions of people to the talking machine and its marvelous possibilities. The dealers should supplement this work by local advertising. The columns of the local papers should reflect the spirit of progressiveness on the part of the talking machine dealers. Supplemental work on their part will secure the largest results from the publicity campaign of the great producing houses. No point should be overlooked which will make for business betterment, and a good, strong local advertising campaign will materially augment talking machine sales.

September is now well advanced, and the time for strenuous activity and the immediate inauguration of publicity plans should be in order.

SECRETARY ROUSH'S GREETING.

The Incoming Secretary of the National Association of Talking Machine Jobbers Writes an Open Letter to the Trade Urging a Greater Interest in Association Matters, and Expresses a Desire That All Members Work for Increased Membership.

J. C. Roush, the recently elected secretary of the National Association of Talking Machine Jobbers, has written the following communication to The Talking Machine World which we commend to the serious consideration of talking machine jobbers throughout the country. Every jobber who has the interest of the trade at heart and who believes in conducting business along improved lines should at once become a member of this progressive organization and thereby contribute in making the association a still greater force for good. Mr. Roush says:

"PITTSBURG, Pa., Aug. 30, 1909.

"TALKING MACHINE WORLD.

"Gentlemen—As the incoming secretary of the

J. C. ROUSH.

National Association of Talking Machine Jobbers, succeeding Perry B. Whitsit, September 15, when he takes the presidential chair of the association, I take this opportunity of asking every member of the association for their hearty support and co-operation in making the ensuing year the banner one of the association.

"The association has done so much good for the jobbers at large and has been granted so many concessions by both factories that it is needless to enlarge upon the advantage of membership in the association. At the same time I would call attention to the fact that a few jobbers have not sent in their application, and as they are deriving the benefits of all concessions given by the factories they should at least lend the association their support by filling in and signing the application blank printed on this page and send same to the secretary, with their check for $7.50, six months' dues, by return mail.

"The convention next year, no matter where it is held, will be made one of the best we have ever had, and plans are already being made to insure every member attending same a rousing welcome and good time. Various plans of entertainment are being mapped out, and members missing the convention in July, 1910, will miss the 'time of their lives.'

"As secretary of the association I will be pleased to receive any and all communications of interest to the jobbers and association, and would also be very glad to receive Edison surplus lists from any National Association talking machine jobber who wishes to exchange with any other member of the association, the Victor surplus being already taken care of through the courtesy of George Ornstein.

"Again asking every Edison and Victor jobber not members of the association to fill in the application blank and mail same at once to the secretary, I am, yours very respectfully,

"J. C. ROUSH."

APPLICATION BLANK.

..... 190..

I (we) hereby make application for membership in the National Association of Talking Machine Jobbers and subscribe and agree to the rules and regulations of the organization as set forth in its by-laws.

Check is herewith enclosed for $7.50, the amount of the semi-annual dues.

(Signed)

Address .....

EDISON MEETS OLD FRIENDS.

In the Glow of Thousands of the Lights He Lighted—Guest of Honor of the Leading Men of an Industry He Created—Glad to Have Him There, Even Though, as Usual, He Refused to Make a Speech.

Two hundred and fifty men and a few guests who have been more or less closely associated with Thomas A. Edison during the last thirty years had him as the guest of honor on the evening of Sept. 2, at Briarcliff Manor, N. Y., at a dinner at Briarcliff Lodge. The dinner was at the close of the thirtieth annual convention of the Edison Illuminating Association, composed of men who have been actively associated in exploiting the lighting inventions of Mr. Edison. Men prominent in electric research were present at the convention, and some of them were among the first associates of Mr. Edison when he was only slightly known and struggling for recognition. Some of them assisted him in his work years ago at Menlo Park and helped to push his inventions.

Mr. Edison used to attend the annual meetings, but for the last fifteen years he had found it impossible to do so. He yielded this year so far as to consent to attend the banquet, but he made one provision—that he be not called upon to make an address and that anything said for him should be said by his old-time friend and associate, Samuel Insull, of Chicago. Mr. Edison, accompanied by Mrs. Edison, arrived from Llewellyn Park, N. J., by automobile, and during the day he met the members of the association and attended the meeting as a visitor.

At the banquet in the evening the sides of the room were banked with flowers—tea roses, asters and hydrangeas—amid which thousands of tiny lights were strung. The table was a mass of electric lights, shining through American Beauty roses, asters and smilax. Various electric effects were displayed on the ceiling and the walls. The table of honor was a great oval, at which seventy were seated, including Mrs. Edison and the ladies accompanying the other noted guests. The main table was flanked with others, all ornamented in harmony with it.

At 7 o'clock the guests gathered in the ballroom of the Lodge. Mr. and Mrs. Edison received them. The presentations were made by Mr. and Mrs. W. W. Freeman, of Brooklyn. Mr. Freeman is president of the association, and he presided later at the banquet. Following the reception Mr. Edison escorted Mrs. Freeman and Mr. Freeman Mrs. Edison to the beautiful banquet room.

Speaking after the dinner, President Freeman told of the promise to Mr. Edison that he would not be called upon to talk. Mr. Freeman expressed the honor the association and its guests felt in having with them the man whose genius had made the electrical wonders of to-day possible.

Mr. Insull responded for Mr. Edison, telling how he had only a few moments before expressed his pleasure that he had come and of the joy it gave him to meet again some of those who were associated with him in other ways.

Informal talks were then made by Edward H. Johnson, who was an early assistant of Mr. Edison and president of the Edison Electric Co. of twenty-five years ago; S. P. Fish, of the American Telephone and Telegraph Co., and Prof. Steinmetz, of the General Electric Co. Among the guests at the dinner were Mr. and Mrs. George B. Cortelyou, Anthony N. Brady and F. A. Vanderlip.

THE SECRET OF SUCCESS.

No man can explain the secret of his success. It is part ability, part ambition, part environment and part opportunity. Mass the component parts into a whole, embrace the opportunity the very moment it dawns upon you, and you cannot fail.—Loree.

Friedrich Service

¶ Dealers in Western Michigan can be assured of quick, accurate and complete service if they buy from the house of Friedrich.

¶ Our stock of Victor machines and records, and of general talking machine supplies, is one of the largest in the West.

¶ Our wholesale and retail stocks are entirely separate and you receive goods from us just as they come from the factory.

¶ If you desire it we can help you plan your fall selling campaign.

¶ We can also care for your wants in the line of small musical instruments and merchandise.

¶ Our representative will be pleased to call upon you.

JULIUS A. J. FRIEDRICH, GRAND RAPIDS, MICH.

Show us a man who doesn't want all he can get for his money—and we'll show you a man who doesn't want a "Fireside" or Amberol Records.

He's the only man in your territory who isn't your prospective customer.
